Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RETREAT, SHINNECOCK BAY, L. I.,

By a practical gunner and an old bayman. Has always on hand the best of boats, batteries, etc., with the largest rig of trained wild-geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests, and satisfaction guaranteed. Address WM. N. LANE, Good Ground, L. I. Nov8 tf

ARLINGTON HOUSE,

GAINESVILLE, FLA.

This popular house is located in the highest and dryest portion of Florida, on the line of railroad between Fernandina and Cedar Keys. The fishing is unsurpassed, black bass being larger and more abundant than any place in the South. The shooting is the finest in the State. Quail, English snipe, ducks of every kind, deer, etc., are very plenty, and afford the choicest sport to the hunter, while the ARLINGTON, being strictly first-class in all its appointments and cuisine unexcelled, makes this favorite winter resort without a rival in the South. Terms moderate. Address J. B. WISTAR, feb6 tf

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

SOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT,* OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an *objet d'art* valued at £169, and a money prize of £105, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 29½ yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 60 guineas, presented by Mr. J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for $500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 168,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

Compressed Buck Shot.

FIRST PREMIUM, CENTENNIAL EXHIBITION—REPORT.—"Exact uniformity of size ally spherical form, high degree of finish and general excellence."

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with 25 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where clubs use them you can readily see which is the hardest shooting. In matches reported in paper, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot and will follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and shot and upheld the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, $14; by single barrel, $4; "Field, Cover and Trap Shooting," $2.

FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year. Ten Cents a Copy.

NEW YORK, THURSDAY, FEBRUARY 6, 1879,

Volume 12—No. 1. No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

EGO.

I CANNOT think as o'hers think,
Nor feel as others feel,
With heads as wise as Socrates,
And hearts as cool as steel;
My wisdom is all womanly,
My logic only love,
And my whole life a cross between
The serpent and the dove.

It seems to me so very strange
To love and never show it;
To find a pearl that cannot change
And not appear to know it:
To keep one's kisses for the dead,
One's kindness for the dying.
Oh, when such notions flood my head
They almost set me crying.

But then you know I am not wise.
For love is all my learning;
I see things with the single eyes
Of truth, that seek no turning.
My spade is nothing but a spade,
My heart is just a heart,
And if you call me an old maid
I shall not even start.

The wonder to me all day long
Is how I keep so blithe,
Flitting with laughter and with song
About Time's busy scythe.
The wise say life's a wilderness;
To me it's full of flowers,
That raise their cheery little heads
More brightly after showers.

So, when all's said, I greatly fear
That I shall ne'er improve,
But weave my foolish fancies still
Round my congenial groove.
Experience it is worse than waste;
No profit from the past;
I must put up with my own taste,
And die myself—at last!

Jersey, Dec., 1878. A. M. V.

For Forest and Stream and Rod and Gun.

'Coon and 'Possum Hunting in Delaware.—No. 1.

READER, did you ever participate in a 'coon hunt? If not, let me introduce you to one that took place in Delaware a couple of years ago. This is not an exceptional one, but one of many that I have taken part in during the last score of years.

It was at the close of a beautiful day in November, in the Indian-summer time—that most enjoyable season of the whole year to a sportsman—I was seated in a comfortable arm-chair in an old-fashioned parlor, enjoying a pipe after a day's partridge shooting, when my friend and sporting companion (Tom) walked in, and, in an abrupt, off-hand manner, said:

"How would you like to go huntin' to-night?"

"What shall we hunt?" I asked.

"We'll find something to hunt," he replied. "I'll take my old dog Lion, and we'll get Sammy's Nec and Romus; and Bob Brown has a brace or two, and Sam Short has an old cur that's mighty good on 'coons and 'possums (and I reckon Sam'll go along), and after we once get started there's plenty of dogs from York Landin' will follow us, and we'll put in a night. I know you'll like it if you're not too tired. You used to enjoy fox huntin', and I know you'll see some fun."

"When do you expect to return?" I inquired.

"Oh, somewhere along about one or two o'clock; just accordin' to how the dogs run."

"Well, as I have nothing particular on hand, I guess I'll go," said I.

I shook the ashes out of my pipe, pulled on my boots, and, donning my shooting-coat and cap, announced myself ready.

We were to rendezvous at Sam Short's store at Fork Landing, on the Murderkill Creek, and hunt up along the creek toward Coursey's Mill, and thence back along the other side toward home, a distance of about four or five miles. On each side of the creek was a thick growth of bushes and trees, which formed a dense cripple, and the soil was soft and boggy; it was a great resort for foxes, raccoons and opossums, and hundreds have been run and killed in this place. It was about six o'clock in the evening when Tom and I started, with a sort of a hazy moonlight, and just cool enough to keep one moving about so as to be comfortable.

Tom had secured his brother's dogs (Hec and Romus), and with Lion we had a pretty good team of our own, and when we reached the Fork we found about a dozen of the boys assembled, and twelve or fifteen dogs of the hound and cur species.

As usual, there were half a dozen darkies in the company; for who ever heard of a 'coon hunt without a darkey being engaged in it? I was pretty well known to all the white men of the company, but Bob Brown was the only sable gentleman with whom I was acquainted, and he was looked upon by all the other darkies as the greatest 'coon and 'possum hunter in the country, and was high authority in all that related to dogs and hunting. Like all the other darkies in this section, Bob had managed to get a family of little ones around him, and although he worked hard and tried to get along, yet between his family and his dogs he was always behind hand and poor.

After a half hour's chatter among the colored folks as to the merits of the various dogs, we started down toward the creek. Bob, being in advance (having assumed the command of the party), gave orders to his followers not to crowd "too close on de dogs till dey struck de trail. Gib 'em plenty o' room, an' don't tramp 'round much, for fear it mought bother 'em." The dogs ran to and fro with their noses close to the ground, every now and then throwing up their heads and uttering low whines, while Bob encouraged them with a "Whoop-ah! hunt 'em out, dogs."

In a few moments a sharp yelp from the leader, which was responded to by two or three of the others, announced that the trail had been struck.

"Dar goes ole Dudley," shouted Bob; "he neber lies—you kin bet on him shuah; an' dar goes Mr. Arnton's Lion, an' dar goes Mr. Short's dog—Hi-hi!"

These announcements were made as each dog gave tongue successively, and in a few moments it seemed as though every dog in the pack had struck the trail and were trying which could make the most noise. The soil of the cripple being soft and boggy, we could hear the dogs splashing and floundering through the mud and water, and all the while keeping up such a noise that it awoke the crows that were roosting in the trees, and they took flight in search of more quiet quarters.

"I'm gwang up to Carpenter's Bridge," said one darkey; "for dat 'coon is shuah to cross hit an' take up 'cross Mr. Arnton's field. Ef I only had a boat—"

"What you want wid a boat? You couldn't folly dat 'coon. De dogs 'ud run 'im clean out'n sight 'fore you could row a boat fifty yards," said old Alec.

"Hark!" said another son of Africa, "what's dat? Didn't ye yere dat? He's treed. Didn't ye yere ole Dudley bark?" And while they were all intently listening for Dudley's bark, in the hope that he had brought the 'coon to tree, a long, sharp yelp, clear as a trumpet, away off up the creek, which told too plainly that the dog had not treed, but that the faithful Dudley was still upon his trail, and the whole lot of us hurried along the creek toward Carpenter's Bridge, which we crossed, and scattered over the field. Several more of the dogs had found the trail again, and were running in full cry.

In a half hour we reached a pine woods of about fifty acres, which stood upon a rise of ground overlooking the creek, while below us the cripple was more dense than ever, and there the whole pack of dogs seemed concentrated, and such a racket and noise as they kept up I had not heard for a long time.

"We've got him now," said Bob; "he's on de island an' runnin' in a circle, an' of he don't swim de crick he'll tree pooty soon."

The dogs and darkeys were all mixed up together, each darkey encouraging his favorite animal with such expression as "Hi on, Romus;" "Seek 'im, Lion;" "Good dog, Hec;" but Dudley seemed to be the favorite, for at least half a dozen—white and black—were urging him on. The 'coon by this time was nearly run down, and we knew by this short, quick tonguing of Dudley that the trail was very hot, and before he had run a hundred yards further he took to a tree, and the rapid barking of the keen and faithful Dudley proclaimed the fact.

Yes, there he was, away up among the branches of a large yellow poplar. Two or three colored individuals took off their coats and made a great fuss and show of climbing the tree; but a little white boy, not more than sixteen years of age, without any waste of time in preliminary arrangements, started up and soon caught the lower branches, and in a short time was up the tree and in a position to shake out the 'coon.

"Look out below!" he shouted, and, after a few vigorous shakes, down came the 'coon, and he had scarcely touched the ground before Tom's dog (Lion) had him by the throat. He fought for a few seconds, but, the other dogs joining in the fray, he was soon killed.

"Dat was a pooty good run, sir," said Bob, walking up to where I was standing. "What do you think of 'coon huntin', sir?"

I told him I was very much pleased at what I had seen, but that I didn't know much about the business, and expressed my surprise at the fact that they could distinguish the tongueing of the various dogs so as to announce which particular one was running the trail by the sound of his yelp.

"Why, dat's easy 'nuff," said Bob, with a grin; "I kin tell de tongue ob ebery dog from yere to Felton if I only yearn him once. I'se follered huntin' eber sence I were a chile, sir, an' allers tuk great d'light in it; why, me an' Mr. Sammy Arnton slept out in de woods many a night when we was boys an' follered huntin' reg'lar, an' I kin tell a dog's woice jist as sartain as I kin tell dat's Mr. Sam Short talkin' dis minnit. I'se monst'ous fond o' huntin', an' many a time I'se husked corn all day an' 'coon an' 'possum hunted all night, sir."

The dogs, having by this time recovered their wind, were sniffing around, and now and then would strike the old trail of the 'coon, but would not run far after they found what it was. Some of the party proposed to go on and get up another 'coon, as it was only nine o'clock, but that was overruled by Bob, who said:

"I think, gentlemen, we kin find a 'possum to-night. I was up along by Bussy's yis'day ebenin' an' seen a good many tracks, an' I yearn dat Mr. Isaac Arnton's boys ketch two big fellers ober on yan side ob de big white oak a couple o' nights ago. I hain't hed no 'possum dis fall, an' I'd jist like to try dese yere puppies o'mine."

So it was settled that we should go and hunt up a 'possum.

The darkeys kept up a continual chaffing and chattering, and their merry laughter could be heard a mile away. Some were telling wonderful stories of former hunting excursions; how they would catch half a dozen 'coons of a night, or a dozen 'possums, while others were descanting upon the merits of some famous dogs which had lived and flourished in that section of the country. From 'coons and 'possums they got to talking of foxes, and then all joined in. It was amusing to listen to them, and to a stranger who had never heard such jargon it was really laughable.

"How 'bout dat ole fox dat you an' Mr. Dan Tumbleson run all night one time, an' den he gib ye de slip, Bob?" asked old Alec.

"Sumfin quare 'bout dat feller," said Bob; "we run him from 'bout nine o'clock cl'ar on to day, an' by golly! de dogs lost 'im down in Mr. Jester's field an' neber tuk him up ag'in. Some o' de puppies run de back foot ob him, but de ole ones hed more sense—dey stop jist on yan side ob de ole sweet gum, whar de fox wanish."

"I 'spect he run in his den," suggested one of the darkeys.

Bob turned the whites of his eyes upon this individual with a look of contemptuous pity, as though he felt ashamed at such a display of ignorance, and also that anybody in that country who had ever heard of him would not give him credit for knowing when a fox had been run "to earth," and, in his most sarcastic tones, replied:

"Den, yer granny! Go home, boy, an' go to bed. I knows what I'se talkin' 'bout."

"What 'bout dat fox?" asked two or three. "We've heerd a good bit o' talk 'bout him, but neber yearn de perticlers ob how it was."

"Well, yer see," said Bob, "Mr. Dan Tumbleson an' Mr. Sammy Arnton an' some more huntsmen an' me hearn a good bit 'bout dis fox, how de dogs run 'im, an' all on a suddint lose him, so we made up to gib 'im a trial. We got ole Dudley an' Mr. Arnton's two dogs (Hec an' Romus), an' Mr. Tumbleson's Trailer an' my four dogs an' started arter him on jist sich a night as this, on'y it mought o' b'en a lectle mite mo' cl'ar. De dogs hadn't b'en huntin' much, 'kase it wur airly in de season, an' kept foolin' 'long arter 'possums an' rabbits till we licked 'em right smart two or tree times to git 'em down to work, an' at last ole Jowler struck a trail 'way down 'mong dem sassyfrax bushes in Mr. Emery's field, an' in less'n a minnit Dudley tuk it up, an' den de hull pack j'ined in, an' sich music you neber yearn. Talk 'bout brass bands an' sich like, dey was nuffin' at all to dat music. Away dey went down de branch, red hot, till dey struck de crick; de fox swum it, an' when de dogs lose 'im at de edge o' de water dey run de back foot ob him a little—dem puppies did—but ole Dudley he tuk right 'cross de crick an' struck de trail ag'in on t'other side an' run 'im up along dat little bottom in Mr. Brown's field; but de fox doubled an' come back an' kind o' frowed de young dogs off, but Mr. Arnton's Hec an' ole Dudley dey stuck to him, an' he run up an' down dat crick—fust on one side, den on t'other—an' you neber yearn de like, till I thought he must be nigh giv' out. Den he tuk up ober dat ole sedge-patch in Mr. Frazier's field an' out t'wards de meetin'-house. We follered dem till near day, an' jist when we all thought de dogs had 'im shuah, by golly dey lose him, and de fox wanish. Nobody neber know'd what come o' him. Dem dogs run'd dat fox so much dat dey got so dey know'd 'im, an' whenever dey got a little on yan side ob dat ole sweet gum dey jist know'd it wur no use follying ob 'im, an' dey gib 'im up."

These Delaware darkeys are naturally superstitious, and they all, with one accord, agreed that this was a visitor from the spirit world. But the truth was, as I learned from Tom Tumbleson, who watched the movements of the fox, that he had a den in the gum tree spoken of by Bob, and he would run a few yards beyond it, then climb the fence and run back along the

top rail and leap into a hollow in the tree about three feet above the fence and some six or seven feet from the ground. Tomlinson, who was a keen fox hunter, and enjoyed the trick of the cunning old fox, never told anybody for a long time, and the darkeys actually became afraid to hunt this fellow, under the impression that some misfortune would happen to them, as they verily believed it was a "spirrit."

By this time we had reached the woods where they expected to catch a 'possum, and the darkeys spread themselves accordingly and urged the dogs on to hunt. If the reader has never seen an opossum, I shall endeavor to give a slight description of him, selected from the work of a well known writer on sporting matters:

"The habits of the opossum generally resemble those of the 'coon and fox, though they are less intelligent in defending themselves against an attack of an enemy. Knock an opossum on the head or any part of the body with a weapon of any kind, small or great, and if he makes any resistance at all, he will endeavor to bite the weapon that hits him instead of the agent using it. The opossum seems willing to treat the world as the Frenchman promised the bull-dog—'If you let me alone I won't trouble you.' Put the animal in a critical situation and he will resort to strategem instead of force to elude his pursuers; for, if he finds escape impossible, he will feign himself dead in advance of your own charitable intentions toward him, and when you think you have given him his quietus and secured him, he will unexpectedly wake up and be off. This trick of the little animal has given rise to a proverb of much meaning among those acquainted with his habits, of 'playing 'possum,' and probably it is as good an illustration of certain deceptive actions in life as can be imagined. Take an opossum in good health, corner him up until escape is impossible, give him a gentle tap that would hardly crush a mosquito, and he will straighten out as beautiful a 'body' as you will ever see. In this situation you may thump him, cut his flesh and half skin him, not a muscle will move; his eyes are glazed and covered with dust, for he has no eyelids to close over them. You may even worry him with a dog and satisfy yourself that he is really dead, then leave him quiet a moment and he will draw a thin film off his eyes, and, if not interfered with, be among the missing.

"There is another striking characteristic about the opossum, which, next to its 'playing 'possum,' is extraordinary. The tail is long, black and destitute of hair, and although it will not enable its possessor, like the kangaroo, in the language of the showman, 'to jump fifty feet upwards and forty feet downwards,' still it is of great importance in climbing trees and supporting the animal when watching for its prey. By this tail the 'possum suspends itself for hours to a swinging limb of a tree, either for amusement or for the purpose of sleeping, which last he will do while thus hanging up as sound as if slipping his hold did not depend upon his own will. This tail-hold is so firm that shooting the animal will not cause him to let go, even if you blow his head off. On the contrary, he will remain hung up until the birds of prey and the elements have scattered his carcass to the winds, and yet the tail will remain an object of unconquered attachment to its last object of circumlocuting embrace.

"An old backwoods preacher, who occasionally threw down his lapstone and awl and went through the country to stir up the people to look after the cusarns of their better end, enforced the necessity of perseverence in good works by comparing a true Christian to an opossum up a tall sapling in a strong wind. Said he, 'My brethren, that's your situation exactly; the world, the flesh and the devil compose the wind that is trying to blow you off the Gospel tree. But don't let him do it; hold on as a 'possum would in a hurricane. If the fore-legs of your passion get loose, hold on by your hind legs of consciousness, and, if they let go, hold on eternally by your tail, which is the promise that the saints shall persevere to the end.'"

As an article of food, the opossum is considered by many a very great luxury. If the animal is kept up a week or ten days before it is killed, and fed upon scraps from the table, it becomes very fat, and loses that rank, wild taste, which is so objectionable to many, and its flesh then tastes like roast pig. There are various ways of cooking it. The Indians suspend it on a stick by its tail, and in this position they let it roast before the fire; but to a civilized and cultivated taste it is coarse and unpalatable, as it retains so much of its oiliness. The negroes, on the contrary, cover the body up with sweet potatoes, and, as the meat roasts thus confined, the succulent vegetable draws out all objectionable tastes and renders the opossum one of the "greatest delicacies in the world," especially to one who has been gunning all day and eaten nothing since breakfast.

Almost any breed of dogs will do to hunt opossum, and, as we had all sorts with us, it was not long before they struck a trail and were running pretty lively.

"Dar goes my puppy, Music," said Bob; "he's gwine to make a fust rate 'possum dog—and, by golly! I yere Jowler an' Dudley an' Romus—dey mus' hev two."

And soon the whole pack were off, hot foot, and in a short time they had treed two opossums—one up a persimmon tree, and the other on a large gum. That on the persimmon tree was crouched low along a large limb, which was too thick for him to wrap his tail around, and one of the darkeys soon mounted the tree, and, with a stick, knocked him off, and he fell among the dogs and was quickly dispatched. The other was more difficult to get at, as he was suspended by his tail and hung out toward the end of a thin branch, where no human being could reach him.

"I wish I hed an axe," said Bob; "I swar, dat tree would hev to come down. I'd mighty aggerwatin' to see dat feller hangin' dar jist out'n reach, an' him laughin' at us all de time. But I'll fotch 'im; I'll make it so hot for 'im dat he'll be glad to come down."

So they set themselves to work, and in a little while had a rousing fire kindled, and, as they threw on the pine wood, the flames mounted higher and higher, and the sparks flew up and seemed to envelop the opossum in their embrace. The scene was now very animated; the shining faces of the darkeys were turned upward, and their eyes, intently fixed upon the opossum, sparkled like diamonds. The dogs stood around and barked occasionally, and wagged their tails in momentary expectation of "seeing him drap," as Bob predicted. He stood it like a Spartan, but had to let go at last, and down he came like a lump of lead and was soon killed.

The darkeys scattered the fire so that it would do no damage, and we went on. After hunting for an hour longer we caught two more opossums, and, as we were then only about a mile from home, Tom and I concluded to leave the party; so, after bidding them "good-morning," we started for home, pretty well satisfied with our night's hunting.

For Forest and Stream and Rod and Gun.

PARMACHENEE LAKE.

At an altitude of 2,000 feet above the level of the sea, surrounded by lofty hills and mountains, in the midst of the dense forests of the Pine Tree State, lies the beautiful sheet of water known as the Parmachenee Lake. Of the origin and significance of the name I am ignorant. The Indian Chief Metalluk had a son named Parmachenee, but whether the lake or the Indian was first named I know not. This lake is five miles in length by three in width, but is not inferior in beauty to any of the larger bodies of water in the State.

Taking the lake as a centre, the facilities for hunting and fishing are equal to any in New England. In a former article I gave a description of the Magalloway River from its mouth to Spoff. Flint's Landing, near the mouth of the Little Magalloway. From this landing to the lake the river is full of rapids and falls, rendering navigation almost impossible; therefore a road has been cut through the woods a distance of three and a half miles, over which boats and baggage can be carted directly to the shore of the lake. Mr. Flint's camp is on this road, half a mile from the landing, and a horse is kept here for the purpose of transporting parties over the carry.

In describing the country in the vicinity of Parmachenee I cannot do better than to give an account of one of my own trips during the present year. While sojourning at Mr. Flint's camp, Spoff. had occasion to go up to Rump Pond, some distance north, for the purpose of carrying supplies to a party of sportsmen encamped there, and your humble servant accompanied him. One fine afternoon in October we walked across the carry to the lake. Reaching the shore, we embarked in a light boat. There was no wind, and the water was smooth as glass. To the southwest, only a few miles distant, a prominent feature in the landscape is "Bose Buck" Mountain. "Bose Buck" Cove is a long arm of the lake extending toward the foot of the mountain. From near this point an old logging road extends to second Connecticut Lake, a distance of about twelve miles. To the southeast could be seen in the distance the fine proportions of Weir Mountain; the nearer hills, covered with brilliant autumn foliage upon their gently sloping sides presented a scene of natural beauty not soon forgotten. Near the northern shore is the floating camp of Mr. John Danforth. This establishment consists of two houses 17 by 21 feet, and 20 by 30 feet respectively. These he supported upon rafts 30 by 40 and 27 by 31 feet. There is also a raft, 20 by 31 feet, containing wood-shed, etc. This hotel accommodates from fourteen to twenty guests. The rafts are securely anchored, and plenty of boats are always at hand for the accommodation of sportsmen.

The Upper Megalloway enters the lake from the north, and our course was directly up that river, which is very crooked and at that time was in many places quite shallow, necessitating some wading and dragging the boat. About half a mile up the river we notice on the left bank the site of Cleveland's Lower Camp, of which the hovel alone remains. This camp was the scene of the marvelous adventures of "The Young Moose Hunters," as written by C. A. Stephens. About two miles from the lake is Little Boys Falls. These falls are not very high, but there is an abrupt fall, and the boat must be carried around.

It is said that two boys were once lost in this vicinity, and from that circumstance came the name of the falls. Two miles above the falls we came to the first "East Branch," a stream coming from the east. By this time it was sunset, and proceeding a short distance up the "Branch" we landed at a camp which has been used by Mr. Danforth in his hunting expeditions. The camp was small and built of spruce bark in the form of an A tent; it contained a stove, lantern, and other camp utensils. The next morning was gray and cold, and after breakfast we started down the "Branch" to the main river, and then continued our course to the northward. For a mile the river was deep enough for comfortable navigation, but for the next three miles the boat had to be dragged along the bed of the stream, as there wasn't water enough to float it. Just before reaching "Rump Pond," we entered deep water again. Rump Pond is oval in form, and has an area of perhaps thirty acres; its banks are heavily wooded; near the pond is a precipitous peak of considerable altitude, which bears the appropriate name of "Camel's Rump." About two miles farther up the river we reached the camp of the party we were in search of, and very glad they were to see us, as their stock of provisions was nearly exhausted, and they were ready to start down the stream.

We were now some ten miles north of Parmachenee Lake, and in the heart of the wilderness. Only a few miles more and we could have stepped over the boundary line between the United States and Canada. Signs of beaver, otter, fisher and sable were to be found upon the banks of the streams and ponds, while innumerable muskrat houses dotted the swamp and bogs. A short distance inland deer tracks were abundant. Caribou and moose are not plenty, but are frequently found. Moose is not legitimate game at present, as the commonwealth of Maine has prohibited the killing of that animal within its limits till the 1st of January, 1880. The camp which we made our headquarters for several days was an open front shed, the side and back being of logs, while the roof was of birch bark. A large fire in front of the camp renders the most stormy evening cheerful, and after a day's tramp it seems like solid comfort to lie down by a cheerful log fire and watch your guide as he deftly tosses the flapjacks. I read an account in the FOREST AND STREAM a short time since of the manner of flipping flapjacks out West, but it must not be thought that the inhabitants of the Maine woods are at all behind in this accomplishment. Tossing flapjacks over the beam in the camp is nothing to brag of, as in this country the correct method is to toss them up through the smoke hole and catch them outside the camp! This is the story as told by the guides, and if any one doubts its plausibility they can ask "Steve" about it!

The journey down the river is comparatively easy and rapid, for we left camp in the morning and reached Spoff's Camp in good season for supper, having enjoyed the trip immensely.

I will mention briefly at this time an excursion made from Flint's to Lincoln Lake. It is four miles from the camp on the east side of the Magalloway River. There is a good trail through the woods direct to the pond, and Mr. Flint has placed several boats upon the lake. A good shed camp is situated upon a pleasant point, where those can make themselves comfortable who wish to stay over night. Lincoln Lake is a third smaller than Parmachenee, but is a beautiful sheet of water, being remarkably clear and deep; trout are abundant; the scenery magnificent. Mr. Flint claims that he has full control of the fishing in this pond, and takes particular pains to preserve the fish, that sport may be abundant during the fishing season.

Before closing I wish to speak of a new route to the Megalloway, making the journey quicker and much more easy that the route now used. A highway is being built from Dummer to Erroll, N. H., making the distance from the G. T. R. R. at West Milan to the Megalloway River, about twenty-eight miles, over a comparatively level road. This road will be finished some time during the coming spring or summer.

C. T. W.

For Forest and Stream and Rod and Gun.

HALIFAX RIVER, EAST FLORIDA.

We started in a light skiff, S., P. and I, one fine morning in February, from the Cognina landing on Halifax River for a day's fishing. S. and I had bass rods, but P. used a hand line; like most of the Floridians, he thought a rod and reel were too slow. Mercury at 8 A. M. 66 degs., with wind from the southwest. We start early, taking advantage of the ebb-tide to carry us toward the inlet, and so also to have the flood to return with, which, as we used oars, was very important. P. takes the oars amidships, S. the stern, and I the bow of our skiff, and we run swiftly down the West Shore, till we arrive at a large creek, into which we turn, and P. runs her nose on a sand-bank, then, throwing the anchor ashore, he goes off with his casting-net to get mullet for bait. The creek came in from the west, and was about fifty yards wide, at this time of tide showing long stretches of sand-banks. On these flocks of wading birds, curlew, willets and plover, with gulls of various species, were feeding. A flock of brown pelicans were sitting on the sand, apparently asleep, their large bills and pouches resting on the ground. All appeared tame, as if not often molested. On the mangrove trees which fringed the shore sat a pair of white herons, their snowy plumage relieved against the green foliage.

P. rolls up his trousers, throws off his shoes, and wades slowly out into the creek looking for mullet. The casting-net, which these people use with great dexterity, is a circle of netting some eight or ten feet in diameter, loaded with lead at the circumference, and rigged with cords which draw it into a bag. With a circular sweep the fisherman casts it as far as possible; it opens on the water, and sinking rapidly, incloses whatever fish may be beneath. These are secured in pockets of netting around the edge of the net. Much practice and some strength of arm is needed to cast the net, but it is a most efficient weapon, and absolutely necessary to the Florida fisherman, as the mullet—the common bait—cannot be taken with the hook. Also, it requires sharp eyes to see the fish before casting, they being generally near the bottom. At the first cast P. gets five or six mullets, which, taking out of the pockets, he throws on shore. At the second nothing. At the third he gets a small bass. Wading further along at the mouth of a little slough, he captures a dozen good mullets, and returns to the boat. "There's bait enough for all day," he says, as he pushes off. The mullet is the most valuable of the coast fishes here. In the summer it is preferred to any other species as food; in the winter it is poor and flavorless, comparatively. There are several species in these waters, and they are found in immense shoals, almost blackening the surface. Most other fishes, as well as water-fowl and mankind, prey on these helpless and inoffensive creatures, which are only saved from extinction by their numbers, being extremely prolific. The common size is about that of the herring, though they grow, when unmolested, to the weight of four or five pounds. They are very fat in summer, when they are pickled, and make a good substitute for mackerel. The roe of the mullet, when smoked, makes a delicious relish.

S.—"Where are you going?"

P.—"I think I will try at the mouth of the creek for sheepshead till the tide begins to make and bring in the bass. The boys put some clams in the boat."

S.—"Wouldn't fiddlers be better bait?"

P.—"Well, I reckon you can get all you want with clams. We keep along the west shore, where a deep channel runs close to the bank, and at the mouth of the creek, where there is a deep hole and strong eddy. P. tosses the anchor ashore and begins to open the large round clams by a skillful blow on their edge with a heavy knife. "Now," says he, "bait your hooks and fish near the bank." Our rig is two Virginia hooks, with a four-ounce sinker. We drop to the bottom in about ten feet of water. In half a minute each feels a tug. We each reel in sheepshead, which struggle hard and bear downward with short rushes. Mine is a four-pounder, which, with some difficulty, I persuade to come to the surface, and P. lifts him into the boat with the landing-net. S. seems to have a heavier one, which keeps near the bottom. After some minutes' play it is brought to the surface, and proves to be a pair, one of which escapes in the final struggle, taking with him the hook; the one saved weighs about five pounds.

P.—"That was a fine pair of sheepshead, too much for your fine line."

S.—"The line could have held the fish, but the snood was a little frayed, I think."

So we kept on for an hour, during which time we got twenty-five sheepshead, average three pounds; six pig-fish, of one pound each; four blackfish and six whiting, the last two being small species here, perhaps half a pound each, but excellent pan fish. The pig-fish I consider the best of the common coast fishes, and only inferior to the pompano.

Then the fish stopped biting, and we left, keeping down the channel toward the inlet till we came to a long sandbank, which lies between the Halifax and Willeboro' Rivers. On the north side of the bank is the main channel, but on the east the water is shoal. Here we anchored in three feet of water. The tide having turned to flood, our boat swung seaward, and baiting our hooks for bass (Cuttyhunk pattern) we cast as far as possible toward the inlet, leaving the bait on the bottom.

P.—"I think I will try for a bass, too," and, whirling his bait round his head, he cast it seaward about forty yards.

S.—"This is a pretty place to fish, bottom clean, with open water to play your fish."

P.—"We ought to get some bass here if the sharks will let us alone. They are very plenty here sometimes."

We sat quietly with our lines out, in the warm sunshine, fanned by the gentle breeze. Our fellow fishermen, the pelicans, were at work near the inlet, diving for mullet. A couple of ospreys were doing likewise, but as usual were much annoyed by a pair of predatory eagles, which from their watch-tower on a lofty pine on the mainland were looking out for prizes, and seldom missed a robbery of the painstaking fish-hawk. As we were observing one of these chases, suddenly P. beganto haul in his line, and at the end we saw a large red fish struggling at the surface. Before it was secured I felt a tug, and my line was whizzing off the reel, which had

a check to it. After running about thirty yards seaward it turned for the shore. In the meantime P. had hauled in his fish hand over hand, which proved to be an eight-pound bass, which he slapped over the side without ceremony, and then took the gaff and secured my bass, which was a five-pounder. Just as he did this S. hooked one.

C.—"There seems to be a school of them around the boat."

P.—"Yes, they generally run that way—get out your line and keep the school." Which I did, and directly fastened a heavy one which got away after a short run, but I soon had another fast, which I saved—about seven pounds. We got four more before the school left, which seemed to be caused by the appearance of a shark, which took P.'s bait, and after some play, bit off the line and escaped.

P.—"I see more of the brutes coming, and we had better be off, no more fun here."

We turned round the point of the bank, and after going a mile up the other river, entered the mouth of a wide, deep creek coming from the West.

S.—"What is there here?"

P.—"This is a good creek for bass, sheepshead and snappers, or would be if them Smyrna fellows would leave it alone. I see two of their boats up the creek now. We'll try under this bank for a snapper."

We anchored close to the bank in the channel, and baiting with mullet, cast up the creek by P.'s direction, as far as possible. I soon felt something at my hook, which I could not catch, but which kept taking off my bait.

P.—"Them is small snappers, they are hard to hook, but we'll hitch a big one directly. There's one!" and he hauled in a red-sided brilliant fish, shaped something like a black bass, of about five pounds weight, which came in reluctantly, and snapped its teeth viciously when in the boat.

P.—"That's a fine snapper; one of that size will make your reel hum!"

S.—"And I have got one—that is if he don't get under the bank. There, what shall I do now, he is under that quay with my line?" There was nothing to do but to break the line, the fish being too strong to be hauled out of his hole.

Just then I hooked a snapper of about two pounds, which I was able to keep away from the bank and kill in open water. Then I got one of four pounds, and S. found himself fast to another, which he saved after a hard fight; this was a five-pounder. After this the snappers declined our offers, and after taking lunch we proceeded up the creek and fished at the mouth of a slough for bass. Presently I found my hook fast to the bottom, as I thought, but, after pulling on it, it moved slowly away. I tried to check the fish, but it was too strong and increased its speed.

P.—"Ah! Mr. C., you've got a stingray, and a big one." Some fifty yards of line were taken out, when the fish stopped. I tried to recover my line, when the creature rose to the surface and thrashed about with his whip-like tail. After many runs back and forth it went to the bottom, and there it stuck. We got up the anchor and put the boat over the fish; then P. stirred up the brute with an oar. He started at once and ran off toward the inlet, and, taking out my whole line of 100 yards, it parted near the hook. "And a good riddance," said P.; "but that 'ray gave you plenty of sport." "More like hard work than sport," said I. "Why, what's the odds between bass and stingray, as long as you have the fun of playing them. Now, here's a big shark come after that 'ray; he thought the 'ray was in trouble and he could get a bite out of it; very fond of a 'ray is a shark. Well, we might as well go, for that shark will scare all the bass."

We went up the creek a mile, and then turned north into another, which led into a labyrinth of sea islands and creeks, the islands low and covered with salt grass and mangroves. P. anchored the boat in a deep hole, where he said if we got a bass it would be a big one. We fished about half an hour without anything showing itself; then I felt a heavy surge at my bait, and found myself fast to a big fish. It ran off thirty yards without a check, then turned and made for the boat, faster than I could reel in my line. When within a few yards of the boat the fish took another run, and showed a tail about a foot wide above the surface. After I had been playing him about twenty minutes S. hooked another big one, and there we fought those fish, I at the bow and S. at the stern, for twenty minutes more, when my bass turned over and gave up the battle. P. gaffed and brought him into the boat, the largest bass I had ever taken. S. secured his in about half an hour or so, and the pair made a great show when we got back to the landing. Mine weighed thirty pounds, and my companion's twenty-nine, and we had taken in all nearly 200 pounds of fish. S. C. C.

THE PIPE STONE QUARRY.

I NOTICE in No. 11, current volume of your paper, a communication over the signature of "M. Gore," entitled "The Great Red Pipe Stone," and being in possession of a copy of "Illustrations of the Manners, Customs and Condition of the North American Indians," written by George Catlin, and published many years ago in London, and from which the legends and traditions set forth in the paper referred to are boldly taken without acknowledgment, and acting upon the presumption that many of your readers have never seen this rare work, I give below an account of Mr. Catlin's trip to the Red Pipe Stone Quarry, and the dangers and difficulties he encountered on his way:

"On our way to this place my English companion (Robert S. Wood) and myself were arrested by a rascally band of the Sioux and held in *durance vile* for having dared to approach the sacred fountain of the pipe! While we had halted at the trading hut of Le Blanc, at a place called *Traverse des Sioux*, on the St. Peter's River, and about 150 miles from the Red Pipe, a murky cloud of dark-visaged warriors and braves commenced gathering around the house, closing and cramming all its avenues, when one began his agitated and insulting harangue to us, as follows:

"'My friends, I am not a chief, but the son of a chief. I am the son of my father—he is a chief—and when he is gone away it is my duty to speak for him; he is not here, but what I say is the talk of his mouth. We have been told that you are going to the Red Pipe Stone Quarry. We come now to ask for what purpose you are going, and what business you have to go there.' (How! how! was vociferated by all of them, thereby approving what was said, giving assent by the word how, which is their word for yes.)

"'Brothers, I am a brave, but not a chief. My arrow stands in the top of the leaping-rock! All can see it, and all know that Te-o-kun-hko's foot has been there.' (How! how!)

'Brothers, we look at you and we see that you are che-mo-kemon captains (white men officers); we know that you have been sent by your Government to see what that place is worth, and we think the white people want to buy it.' (How! how!)

"'Brothers, we have seen always that the white people, when they see anything in our country that they want, send officers to value it, and then, if they can't buy it, they will get it some other way.' (How! how!)

"'Brothers, I speak strong, my heart is strong, and I speak fast. This red pipe was given to the red men by the Great Spirit—it is a part of our flesh, and therefore is great medicine.' (How! how!)

"'Brothers, we know that the whites are like a great cloud that rises in the east and will cover the whole country. We know that they will have all our lands; but if they ever get our Red Pipe Quarry they will have to pay very dear for it.' (How! how! how!)

"'Brothers, we know that no white man has ever been to the Pipe Stone Quarry, and our chiefs have often decided in council that no white man shall ever go to it.' (How! how!)

"'Brothers, you have heard what I have to say, and you can go no further, but you must turn about and go back.' (How! how! how!)

"'Brothers, you see that the sweat runs from my face, for I am troubled.'

"About twenty of them spoke in turn, and we were doomed to sit nearly the whole afternoon without being allowed to speak a word in our behalf until they all got through. We were compelled to keep our seats like culprits and hold our tongues till all had brandished their fists in our faces and vented all the threats and invective which could flow from Indian malice, grounded on the presumption that we had come to trespass on their dearest privilege—their religion. Their superstition was sensibly touched, for we were persisting in the most peremptory terms in the determination to visit this, their greatest medicine (mystery) place. 'This red stone was a part of their flesh; it would be sacrilegious for white men to touch or take it away; a hole would be made in their flesh, and the blood could never be made to stop running.' My companion and myself were here in a fix, one that demanded the use of every energy about us. In this emergency we mutually agreed to go forward, even if it should be at the hazard of our lives. We heard what they had to say and then made our own speeches, and at length had our horses brought, which we mounted and rode off without further molestation. The rock on which I sit to write is the summit of a precipice thirty feet high, extending two miles in length, and much of the way polished, as if a liquid glazing had been poured over its surface. Not far from us, in the solid rock, are the deep impressed 'footsteps of the Great Spirit (in the form of a track of a large bird), where he formerly stood when the blood of the buffaloes that he was devouring ran into the rocks and turned them red.'

"At a few yards from us leaps a beautiful little stream from the top of the precipice into a deep basin below. Here, amid rocks of the loveliest hues, but wildest contour, is seen the poor Indian performing ablution; and at a little distance beyond on the plains, at the base of five huge granite boulders, he is humbly propitiating the guardian spirits of the place by sacrifices of tobacco, entreating for permission to take away a small piece of the red stone for a pipe. Farther along, and over an extended plain, are seen, like gopher hills, their excavations, ancient and recent, and on the surface of the rocks various marks and their sculptured hieroglyphics—their wakons, totems and medicines.

"The Medicine (or leaping) Rock is a part of the precipice which has become severed from the main part, standing about seven or eight feet from the wall, just equal in height, and about seven feet in diameter. It stands like an immense column of thirty-five feet high, and highly polished on the top and sides. It requires a daring effort to leap on to its top from the main wall and back again, and many a heart has sighed for the honor of the feat without daring to make the attempt; some few have tried it with success, and left their arrows standing in its crevice, several of which are seen there at this time; others have leaped the chasm and fallen from the slippery surface on which they could not hold, and suffered instant death on the scraggy rocks below. Every young man is ambitious to perform this feat, and those who have successfully done it are allowed to boast of it all their lives.

"The position of the Pipe Stone Quarry is in a direction nearly west from the Fall of St. Anthony, at a distance of three hundred miles, on the summit of the dividing ridge between the St. Peters and the Missouri rivers, being about equi-distant from either. This dividing ridge is denominated by the French the 'Côteau des Prairies,' and the 'Pipe Stone Quarry' is situated near its southern extremity, and consequently not exactly on its highest elevation, as its general course is north and south, and its southern extremity terminates in a gradual slope. * * * * * * The full extent and true character of these vast prairies are but imperfectly understood by the world yet, who will agree with me that they are a subject truly sublime for contemplation when I assure them that a coach and four might be driven with ease (with the exception of rivers and ravines, which are in many places impassable) over unceasing fields of green from the Fall of St. Anthony to Lord Selkirk's establishment on the Red River at the North; from that to the mouth of the Yellow Stone on the Missouri; thence to the Platte to the Arkansas and Red rivers of the South, and through Texas to the Gulf of Mexico, a distance of more than three thousand miles."

Nothing but a wholesome fear of the waste-basket induces me to close this article (already too long), and I will only add a chemical analysis of this wonderful stone.* The calumet made from the red stone has been familiar to nearly all the Indian tribes that ever inhabited this Continent, and are of two different kinds: the fumes from one herald unrelenting war, and the smoke from the other encircles the Olive-branch of Peace. A. L. Rose.

Chicago, Nov. 20, 1878.

*In *Stillman's American Journal of Science*, Vol. XXXVII, p. 394, appears a chemical analysis of the red pipe stone, brought by George Catlin from the Coteau des Prairies in 1836, submitted to Dr. Jackson, of Boston, one of our best mineralogists and chemists:

Water	8.4
Silica	4.2
Alumina	28.2

IS IT HERRING SPAWN?

Washington, D. C., Feb. 1, 1879.

Mr. Editor: I am much interested in the communication of your correspondent, Mr. Philip Vibert, of Gaspé, in regard to the spawning of herring in the Bay Chaleur. I would, however, like to be assured that this spawn was actually derived from that fish. It is a well-known fact that herring spawn in the spring in the Gulf of St. Lawrence and about Newfoundland; but this act is exercised in the summer (as late as the middle of July to the middle of September, or a little later) in the Bay of Fundy; still later and later as you proceed southward, October being the season on the coast of Massachusetts, and December, and even January, in the vicinity of Nantucket and Noman's Land.

The question is, however, whether the spawn spoken of as washed upon the beach is really that of the herring. In the first place, the eggs of the herring adhere to anything they touch after sinking to the bottom, sticking with extreme tenacity to objects at the bottom. I have repeatedly brought them up by the dredge from two to ten fathoms in depth adhering to pebbles, sea-weed, shells, etc., and I can hardly imagine their being separated so as to form wind-rows, as suggested. If the egg is of the size of a small pea it certainly cannot be that of the herring, as the dimensions of the egg of that fish, as is well known, are considerably smaller than those of the shad.

It is not at all improbable that these eggs belong to some species of Cothis, or sculpin, which have large eggs and which spawn in immense quantities. Precisely similar masses of their eggs are thrown upon the shores of New England, especially in the vicinity of Wood's Hole, which being hatched out under my direction have proved to belong to several distinct species of that animal. It would be a matter of extreme interest to have some of these eggs in different stages of development of the young, and still more, to have some of the young fish that have emerged from them; and if Mr. Vibert will kindly send a bottle of them, preserved in alcohol, to the Smithsonian Institution in Washington, I will take great pleasure in having a critical investigation prosecuted and a report made of the result.

Very truly yours, Spencer F. Baird.

Shad Spawning in October.—We have received from Professor Spencer F. Baird the following note of shad spawning in October. He is desirous of ascertaining whether, and to what extent, the facts therein contained coincide with the observations of other fishermen. We hope to hear from any of our readers who may have any information to give upon the subject. The letter is as follows:

Saybrook, Conn., Jan. 29, 1879.

Prof. Spencer F. Baird—*Dear Sir:* I am an old fisherman, having been engaged in that business on the salt water and on the great lakes of the West for many years, and last fall found something new in relation to common river shad. I wrote to Mr. Wm. M. Hudson, Chairman of the Board of Fish Commissioners of this State, but he could not explain or account for it, and that is my excuse for writing to you. I am not a scientist, as you will readily see, but having forty-five years experience in shad fishing and twenty years on the lakes, I know something of the habits of fish and am interested in anything new about them. I set some nets in October last along the shore of Long Island Sound near the mouth of the Connecticut River for the purpose of catching striped bass. I at once began to catch shad, full grown shad, some of them just ready to spawn. On the morning of October 20 I took out of one net twenty or more. Some would spawn in two weeks, and all along from that time, I should judge, to five or six. They seemed to be bound in the river for that purpose. This is new to us here. Never knew spring fish to spawn in the fall or fall fish to spawn in the spring. Do you think artificial propagation has had anything to do with it? Will you please give me your opinion and oblige

Yours respectfully, Frederick Kirtland.

Wisconsin—*Madison, Jan.* 20.—*Editor Forest and Stream:* At the present time there is a bill pending before the Legislature of this State to make an appropriation for the construction of a State fish-hatching house to be located in Milwaukee. The latter city proposes to give to the State the site and water free of charge. The water used, at the city water rates, exceeds in value $1,000 per annum. This is a liberal offer on the part of Milwaukee. The State Fish Commissioners report that this additional hatchery is needed. The hatching of whitefish is the leading feature of their work, and must ever remain so. Large numbers of the plant of two weeks ago are now found on beds heretofore barren. Whitefish and lake trout can only be hatched successfully in the cold waters of the lakes; the water of our inland springs is of too high a temperature to hatch these varieties. At the hatchery located near this city very encouraging work has been done. Rover.

Com. Welsh proposes to stock the Ashland Bay with 20,000 California salmon.

—It is generally believed that Seth Green's book on Trout Culture is out of print, but we believe a number of copies can still be had by writing to the author at Rochester, N. Y.

American Fish in France.—*A Foreign Compliment To Fred Mather.*—We have received the following letter from the Secretary of the "Société d'Acclimatation," of Paris, which will be read by fish culturists with much interest. All of them will congratulate Mr. Mather upon the compliment paid him, which, we need not say, has been fully earned by faithful persistent devotion to the charges with which he has been intrusted, combined with that practical knowledge of his business which can alone ensure success:

Editor Forest and Stream:

Your issue of the 28th of November alluded to an article of the London *Field* about the piscicultural prizes recently awarded among the annual prizes of the French Acclimatization Society.

Permit me to say that this article of the London paper is erroneous. Mr. Collier has, indeed, obtained a prize (a silver medal and not a gold one) for his apparatus, suitable for the transport of fish ova; but never has that apparatus been employed for transporting *Salmo quinnat* ova,

but only the *Salmo fontinalis* eggs generously given last year to the society of Mr. Seth Green, of Rochester.

As for the *Salmo quinnat* ova sent in 1877 by Prof. Spencer F. Baird, the endeavor was a failure. All the eggs have been lost for want of being packed in ice. But recently a new lot has reached Paris in most splendid condition, and this only, thanks to the excellent care of Mr. Fred Mather, who brought them to Europe in a special refrigerator. Almost all those eggs have been hatched, and the fry are now very lively. In fact, this time the operation is a real success, and all the merit is indebted to Mr. Fred Mather, to whom our society has utmost gratefulness.

I remain, dear sir, truly yours, RAVARET WATTEH, Sec.

Natural History.

FISHES OF THE DEEP SEA.

AT the meeting of the Christiana Society of Science on the 13th of December, Mr. Robert Collett communicated that the material of deep water fishes collected during the last Atlantic expedition amounted to thirty-three species, and proved to be of great interest for science, as the fish had, with a few exceptions, been taken from depths which no arctic fishes had previously been obtained. The apparatus employed was the so-called trawlnet, constructed on the same principle as that employed by the English fishermen on Doggershank. Fish were taken up with that apparatus from depths of 1,400 and 1,500 fathoms. Five species proved to be entirely new to science, and it was necessary to classify one of them under a special new genus. This was caught at a depth of 1,200 fathoms, and was about one foot long. While alive it was beautifully rose-colored all over, but of so soft and gelatinous a substance that it was half transparent, and the heart could be seen performing its functions; and large portions of the brain, the entrails and the whole back-bone were visible through the skin. The abdominal fins were transformed into two long, split threads, which gave the fish a very peculiar appearance. It was named *Rhodichtys regina*, and belongs to a group of the genuine deep water fishes, which is chiefly limited to the tropic seas. One of the new species was taken up in the trawlnet from a depth of 700 fathoms, but in so mutilated a condition that it has not yet been positively classified. It probably belongs to a somewhat divergent group of *blennioides* or to the genus *Liparides* (remora). Among the other species several were known only through single specimens scattered here and there in museums, and the descriptions of which are generally incorrect and defective. We were therefore quite unprepared to find the genuine arctic genus *Lycodes*, of which, up to the present time, only a few specimens have been found near Greenland and in other places in the Polar Sea (almost always taken by chance from the stomachs of sharks), spread as it appeared in quantities everywhere at these great depths, where the temperature of the water keeps under 0 deg. It has only been the lack of suitable apparatus, which has until now prevented the discovery. Of this genus, some species of which are more than two feet long, six species were found, two of which were new to science. The material collected has in consequence been of very great interest, and will be described in detail in the general report, for the publication of which the Storthing has granted the necessary means. It will probably be an illustrated folio with English and Norwegian text. The most of the deep water fishes caught by the expedition will be there represented. In conclusion, we will add that examinations of the animal remains still to be found in the ventricles of these deep water fishes have contributed much to the knowledge of the pelagic evertebrates' extension in the Polar Sea.

Washington, Jan. 24, 1879. S. F. BAIRD.

WHIPPOORWILL AND NIGHTHAWK.

BARABOO, WIS., Jan. 14, 1879.

EDITOR FOREST AND STREAM:

I never was so much surprised as when I saw your answer to T. E. F., in your issue of Jan. 9, in regard to a whippoorwill being distinct from a nighthawk.

Our best authorities in our part of the country claim that they are one and the same thing, and as for myself I have killed a good many whip poorwills and I also fail to see the distinction. Will you please describe the difference?

ED. HOLLAND.

[We cannot spare the space to go into a detailed description of both birds and must refer our correspondent to some work on ornithology, where he will find the information which he wishes. The two birds may, however, be readily separated if it be borne in mind that the whippoorwill (*Antrostomus vociferus*) has long bristles, or "whiskers" along the edge of the upper jaw, has a rounded tail, has no large white patch on the quills of the wing and has plumage of a general grayish tone, with perhaps a tinge of rufous. The nighthawk (*Chordeiles popetue*) has the rictal bristles short and inconspicuous, the tail somewhat forked, large white wing patches, and the general cast of the plumage quite dark, and without any pronounced shade of rufous. The whippoorwill is nocturnal and very seldom seen abroad during the day; the nighthawk flies at all times of the day, but especially toward evening and in cloudy or rainy weather. No one who has ever compared the two could possibly mistake one for the other.

Our correspondent will see that not only are the two species distinct, but they even belong to different genera. We are sorry for the "best authorities," but we think that after looking up the matter they will "acknowledge the corn."—ED.]

THE BIRDS OF SOUTHERN TEXAS.—The field ornithologist whose collecting ground is near our Southern border enjoys exceptional advantages. Writers on ornithology in this country have generally agreed to consider as North America only that portion of the continent which is north of the boundary line between Mexico and the United States, and it is obvious that near our Southern border line will occur the most favorable opportunities for observing, within our territory, the presence of stragglers or occasional visitors from the great South American region. These opportunities have recently been taken advantage of by an accomplished ornithologist.

Perhaps no one of all the great army of working ornithologists in this country has recently added so many new facts to our knowledge of this science in North America as Dr. J. C. Merrill, U. S. A. Within the past two years and a half he has increased our United States avifauna by no less than twelve species of birds not previously known to belong to it, and has, besides this, contributed a considerable amount of novel information concerning the habits of other species, of which, hitherto, our knowledge has been very meagre. Dr. Merrill has been most fortunate in his collecting ground, and no one can read over his recent "Notes on the Ornithology of Southern Texas" without coming to the conclusion that he has been most earnest and faithful worker as well.

His list, which has been recently sent out from the Government Printing Office as a part of the "Proceedings of the United States National Museum," contains notes on 252 species of birds observed in the vicinity of Fort Brown, Texas, with accounts more or less full, as the subject may demand, of their habits, distribution, nests and eggs, etc. In the preparation of this list Dr. Merrill has had the able advice of Dr. T. M. Brewer and Mr. R. Ridgway, to whom he returns, in his prefatory note, hearty thanks for assistance given.

The work is one of the greatest interest, and all ornithologists who have not seen it will, we are sure, thank us for bringing it to their notice. A very great portion of the matter contained in it is quite new, and to any one interested in birds it is most attractive reading. The species added to the bird fauna of North America by Dr. Merrill are the following: *Thryothorus ludovicianus* var. *berlandieri, Cyanospiza, versicolor, Myiarchus erythrocercus* var. *cooperi, Amazilia fusci-caudata, A. yucatensis, Nyctidromius albicollis, Sturnella magna* var. *mexicana, Molothrus aneus, Buteo albi-caudatus, Parra gumnostoma*, and *Podiceps dominicus*.

Dr. Merrill's observations extended over a period a little less than two years and a half, from February, 1876, to June, 1878, and we can well perceive from the excellent record before us that he has made the very best possible use of his time.

ORNITHOLOGICAL PAPER.—We have received from the author, Mr. Geo. N. Lawrence, two interesting papers, which contain descriptions of new birds, collected by Mr. Ober during his recent explorations in Dominica, Antigua and Barbuda. In the "Annals of the New York Academy of Science," vol. I., No 8, Mr. Lawrence described a new species of chimney swift, *Chætura dominica*, which, as might be inferred from its name, was taken by Mr. Ober in the island of Dominica. It was at first referred to *C. poliura* by Mr. Lawrence, but further study has led him to regard it as hitherto undescribed. The other paper referred to is from the "Proceedings of the United States Nat'l Museum," and is a catalogue of the birds of Antigua and Barbuda, from collections made for the Smithsonian Institution by Mr. Fred. A. Ober. Forty-two species are reported from Antigua, of which one (*Speotyto amaura*) is new, and thirty-nine are mentioned from Barbuda. The burrowing owl is a curious form, not distantly related, it would appear, to *S. quadalcupensis*. Mr. Lawrence notes some interesting facts in regard to the plumage of the common quail of Antigua, which presents points of resemblance to both Cuban and the ordinary North American form of *Ortyx*. Both of these contributions to our knowledge of the ornithology of this group of islands are very interesting, and Mr. Lawrence must be congratulated on the number of new forms which he has been able to announce from these new fields.

THE DOMESTICATION AND ARTIFICIAL PROPAGATION OF QUAIL.—One of our sub-editors, who seems to have lost his reckoning in a fog, answered an inquirer last week by saying that "we"—that is, *he*, of course, never knew of quail breeding in confinement. Now if he and the anxious inquirer will turn back to our files of February 12, 1874, just five years ago, they will find very full instructions for breeding quail in confinement, with diagrams of coops and hatching houses which had been most successfully used by the West Jersey Game Protective Society. These diagrams and instructions were subsequently republished by request in our issue of Jan. 7, 1875. Of course our early readers will recall them. Perhaps we can do our more recent friends no better service than to republish them again in 1879. Independent of this particular article, we have time and time again printed statistics of the ease and guaranteed success with which quail may be propagated in confinement, and the query of our correspondent who "wants to know," does as little credit to his scrutiny of our columns (unless he be a new subscriber,) as the answer does to the memory and application of our sub-editor who got astray in a fog. Of course such incorrect and improper replies to correspondents are very annoying as, if often repeated, they would shake confidence in a department upon which they have always placed almost implicit reliance, and in which we have taken especial pride. The managing editor confesses delinquence in not exercising more careful scrutiny of the manuscript offerings and th printer's proofs, and promises closer surveillance in future.

Our correspondent of last week is informed that the preferred natural food of quail is worms and bugs. The best artificial food is bird seed mixed with a little wheat, gravel, sand, clods of dirt, and fresh water every day. Feed no bread.

In answer to your query respecting the breeding of quail, I beg to state that a friend of mine on Long Island has raised fourteen quail, and they are in prime condition. They were bred in a wire cage, seven feet by twelve, with stout branches for roosting; also a gentleman living in Ridgewood, L. I., brought up some California quail. As to feed, could give you the address of said parties, who could give you further information. M. ENGLERT, 35 Delancy street.

New York, Feb. 1, 1879.

I had for two years a pair of quails which I kept in a warm room, where I had also a number of canaries. The first year the hen laid at different times about twenty eggs, which were deposited in different parts of the room; but they did not try to build a nest, although I had placed the necessary materials in the room. The second year they made a regular nest in the corner of the room, and after laying eighteen eggs, both hen and cock-bird commenced setting on them, and in due course of time I found one morning seven young birds hatched, all of which were regularly brought up until full grown by the parent birds. ALBERT C. ROUSSEL.

Philadelphia, 626 *Spruce street, Feb.* 1, 1879.

The Kennel.

THOSE MINNESOTA FIELD TRIALS.

A BIT OF UNWRITTEN HISTORY.

NEW YORK, Jan. 26, 1879.

MR. EDITOR:

Last fall I forwarded to you from the Field Trial Grounds at Westport Lake, Minnesota, a "full and accurate" report of the trials there run. The report was full, (as you will see by referring to back files,) because I gave the state of wind and weather at morning, noon, and night; the lay of the land; the duration of each dog's performance; the style, pace, and condition of each dog; and specified each point or demerit as it was made, as well as the character of the ground where so made—whether in stubble, grass, slough, weeds or brake. It was accurate because my observation was careful, and because the scores, as sent to you, might be termed official, having been taken from the score books of one or other of the judges, and either handed to me by them directly, or through Mr. Lincoln, the Superintendent of Trials. They were the same scores which I sent to the St. Paul *Pioneer-Press*, for which paper I was also reporting. I followed the dogs steadfastly, either by wagon or on foot, from the beginning of the first day to the end of the last, until after all persons had deserted the ground except the handlers, the weary judges, the Editor of the Chicago *Field*, and myself. As an eye witness and participator, I was competent to relate what I saw, notwithstanding I "kept my place seventy-five yards to the rear" of the judges—a circumstance sneeringly referred to by Dr. Rowe, of the *Field*, as necessitating a deficient report on my part. Throughout the first three days I secured the services of Mr. S. B. Dilley, of Lake City, Minnesota, who had done similar service for Dr. Rowe the year before, and whose excellent knowledge of dogs made his estimate of their performances valuable.

The attendance on the first day was fair, and on the second day had increased to its maximum, many ladies and family parties being present. Excellent order was preserved. The seventy-five yard rule was strictly enforced, and Mr. Dilley and myself, in common with other spectators, kept the regulation distance in rear of the judges. I had no idea that reporters could claim special rights or privileges, for I could see the manifest propriety in *all persons* being kept aloof from the judges, and from any communication with them whatever which might prejudice or influence their decisions. In no kind of competition is such an observance so imperative as in dog field trials, for the duty of the judges requires intent and continued inspection and mental application throughout. Reporters are supposed to construct their reports upon their own independent opinions, merely receiving the official results, at the close; but Dr. Rowe, from the very outset, was so constantly in company with the judges, in and out of their wagon, and afterwards in their tent, and seemed so much to assume the *direction* of the trials that I felt that the most conscientious judges could not help be influenced. He received from them the decision on each point the instant it was made, and signalled it by flag to the curious spectators "75 yards in the rear." So conspicuously was he intrusive and officious—so indifferent to the prerogatives of the judges, that every disinterested person urged me to go to the front; and on the third day even the judges, all of them, told me the whole field was mine: they wished fair play and no favoritism. Their annoyance at the dictation and meddling of Dr. Rowe manifested itself repeatedly, and I am inclined to attribute their severe discrimination and their scrupulous stickling for the disputed point in the controversy which has resulted respecting the dog Nellie's performance, not to a struggle in behalf of preferred favorites, but to a consciousness that the close intimacy of Dr. Rowe would expose them to charges of preconcerted verdicts by those who were jealously watching the whole business. Is there a single reader of this paper or that,

or member of this or that Kennel Club, or owner or handler of dogs, who can see the propriety of an editor of any paper mixing up with the management of events upon which he is expected to pass criticism in his capacity of chronicler? Is a man who does so a fit person to arbitrate upon vital questions? Can those who have the interests of sportsmen at stake *afford* to hang their confidence on one who assumes the functions of counsellor, reporter, judge, and juror, all at the same time? Disorder makes all laws and methods a farce.

For the first two days of the Trials I "kept my place in the rear," feeling that there was some advantage in hearing the comments of others, and in being in company with Mr. Dilley, with whom I could compare notes. Finally we reached the afternoon of the third day and the supreme moment when the performances of Sanborn's Nellie excited what has since proven to be a considerable tempest. All the spectators had left, from lack of interest in what seemed to them to be aimless work, so far as the main object of the Trials was concerned. Judge Mulliken and Mr. Dilley alone remained of all the members of the Minnesota Kennel Club under whose auspices the Trials were held! Jockeying, pottering, the meddling of outsiders, sharp practice, and bickerings, had driven them off in disgust. Under such circumstances, as is usual when numbers are small, discipline became lax, regulation distances were disregarded, and all hands came to close quarters with the dogs. When the opinion of the three judges became divided on the merits of Nellie, (Whitford vs. Davidson and Mulliken,) Dr. Rowe's peremptory dictation became so exasperating and he was so manifestly out of order that the judges were obliged to read him the rules. A violent altercation followed between Messrs. Rowe and Davidson, and the bad blood then engendered has led to Dr. Rowe's persecution of Mr. Davidson through his paper, the Chicago *Field*. The Dr. uttered threats then, and afterwards at lunch the day following, of such positive character that their meaning was plain enough to the half dozen or more persons who heard them. On the latter occasion Mr. Davidson's forbearance alone saved Dr. Rowe a drubbing. The virulence then rankling came to the surface more than once before the Trials ended, and when the gentlemen parted it was jointly understood that they were to meet again in the lists. It has never occurred to me that the judges were anything but fair-minded and conscientious in their decisions, and I never thought of going behind the returns for motives. Whatever the dog's real merits were they have never yet been settled by a harmonious verdict. Therefore, there has never been practically *an official score*. Though siding with Mr. Whitford, I accepted the score handed to me at night by Mr. Davidson, because I believed Mr. Whitford to be in the minority, and published it as I received it. It must be borne in mind that Mr. Davidson was persuaded at the time of trial to allow the point claimed for Nellie, and that under his concession Mr. Sanborn was induced to put her down, after he had once withdrawn her, under dissatisfaction. But although the point was allowed on the field, it was not so allowed on the final score; and all the newspaper controversy and the triangular cross-fire between the judges, therefore settles nothing, nor ever will—either as to the merits of the dog's performance or the sagacity of the judges themselves. As to the *integrity* of any of them, it is nonsense to arraign it. Questions of veracity and charges of remissness ought to be courteously put out of sight. I assume to know nothing of any preconceived prejudices of theirs in favor of this or that strain of dogs. I do not allow such considerations to enter into the merits of the question. They are inspired by jealousy. An honest judge rates his trial dogs by their performances, and not by his preferences. It seems to me that the present controversy between the judges is of forced growth, stimulated, like the mushroom, by the innate dirt and deviltry of that poor latent human nature, which, like dog nature, forces two blameless creatures to tackle and tear each other without previous grudge or animosity. As for Dr. Rowe, I give him no credit for the part he has taken in the debate. He has championed no principle, no interest, no "blue blood," nor anything but bad blood. He has merely cried "Steboy!"

In arraigning a brother editor, (for the first time in my life,) I feel that I tread on delicate ground; but I plead that I am merely defending myself from his unprovoked and undeserved attacks on me, as well as the principle of good management and the integrity of competitors. I stand also in front of those honorable gentlemen, Messrs. Mulliken, Davidson and Whitford, the judges of the Minnesota Field Trials, who have been so involuntarily drawn into personal altercation by a designing disturber. May their differences be soon reconciled, and may they live to judge at many a coming Bench Show and Field Trial. HALLOCK.

FROM MR. DAVIDSON.

EDITOR FOREST AND STREAM:

By Mr. Whitford's letter in a Chicago paper of Feb. 1, he seems to indicate that Mr. Mulliken and myself were unable to keep our scores at the Minnesota Field Trials, and therefore had to rely on him. We were not only able to do so, but sharp enough to hinder him from playing his little game successfully. In comparing over our respective figures in Tempest's score, the only difference was that Mr. Mulliken and myself allowed Tempest ½ point more for nose than Jennie and ½ point less for quartering than Mr. Whitford allowed her, which made our scores the same in the aggregate; but on asking him how much he made Tempest's score, he stated 44½, less 2 for a false point, making her net total 42½. He was then asked how much he had Jennie's score, our figures of merit being the same on her score, when he said 43½. When asked to explain how Jennie could have 43½ and no fraction in her regular score of merit (she having no demerit), he had suddenly forgotten something. When asked how Tempest's score figured up only 42½, he again recollected something, and his mutilated score show these to be the facts. In making out the score to give to Mr. Lincoln, he remarked that inasmuch as our scores all agreed in the aggregate, he might as well make his the same as ours, and I suppose he did so; and neither brass nor falsehood can change it.

Monroe, Feb. 1, 1879. JOHN DAVIDSON.

THE MINNESOTA FIELD TRIALS.

ST. LOUIS, MO., Jan. 20, 1879.

EDITOR FOREST AND STREAM:

Mr. Davidson furnishes a good example of "A guilty conscience needs no accuser," when, in reply to my charges against him in Chicago *Field*, he assures the readers of FOREST AND STREAM that he has been longing for the attack. Instead of meeting the issue squarely and attempting to prove the charges without foundation, he branches off into a mild form of his malicious statement about Mr. Morgan and myself shooting and shipping birds from the preserve. At Sauk Centre the register of the hotel will show Mr. Morgan and myself were quartered in the town Saturday and Sunday night, and for Mr. Davidson to infer that we could drive fifteen miles Monday, locate, shoot and ship birds enough before Tuesday morning to pay for a team to take them to town is a matter almost too ridiculous to talk about now, if it had anything whatever to do with the grave charges against Mr. Davidson. The point he attempts to make is, that Mr. Morgan being a winner in two stakes, might reflect somewhat upon the judges, particularly upon me. If Mr. Davidson or any one else will say Prairie Belle was not head and shoulders above any pup in the nursery stakes, I will at least show her place was won fairly and under the eyes of all three judges, much to the grief of Mr. Davidson.

In the case of Friend I took the precaution to place myself above suspicion by absolutely refusing to officiate at her trial, notwithstanding Mr. Morgan had asked me to follow her, saying he could neither get a fair trial nor decent treatment at the hands of Mr. Davidson. All the credit she received from me was one point. Mr. Morgan claimed another, which I did not allow him, as I could not see the dog on her point, although he claimed she was standing, and a bird arose in front of where I saw her charged.

For the benefit of the curious, I will say I shot about two hours with Mr. Morgan over dogs *not run in the trial*. Had I shot a month with him over the very dogs he ran, the comparison Mr. Davidson attempts to draw—viz., his shooting with Mr. Whitman over Tempest—would not hold good, as Mr. Davidson was at that time an appointed judge, while I did not receive my appointment until Tuesday morning, the day of the trials.

But getting to matters more serious, I will briefly state charges, which, if proven, are reasons why he should not be encouraged by sportsmen. If I fail to prove my charges thoroughly true, I am willing to step down and out after asking your readers to receive Mr. Davidson as of yore, when he was known as "Honest John." For the purpose of showing that there was method in Mr. Davidson's madness, so frequently displayed at the Minnesota trials, I might call upon many to testify about what they know of his holy horror for pure field trial setters of Mr. Smith's breeding; his decided dislike for Mr. Sanborn's dogs; his jealous hatred of the Campbell dogs, and how he felt toward the Laverackes; but this is not necessary, as I prefer to fight him with his own fire; and to go back of the returns, I give an extract from his letter to me on the subject. He says: "I have concluded to keep to the English 'and more' to my own kennel now. I have got all the outcrop I want at present, and think, with Afton for my stock dog, I care for none of them. My pups out of Doll by my old native Dash can clean outrange Clip Leicester-Dart I ever saw in the field." At the time he or any wrote this the pups he speaks of were nine months old. He goes on to say: "The field trial setter, I admit, beats the native in two places—first, in running in the newspapers imaginary; and second, in the parlor, making a good score when the running in the field is over. They run best where there is no game." Writing of the Nashville trials of 1877, he says: "With the same judges next year, I do not think there will be a single entry of any strain but field trial and Campbell." From the bitter manner in which he speaks and writes of these dogs, one would naturally conclude he was scarcely qualified to judge them in the field. It looks a little suspicious, at least, and forms a good foundation for his vowed intention to beat the dogs he hated if he had an opportunity. This is rather a serious matter, but for the correctness of the circumstances and a quotation from his letter I am personally answerable, and will not trouble you with a certificate of an unknown expert. To show that his intentions to beat some of the dogs at Minnesota were premeditated, it may not be out of place to refer some of your readers to a report of the sportsmen's meeting held last April in Baltimore for the purpose of conferring with the Baltimore Kennel Club in reference to their holding a field trial, where it is recorded that Mr. Davidson, Dr. Rowe and myself were strong advocates for one judge, and as our remarks upon this point seemed to meet the approbation of the B. K. C, and the gentleman present who proposed to compete, it was almost a fixed fact that if the event came off there would be but one judge, and that judge would be Mr. Davidson; the subject was talked and written about in such a manner that Mr. Davidson really expected the appointment. Right in the face of this, within a month after the meeting, Mr. Davidson, with a full knowledge of the fact that I would compete and would not run any field trial or pure Laverack setters, wrote me the following bid for my assistance in getting him the appointment: "I will make you a small bet that neither the puppy nor champion stakes at the M. D. field trials will be won by a pure field trial or pure Laverack dog, provided the one judge system is adopted."

His prejudices against Mr. Smith's dogs were so strong that he even went so far as to circulate a report to the effect that two of the judges at Nashville last year were reciprocants of promised puppies each as presents from Mr. Smith. With these facts before me I was prepared to see Mr. Davidson's jealousy rule his better judgment at the Minnesota Field Trials. Taking up that event where he left off, he is positive in his assertion that the score in the nursery stakes was taken from my score, that is the official scores which have been published, and to show what my score was, he has an unknown attorney-at-law, who considers himself a good judge of handwriting, certify that the score published by "Shamrock," and now on exhibition at Mr. Davidson's, is my score. What does all this signify? Simply this: If this score *is not* like the official score, Mr. Davidson has lied. The same is true of Mr. Davidson if this score *is* like the official score, for if this score is not like the official score how in the name of common sense could the official score have been taken, as Mr. Davidson says, from it? If it is like the official score, then Mr. Davidson should be scored a lost opportunity for declaring it is different from his score and the official score. The facts in relation to this score and the nursery stakes are strictly these: I was the only judge that kept a memoranda of the dog's general points in this stake; this was kept on one of the regular score blanks, and any figures made were of course subject to change, the marks being a mere memoranda of the workings of the dogs, and not a regular score. To make is more clear I give below a copy of this memoranda, as near at I can recollect its appearance at night after the stakes were run:

POINTS OF DEMERIT.	Prairie Belle.	Nellie.	Tempest.	Strathroy.	Jennie.
Net Total	45½	36	44½		43
Total	3		2		
False Point, 2			2		
Breaking shot, 3					
Chase, 3	3				
Refusing to back, 3		3			
Each Flush, lost Opportunity	0			w	
POINTS OF MERIT.					
Total	48½	39½	44½		43
Staunchness, 0 to 6	6	6	6	6	6
Retrieving, 0 to 5					
Quartering, 1 to 5	4½	3	4	5	4
Style, 1 to 5	3½	3	4	4	4
Pace, 1 to 10	7½	7	8	9	10
Nose, 1 to 7	6	6	6	4	6
Breaking, 3		0	3	3	3
Each Point, 5	1111 20	111 15	111 15	1 10	11 10
NAME.	Prairie Belle.	Nellie.	Tempest.	Strathroy.	Jennie.

The first two ran were Prairie Belle and Nellie, and their relative merits were in my judgment as marked above. Tempest, the next down, showed a trifle more speed than Prairie Belle, for which she got credit. Thinking her about the same in style and quartering I marked her 3½ points for each, the same as given to Prairie Belle. Mr. Davidson, however, who had been following her more closely than I had, thought her more stylish and a better quarterer, saying she quartered beautifully at times, and had made one of the most stylish points he had ever seen. Upon the strength of his statement I marked her 4 each for style and quartering, but having a chance afterward to see more of her I failed to see any difference between the style and quartering of her and Prairie Belle, so I concluded when she had finished her score to go back to my first marks on these points, which were 3½ each. When Strathroy had finished, his speed and quartering were the best that had been shown. For speed I marked him 9, and as his quartering was perfect I gave him 5, the maxium, and marked him 4 for style. Jennie, being still faster, received the maximum for speed. Though not quite as good a quarterer as Strathroy, he was at least a point over any of the others, so I marked her 4 and cut Tempest and Prairie Belle back a half point each, leaving them 3 for quartering; and as Jennie was an easy point ahead of these two on style I gave her 4 and cut the other two down a half point each that there might be a full point difference. So my idea of what Prairie Belle, Tempest and Jennie should receive, was as follows: Prairie Belle, 20 for pointing, 3 for backing, 6 for nose, 7½ for pace, 3 each for style and quartering, and 6 for staunchness, making a total of 48½ points of merit, less 3 for a demerit, leaving a net total of 45½. Right here let me say that when we came in at night the above memoranda was our only guide from which to make out an official score. We looked it over, and upon the suggestion of Mr. Davidson cast it up with the results as given, for the purpose, as he said, of seeing about how they stood, that we might not waste time in figuring up the score of those that had no show to get a place. I called off the figures from this sheet, with the proposed changes, Mr. Davidson setting them down on his score with the result as given in the total and net total as above. In the above score there would appear to be an error in addition, but the totals are not the sum of the points given, but a copy of the totals figured from the changes made on another blank. On this clean sheet Tempest stood 15 for pointing, 3 for backing, 6 for nose, 8 for pace, 3½ for style, 3 for quartering and 6 for staunchness, making a total of 44½ less 2, leaving a net total of 42½. These changes, as will readily be seen, were brought about by a higher standard of Jennie's general points, from which they were graded. Her score, not being changed, her totals were as correctly added in the score above. While this was going on Mr. Lincoln had gone for a clean score blank for me on which to make out my score. During his absence we figured upon Mr. Davidson's, and I set the totals down in my memoranda. When I received the blank from Mr. Lincoln I marked Prairie Belle according to our figures as officially given, and then upon Mr. Davidson saying it would not do to let Prairie win, I told him that we would go over the score carefully and we might make some change. He pleaded for Tempest, to which I replied, we could not give it to one or the other, but would have to be guided by their relative merits. I stated that, inasmuch as Tempest had gotten a false point under severe circumstances, I would give her the benefit of the doubt on any particular point. I conceded a half point on style from what Mr. Davidson said of her magnificent point, that I did not see. I raised her a half point on quartering upon the judgment of Mr. Davidson. When we talked of nose, I said that I actually believed Jennie had shown the best, and called his attention to a particular fine point that she made, but added, inasmuch as she might first have been attracted by crossing the foot scent of these birds, I was not willing to accept as positive what was possible, viz., that she actually smelled the birds the long

distance they were from her; and although I felt the chances were that Jennie's nose was the best, I hardly felt like making any distinction between her and Tempest in so short a trial; so it was quite agreeable to Mr. D. to take as much for Tempest as for Jennie. This made her score as follows: Pointing 15, backing 3, nose 6, face 8, style 3½, quartering 3½, staunchness 6; total, 45, less 2 for a demerit, leaving a net total of 43. Mr. Davidson changes his score to agree with this, and upon the three scores the totals are as follows: Prairie Belle, 45½; Tempest, 43; Jennie, 43. Mr. Davidson tried hard to persuade me to raise Tempest somewhere. He thought speed or nose would be the best place, but I told him that we had already agreed upon those points, and, as I had conceded all I thought just, I was not willing to make any alterations. I added that if he thought there was any particular points where she had not been properly credited I was ready to look them over. His reply was that Tempest was the best of the two, and should have the prize, which he said was too small to divide. Said I, if you will take some stand for a particular point, and conscientiously stick to it, I am willing to discuss the merits of your position; but, if you simply wish to give it to Tempest, please excuse me, as I shall not be a party to any such proceeding, and thereupon left the tent, with my score for Tempest as above stated. Mr. Davidson raised Tempest a half point for nose, and induced Mr. Mulliken to do the same.

I stated that very night the circumstances, as I relate them now. Mr. Davidson seemed ashamed to give in his score, and the duty fell upon me. I gave Mr. Lincoln what I suppose was honorable and just, viz., the official score, not a copy of the memorandum (which had served its legitimate end, and was thrown away), not my score, which is a half point different from the score Mr. Lincoln received, but I gave Mr. Lincoln the score agreed upon by Mr. Davidson and Mr. Mulliken. This score that I gave, Mr. Lincoln will testify, was the same as the published score, and Mr. Davidson cannot deny it is a true copy of his and Mr. Mulliken's score. These are facts that prove themselves correct, and no one can truly say my part was anything but honorable. On the other hand, read the contradictory evidence of Mr. Davidson on this point. He says, "The scores in the Murray Stakes were taken from Whitford's score," and attempts to prove it by the testimony of Mr. Lincoln, and produces a certificate from a man who saw Mr. Lincoln's letter on the subject, wherein he says he received the papers from Whitford. Quite a difference, Mr. Davidson, between your positive false statement and Mr. Lincoln's true statement. Mr. Davidson also says that Mr. Lincoln came in the tent and received the score from me. Wrong again, Mr. Davidson. Mr. Lincoln will tell you that I gave him the score outside of the tent.

Mr. Davidson's fine tale about Dan's "back" will fall short of the truth when compared with every man but himself who saw it, and heard his ungentlemanly, uncalled-for abusive remarks to me. The facts, as would appear from his own testimony, show he quarrelled about the back simply because he did not see it, but when I brought it down to a question of veracity he refused to admit that he doubted my word, and said if I saw it that was sufficient, and his score where Dan is credited with the back is his acknowledgment, and poor apology for his error. I do not propose to bore your readers with a rehearsal of Mr. Davidson's ungentlemanly remarks, nor his frivolous excuse for the position he took. He acknowledged the corn; that is sufficient for me. Let some of the gentlemen who saw the whole matter give their version for the benefit of the public, and let Mr. Davidson, for the same purpose, say who the few were that were so anxious for him to remain after he had announced his good intention of giving up his position. For every interested man he will name, I will produce the affidavit of two that were quite as anxious he should quit. We do not want mere assertions in this matter, but facts, accompanied with proof that will bear investigation.

In relation to the trouble about Nellie, Mr. Davidson must admit he committed a grave fault in making an unnecessarily abusive defense in support of his error, or grant that in allowing the point, himself and Mr. Mulliken abused their position by marking a dog what they knew to be wrong. This is the plain English of it, according to the separate statements of each of them.

In relating the circumstances about Countess Royal he furnishes another striking example of his timidity, and attempts to show how easily he is led contrary to his own and the wishes of his colleague, Mr. Mulliken, and to the cost of the dogs he was in duty bound to protect. As usual Mr. Davidson has burnt his fingers with the fire he attempted to kindle, for he declares both himself and Mr. Mulliken were unanimous in their opinion that the dog was entitled to a point, yet neither of them even attempted to mark it so on their scores. Does this look as if he was the fit person to judge dogs men go hundreds of miles to exhibit? Let Mr. Dilly himself say at whose inconsistencies he suffered; let him and others say what they know about how Mr. Davidson treated Ranger. Mr. Dilly will, I think, tell you that under my jurisdiction he got a fair show. If I erred in refusing to allow him the point Countess Royal made, I was at least conscientious that I was doing my duty, and my objection to granting the point was made upon the strength of Mr. Davidson's statement that he had told Mr. Dilly to take the dog up, and he said to me as Mr. Dilly was working off from the judge, "Go and tell him to take his dog up," he assuring me that he had ordered up both dogs; and as I started the dog pointed. Mr. D. said, "We cannot give him anything for that, as his dog is not down." I was perfectly agreed, and said if he was ordered up his dog is not under judgment.

I would again call Mr. Davidson's attention to the Clipper matter, and trust he will say he did or did not agree to withhold Clipper's score. Perhaps he will deny that he afterward sneaked off to Mr. Hallock's tent with Mr. Mulliken and attempted to give his version as official. And I would like to know whether or not he remembers sending me back to Mr. Hallock's tent to say that he would take it back. The fact of his having agreed with me to withhold the score was reiterated by him and can be proven if he will deny the charge, and what I said to him in Mr. Hallock's tent can be vouched for by that gentleman.

To "Shamrock," or Mr. Whitman, I would say, in reply to his great desire to get at facts, that I have the very best of reasons to charge to Mr. Davidson the little burst of enthusiasm from "Shamrock." I know whereof I speak when I say; "The score furnished by Davidson and published by 'Shamrock.'" Mr. Whitman's point is not staunch enough to here bear a thorough inspection, but if he will say positively that he did not receive from Mr. Davidson what he published over "Shamrock" I will make my statement good or take it back. If he wishes to assume the responsibility of that score to relieve Davidson I am perfectly willing that the sauce for the goose shall be the sauce for the gander.

I most emphatically deny that I handed Mr. Lincoln my score, and the proof is that the published score from Mr. Lincoln is not like my score nor the memorandum that I threw away; and for Mr. Whitman or any other sensible man to deal with such twaddle is the height of folly. It is quite true that this memorandum was picked up, the figures changed to correspond with the results of the official score, and then used by Whitman and Davidson to prove something. They fail, however, to make a single point out of it, as by their own statement they prove it is not my score. They acknowledge having made some alterations, and inform the public that I endeavor to ignore it. Not so, Mr. Whitman; I, on the other hand, propose to keep it before the public as an evidence of Mr. Davidson's crookedness. It is the only position he has taken in this controversy, and I propose to hold him to it till he makes a new move.

In giving my ideas of Jennie's speed, Mr. Whitman will please give the exact quotation, and not his definition of what I wrote; and instead of its being "an admitted fact that Mr. Whitford and Mr. Morgan were quartered and hunted together over the dogs hunted in the trials by Mr. Morgan—Prairie Belle and Friend—both winners," it is an unqualified falsehood, as malicious as it is base. If any man can be found that will plainly say I did hunt over Prairie Belle and Friend before the trials, he will please accept the lie with my compliments. If Mr. Whitman or any one else have any charges to make, connecting me with any dishonorable acts in my position as judge at the Minnesota trials, let them be based upon what they know to be facts, or what can be proven as such. All this hearsay rubbish that cannot be traced to the fountain head is mere twaddle, and those who throw such mud must expect to be soiled by the dirt.

C. B. WHITFORD.

AN ENDORSEMENT OF MR. DAVIDSON—*Mr. Editor:* The bench show at Pittsburgh is over, and I had intended sending you a full report of the same had I not met one of your reporters there who could do it so much better. For the first time I met Mr. John Davidson, who, with myself, was to do the judging. After reading so much about him in the papers, I felt a natural curiosity to see the man, to watch him in his capacity of judge, and then to decide for myself whether he was an impartial judge or not. As I was associated with him, I had every opportunity to do so. The result was that I consider him one of the fairest and most impartial judges that I ever met at a bench show, and in the future I shall recommend my friends to send their dogs to the bench shows where he is to judge, feeling that their dogs will have full justice done to them. In addition to being a good judge, I found him to be a very pleasant companion.

Yours, respectfully, R. L. WALKER.
Mansfield, Allegheny Co., Pa., Jan. 23, 1879.

STOP IT!—*Lawtonville, Ga., Jan. 20.—Mr. Editor:* I think it time for you to come in and settle the Rowe-Davidson controversy. One of your scathing editorials will settle the matter for all time. ST. CLAIR.

A CORRECTION.—*Editor Forest and Stream:* Please correct my statement in last week's issue that Mr. Whitford and Mr. Morgan hunted together over Prairie Belle and Friend before the trials. I was mistaken; it was only over Prairie Belle. Truly yours,
Chicago, Jan. 29, 1879. J. H. WHITMAN.

A NUT FOR THE NEW ORLEANS AUTHORITIES TO CRACK.—Harry Jennings, of New York, and Thomas Tugman, of Philadelphia, left this city for New Orleans last Saturday, taking with them twenty-one bull-dogs which are to take part in "the great national dog fight" to be fought in New Orleans during Madri Gras and the following weeks. What is New York's loss is New Orleans' gain.

BLUE STAR KENNEL.—This name is claimed by Mr. M. P. McKoon, of Franklin, Delaware Co., N. Y., for his kennel of cocker spaniels. Mr. McKoon has carefully selected his breeding stock and proposes sending out only such puppies as will do credit to himself and his "star" kennel.

Mr. C. B. Fitz Maurice, of Brooklyn, claims the name of Nora Rhue for his red Irish setter bitch, whelped Nov. 25, 1878, sired by Elcho out of Nell II.

—Mr. O. R. Twain, Painesville, O., claims the name Harry for his liver and white cocker spaniel, whelped June 9, 1878, bred by Fred. H. Hoe, Tarrytown, N. Y., out of Madge (Quip-Juliette) by Witch (Romeo-Juliette), all prize winners.

—Mr. H. B. Stoll, of Oswego, N. N., claims the name Tony for English cocker dog pup, whelped Nov. 27, 1878 (Captain-Fannie) from M. P. McKoon's kennel, Franklin, N. Y. Also Zipp for red Irish setter pup whelped Sept. 28 York-Norah). Bought of C. Z. Miley, Lancaster, Pa.

—Mr. H. Erskine Smith, of New York, claims the name of Pride of the Kanterskills for his lemon and white setter pup, whelped in July, 1878, out of Dr. Gour'r. M. Smith's Bonnie Bess (by St. Elmo) by Pride of the Border.

—Mr. F. C. Simpson's (of West Orange, N. Y.,) double-nosed pointer bitch, Lady, whelped, Jan. 15, seven pups—five dogs and two gyps—by John G. Hechscher's well known pointer Dan, highly commended at N. Y. dog show 1878.

—Mr. A. J. Huyler's bitch Nellie whelped, at Tenafly, N. J., nine puppies, on the 1st inst., six dogs and three bitches, all orange and white; sired by his dog Pinto.

—The Imperial Kennel's (Jones River, N. J.,) setter bitch Daisy (Frein's Sam, Wallace's Belle) whelped, on Jan. 25, six puppies, two dogs and four bitches, the sire being Mr. J. R. P. Woodriff's Teddy, by Mr. Jaffray's Ned II., out of Mr. Shirley's (Ireland) Juno.

—The fox terrier Nettle, imported by Mr. D. G. Hartt, of Northport, L. I., in December, has whelped three dog and four bitch puppies.

—J. & R. B. Nesbitt's champion English setter Rock, imported by Luther Adams, Esq., died Saturday, Jan. 18, 1879, at the Harvard Kennel Club, Cambridge, Mass.

MAC AND JUDY.—We take pleasure in calling the attention of breeders of spaniels to these two fine dogs, advertised for sale in our columns this week. The gentleman who owns them, having more dogs than he has room for, has determined to part with all except his setters, and now offers these champions for sale. Both Mac and Judy took first prizes in their respective classes in 1877 and 1878 at the New York shows, and they are undoubtedly as fine specimens of the breed as can be found in the country to-day. Either of the above dogs would be a most valuable addition to the kennel of any breeder of retrieving spaniels.

TO STOP NIGHT BARKING—*Editor Forest and Stream:* I notice that one of your correspondents asks how to stop a dog from night barking, and that you answer "The whips. That will do very well in the day time, but in the night I have found from experience that to get up half a dozen times and go out of doors to apply it was pretty severe punishment for myself as well as the dog. Thinking it may benefit some of your readers, I will give you my way of dealing with such an animal. First, place his kennel as nearly as possible under your chamber window; chain him to it; attach to his collar (a spike and choke, if you have it,) a strong line; carry the other end up into your chamber through the window, making fast near your bed, leaving enough slack so that the dog can go the length of his chain without drawing on it. Now you are fixed for one or two nights without much sleep, but better so than to have your dog a nuisance to yourself and neighborhood for months. When the dog barks, call out "Stop!" at the same time bringing up with a succession of sharp jerks, and, if he is not too heavy, suspend him for a few seconds. Repeat it every time he barks. In this way I have broken a number without getting out of bed, and have not had a failure. Three nights have been sufficient, the first being the most troublesome. Should he bark occasionally afterwards, without good cause, raise your window and call "Stop!" and you will find that he remembers his lesson.

FRED A. TAFT.

TEACHING DOGS TRICKS.

STRATFORD, Conn., Jan. 8, 1879.

EDITOR FOREST AND STREAM:

I wish some one of your sympathetic correspondents would instruct me as to the proper mode of teaching an intelligent dog—a pointer—some indoor tricks during the existence of this close and snow-bound season—some such instruction as would serve to develop a lurking instinct, traceable in the animal's countenance, and farther evidenced by a study of that of his master's, to which he (the dog) is given. He is already practiced to drop to hand, and to shot, to point, to fetch, and has had some field instruction on game. SENEX.

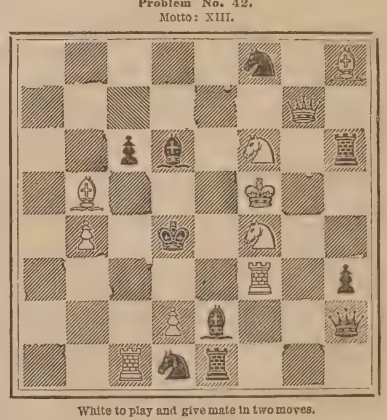
The best tricks to teach a dog are those which may be made useful to yourself or others. There are no "tricks" more interesting than the obediences and performances of a well broken sporting dog. You can make him sit or lie down by a simple motion; fetch any article you may hide; refuse food placed directly under his nose; carry the most fragile article without breaking it; range and quarter far away in front of you, or meekly drop to heel behind you. You can make him "speak," or hold tongue; drop when a gun or pistol is fired; come or go at the sound of a whistle; watch your coat when bidden; etc., etc. If you wish to add other tricks of an amusing character you can do so, but it is not best to burden a dog's memory too much. The cardinal principles of instruction are observation, patience, perseverance, mildness and self control. For full instructions read "Hallock's Sportsman's Gazetteer."

—See Bohemian Glass Company's advertisement.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 42.
Motto: XIII.



White to play and give mate in two moves.

Game No. 99—IRREGULAR.

An International Tourney game resigned by Henry Waight, of Halifax, England, to L. S. Atkinson, of Tilton, N. H.:

White. Waight.	Black. Atkinson.	White. Waight.	Black. Atkinson.

NOTES.

(*a*) Up to this point the moves were proposed by Mr. Waight and accepted by Mr. Atkinson. The *Handbuch* leaves the game as even.

(*b*) It is generally considered poor play to bring out the Q thus early in the game, and subsequent moves show this is no exception to the rule.

(*c*) A good move.

(*d*) B–K3 looks like a promising move.

(*e*) Poor play. The advance of this P permits Black to almost immediately gain a winning advantage.

(*f*) Promptly taking advantage of the situation.

(*g*) Still playing Black's game.

(*h*) Why sacrifice the R?—*Hartford Times.*

CURSORY JOTTINGS.

—We are indebted to L. Cohn, Esq., Secretary of the Manhattan Chess Club, for the following information about the progressing handicap tournament of that club:

The tournament was commenced Oct. 12, with 25 entries, the players being classified into four classes, each player to play two games with the other; those who had not played 33 games by Jan. 18 to be closed out from further play. Four prizes: $50, $25, $15 and $10, given to those players who have the best percentage. The following gentlemen have the best scores at present:

	Games Played.	Games Won.	Percentage.
Chs Niohle	34	30	88.2
D Graham	35	29	82.8
L Bloch	42	34½	82.2
N Gedalia	34	27	79.4
Baird	38	29	79.4
Ryan	33	21½	65.1

The tournament will close Feb. 22 with a banquet [We hope to be on hand]. The club has 100 members, including the strongest players of the city, as Eug. Delmar, Ryan, Perrin, Barnes, etc. There are about 400 games recorded, of which some rank very high.

THE GIRONDIN DISINFECTANT.—Long use of the Girondin Disinfectant in kennels and at our principal dog shows has thoroughly tested its merits and demonstrated the fact of its successful purifying power.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

J. J. S., Muncy, Pa.—Bogardus shoots with his eyes open.

COIN COLLECTOR.—Write to Wm. P. Brown, 145 Nassau st, New York, for coins, etc.

PEDES.—Send to the Coltons, William st., this city, for New York and New Jersey maps.

A. S. B., Boston.—Galvanize the bottom of your aquarium. The material will not hurt the fish.

S. B. W.—We know nothing of the firm you inquire about and fail to find their names in the Directory.

A. B. C., Georgetown, D. C.—You will find good quail shooting in the vicinity of Litesville, N. C.

S. C., Alpena, Mich.—Single cylinder 9x12 will be equal to two 6x8 each. A good size for your boat 50x12 ft.

C. E. O., Moriah, N. Y.—For untanned deer skins send to Knapp & Van Nostrand, Washington Market, New York.

F. L., Santa Rosa.—For charts of the Chesapeake write to Merrill's Sons, 179 Water st., New York. Cost $3 for the set of six.

J. C. M., Boston, Mass.—Steel cartridge cases are made for shotguns and can be obtained of the dealers advertised in our columns.

T. M. P., Beaver Falls, Minn.—Carver and Bogardus did once, several years ago, shoot a match in California. We have not the scores.

G. F. T., Norwalk, Ohio.—No charts of Lake Erie to be had in New York. You can find some in Buffalo most likely, or write to the Coast Survey, Washington D. C.

W. W. J., New York.—Will you please mention choice in quickness of action and safety between a Damascus steel Parker and ditto Fox gun? Ans. Very little difference.

S. S. S., Middleburg, Pa.—The firm you inquire about are not known to the trade, and we cannot say anything as to the safety of the gun. We know nothing about their price list or standing.

J. V. O.—To obtain drawings you speak of or a tracing of same, send letter to Martin Gale, care this office, and it will be forwarded, as we have returned the drawings of the Corinthian cutter.

R. L. N., Salem, Mass.—The pedometer is manufactured by Tiffany & Co., of this city. It is a pocket instrument which records the distance walked or run by the person carrying it. Its cost is $5.

M. R., South Wellington, Conn.—We cannot find anything about a book entitled "The Tongue of Time." We have sung of the *tempus edax rerum*, before now, but the "tongue" is something new to us.

C. M. S., Norway, Me.—Will wild rice grow in Maine? If so, can I obtain it at this season of the year? Ans. We believe the rice will grow in your State. For seed send to H. M. Valentine, Janesville, Wis.

S. T. L., Applebackville, Pa.—Of the States mentioned we should prefer Michigan for trapping. Take a Winchester rifle for deer hunting. For complete instructions in trapping consult Batty's book.

E. M. C., Ithaca, N. Y.—You must ascertain by practical experiment the proper charge of powder for your gun. We can give you no absolute standard, for the amount necessary will vary with the kind of powder used, etc.

J. C. W., Camp Grant, Arizona.—Is the Dittmar powder a secret preparation? If not, will you please give me the formula? Ans. Dittmar powder is made from a patented process, of which we cannot give the formula.

M. and B., Monson, Maine.—Please tell me your opinion of blood hounds. What I mean is, what kind of a foxhound they would make crossed with a foxhound? Ans. For ordinary fox hunting they would probably be too slow.

READER, Brooklyn.—We see anti-fat remedies advertised extensively in the papers and on the bill boards. We are not afflicted with corpulency ourselves, but if we were we should not hesitate to try the anti-fat men's medicines.

F. M. H., Silver City, Idaho Ter.—What is the proper charge of Dittmar powder for a No. 10 gun for duck shooting? Ans. The same charge by measure as of black powder, following closely the directions for loader which accompany the powder.

C. H. W., Titusville, Pa.—I have several stuffed animals such as squirrels, rabbits, also a dog and a deer head. How shall I keep them so moths will not destroy? Ans. Sprinkle corrosive sublimate, either in powder or solution among the hair and fur.

R. L. P., Crookston, Minn.—A Gordon setter was poisoned a short time ago and his hair is all faded and stands almost straight up. Ans. Give him two capsules of tar each day for a week and wash his coat with yolk of eggs. Raw eggs given internally are also good.

CANOE, New York.—For all general purposes the *Shadow* canoe is probably the best of all types. For lengthy cruising and sailing she has no equal, though it is the general opinion that she is not so fast under paddle as other types. For builder see advertising columns.

W. A. R., Brooklyn.—In answering your query two weeks ago we stated that the *Nuttall Bulletin* was a monthly and gave a wrong address for Mr. Deane. The *Bulletin* is published quarterly, and all business letters should be addressed to Ruthven Deane, Cambridge, Massachusetts.

W. D. L., Poughkeepsie.—You will find much information of a practical sort relating to canoe building in the appendix to "Canoeing in Kanuckia," Harper Bros., N. Y., price 75c. It is easier to build a paper canoe than a wooden one, as the latter requires considerable adeptness with tools and nicety in fitting.

DICK, Painesville, Ohio.—My six month's old cocker spaniel is poor in flesh, has no appetite, seems well, although don't care to play. What can I give him to give him an appetite? Have tried sulphur, but don't seem to do any good. Ans. Give him a teaspoonful of cod liver oil, with one or two drops of wine of iron in it twice a day.

C. S. B., Albany, N. Y.—The sharpie is very fast off the wind, faster than the sloop, and is also very weatherly in smooth water. But in a short, chop sea she "pounds," or spanks on account of her flat bottom. She is, under such circumstances, slower and less weatherly than a deep boat, but she is, if decked, always a safe craft in any sea when skillfully handled.

D. D. L., Ravenna, Ohio.—1.—Is tin-coated soft shot better for all practical purposes than chilled? 2. What grain and charge of Dittmar powder should be used for 1¼ or 1⅛ oz. of shot for general shooting? Ans. 1. We are not prepared to say. 2. The same charge by measure as of black powder, following closely the instructions which accompany the powder.

W. E. A., Huntington, L. I.—My dog has a hard dry cough; he coughs incessantly all day and all night, never stopping for over five minutes. Ans. The following is a good remedy for chronic cough: Friar's balsam, 15 drops; syrup of poppies, 1 drachm; diluted sulphuric acid, 5 drops; mucilage, ½ oz.; water, ½ oz. Mix and give two or three times a day.

J. W. W., Winona, Minn.—I have an English setter bitch four years old. I have never known her in heat, became careless and in consequence now find her in whelp, by what no one knows. This I have always understood as ruining future progeny. Is their any danger in spaying her at this age, or is it likely to injure her for the field? Ans. Your bitch is too old to be spayed.

F. C. R., Princeton, Me.—1. Can you give me the title of any book on training setters on partridge? 2. Can any dog trainer train a setter on partridge, or is it necessary to have a different trainer for same? Ans. 1. The "Sportsman's Gazetteer," published at this office, will give you general directions for training your dog. 2. Any good dog breaker can break a dog on partridges.

DEERSLAYER, West Meriden, Conn.—Vanderdecken's "Yacht Sailer" treats of seamanship and the fitting of yachts. For duties of club officers and organization procure a club book from some leading yacht club. Kemp's Manual is the best book for instruction in the handling, rigging or building of small yachts. Can send it upon receipt of price, $3.50. Vanderdecken's abridged book, $3.75.

BROM BONES, New York.—My setter pup, 8 months old, has quite a severe cough, which I think proceeds from worms, as his nose is cold and moist, and he is with this exception apparently in perfect health. What shall I do for him? Ans. If you suspect worms give him santonine, 2 grs. to the dose, say for two or three times a day, one dose each day. Follow the last dose with ½oz. of castor oil.

R. D., Shawneetown, Ill.—My setter bitch, 2½ years old, came in heat about three months ago and has been in that condition ever since. She has got so weak that she can hardly stand up. She gets enough to eat, but is so poor and weak that I am afraid that she will die. Can you tell me what is the matter with her and a remedy, if any? Ans. We should advise breeding her to a dog. The case is a peculiar one.

G. H. W., Germantown, Pa.—My setter dog has had for a year or more a dry cough; sounds just as if he had swallowed a bone and it had lodged in his throat. What is wrong with him and what shall I do to relieve him? Ans. The following is a good prescription for chronic cough: Friar's balsam, 10 drops; syrup of poppies, 1 dr.; diluted sulphuric acid, 5 drops; mucilage, ½ oz.; water, ½ oz. Mix and give two or three times a day.

SUBSCRIBER, Port Rowan, Ont.—Can you tell me whether snipe and woodcock breed in the South during their stay, or do they only hatch once a year? Ans. Snipe and woodcock, which migrate from these or more Northern latitudes to the South, do not breed there. The woodcock breeds in the Southern States as early as February and raises two broods there, no doubt, as it does here. The snipe rarely breeds South of New York, and of course only in summer.

ONEIDA.—We have forwarded to you a published legal opinion which covers the ground you refer to, in each case. The man has no right to hunt or fish out of season on his own ground. The laws are made for the public benefit, and if restrictions tread on private interests the law may be sorry, but it permits them to suffer notwithstanding, for the public good. The ends of protective laws would not be reached if every one were allowed to hunt and fish out of season on his own land.

WAXIE, Attica, Ind.—You will find a sternwheel boat the best for the rivers of the Northwest. A screw steamer will draw too much water and a sidewheeler requires too much room. A boat with flat bottom, 85ft. long and 9ft. beam and a little over 2ft. deep amidships, will be ample for eight men and baggage on light draft. Build cabin superstructure similar to river boats in your neighborhood. Boiler about 34in. diam. and 125 sq. ft. heating surface. Single high pressure engine, 5½in. bore, 3ft. stroke, 60 revolutions.

H. R., Norfolk.—For cruising in lower Chesapeake would recommend yacht similar to design published last week. Retain the main features and fill in the lines to suit your own ideas. You cannot go far astray. It is a good plan to make a model and test her. You doubt the value of such an experiment, but practical proof is not wanting to show that large vessels will perform exactly as their prototypes on a small scale. The test of science and sensitive mechanical recording instruments have been applied by Prof. Froude with convincing results.

H. P. C., Bridgeport, Conn.—1. Are the Adirondacks usually free from snow by May 1 of each year? 2. Could a party of four go into that region and be reasonably sure of obtaining game in sufficient quantities for food the year round? 3. Could pelts and game enough be found and sold to make our position a self-sustaining one? 4. If only one gun could be afforded, which is to be preferred, a shot-gun or a rifle? Ans. 1. Yes. 2. Yes; but you must not hunt the year round. 3. No. 4. Shot-gun. For catalogues of guns, prices, etc., send to any of our advertisers.

P. R., Lock Haven, Pa.—To stain rods rosewood or black walnut color: Mixture No. 1, ¼ lb. ground camwood, one pint alcohol; mix and let stand six hours; shake five or six times. Mixture No. 2, two ounces iron filings, one pint of vinegar; mix and let stand forty-eight hours; shake occasionally. Give four coats of No. 1, then to one gill of No. 1 add about two tablespoonfuls of No. 2, and give two coats When dry give one coat of No. 1. Let dry, and with a rag give a coat of boiled linseed oil, and let stand six hours; wipe off; if too dark rub with a rag and fine pulverized pumice stone to color desired.

NOVICE, Buffalo.—Have a cocker one year old. For six or eight months has had canker in ear; large red lump formed on inside tip of one ear; have tried lead water, sul. zinc, sol. goulard, sol. nitrate of silver, and kept them clean with castile soap, but with no beneficial result; growing worse; diet wholly vegetable. Will you please prescribe, and if you advise a seton please give instructions how to make and apply it. Ans. Try the following: Touch the sore with bluestone and afterward apply ointment of green iodide of mercury. It is possible that the dog must wear a cap. A seton would do no good.

A. M., Balto.—1. A and B shoot a glass ball match; are even on the eleventh ball. A breaks his twelfth, and B remarks, when about to shoot, that he will fire twice if he misses with first barrel, and does so, breaking ball with second barrel. Is that allowable, as no agreement was made before the match? 2. What would you consider a proper load for a 7½-lb., 12-gauge breech-loader? It kicks a little with 3 drachms powder and 1⅛ oz. shot. Ans. 1. When both barrels are allowed, a bird is a bird, and the two gentlemen tie. But it would be just to allow the score to the man who killed his bird with the first barrel. 2. Your charge is a proper one. You had better experiment.

C. L. D., Johnstown, Penn.—I have a pointer two years old, apparently in good health, excepting a spot on his hip about the size of a dollar (one of the new buzzard dollars), which is entirely denuded of hair and appears inflamed. It has been so for some four weeks, and does not increase in size. I imagined it to be mange, but it does not spread. How can I cure it? I have applied a mixture composed of 1 oz. basilicon ointment, ½ oz. flour sulph., and 1 oz spirits turpentine; also crude petroleum without any apparent effect. Ans. Anoint it with vaseline; if that does not heal it blow on some dry calomel. In the meantime the dog's diet must be of the lightest, with plenty of vegetables.

W. H. B., Philadelphia.—For iron life boats write to Ingersoll's Boat and Oar Bazar, South and Dover streets, New York. Boats cost $8 per foot; deck extra. Models are double-ended, similar to those in use on steamships. As they are built over templates like a shoe over a last, it will be expensive to deviate from customary shape. Keel or centre board can be added as desired. Can be made to work readily under cutter rig. Should carry 300 sq. ft. canvas in lower sails. Give spars proportions similar to design of yacht published last week, relatively to amount of canvas. Much will depend upon amount and position of ballast carried. Can only give general answer without more specific detail.

C. B., Allentown, Pa.—We cannot undertake to get you a situation or put you in communication with Western ranchmen. You can use our advertising columns to advantage at small cost. The Wind River country, in Colorado, is much frequented by sportsmen, and we should therefore prefer the county southward of that for trapping. The best of the trapping in that region was thirty years ago, when beaver brought a dollar a piece. You will find a description of the game of the region in last week's FOREST AND STREAM, and in fou score preceding numbers. Send to J. Curley & Bro., 130 Nassau st., New York, for catalogue of bowie and hunting knives, or to E. H. Tyron 220 North Second st., Phila., or to Jas. C Grubb, 712 Market st. Phila.,

J. P. G., Cambridge, Mass.—1. Do you know whether the use of the Dittmar powder is liable to injure the gun? I have used a small quantity of it and found afterward that my gun had the appearance inside of having been eaten, as if by acid. A friend of mine had an expensive breech-loader served in the same manner and he lays it to the use of acids in the manufacture of the powder. Is this so? 2. How do the shooting qualities compare with common powder at the same price? 3. Is mange in a dog both hereditary and contagious, and what is its prime cause? Ans. 1 and 2. We must refer our correspondent to, some letters which are printed in our Game Bag and Gun department this week and to others that have been printed before. 3. It is contagious, but not hereditary. Cause, other than infection, unclean kennel lack of exercise, and improper food.

INCOG., New York.—A Tennessee correspondent sends us the following information concerning lands in Lewis and Hickman counties, Tenn: "These counties join Maury County, and are in the middle of Middle Tennessee. Hickman County has about 2,000 voting population, though not thickly settled. There are some magnificent farms, the soil producing well; the principal productions being peanuts, corn, wheat, rye, and especially is the soil adapted to the successful and profitable raising of peanuts. The waters are almost entirely freestone, and furnish some of the finest water power in the world. Hickman furnishes considerable game, such as wild turkey, deer, quail, squirrel and plenty of fish, such as trout, black perch and pike. Hickman abounds in iron ore, as fine as can be found anywhere, and of different varieties, and coal in some portions of the county. In the course of twelve months a narrow-gauge railroad will be in operation from Burns Station, on the Nashville and Northwestern Railroad, to Centreville the county seat. Lewis County is a small county, and poor in several ways.

C. D. J., Po'keepsie.—I have a Newfoundland about six years old, and for the past two years he has been troubled with mange. I used carbolic acid diluted with water and found, in some instances, a help. About a year since his head seemed to trouble him. He would carry it on one side and shake his ears; seemed to be in great pain, and after a few days would discharge. Again, last summer and last week, a sore broke out on his neck and throat and became a raw, running sore. I was told to give him gunpowder and lard, and after giving him the first dose last summer it cured him. I have given the same again and washed the part inflamed and raw with Pond's Extract. Ans. Give your dog at least twelve drops of Fowler's solution of arsenic twice a day, commencing with say, eight drops and gradually increasing it. If he has canker in his ears drop into them every other day a few drops of solution of nitrate of silver. We have dried up obstinate sores in a dog's ears by blowing on them occasionally a little dry calomel. The dog's diet should be of the lightest, with plenty of vegetables and no meat. We cannot prescribe further without knowing to what extent the mange has affected the dog's body and coat.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 6, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

ANOTHER VOLUME.—The opening of Volume Twelve of FOREST AND STREAM with this number reminds us that we are getting on in years, but really we had been so busy—enjoying in a quiet, sedate fashion the ups and downs of thousands of our friends in the field—that weeks and months and years slipped on and we had not time to note their lapse. With such a vast field for reflection, so much rich cover to hunt over, our perpetual embarrassment is not what to put in, but what to cull from the many good things forced to our notice while the growing subscription books and the crowded advertising columns tell of a substantial business prosperity. We will promise nothing for the future, but simply give assurance that those who come to our feast of good things will find that our *menu* for each recurring week will drive out of mind and body the many bountiful spreads of the past cooked to a turn: the delicacies of field and stream, mountain and meadow will be set out in tempting array, dished up with literary trimmings, and all to be washed down with sparkling draughts of wit and humor. Hist! There he goes! Bang! Bull's-eye Good! Next.

GIVE THE PAPER TO THE BOYS.—Some of the Yale College professors recently gave their united protest against the literary food furnished for our boys by the publishers of the flash periodical literature of the day. Fiction in which the youthful heroes are remarkable chiefly for their super-human expertness with street-slang, profanity and fire-arms, and a supreme disregard for all domestic and civil authority, is not just the kind of material likely to instil right views of life. It is useless, however, to simply decry this literature without furnishing some substitute for it. Nature abhors a vacuum; so also does a boy's mind. If we would not have our young people read what is injurious we must supply them with what is instructive and ennobling. Our printing presses teem with good, wholesome literature, and with a judicious care and oversight on the part of parents a normal literary taste can be so firmly established that the young reader will of his own accord reject what is flashy and pernicious. A good paper for boys to read is the FOREST AND STREAM. So writes a correspondent, and we take great pleasure and pride in heartily endorsing his opinion.

—The climax of ingenuity in vernacular reporting and character sketching is reached in the *Sun's* summary of the billiard matches now in progress at the Cooper Institute. The reports should be read and studied to be appreciated.

—Lavarack pups. See adv. A. F. Huston.—*Adv.*

A MOVEMENT WHICH WE APPROVE OF.

A SOCIETY has very recently been incorporated in this city under the name of "The Business Men's Society for the Encouragement of Moderation." Its certificate states its object to be to encourage moderation in the use of alcoholic beverages, to promote a knowledge of science and statistics relative to the manufacture of alcoholic liquors, to disseminate among the people useful information regarding the principles of moderation and the means of carrying such principles into practical effect. The society intends to prepare and furnish to applicants three forms of pledge. The first a total abstinence pledge operative for one year and renewable thereafter at the will of the pledger; the second a pledge binding the person who takes it not to drink during business hours, and the third a pledge not to partake of intoxicating liquor at the expense of another person and not to extend an invitation to any other person to drink at his expense. The society is also to exert its influence to induce retail liquor dealers to provide for tectotalers stimulating and nourishing beverages which contain no alcohol. Still another purpose of the society is to encourage the establishment of places of cheap recreation and amusement where no intoxicating drink shall be sold. The time of existence of the society is fixed at twenty years, and it will begin operations at once.

—With mankind persuasion is more potent than force: example more efficacious than restriction or argument. Our young men learn the habit of drinking by the encouragement which they receive from social example. One habitual drinker who is not excessive in his indulgence, assures us that he drinks nine times by invitation where he imbibes once by desire. His normal appetite asks for only a quantum of alcoholic stimulant, which his system may absolutely need; but he takes ten times as much as he requires, and who will dare deny that physical damage does not result? Now if, instead of being invited to drink, he were discouraged from drinking by the negative example of those who never invite another, and never accept an invitation: we demand to know if the direct result so much desired by advocates of temperance would not be immediately reached? Sociality is the life and nourishment of that habit known as "treating." What a solemn time tipplers and wine-bibbers would have if they were obliged to drink solus, all by themselves, as one takes medicine, with every man's back turned to him, and face set rigidly against the time-worn custom! And futhermore, would not the act of drinking such spirituous liquors as whiskey, rum and gin, presently become as distasteful in itself, under this new discipline, as taking the dose of medicine would be? for who but the old toper likes the taste of whiskey? Watch the young men at the bar and see with what heroism and contraction of muscle they swallow the poison they have "nominated," and how quickly they grasp for the water to drench the fire in their throats. Would they voluntarily go through this trying ordeal were it not for the presence of others whose false manhood they try to emulate? Even the steady middle-aged business man who has contracted the habit of taking a daily dram or two, through real or fancied need, would go less frequently, we think, if he did not invite or expect to meet some acquaintance at his favorite place of quiet resort. The multitude of drinking places on 'Change are enriched by the lavish expenditure of brokers whose very life and charms of business inhere in the social element thereof. Establish the rule proposed by the "Society of Moderation," and nine-tenths of the sample rooms would have to close. Conviviality is the outcome of sociality, and the first step to inebriety. Solitary drinkers can never be convivial.

One most charming feature of the new society's metaphysics is, that it leaves it to a man to judge of his own disabilities and requirements, and gives him option to choose the remedy. It appeals to his manhood and sense of self-respect. Some men of a certain temperament or physical condition require stimulant in business hours more than at any other time. Other men, with feverish blood, and thirsty, would often be better content with a beverage which contains no alcohol, could they obtain it as easily as alcohol. The measures of the new society provide for the substitute. If there are other men who hope by a temporary period of abstinence to stoteh or kill an accursed craving for liquor, the one-year pledge is offered in their aid. We know how often pledges fail, and how naturally an honorable disgust and discouragement attach to the evidences of one's own weakness; how often noble men give up and grovel, for that very lack of sympathy and encouragement which is now held out to them through that combination of effort promised in the co-operative society for the "Encouragement of Moderation." We believe in the nobler impulses of men; and we believe also that social influences obtain for good as well as for evil. It is not sufficient for man to set his face against evil; he must be sustained in his resolution, either by Divine help, or by the help of his fellow men. If he has no faith in the first, he may at least place some confidence in the last. The principle upon which the new Association seems to be founded, is contained in that great commandment: "Love thy neighbor as thyself; and do unto all men as ye would they should do unto you."

RIPARIAN RIGHTS.

A CASE which has created a great deal of interest in Perthshire, England, was recently decided. The point in question was raised by Lady Willoughby d'Eresby in the Sheriff's Court in which an interdict was craved against parties angling for trout from the bank of the River Teith opposite to her ladyship's property, to prevent them casting their lines beyond the *medium filum* of the river, which at the part in question is between fifty and one hundred yards broad. The defenders, while not disputing the pursuer's title as set forth by her, and even declaring their readiness, if they had been required so to do, to have given their guarantee to desist from entering into the river through the pursuer's lands, as they admit they were in the custom of doing when going to fish on Mr. Marshall's side, deny that they ever entered or trespassed on said lands for the purpose of fishing therefrom in the River Teith, or that they ever fished from the lands belonging to the petitioner along said river, or from the solum of the river without leave, or ever gave cause to the pursuer to apprehend that they would do so, and maintain that the interdict asked is unwarranted, and that they ought not to be found liable in the expense of the present proceedings: That the said defenders admit that in respect of permission granted by Mr. Marshall, the proprietor of the right bank of the River Teith, they did enter from the pursuer's land into, and wade across, the River Teith, for the purpose of fishing therein from Mr. Marshall's side of the river: That the said defenders further admit that while fishing in the River Teith, under the authority referred to, they "cast their lines over as much of the river as they could; that they thought that they could fish with their lines across the river; that they waded while fishing, and always threw where they considered that they would be likely to get a fish, whether further from the middle of the stream or not."

The following was the decision of the Sheriff's Substitute, Mr. John Graham:

"That the defenders had not received any permission from the pursuer to fish from her said lands or in said river, and they were aware that her fishings were then preserved, and that notice of warning against parties trespassing in said lands and river belonging to the pursuer, for the purpose of fishing, had been issued by her: finds in point of law that any leave given to the defenders to fish in the River Teith by the proprietor of the right bank did not entitle them to fish or cast their lines beyond the *medium filum* of the river without the permission of the pursuer; that in doing so, and in entering from the pursuer's said lands into said river for the purpose of fishing without her permission, they committed a trespass upon the pursuer's property, as alleged in the petition: finds, therefore, that the pursuers are entitled to interdict as craved in the petition. Declares the interim interdict already granted against the defenders to be perpetual: finds them liable to the pursuer, the said Lady Willoughby d'Eresby, in the expenses of process, of which allows an account to be lodged for taxation, and remits the same when lodged to the auditor of court to tax and report, and discerns."

In its editorial review of this case, *Land and Water* makes the following very proper comments:

"The defence of the action is that the defender, having obtained leave to fish for trout in the Teith from Marshall, the proprietor of the right bank of the river, he was entitled not only to fish from that bank, but to cast his line and fish from any portion of the solum of the river belonging to Mr. Marshall, even though in so doing his cast should cover a portion of the river beyond its *medium filum*. The right thus asserted by the defender implies (apart from the pursuer's right of salmon fishing, which is not here in question) a common right of fishing on the part of the opposite proprietor, if not in the whole water of the river at least so far as could be covered by a line cast toward either bank from the *medium filum*. That a common right of this nature is in some cases recognized must be admitted. It is, however, exceptional. Such alleged common rights are allowed only under exceptional circumstances of necessity or convenience, as, for example, in the case of a narrow river where the proprietors of each bank are entitled to cast their lines, or in the case of rights of salmon fishing being possessed by them to bring the sweep of their nets beyond the *medium filum*—the exercise of their respective rights of fishing not being possible in any other way. The principle applicable to the question appears to be that the right of trout fishing, which is a pertinent to the lands adjacent to the river, cannot be exercised by the proprietors of those lands beyond the limits of the solum of the river which they respectively possess, and that as the sportsman is not entitled, though standing on his own land, to shoot at or kill game on his neighbor's property, or flying above it, so the angler, though standing on his own portion of the solum of the river, is not entitled to cast his line or catch fish swimming above his neighbor's solum—*Hujus est solum est usque ad cœlum*. In all such exceptional cases as those referred to, it is not the legal rights of parties, but the requirements of exceptional circumstances that have regulated the method and extent of fishing allowed. Where the right of fishing can be exercised by either proprietor without transgressing the *medium filum*, he is not entitled to cast his line beyond it. If he does so, he commits a trespass on his neighbor's property, and subjects himself, as the Sheriff-Substitute thinks the defenders have done in the present case, to the consequences of such wrongous act—viz., interdict and expenses."

It strikes us that the decision and argument should be taken as letters precedent to govern similar cases which may arise in America. The question of riparian rights is one which has become serious in the United States, and has already made some disturbance in Canada. In respect to the latter country, the question continues whether, the vested rights of the proprietor having been conceded and defended, the Government has any shadow of authority to lease fishing privileges over the proprietor's title. The Canadian Government asserts arbitrary jurisdiction when it assumes to lease whole rivers to anglers and fishermen, while some sections of those same rivers belong to private individuals. English law having now defined and established the rights of river proprietors in England, we do not see why the same rights should not be recognized, obtain, and be scrupulously defended in Canada. If the Canadian Government has appropriated the rights of ri-

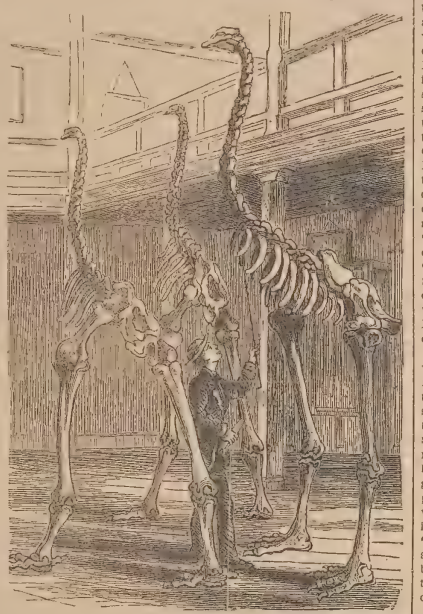
parian owners, without leave or permission, the owners certainly have recourse. It does not follow that the Canadian Government, because it has been to large outlay in stocking and protecting streams, should reimburse itself directly out of the waters which have been benefited. The improvements are for the benefit of the whole people, and the tax for making and maintaining the same should not be levied solely upon the riparian owners. If the Government cannot maintain its hatcheries out of the rentals of the waters over which it has inherent absolute jurisdiction, and from fines, etc., it should levy a general tax for the deficiency. But the riparian owners having received a large and direct benefit, while the public has only an appreciable and remote benefit, some concession is certainly due from the riparian owners to the Government. It seems, thereforo, as if an equitable adjustment of the account could be easily reached. Either the riparian owners should be allowed some restricted right of leasing fishing privileges for rods along his "solum" of the river, or the Government should pay him a small annual rental for the relinquishment of his rights. If some such compromise be not soon effected, there will be trouble in the Provinces, especially in New Brunswick. We hope some member of the Dominion Parliament will press this matter upon the attention of that honorable body.

THE NEW ZEALAND MOA AND ITS HUNTERS.

THE history of New Zealand and its inhabitants prior to its occupation by Europeans, is enveloped in the mystery and uncertainty which surround that of every nation, and particularly every barbarous nation, which has no written records of the past. Traditions the Maori has, of course; but, so vague, contradictory and mythological are they, that very little reliance can be placed on any statements contained or allusions made in them. There seems, however, little reason to doubt that the present race of aboriginals migrated hither from one of the Polynesian Islands, which their legends concur in calling "Hawaiki," some three or four hundred years ago; and that at the time of their arrival there were no human inhabitants on any of the New Zealand group of islands. But whether the aborignal race that was contemporary with, hunted and lived on the now extinct *Dinornis*, were the immediate ancestors of the present natives, or whether they were an ancient people that died slowly out, or eventually migrated, is a point that has not yet been, and probably never will be, satisfactorily determined. At several places in both the larger islands of New Zealand are found distinct traces of works which, like the ancient mounds and walls in your own country, indicate the existence in the distant past of a race of which the present aborigines know nothing. Archæological research has not, however, yet advanced very far among us. Here, as in every new country, the practical side of life takes the lead; and, beyond a few discoveries of this nature, briefly reported by travelers in the interior, nothing on which to found a reliable theory has been ascertained. The *Morioris*, who inhabit the Chatham Islands, are beyond doubt the descendants of emigrants from New Zealand; and it is possible enough that their ancestors were the remnant of the ancient New Zealanders, who, impelled by the exigencies of want or war, or perhaps simply by a restless desire for a new home, launched out in their frail canoes in search of the more genial tropical climes of which their traditions probably sang.

But whatever uncertainty may shroud the history of the Moa-hunters, the abundant remains of the great apterous bird itself plainly show that both he and his captors existed at one time in considerable numbers in all parts of New Zealand. In many instances twenty or thirty moa skeletons, mixed with those of the native dog, which was formerly cultivated in New Zealand and in many others of the Polynesian Islands as an article of food, have been found in caves or pits in the interior; and with them, or in the immediate neighborhood, the rude cutting implements of chert or obsidian which seem to have been the highest manufacture in that direction of the earlier races. In some of the old native ovens or "kitchen middens," too, have been found great quantities of the broken egg shells of the bird, leading to the conclusion that the roasted Moa egg was quite as favorite and common an article of food as the bird itself. One or two eggs have been secured in a fair state of preservation and sent to England; it was noticeable in each case that the same part at one end was missing, as if the contents had been abstracted through the aperture. The average size of the egg, as far as can be gathered, was about nine inches in length by six inches in diameter. Of the appearance of the bird itself we have no information from eye witnesses. I inclose you Professor Owen's drawing of what it ought to be, and no doubt he is pretty near the mark. The Professor has simply classified them under fifteen species, viz.: *Dinornis curtus*, *D. geranoides*, *D. didiformis*, *D. dromioides*, *D. rheides*, *D. gracilis*, *D. gravis*, *D. casuarinus*, *D. crassus*, *D. elephantopus*, *D. struthoides*, *D. ingens*, *D. giganteus*, *D. robustus*, and *D. maximus*. Of these *D. curtus* is the smallest, and would probably stand about three feet high; his average length of *femur* is given as six inches; *tiba*, eleven inches, and *metatarsus* five inches. The other species as enumerated are on a progressively increasing scalē; *D. maximus* has been found standing twelve feet high; some of his average measurements are given by Owen thus: *femur*, eighteen inches long and averaging five inches in diameter; *tibia*, thirty-nine inches long by (say) seven inches in diameter; *metatarsus*, twenty-one inches long. Dr. Von Haast, the New Zealand Government naturalist, is of the opinion that the *Dinornis* may be divided into two groups, the first to be called the *Dinornithidæ*, their characteristics being the absence of the hind toe, the bill narrow and pointed, and the *metatarsus* comparatively long; the second, which he names *Palapterygidæ*, includes those species which have a hind toe, whose bills are obtuse and rounded, and in which the *metatarsus* is short. It is, however, doubtful whether we have enough perfect specimens to justify such a classification; so I need not enumerate the species placed under each.

Although there seem to be no definite statements in Maori tradition that the Moa has been seen within the last century or two, yet they have many and varied accounts of the habits of the bird and the methods by which he was captured. How far these accounts represent the real occurrence, or to what extent they have been evolved by poetic fancy from the mere traditional existence of the mighty bird, it is hard to say. Whatever their value, some of the stories state that great public preparations were made for the hunt; that a whole village would turn out and beat the scrub within a large circle, gradually contracting and forcing their quarry toward some lake or pool in the river; and, having thus rushed him into deep water, they would come up in canoes and easily dispatch him. Other accounts, again, say that hunters armed with long spears, made specially with points that would easily break off, planted themselves along the bush tracks frequented by the birds; others of the party would then drive the prey along the tracks, where they would receive the spears of perhaps a dozen or two of their assailants, the points, breaking off as the bird hurried along through the scrub, remained in the wounds, and so weakened him that when run out in the open ground he fell a comparatively easy victim to the bolder and more skillful hunters. Another story is to the effect that the men used to drive a strong stake into



Skeletons of the Moa.

the ground above the entrance of a cave known as the haunt of the Moa, and hang thereto a strong rope of native flax (*Phormium tenax*), with a running noose, into which the bird would inevitably run his head on some of his exits or entrances, when, of course, he was easily disposed of. There seems to be unanimity, at any rate, on the point of the timid, lazy and sluggish character of the birds, except at certain seasons, when they are said to have fought with great ferocity, many being thus disabled and falling a prey to the natives. One story asserts that they were so lazy and inert as to lie down and allow themselves to be roasted to death in the bush fires, and that their extinction is largely owing to the extraordinary prevalence and extent of fires during one particularly dry summer. Hence, too, the Maories have a proverb, "As lazy as a Moa." It seems to be pretty well established that they went about in pairs, and had but one chick with them. Their habitat was, no doubt, in the bush, but I have myself found the little heaps of rounded pebbles from the crop which indicate where one of these birds had died, along with fragments of their bones, on some of the bare ridges of the South Island, where now there is not a stick of timber within fifty miles, but where, as the occasional charred logs show, there grew at some remote time a luxuriant forest.

On one or two occasions of late, a rumor was in circulation that the Moa had been seen alive in some remote and inaccessible corner of the island, but his existence has never been established, and there can be little doubt that he is totally extinct. Our principal museums, however, have some excellent skeletons, and every now and then a new discovery is made that adds to the stock. The grand old bird has been immortalized, though somewhat irreverently, by a bush poet, with whose effusion I will conclude:

"Who in the days of ancient fame,
Before the * Pakiha-Maori † came,
Kicked up his lively little game?
The Moa!

"Who saw Mount Eden's‡ crater gush?
Who saw the red-hot lava rush?
And then skedaddled in the bush,
The Moa!

"Who only laid a single egg?
Who had no wing, but only leg,
Pronounce his fearful name, I beg—
The Moa!

"Who picked up little Maori boys,
As hens pick corn, with rapping noise,
Closing their little dusky joys?
The Moa!

"Who stood twelve feet, without his boots?
Who collared dogs and grubbed for roots?
Who didn't care for mild cheroots?
The Moa.

"Whose bones have puzzled Mr. Owen?
And been discussed by Governor Bowen,
Who said, indeed, there was no knowing?
The Moa!

"Whose stomach had a strong digestion?
Who'd settle soon the 'native question,'
(A very powerful suggestion)?
The Moa!

"Then fill a goblet to the name
Of that old cock of ancient fame,
Who's passed away and played his game,
The Moa!"

* Pakeha (white man). The name "Pakeha-Maori" was given to those Europeans who lived with the Maoris.

† An extinct volcano in the North Island.

WHAT IS THOUGHT OF US.

AN OPINION SUI GENERIS.—The following is a letter which we must publish just as it comes to us. It is genuine "home spun." We should like to go fishing with the writer.

DOVER, N. H., Jan. 19, 1879.

MR. EDITOR AND CO-OPERATORS OF FOREST AND STREAM:

Your noble efforts to make FOREST AND STREAM a valuable journal and educator has been well carried out thus far, and it will be appreciated and enjoyed by thinking persons who read it.

When we meet a man who loves the study of nature and is a true sportsman, we generally find a gentleman and a whole soul. Only once in a life of fifty-six years have I met two individuals—who belonged to an honored sporting club, the Oquossoc Angling Association, Indian Rock, Lake Rangely, Me.,—who impressed me with the idea (if this theory was true, that "Whenever a child was born somebody dies, and the soul of the dying man goes into the child") that at the time when those two leather dealers of New York city were born nobody died. In an article, "True Sportsmen and Sporting Literature," FOREST AND STREAM, Jan. 9, we read: "The great trouble nowadays is the want of judicious discrimination between a sporting man and a sportsman. The former must, as a consequence, be over just to himself with the bottle; must deal at the pool-room, and consequently visit the gaming table. The latter must be either a painter or poet, a thorough naturalist (Darwin's views excepted), must keep the Ten Commandments, the Revised Statutes, and thirty-nine articles of the Episcopal Church." With due respect for individual faith and convictions, the gentleman will allow me to state that no thorough naturalists of the nineteenth century can afford to except this only rational theory of development of our illustrious Darwin; but men like Prof. Huxley and others have accepted it. An English bishop said in an assembly: "Ladies and gentlemen, is it possible that the learned Prof. Huxley can believe that we spring from a monkey?" The Professor replied "Ladies and gentlemen, if it was a matter of choice whether we spring from a monkey or something else it would be different, but science deals in investigations and facts; but if it was, as the learned bishop wants it, my choice to spring from a monkey or from a bishop of the Episcopal Church who can put his brains to no better use than to ridicule science and its facts, I certainly should choose the monkey."

The game and fishing laws of New Hampshire are good, but many wish (with me) that the slaughter of striped bass in Exeter and South New Market rivers, which is now going on, would be stopped, and that the laws were executed; but we find it a sad fact that irrational, superannuated laws remain on the statute books, and rational laws are treated in the same way as two ministers of the gospel executed their Sunday law when they were on the Grand Lakes, Me., in June. They requested the man who carried them over the lakes to bring them back to Princeton on Sunday. The man remoistrated and said, "You gentlemen teach us not to work on Sunday." One of the divines replied: "If I prove to you that it is your duty to get us out of here, where we are plagued by mosquitoes and black flies, will you do it?" The man promised he would. "Now, you find in the Scripture, 'If thine ox or thine ass falls in'o a pit on the Sabbath get him out,' and have you ever seen two bigger asses than we are to come here to be all bitten up by those creatures?" The man found the confession too strong; he skipped that elastic law with those who pretend to execute it at home, and shipped them back.

The Dittmar powder is excellent, and all what Mr. Dittmar claims for it, but will he be so kind to explain why the dealers sell a can which weighs eleven ounces, can and all, and call it a pound? Hoping that you will receive a circulation of your valuable journal to your full satisfaction, I am yours truly, C. H. H.

CAUSE AND EFFECT.—An Ohio correspondent thus enumerates the results which have followed his subscription to FOREST AND STREAM some four years ago:

"It caused me to buy Bogardus' book, to take the FOREST AND STREAM, and caused its circulation to increase a score, at least, by my friends taking it, and has been the means of me buying one of Holabird's shooting suits, and one overcoat of G. W. Simmons, a fine gun of Nichols & Lefever, ten pounds of Dittmar's powder, a dog collar of Von Culen, 500 Vanity Fair cigarettes, arms and ammunition of H. C Squires for our shooting club, a fly rod and tackle of Conroy & Bissett a meerschaum pipe of Kaldenberg, a trolling spoon of Fish & Simpson, a shell cleaner of Ronan, a pair of oil tanned moccasins of Holberton, a hammock of McCoy & Sanders, a pocket compass of Williams & Co., a camp stool of E. W. Gourd, an auxillary rifle barrel, three fine Gordon and two Irish setters bought by myself and friend, besides tent, camp stove and other things too tedious to mention. Now, if my other friends have done so well for your advertisers, it must have done something for their trade. Many of the above-named articles I have long stood in need of, and knew not where to get them, and by reading the FOREST AND STREAM I have learned to be a more successful sportsman by learning the habits and haunts of game and wild fowl, the subject being fully written up by your many able contributors from all parts of the country. The pleator has become aware that he can realize his most sanguine expectations in fishing in the waters of Mich., landing the beautiful grayling and trout with which her waters abound. At the same time railroad companies and hotel keepers are reaping a rich harvest from the sportsman. But the sportsman doesn't think so much about that, but wants his fun and expects to pay handsomely for it.

Yours truly, J. W. S."

MORE TESTIMONY.—We are gratified to add the followin testimony to the hundreds of other letters which we have already printed and published:

GEOLOGICAL SURVEY OF CANADA, Montreal, Feb. 1, 1879.

EDITOR FOREST AND STREAM:

In answer to the advertisement of my "Weather Almanac" in your columns, I have received orders for copies from nearly every quarter of the United States, and upon receipt of these many of the news-

papers have noticed the publication most favorably. This shows me first, the power of your paper as an advertising medium; and, secondly, the great interest at present attached to "the weather" by all classes of the community. Could you not from time to time give us, through your columns, some of the more remarkable features of the weather in the Northern United States? For example, such as how far the great snow storms of December and January last traveled southward, and how long the snow remained on the ground at southern and western points. Likewise, the lowest readings of the thermometer during the recent "cold dips." I am at present constructing a snow-storm chart for the Dominion of Canada, and should like to include that portion of the United States where these have been experienced to a greater or less extent. HENRY G. VENNOR.

Our correspondent can obtain all the information he wishes from the S nal Service Department, Washington.

CEDARVILLE, Greene County, Ohio, Jan. 21, 1879.

EDITOR FOREST AND STREAM:

I wish your paper could get more into the h ands of boys than it does, as it would be so much easier to instill into their minds the duties of a sportsman—the preservation of game, and the various other items that comprise the *role* of sportsman. I do not know that I could suggest anything which would adapt the paper more to the wants of boys, unless it should be a frequent editorial recurrence to such views as you expressed in No. 21 on the subject of temperance. Such views would and should be an additional inducement to parents to place the paper in the hands of their boys. I have felt like thanking you for that article ever since. I know of nothing more absurd than the habit of drinking on sporting occasions, when, if ever, a man should have a clear head and a steady hand. Accidents are sufficiently numerous at best without adding four-fold to their number by the use of intoxicating drink. J. G. D.

PARSONAGE OF THE REFORMED CHURCH,
Chatham Village, N. Y., Jan. 30, 1879.

EDITOR FOREST AND STREAM:

I enjoy your paper more and more, and took much pleasure in reading the handsome and deserved testimonials in this week's issue from Washington, Indianapolis, Chicago and Pittsburg. Though I am a minister with a church of one hundred families, yet I find work of this kind a pleasant diversion, which often acts like an invigorating tonic. An "about face" from tacology to FOREST AND STREAM is recreation.

Yours truly, N. H. VAN ARSDALE.

EXTINCT NEW ZEALAND BIRDS.—We publish on another page a most delightful account of these great extinct birds, for which we feel under great obligations to our correspondent. The account of the Maori traditions concerning the Moa are especially interesting.

There are in this country two very excellent collections of Moa bones, which we recommend all our readers to see—one at the American Museum of Natural History in this city, and he other at the Peabody Museum of New Haven, Conn.

DEAD LETTERS.—The receipts of money in the letters received at the Dead Letter Office at Washington average $81,600 per month. That is the premium paid to carlessness. Always see that your letter, inclosing $4, is properly directed to the Forest and Stream Publishing Company, New York.

WOODCOCK AT THE SOUTH.—The article which we print in our Gun Column relative to the habits of woodcock in the Southern States, and the methods of hunting them there will doubtless prove very interesting to many of our Northern readers.

—We regret to announce the death of Mr. Chas. Riley, superintendent of the passenger coaches of the N. Y. C. & H. R. R. R. Mr. Riley was a genial sportsman, well known to every member of the New York State Association for the Protection of Fish and Game, from whose conventions he was never absent. His sterling worth and open-hearted manner made for him a host of friends.

GAME PROTECTION.

HOW SETH GREEN FIXES THEM.—The other night, at the meeting of the New York Society for the Protection of Fish and Game, a letter from Seth Green was read. It contained the following quaint passage:

"I do not believe I have ever had a fish stolen. I will tell you how I protect the creek. Flags and weeds grow along the banks of the stream and when night-fishing season comes I have my men scatter gas-tar, diluted with turpentine, among the flags and weeds. It is very effective. I will relate an instance and show how it works. A few years ago a certain man was in the habit of stealing on the creek a few times during the night-fishing season and would not stop. He was sued, and fined $50 and $6 costs, and to keep him from going to jail and his family from suffering I paid the fine. But still he would come on; so I took the law in my own hands and prepared a kettle of the above mentioned mixture, put it into my boat, and floated down stream, and threw it with a ladle all over the flags and weeds. That night he came. The flags were as high as his head. It was dark and before he knew what was the matter he was covered with tar from head to foot. His hair, whiskers and rod got their share. He was not seen for several days afterward; and when he was seen he did not have any whiskers and but little hair, and his rod, basket and fly-book that he used to show with so much pride were never seen again. He left the town in less than a year. If any of you are troubled with poachers give them gas tar.

Yours truly, SETH GREEN."

KENNEBEC ASSOCIATION.—At the annual meeting of the Kennebec Association for the Protection of Fish and Game, held at Augusta, the officers elected for the ensuing year were: Pres., Dr. Geo. W. Martin, Augusta; Vice-Presidents, G. A. Robertson, Augusta, S. B. Glazier, Hallowell; Sec. and Treas., R. B. Capen, Augusta; Executive Committee, G. W. Martin, G. A. Robertson, G. A. Cony, J. F. Pierce, C. B. Morton, Augusta. The address of President Martin discussed the history of fish culture, and contained much sensible comment upon the value of that branch of the fishing industry.

MASSACHUSETTS—*Monson, Jan.* 28.—The sportsmen of this place have recently organized a club, the title of which is, "Monson Sportsmen's and Fancier's Club." Officers of the club: A. D. Norcross, President; R. Flynt, Vice-President; C. R. Keeney, Secretary; R. Fay, Treasurer. Object of the club is to promote excellence in sports and fancier's interests.

C. R. K.

SOUTH SIDE SPORTSMEN'S CLUB.—At a meeting of the South Side Sportsmen's Club, held at the Hotel Brunswick, this city, Monday evening last, the following ticket was nominated for the current year:—Recorder John K. Hackett, President; Charles Banks, Vice-President; William M. Fliess, Treasurer; Roland Redmond, Secretary; John E. Develin, Counsel. Members of the Executive Committee—John K. Hackett (*ex officio*), President; William M. Fliess, Treasurer; John E. Develin, Counsel; Joseph Allen, George W. Hall, Roland Redmond and James Benkard.

PENNSYLVANIA—*Allenton, Jan.* 28.—We have started an association for protecting game during the winter, and have at present 106 live quail. C. H. BITTING.

PHILADELPHIA GAME PROTECTIVE SOCIETY.—Henry B. Mahn, proprietor of a restaurant in Broad street, above Chestnut street, Philadelphia, was convicted before Magistrate Hugh F. Kennedy for selling reed birds out of season. The fine imposed was $80. Henry Domnitz, game and provision dealer, No. 129 South Seventeenth street, was convicted of selling venison out of season before the same magistrate. The fine imposed was $30. In both cases security was entered, and an appeal to court taken. The arrests were made on complaint of officers of the Philadelphia Game Protective Association.

VIRGINIA.—It is proposed to establish a close period from mid-day Saturday till Monday morning of each week during the fishing season in the Potomac. This is absolutely necessary for the preservation of the fisheries.

INDIANA—*New Albany, Jan.* 29.—Last week our sportsmen organized a club, known as the "Floyd County Game Protective Association," with the following officers: President, Sam Weir; Vice-President, W. B. Rodenham; Treasurer, H. A. Fawcett; Secretary, Bayard Pierce. The first and chief object of the club is to restock our county with quail. The cold weather and snow played sad havoc with them. A good lively interest is manifested, and we hope to accomplish great good in our work. B. P.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship of 1879

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Offhand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

The captains of the several teams, entered before 9 o'clock on the evening of Feb. 22, will meet at Conlin's Gallery at that hour and fix upon the arrangements for carrying out the match, choose referees, and decide in what order the respective teams shall shoot. The assembled captains shall decide upon the date of opening the matches, and the date at which the entries shall close. The referees shall elect an umpire, whose decision in all cases shall be final.

The championship team tournament is creating no small discussion, and from the number of letters already received there is every indication of a large line of entries. These letters come not only from the clubs in town, but from Rahway, Bergen, Newark and Elizabeth, in N. J., Boston, and even from Chicago, where the team of the Thos. Post, G. A. R., are discussing the question of coming on. The South Brooklyn Rifle Club will be represented by a team, and such clubs as desire to take practice in the gallery may have special practice by writing the gallery master.

GERMAN RIFLE CLUB ELECTIONS.

The most of the German-American shooting clubs and associations hold their annual meetings in the months of January and February of each year, and elect their officers. We know of the following:

BOHEMIAN SCHUETZEN CORPS.—Captain, F. Wokal; First Lieutenant, Ad. Hahn; Second Lieutenant, A. Cherovsky; Third Lieutenant, Th. Firtsch; and Wenzl Kacerowsky, President; A. Cherooke, Vice-President; J. Strupl, Secretary; Alviss Krakki, Financial Secretary; Joseph Kordula, Treasurer; Wenzl Nepivoda, Shooting Master. Headquarters, 163 East Fourth street. Meetings, second and fourth Monday each month.

GERMAN RIFLE CLUB.—Captain, F. Freeze; Secretary, L. Gaerth; Treasurer, A. Ellerich; Shooting Master, Chas. Zettler, Sen., and Orderly, Chs. Huttich. Headquarters, 122 Rivington street.

MANHATTAN RIFLE CLUB.—President, H. Oehl; Vice-President, D. Miller; Secretary, F. Fabarius; Treasurer, M. B. Engel. Headquarters, Karl Klein's Hotel, 197 Bowery.

STATEN ISLAND SHUETZEN CORPS.—Captain, Fr. Bachmann; First Lieutenant, J. Rubsam; Second Lieutenant, Ch. Mundhenk; Treasurer, A. Zorn; Corresponding Secretary, F. Illig; Finance Secretary, O. Platz; Shooting Master, E. Zesch; Color Bearer, Ch. Beinort; Orderly, A. Hagemann.

JERSEY SCHUETZEN CORPS.—Captain, Aug. Ermisch; Treasurer, R. A. Lienau; Secretary, F. H. Jacobi; Orderly, G. B. Clausen; Stewards, J. D. Bishoff, O. Raisch; Color-Bearers, J Werhan, W. Mohn, W. Gerdts, J. Dehmke; Financial Committee, F. W. Schumann, J. Mangels, G. Koster.

BALTIMORE SCHUETZEN CORPS.—President, W. Raine; Vice-President, E. Groman; Treasurer, C. N. Oehm; Shooting Masters, Fr. Hasselhorst, Ch. Struth; First Secretary Jas. Letzer; Second Secretary, E. Buschmann; Directors, A. Martini, E. Heisenor, Fr. Gardner, H. Spanhake, G. Leimbach.

The shareholders of the Schuetzen Park, at Union Hill, N. J., held their annual meeting last week at Busch's Hotel, Hoboken. The financial report was read and unanimously approved. The report shows a small profit of $658.38 for the last year, but among the expenditures figures an item of $3,509.60 for altering castle, new gate, house, new roofs, etc. The following gentlemen were elected directors for the ensuing year: Hy. Offermann, Fred. Harenburg, H. W. Cordts, J. M Brunie, M. Steljes, W. F. Schumann, J. F. W. Mangels, Capt A. Ermisch, J. Horsmann, H. D. Busch, G. A. Kundahl, J. N. Crusins, B. H. Tienken, L. A. Lienau, H. D Gerdts, John Raschin, Herm. Raschen, Fred. Hansen, J. C. Huser, H. L. Meyer, A. W. Lemke, Chs. Pirovano, F. H. Jacobi, J. Hanken, Wm. Engel and C. Meyer. In place of John and Hermann Raschen, who declined to serve, Messrs. A. Hauenstein and Jugwersen were elected, and the Board organized as follows: President, H. D. Busch; Vice-President, Capt. Aug. Ermisch; Second Vice-President, Fred. Harenburg; Treasurer, Hy. Offermann; Corresponding Secretary, H. D. Gerdts; Recording Secretary, B. H. Tienken; Financial Secretary, John Horsmann; Shooting Master, G. A. Kundahl.

STANDING COMMITTEES.—Festival Committee, Busch, Ermish, Harenburg, Offermann, Horsmann, Gerdts, Fienken. Finance Committee—Cordts, Schumann, Hauenstein, Brunie, Jacobi. Park Committee—Schumann, Mangels, Hanken Engel, Crusins. Shooting Committee—Kundahl, Hansen, Lienau, Pirovano, Ermisch, Lemke, Cordts. Supply Committee.—Harenburg, Steljes, Horsmann, H. L. Meyer, Carsten Meyer. Law Printing—Gerdts, Ermisch, Steljes. Police Gate Committee—Mangels, Huser, Jugwersen, Horsmann, Hansen. Railroad Committee—Crusins, Jugwersen, Jacobi, Schumann.

We are informed that in the coming spring another grand shooting ground will be added to those already in existence, but will out-rank them all except that at Union Hill. This ground is at South Beach (Cedar Grove), Staten Island, and can accommodate hundreds and thousands of shooters. One can shoot there at short, middle, and long ranges, at the option of the participants. The proprietor of said place, Mr. A. Petzler, will have finished in a few weeks target-houses and shooting stands. During the season he will have running two steamers from the city to his place direct, and we presume that this place will be visited by almost all shooting societies of New York and vicinity during the next summer.

THE WASHINGTON RIFLEMEN.

WASHINGTON, D. C., Jan. 25, 1879.

EDITOR FOREST AND STREAM:

The Columbia Rifle Association of the District of Columbia held its third annual meeting on the evening of Jan. 15th, inst., there being a full attendance of its members. After the revision and correction of the rules and regulations which had previously been referred to a special committee on that subject, and the election of several new members, the association proceeded to the election of officers for the year 1879, which resulted in the re-election of Col. J. O. P. Burnside, as President, and Prof. Wm. Harkness for Vice-President, and the election of J. M. T. Partello, Secretary, and Jas. E. Bell, Treasurer. Two new offices had been created in the revision of the rules and regulations—Range-Officer and Team Captain—and General John Coughlin was elected to the former, Professor Wm. Harkness to the latter. Harrison Dingman, Esq., Dr. Wm. Tindall and Mr. Charles Laird were selected by ballot to serve with the officers of the association as an Executive Committee for the ensuing year.

The secretary made a report for the past year in which the association was congratulated on what had already been accomplished in perfecting the organization, and also on its prospects for the season of 1879 as evinced by the acquisition of so many new members and the spirit and enthusiasm of both old and new members.

Short-range shooting is to be a distinguishing feature of the association for the ensuing year, and many of the recently elected members of the club bear reputations for excellence at the close ranges, among whom may be mentioned Mr. J. M. T. Partello, Mr. P. T. Dodge, J. E. Gadsby, D. W. Bruce, Dr. Tindall and others. Altogether the prospects of the association for the season of 1879 are very encouraging, and new members—both active and associate—are continually adding to the lists. With the increasing interest in rifle matters now manifest in the District of Columbia it is confidently expected by the members of the club that, with a range complete in all respects, they will be enabled to close the year of 1879 with a healthy, self-sustaining organization of riflemen, whose only object will be to indulge in and encourage the sport as the recreation of gentlemen, and for the ultimate great benefit which must result to the country from having its young men thoroughly skilled in rifle practice.

The practice of our members is thorough and systematic, and is always conducted with the same particularity that the matches are—in fact each practice day is the same as a match. No sighting shots are allowed, and the regulation number of shots are fired over each distance, the members firing in turn and regular order, observing all the rules of a match.

Two mid-range iron targets are to be added in a short time on the Bennings Range, which, in addition to the long-range and short-range targets now in use will enable our riflemen to practice at all the distances. Heretofore there has been no 500 and 600 yards targets on this range, and some of the marksmen from this city at the late fall meeting held at Creedmoor entered the mid-range matches without ever having fired a shot previously over those distances. This defect is to be remedied, and hereafter mid-range and short-range shooting will be cultivated to a great extent.

The Columbia Rifle Association hopes to have the arrangements completed in time to invite the riflemen of the country to a meeting at Bennings Range early in May next. It is intended that the meeting shall be one of three days' shooting.

J. M. T. P.

EXPRESS BULLETS.

WORCESTER, January 27, 1879.

EDITOR FOREST AND STREAM:

Sir: I notice in your last issue a communication from F. J. Rabbeth on the accuracy of Express bullets as compared with the long-range 550 grain bullets, which has interested me very much. I have an Alexander Henry Match and Express

rifle. .45-calibre; with the rifle came Express bullets, with hollow points, which I have tried repeatedly, using the long-range sights and from 100 to 112 grains powder. The last experiment I made was about four weeks since, when I shot Express bullets 275 yards from a dead rest, ten shots, and to my disgust they covered about a two-foot circle. I then removed the Express bullets from the shells, and inserted the 540 grain long-range bullet, and shot ten shots in succession into an eight-inch bull's-eye, so you can readily see that my experience agrees with friend Rabbeth to a nicety. I have never tried them on game, but am content to take the testimony of others who have for their great killing properties, as I have shot them into a snow bank, and the result was they were turned completely inside out, with the exception of a small piece at the butt end, and so flattened out that they were nearly one inch in diameter; and if they could be used without impairing accuracy, I think they would be a good thing, but as friend Rabbeth says, I had rather estimate elevation for the long-range bullet than take the chances of the Express bullet going where it is aimed. I hope to hear the experience of others. G. J. R.

ACCURACY OF EXPRESS RIFLES.—In answer to Mr. T. J Robbetti, I would say that I have just had a diagram sent me of the shooting of a 50-bore double Express rifle made by Mr. Thomas Meuer, Fisher street, Birmingham, England, in which 10 shots at 100 yards are all in a 4-inch bull's-eye, and 10 do. at 200 yards in one 6 inches by 8. This rifle carries a charge of 6 drachms of powder, 164 grains, and only 340 grains of lead, and its effect on game is simply awful. Of course it is designed chiefly for East Indian shooting, where most of the game is dangerous, and its effect on grizzly bears would be instant death. Yours truly, C. MESSITER.

Dauphin, Pa., Jan. 31.

MASSACHUSETTS—*Springfield.*—The U. S. Armory Team shot over their range on the 31st ult., using the regulation army rifle, 70 grains powder and 405 grains lead, 10 shots per man, the scores running:

S S Bumstead	5	5	5	5	4	4	5	4	5	4—46
R T Hare	5	5	5	4	4	5	4	4	5	4—45
F H Bell	5	4	4	5	4	4	4	4	4	5—43
M W Bull	5	5	2	4	4	5	4	5	4	4—43
J F Cranston	4	4	4	3	4	5	4	4	5	4—41
M P Benjamin	4	4	2	5	4	3	4	4	3	3—36

Benjamin is a new man, but gives promise of being a good shot.

WALNUT HILL—*Boston, Feb.* 1.—A forbidding day did not prevent a very full attendance at the regular Saturday meet to-day. The winter shed was crowded, and the ladies, who love the odor of burning powder, were given excellent points of view, whence they could see the rising discs, and once or twice the fair ones were induced to try a shot, and the white discs displayed were not mere complimentaries, but were actually earned. The competition was the seventh one for the Maynard rifle, with seventy-seven entries. The scores standing as follows at 200 yards, off-hand:

W H Jackson	5	4	4	5	5	4	5	4	5	5—46
J Wemyss, Jr	5	4	4	5	4	4	5	5	4	5—45
C M Meiggs	4	5	5	4	4	4	4	4	4	4—45
A B Archer	5	4	3	4	5	3	5	4	5	5—43
E B Souther	4	5	5	4	4	4	4	5	4	4—43
W E Currier	5	5	4	4	4	5	5	4	4	4—42
H Tyler	4	5	3	4	5	4	4	4	5	4—42
J Nichols	5	5	5	4	4	3	4	4	4	4—42
J S Somes	5	5	4	5	4	4	4	4	3	4—42
Col N Wales	3	4	5	5	4	4	4	3	4	5—42
F A Brown	4	4	5	4	4	3	4	4	5	4—41
W Charles	3	4	4	4	4	5	4	4	4	4—41
R Davis	4	4	4	4	4	3	4	5	4	4—40
E W Archer	3	4	4	3	4	4	4	4	4	4—80
F W Archer	3	4	4	5	4	4	4	4	4	4—39
N E Jepson	4	3	4	5	4	3	5	4	3	4—37
H Wharton	4	4	0	2	4	4	5	4	3	5—29

The wind was decidedly unfavorable for the making of large scores, varying from 10 to 12 o'clock, and was very gusty. During the afternoon several of the members engaged in practicing with shot-guns at glass balls thrown in the air, and some very fine exhibitions of skill were given. Mr. J. N. Frey has been unanimously chosen President of the Massachusetts Rifle Association for the current year.

GALLERY SHOOTING.—the regular monthly shoot at the Mammoth Rifle Gallery, Washington st., Boston, closed on Saturday last, and the scores made have shown a very steady high average. The shooting was participated in by many of the members of the Massachusetts Rifle Association as well as by independent marksmen. The shooting was at 50 yards; 8 rounds; possible 40; the scores standing:

P H Hartshorn	5	5	5	5	4	4	5	5—38
Edwin A Archer	5	5	4	4	5	5	4	5—37
F M Harris	5	5	4	4	5	5	4	5—37
John A Lowell	5	5	5	4	5	4	4	5—37
D F Small	5	4	4	5	5	5	5	4—37
Horace Binney Sargent, Jr	5	4	4	4	5	5	5	5—36
Wm H Restarick	4	4	4	4	5	5	5	5—36
E C Sales	5	4	4	5	4	4	5	5—36
John K Fox	4	5	4	5	4	5	4	5—36
Col Nat Wales	5	4	4	4	5	4	5	5—36
H M Pope	4	5	4	4	5	4	4	5—35
Everett Clark	4	4	3	5	5	4	4	4—35
George E Everett	5	5	4	4	3	5	4	5—35
George T Rockwell	4	4	4	4	4	5	5	5—35
Amos E Moore	5	4	4	5	4	5	4	5—35
L W Blake	3	4	4	5	4	5	5	5—35
M H Raymond	5	5	4	4	4	4	4	5—35
V L Seche	5	4	4	4	4	4	4	5—34
E K Knowles	4	4	5	4	4	5	5	5—34
H A Driscoll	5	5	4	4	4	4	4	4—34
William R Allen	4	4	4	5	5	4	4	4—34
George R Estes	4	4	4	5	5	4	4	5—34

E. W. Archer and F. M. Harris are tie for second and third prizes, according to the rules of the gallery.

—The match between the Bergen Point Rifle Club and the Medford Rifle Club will be shot Feb. 22, at 2 P. M.

CONNECTICUT—*Collinsville, Jan.* 30.—The Canton Rod and Gun Club to-day shot over the 200 yds. range for their regular weekly match, the scores running, in 10 shots:

	Mass.	Oreed.		Mass.	Creed.
J Lanhenstein	94	43	Geo Case	78	38
O B Hull	53	43	J Pfister	18	36
H Kenold	81	39	J H Bidwell	64	33

—At the annual meeting of the Seventh Division Rifle Association at Rochester, N. Y., on the 18th inst., officers were chosen for the present year as follows: President, Brigadier-General W. H. Briggs; Vice-President, Major A. G. Wheeler; Secretary, Major W. S. Smith, Jr.; Treasurer, C. F. Walters; Executive Committee—Colonels Begy, Erbelding and Miller.

EMPIRE RIFLE CLUB.—At a meeting held last week the following officers were elected: President, W. Wilton Farrow; First Vice-President, F. H. Holton; Second Vice-President, D. F. Davids; Secretary and Treasurer, Dr. M. M. Maltby. The club has unconditionally accepted the challenge of the New York Rifle Club, the match to come of on the 22d of this month, at the Brinton Range.

—At Zettler's Gallery, 207 Bowery, the regular weekly scoot of the Zettler Rifle Club was held Jan. 28, at point target reduced to gallery distance; 10 shots per man; possible 30 points:

C Judson	22	M L Riggs	14
D Miller	21	H Fisher	13
H Oehl	20	F Fabarus	14
F Dath	19	C Zettler	13
M B Engel	19	M Dorrier	18
P Fenning	17	W Klien	13
B Zettler	17	F Levy	13
A E Moore	16	J Reyn	12

There will be two teams enter the FOREST AND STREAM match from this club. Second team held a meeting last Thursday evening and elected Mr. N. D. Ward Captain.

N. R. A. DIRECTORS.—The National Rifle Association directors met on the 4th inst. in regular monthly session. A resolution offered by Gen. Wingate instructed the secretary to notify all foreign rifle associations that the annual contest for the "Palma" would take place at Creedmoor next September, and inviting them to send teams to enter the competition. The secretary was also directed to send similar notices calling attention to the International Military and Inter-State Military matches. Mr. Schermerhorn, Major Henry Fulton and Col. E. H. Sanford were appointed to prepare a programme for the spring prize-meeting at Creedmoor. Col. G. D. Scott gave notice that at the next meeting of the board he should offer an amendment to the by-laws reducing the annual dues of members from $8 to $2. On motion of Mr. Schermerhorn, the Executive Committee was directed to consider the advisability of allowing military men to assume any position in matches at distances greater than 300 yards. At present they are compelled to shoot in a prone position, head toward the target, while many desire the privilege of shooting from a back position, like marksmen using small-bore rifles. A letter from Capt. W. H. Jackson, of the American Rifle Team, stated that a Boston jewelry firm would take charge of the Palma, about to be shipped to that city, and return it to this city at the expiration of three months. Major J. H. Jones, of the Twelfth Regiment, was chosen Secretary, and the following standing committees were appointed:

Range—Gen. G. W. Wingate, Capt. Joseph G. Story, Col. G. D. Scott.

Finance—Col. E. H. Sanford, Capt. W. C. Casey, Col. J. H. Cowperthwait.

Prizes—Col. John Wood, Major Joseph Holland, Major J. H. Jones

NEW JERSEY—*Newark.*—The first of a series of winte competitions opened at the range of the Newark Rifle Club on the 16th ult., and in a cold northeaster the following scores were made:

E B Elliott	4	5	5	4	4	5	4	5	5	5—46
W F Nutten	3	4	4	4	4	4	4	4	5	4—40
W H Nicholoy	4	2	5	4	4	4	4	4	4	4—39
H Humistow	4	4	4	3	3	3	2	4	4	5—36
R B Pomeroy	4	3	4	5	4	3	4	3	4	3—35

On the 29th ult., in regular weekly competition, the scores stood:

E B Elliott	4	5	4	4	4	4	5	5	4	5—44
N Numistow	4	5	4	4	4	4	4	4	5	4—42
W N Nicholay	3	4	4	5	4	4	4	4	5	4—40
W Nutten	5	3	4	4	3	5	4	4	5	3—40
C J Smith	3	4	5	4	4	3	3	4	4	3—38
R B Pomeroy	3	4	4	4	4	5	3	4	3	3—37
F Chapman	4	4	3	4	5	2	3	4	3	4—37

Ohio—*Cincinnati.*—The Fishing and Shooting Club and the Germania Club met on the 26th for 200 yds. practice, the scores standing:

T C Baum	4	4	4	4	5	5	4	4	5	4—65
W Caldwell	4	4	4	4	4	4	4	4	5	5—64
W Hall	4	4	5	4	4	4	4	5	4	4—63
M Genderlin	4	4	4	5	4	5	3	4	4	4—60
L Fender	4	5	4	4	4	4	5	4	4	4—60
G Henson	4	5	4	4	3	4	4	3	4	4—59
T A Jones	5	4	4	4	5	4	3	2	5	5—57
W Campbell	4	3	3	3	4	3	5	3	4	4—54

At the conclusion of the practice shoot, matters were enlivened by a little team match, at same distance, the scores standing:

Genderlin's Team.

M Genderlin	4	4	4	5	4	4	5	5	5	4—67
T C Baum	5	4	4	4	4	4	4	4	4	4—63
W Hall	4	4	4	4	4	4	5	4	4	4—61
Total										191

Fender's Team.

W Caldwell	4	4	5	4	4	4	5	4	5	4—66
W Fender	4	4	4	5	4	4	4	5	4	4—65
G Henson	4	5	4	4	3	4	4	4	5	5—59
Total										190

PENNSYLVANIA—*Allentown.*—On Saturday, Feb. 1, a shooting match took place at Richards' gallery, on 6th street, the following were the conditions: Glass balls are to be hung on a swing target and shot at with a parlor or saloon rifle. Each man had 45 balls to shoot at, and the following is the score:

Boyer J	1	0	0	1	1	0	1	0	0	1	0	0	1	0	1	1	0	—	7
Gilbert G	0	0	0	0	0	0	1	0	0	0	0	0	0	0	0	0	0	—	1
Moser Wm	1	1	0	1	1	1	0	0	1	0	1	1	1	1	0	1	—	10	
Boyer	0	0	0	0	1	1	1	0	1	0	1	0	1	1	1	—	8		
Gilbert	1	0	0	0	1	1	0	0	0	0	0	0	0	1	1	0	—	5	
Moser	1	0	0	0	1	1	0	1	1	0	0	1	1	0	0	1	—	7	
Boyer	1	1	1	1	0	1	0	1	1	1	1	0	0	1	0	—	10		
Gilbert	1	0	1	0	0	1	0	0	0	1	0	1	0	0	0	—	5		
Moser	1	0	0	0	0	0	0	0	0	0	0	1	1	0	1	—	4		

Yours very respectfully, CHAS. H. BITTING.

THE RIFLE IN CHICAGO.—A new impetus and a powerful one has been given to the science of rifle shooting in the West since my last letter, by the formation of the Grand Army Rifle Association of the United States, with headquarters at Chicago, organized under a charter from the State of Illinois. The following officers were elected: M. W. Lyman, President; John L. Manning, Vice-President; W. H. Reed, Secretary; Henry D. Fields, Treasurer, and Colonels Swain and Chamberlain and Captains Chenoweth, Dyball and Lyman, Directors. The appointive officers will be announced hereafter. At the recent grand encampment of the G. A. R., held at Galesburg, some twenty of the posts represented there signified their intention to organize rifle clubs and to affilliate with the central association, and letters have been received from posts in Iowa, Wisconsin and Minnesota, desiring instructions in regard to the formation of rifle clubs. From the well known energy, tact and shrewdness of the officers of the association, and their enthusiasm in rifle matters and their efficiency in the use of our national weapon, there is no question as to the success of this organization. The object of the organization is to foster and build up rifle shooting in the country. Although it is started in the name of the Grand Army of the Republic, it is not intended to confine its membership to clubs in that body, but simply to have a responsible organization back of it. Rifle clubs not connected with the Grand Army will be admitted to all its privileges, and are cordially invited to correspond with the secretary, W. H. Reed, who may be addressed at headquarters, No. 293 West Madison street. One thing may be relied upon by riflemen throughout the country—this association will have none of the elements of close communion about it in the event of a future in ternational team match. The Grand Army Rifle Association Team will be composed of the best marksmen that may be affiliated with the association, without regard to the range over which they may have won their rank.

The weather has been too inclement lately for outdoor shooting for any club less plucky than the Lake View boys. They were out on the 25th of January and the 1st of February with good scores.

"Captain Sone's man" is informed that when I sent the scores of Lyman and Kellogg I had not seen the unequaled scores of Sibley and Sone. LU.

Chicago, Feb. 4.

—The Lake View Rifle Club, of Chicago, have accepted the challenge of the Medford, Mass., Rifle Club, and the match will take place Feb. 22, at 10 A. M.

WISCONSIN—*Milwaukee.*—Jan. 25 was regular practice day for the Milwaukee Rifle Club, and a fine score was rolled up. The following is the record, 15 shots, possible 75, distance 227 yds.:

Welles	4	5	5	5	5	5	4	3	5	5	4	5	4	4	—68
Fielding	4	5	4	4	4	5	5	4	5	4	5	3	5	4	—64
Hill	5	5	4	4	4	5	2	4	4	4	5	4	4	4	—62
Drake	4	4	5	4	4	3	4	4	4	3	4	4	4	4	—60
Murray	4	3	4	4	5	4	3	3	4	4	3	4	5	5	3—59
Williams	4	4	2	4	4	3	4	3	3	4	5	0	4	5	3—59
Berry	4	4	3	4	3	4	3	3	4	4	4	4	5	5	2—56
Markham	5	3	4	4	3	3	3	4	3	5	5	3	3	2	3—53
Simmons	4	4	0	3	3	3	4	3	3	4	4	5	4	4	—52

A PHILADELPHIA RANGE.—There exists within the city bounds a race course, which, with an additional strip available, would give a range for long-range shooting, perfectly level and suitable in every respect, excepting one particular, that is the direction of fire would have to be nearly due south instead of north. Is this so serious an objection as to prevent its use for the above purpose? The grounds are so well suited with buildings, stands, etc., and will most likely be fitted up and offered for the above use by the association owning it, and under such conditions as would make it popular, that if the expense had to be borne by riflemen, would place the fitting up or even the acquiring of a range by any other means impossible in this city. C.

The great point in laying out a range is to get the sun at the rear of the firing points, in order that there may be no glare in the eyes of the marksman. A shade over the firing point would do much to meet the evil, but with snow on the ground the reflection from the white surface would be very strong. The objection is not a fatal one, however, and it may be overcome by appropriate shooting stands.

COLORADO—*Denver, Jan.* 29.—The members of the Denver Rifle Club are on the *qui vive* of expectancy, preparing for a coming contest of skill with the rifle club of Cincinnati. The challenge was received in last night's mail, and makes the initial move in the preparations for an unusually interesting trial. It is proposed to make a short and careful contest. But one range, the 200 yards, will be used, and the shooting to be off-hand. Six men upon each side will contest, each being allowed ten shots, thus making a possible aggregate score of but 300. The Denver Club have promptly replied, accepting the challenge, and the match will come off in the near future, about the middle of February, it is thought. Mr. W. Y. Sedam, now of this city, and a member of the Denver Rifle Club, was formerly captain and chief shot of the Cincinnati team. He has practiced several times of late with members of the Denver Club, and thinks they will have little difficulty in defeating their opponents, that is if six good average men are selected. One poor member will, of course, defeat the efforts of the others in such a short trial, where success depends much more than ordinarily upon the accuracy of every shot. The range selected, however, is, we think, rather favorable for the Denver Club. Mr. C. Gove has few if any equals at this distance, and his record of 49 out of a possible 50 bears record to the fact. O. Gove is but little inferior, and the other members of the club have had sufficient experience, and shown sufficient skill, to give promise of a good exhibition. Some members of the club are now practicing daily. Three matches will be shot to select the six who will participate in the contest. Each team will shoot upon its own range, and the scores will be transmitted by telegraph. W.

A CANADIAN LONG-RANGE CHALLENGE.—There is a Yankee directness in the following letter from a Canadian subscriber. No doubt Captain Jackson will be happy to give our friends from over the border a few lessons of what "Walnut Hill" can accomplish.

EDITOR FOREST AND STREAM: January 27, 1879.

In your columns I notice that there is a considerable controversy regarding the disposition of the Centennial trophy—"The Palma"—that the N. R. A. anticipates a difficulty in getting a foreign team to compete for it, which would necessitate an empty "walk-over" for the American team, to enable them to hold it until some other disposition is made.

Considering this to be the position of the American Rifle Team of 1879, and that they may not have the questionable honor of winning the trophy by a matter of form (a walk-over), the Bowmanville Gun Club, of Canada, authorize me to make the proposition that the American rifle team of 1879 will hold a competition with the Bowmanville Rifle Club, of Canada, in May or June next, at the city of Rochester, N. Y., said competition to consist of the usual number of competitors a side, and governed by the customary rules of the N. R. A. for such occasions. Further particulars to be arranged on acceptance of proposition.

The club does not send this in the shape of a direct challenge, for the reason that they are not a national Canadian team, but only represent their club, and consequently the N. R. A. would not be obliged to entertain it, but send it in this shape, with the hope of arranging a match.

Whatever smack of assurance this may have, the club will attempt to justify by showing the white disc.

A. J. FOTHERGILL, Bowmanville, Ont., Canada.

YACHTING NEWS.

YACHTING AT OSWEGO, N. Y.—The prospects of lake yachting in the future seem bright indeed, for from all ports along old Ontario, Erie and Michigan comes favorable news concerning the rapid increase of the fleets and the spread of popularity of the sport among the masses. When once the beauties of the lakes and the magnificence of the cruising grounds they afford are fully appreciated by the people in the West, it will not be long before their yacht squadrons will vie in number and in quality with those along the sea-board proper. About Oswego the outlook is encouraging. The fleet in those waters reaches twenty sail, the largest a 40-ton schooner, 50ft. keel and 10ft. beam. The *Ella*, of 20 tons, is by many considered the fastest boat of her size on the lakes, for in the matches at Oswego and on the Canadian shore she defeated *Surprise*, with gallant Cuthbert at her wheel. A steam yacht, 50ft. keel, is now in course of construction for Mr. N. Best, of Oswego, and a number of smaller craft are going up. Tides and currents do not bother our friends on Lake Ontario. The Thousand Islands and other famous places are the most popular resorts of the yachting fraternity. Barnacles are scarcely known in the fresh water regions, and iron craft need not bother about "the best coating for their bottoms."

BUNKER HILL YACHT CLUB.—The Bunker Hill Yacht Club, Charlestown, Mass., elected the following officers for the year: Com., W. H. Tolman; Vice-Com., J. H. Rich; Capt., S. H. Morris; Sec'y, W. F. Hodgkinson; Fin. Sec'y, P. J. Henchey; Treas., G. W. Melville; Trustees, N. F. O'Neil, G. Andrews and J. Keyes; Measurers, W. S. Robbins and M. Walsh; Steward, B. W. Hollis.

NEW DEPARTURE IN SHARPIES.—A correspondent, whose experience with sharpies extends over many years, informs us that Mr. Barns, of Stony Creek, Conn., has built for him a ducking boat on the sharpie plan, but to obviate the "pounding" has adopted the following plan: The stem projects below the bottom, and a rounded piece of wood butts up to it and runs to nothing aft. Of the success of this improvement we hope to hear more anon. One objection to the sharpie for hunting purposes has been this very peculiarity of pounding or hammering in a sea, thereby destroying the aim. If this can be done away with, the sphere of usefulness of the sharpie will be materially enlarged.

EXPERIENCES ON THE LAKES.—"We have," writes a lake yachtsman from Buffalo, "some glorious old sport on our fresh water lakes, and yachting in the future promises to expand to large proportions on our inland seas. First, the getting ready for the start, fitting out with countless things for the coming cruise, preparing fishing tackle, bait and provisions; then the start itself, and when once well outside of the Dummy Light, to meet the storm, hoist foresail with a reef, stow mainsail and jib, and skim along at a lively pace through the blinding rain for our destination. Arrived there, we lower foresail, drop the anchor, make things snug, and after a quiet smoke, then for the good old sleep of the righteous that the sail and the excitement brings on. Next morn, up with the break of day, and out to the fishing-grounds, where sport of a grand kind awaits us among the black bass, perch, rock bass, and an occasional sheepshead! If our fellow-citizens only knew of the solid fun there is in yachting, Buffalo would soon count her handsome craft by the score."

THE CORINTHIAN CUTTER.—Owing to the small scale upon which our cuts of the Corinthian cutter (published last week) were necessarily executed, it would be found difficult to build directly from them. For those desirous of building upon this design, we can procure large scale working drawings.

OSGOOD'S PORTABLE BOAT.—The canvas folding-boat of the Osgood pattern has long been in high favor among sportsmen. She weighs only 40lbs., everything included, and can be bought for $35. They have been used as long as seven years, without showing signs of wearing out. Made at Battle Creek, Mich.

BOSTON YACHT CLUB.—The annual meeting was held and the following officers unanimously elected for the ensuing year: Com., Francis H. Peabody; Vice-Com., Nathaniel Wales; Rear-Com., Andrew Robeson; Sec., Thomas Dean; Treas., Augustus Russ; Measurers, D. J. Lawlor, J. B. Smith; Trustees, Benjamin Dean, Wm. B. Merrill, E. B. Phillips; Regatta Committee, Wm. H. Bangs, Jr., J. Alfred Mitchell, Thomas Dean, Frank A. Drew, George S. Rice; Membership Committee, A. C. Martin, Charles E. Russ, William S. Whitney. The club received a proposal from the Sewanneka Club to present a united petition to Congress through our member from this district for a license law to govern yachts, and do away with requiring them to take coaster's papers. On motion of ex-Vice-Com. Smith, a resolution was adopted and Com. Peabody instructed to sign for the club. Mr. Curtis' motion relating to the voting privilege was referred to a committee to report at next meeting in April. The club is in a very prosperous condition.

THE REAL ORIGINAL SHARPIE.—*Editor Forest and Stream:* Give honor to whom honor is due. I notice in your paper an article on sharpies, signed "B.," in which he says Mr. Taylor, of Vermont, has the name of building the first sharpie, which is not correct. I remember full well the boat built by Mr. Taylor and named the *Trotter*, and wish to inform you that the boat built by Mr. Taylor was not the first sharpie. The first sharpie was built by myself and brother, J. H. Goodsell, of Fair Haven, Ct., several years before Mr. Taylor's, and was named the *Telegraph* from her great speed. We were the designers of the model of the sharpie. I am not positive as to the exact year we built the *Telegraph*, but I think it was about the year 1848. If you desire any further information relative to the above you can obtain it by writing to parties in Fair Haven who are conversant with the facts.

Baltimore, Md., Jan. 30. J. D. GOODSELL.

We are glad to place upon record the names of the originators of the sharpie, for with the lapse of time her origin would have become obscured, and the number of claimants who years hence might seek to identify themselves with the first boat of the kind have been forestalled, and thus, as our correspondent says, we give honor to whom honor is due.

WHERE TO BUY CANOES.—We are constantly in receipt of inquiries for the name of the builder of the *Shadow* canoe. The canoeing world is referred to our advertising columns, where they will find the card of Mr. Geo. Roahr, boat-builder, of Harlem. A visit to his extensive shop will satisfy any one that Mr. Roahr knows what a *Shadow* canoe is and how to build them quite as well as he knows how to put together shell-boat work, for which he has long been famous. The material and workmanship, and particularly the finish of his *Shadows* and *Nautilesses* will compare favorably with anything in that line. With his ample facilities and favorable location, he is prepared to build the *Shadow* and other canoes at the lowest rates, while his responsibility requires no further guarantee from us.

ROUGH WEATHER YACHTS.

BOSTON, Jan. 27, 1879.

EDITOR FOREST AND STREAM:

I notice in your correspondence recently an article headed "Rough Weather Yachts" in which the writer, who was apparently on board the *Sunbeam* during the race, makes some statements in regard to the judges, Messrs. Arthur Burgess, Coolidge, Barnad and myself, not sustained by the facts. He says: "The judges concluded to log-off the course by a patent log on board the *Dolphin*. This was certainly an error on the part of the judges, as it proved the longest ten miles that ever were sailed. On board our boat was a practical navigator, who laid out the course on the chart in a proper manner, and when the bearings bore right by compass we hove-to."

I have yet to learn that a patent log in thorough order, as was the one used that day, is not a proper—and the usual—means in such races; and as when ten miles by it were run, Minots Ledge Light bore southwest by south and Bakers Island Lights north by west, there was no material error in the distance. When the *Sunbeam* hove-to at 11:05 A. M. the *Dolphin* had run one hour and a quarter east by north from Boston Light at half speed, being short of coal. Her full speed is not over eight knots, and the log then registered less than five. The "practical navigator" must have left his chronometer at home.

I notice next "some little delay was caused in getting the flag buoy into position." This is not true; there was no delay whatever in that operation, and as the *Sunbeam* was astern some half-mile or more, I presume "Kedge" speaks from hearsay. My "request" to waive the consideration of starting to windward first was a refusal to serve for another race unless this was so altered. Of the yachtsmanship of starting a twenty-mile race from a flag buoy ten miles out to sea, comment is unnecessary.

On the second day the judges postponed the race more than an hour after the appointed time, neither yacht being within five miles of the starting point, and no wind. Such remarks as "They had the ear of the judges. We made up our minds we should not only not handle their money, but would never see the stakes," and some others of similar nature, so far as they refer to me, may pass for what they are worth. With this I leave the subject. Pardon my taking up your space with a matter so purely personal. Very respectfully, FRANK E. PEABODY.

The above we print with pleasure in justice to the judges who are certainly above any suspicion and well known in the community in which they reside. We have also in type an account of the *Sunbeam-Gael* matches from the standpoint of the *Gael*. The controversy would seem to be the result of misunderstanding and "Kedge's" complaint against the judges will be cleared up by the letters to hand, though there may always remain a difference of opinion as to the merits of the two yachts, which a series of races next season can best settle.

MORE ABOUT THE SHARPIE.

NEW HAVEN, Conn., Jan. 21, 1879.

EDITOR FOREST AND STREAM:

I have come to the conclusion that one's own experience coupled with that of others would make a more readable and instructive article than personal experiences only. I have called on several builders and sailers of the sharpie and round-bottomed boats, thinking that if there were any good or weak points in either, I would be apt to hear of them. Both classes of these men here agree that a sharpie labors easier and is drier, except in a chop sea, or a heavy sea and light wind, when it will pound, and is then the wetter boat of the two. This is the only fault that I have heard of them, while their light draught and sailing qualities are not excelled by any other class of boats.

Years ago, the dug-out canoe was used by the Fair Haven boatman. The square-ender, or skiff, was used by some, but was not considered a salt-water craft, and was thought to be countrified, and no boatman was high-toned unless he was the owner of a canoe. These were brought from Lake Champlain, rafted together like logs, by one John Smith, who would get customers for them and who drew cuts for choice on their arrival: each canoe being numbered and a price so set by a committee that Smith would get his price for the lot. The price would be $30 to $60. They were used with leg-of-mutton sail, leeboard, and steered and sculled with an oar. Occasionally there would be a race, six or eight men in each canoe with paddles, the losers to pay for an oyster supper at the tavern. The whole thing would be wound up with a fore and-after in the barroom, and the negro fiddler would keep the light fantastic toe a-wagging away into the early hours of morning.

The last raft of canoes was brought about 1832. Suitable logs being difficult to obtain, the canoes became poorer in quality; and just about this time oysters began to be so scarce in the Quinnipiac River that the oystermen were obliged to plant them in our harbor. In looking around for a proper boat, the sharpie was hit upon, the first being built about 1835. She was not then the handsome and speedy boat she is to-day, and it is only within the last five years that they have been brought to that degree of perfection that their sailing qualities exceed those of the round-bottomed boat. Even now there is no regular rule to build them by, each boatman ordering of the builder—who is generally a boatman—what he thinks would best suit his purpose, trusting to luck for extra sailing qualities. The head of the centreboard trunk is always put just aft of the cabin or forward deck, which varies in a 35ft. boat from 9½ to 11ft.

Mr. Lester Rowe, of Fair Haven East, has been the lucky one, as boats of his build—when they have been allowed to enter—have won every race for the last three years. He has kindly furnished me with the dimensions of his *Carrie V.*, which has beaten such fast round-bottomed boats as *Libby*, of Bridgeport; Bird's yacht, of Clinton, and *Twilight* and *Fleetwing*, of Stony Creek. Mr. Rowe thinks his boat will go faster to windward than any boat he ever saw, and will not except a catamaran.

Carrie V. is 35ft. long, breadth of beam is amidships, and is 8ft. on deck; flare of sides, 4in. to the foot; width of stern, 4½ft., just before it commences to round, and 10in. deep; depth at bow, 36in.; 14in. sheer; 11ft. centreboard; decked over, 10ft. forward and 4ft. aft; washboards, 12in. wide amidships; length of rudder, 6ft., and 18in. deep; greatest draught of water, 6in., and is amidships; bow sets 4in. out of water. In her racing trim she carries a 45ft. foremast, 6in. diam.; 40ft. mainmast, 5½in. diam.; both tapered to 1¾in. at mastheads. Length of bowsprit, 17ft., 22ft. between spars; hoist of jib, 27ft. She carries 250yds. of canvas—75 in the foresail, 60 in the mainsail, 45 in the staysail, 40 in the squaresail, and 30 in the jib. To get this great spread of canvas in the fore and mainsails, 8 or 10ft. "cimbs" are used, and two booms to each of these sails, which set with such nicety that when on the wind there is not over 6in. space between sail and boom. The mainsail runs out so far over the stern that an iron V, 4ft. long, has to be used for the mainsheet. The cost of sails is 50 cts. per yard. The canvas is generally furnished by the boatman, the sailmaker doing the work, including roping, for 4 cts. per yard. In a race 12 men are used for ballast—no dead weight ever being used—and when on the wind, outriggers, consisting of two 16ft. planks, are run out to windward, upon which the men get, one of them being captain of the outriggers, whose business it is to see that the weather corner is kept just out of water, he using more or less men, and shifting them to windward or to leeward as the occasion requires. It is a great point to keep the sharpie in just this position when on the wind, as she sails faster and holds on better.

The cost of the round stern over the square is $15. The advantages are in looks, no corners to catch the mainsheet, it will not ship a sea so easily when moored by the stern, as they always are when tonging for oysters. The reasons for so mooring them are, handiness in getting at the anchor, and they lie more quiet. The two pleasure or working masts for 35ft. boat are 4½in. diam., and 28 to 30ft. hoist, and the two spread 65yds. canvas.

Most boatmen have to go through several bridges in going down the river, and as they have to unstep their masts, they are made as light as possible, so as to handle easily, and for this reason they are sometimes carried away at the partner or main thwart. A hatchet is carried, so that the stump of the mast can be cut to fit the step when a single reef is put in—not a long operation for a Fair Haven boy, either.

From 150 to 175 bushels of oysters can be carried in a boat of this size, and she will sustain 5 tons weight. The weight of her hull is 2,000 to 2,500 lbs., and it takes ten good men to end her up. The captain of one of our yachts told me that he had seen sharpies in bad weather dredging for oysters in the Sound, when it was a mystery to him how they staid, let alone doing any work. The cost of one these boats, with working or pleasure sails, is about $250.

Length for length, the round-bottomed boat is the better, but a sharpie will outsail and drown out anything nearly double her tonnage, if sailed by a Fair Haven boatman. The sharpie is also the quickest boat that ever sat in the water, and it requires considerable experience to handle her easily. They will come dead about in their own length, and their quickness is only equaled by two well-matched Tom cats in a moonlight set-to.

Long sharpies will not be built to any great extent for yachting purposes, and my reasons for so believing may be stated at some future time. The "skip-jack," a boat of many good qualities, I think will take the place of the large sharpie for yachting. A sharpie less than 25ft. in length does not amount to much in a seaway, unless you give her considerable breadth of beam, which hurts her sailing qualities, and spoils her beauty; the latter being a great misfortune to anything of the feminine gender. Sharpies sail better when loaded by the stern than by the bow, and should you ever wish to row one alone that is made to pull two pairs of oars, always take the stern pair.

I have had no experience in the transportation of boats by cars, but think that perhaps weight will tell against the sharpie. They are heavier than one would suppose to look at them, and while one end at a time lifts easily, it is another thing when you tackle both ends at once. You can judge for yourself when I tell you I have one I made as light as possible for sailing, 14ft. long, 3ft. beam, and it takes two men to load it on a wagon. The stock for this boat, including three coats of paint, was about $6, and I was one and one-half days building her. The price of a boat of this kind is $1 per foot or a little over. I have another, 26ft. long, decked over like a duck-boat, and made for that purpose; and while she would do well enough to shoot out of on a river or small lake, she is a complete failure for coot shooting on the Sound on account of her "pounding," which destroys the aim. When made for rowing, sharpies are considered heavier than a round-bottom boat of the same length, made for the same purpose.

Sharpies have no hollow water-lines, neither ought the bow crown up. The sides throw up the bow in bending them, but the forefoot is cut straight away aft, so that the water-line will be at right angles with the stern. A sharpie's bottom is nearly straight from the stern to midships, or thereabouts, according to the fancy of the builder. Some makers commence at the stern to cut up the corners, and hollow the sides along midships. What gives the bow the appearance of crowning up is the way the sharpie sits on the water, and the less you cut away the corner or bottom sides amidships or aft of it, the higher the bow will be out of water.

JAEL.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachinotu carolinus*
Drum (two species). Family *Sciænidæ.*
Kingfish, *Menticirrus nebulosus.*
Sea Bass. *Scianops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Snapper, *Lutjanus blackfordii.*
Grouper, *Epinephelpus nigritus.*
Trout (black bass), *Centrorpristis atrarius.*
Striped Bass, or Rockfish, *Roccus lineatus.*
Tailorish, *Pomatomus saltatrix.*
Black Bass, *Micropterus salmoides M. pallidus.*

FISH IN MARKET—RETAIL PRICES.—Bass, 25 cents; smelts, 10; bluefish, 15; salmon, 35; mackerel, 20; shad, 40; weakfish, 15; white perch, 12½; Spanish makerel, 50; green turtle, 14; terrapin, $18 per doz.; frostfish, 6; halibut, 18; haddock, 6; kingfish, 15; codfish, 6; blackfish, 15; herring, 6; flounders, 8; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 20; scallops, 30 per quart; whitefish, 16; pickerel, 15; salmon trout, 15; red snapper, 15; smoked haddock, 12; smoked salmon, 16; dry cod, 7; hard crabs, $2.50 per 100; soft clams, 60 per 100.

During the early part of last week there were over 2,000 pounds of bluefish caught on the North Carolina coast; they averaged seven pounds each. This is the latest ever known for bluefish to be taken on our coast. From two to four thousand pounds striped bass are taken every day during the past week on the Hudson in vicinity of Peekskill.

MOONSHINE.—We have some interesting articles upon the moonlight and fish question which we shall publish in our next issue.

—We call attention to the advertisement this week of the Arlington Hotel at Gainesville, Florida. Gainesville is on the Fernandina and Cedar Keys railroad. By a coincidence we received reports of the fishing there from three different persons by one mail. This locality seems to have been overlooked by anglers.

MOVEMENTS OF THE FISHING FLEET.—Ten fishing arrivals have been reported at this port the past week, 4 from the Banks, 4 from Georges and 2 from Grand Menan. The Bankers average light fares, the receipts for the week being 90,000 lbs. halibut, but the arrivals are well distributed and fair prices are realized. The prospect on Georges is quite encouraging, if the fish continue in their haunts until the fleet fits away. The vessels engaged find good fishing for cod, and most of them bring in small lots of halibut. The Georges receipts for the week foot up 160,000 lbs. cod and 25,000 lbs. halibut.—*Cape Ann Advertiser, Jan.* 31.

New Bedford, Feb. 3.—To-day's boat brought off from the Vineyard about a barrel of smelts, the first of the season. Eels are extremely plenty owing to the thick ice, which enables the fishermen to reach them easily with spears. Sea fowl also very plenty, as they gather in flocks around the air-holes. Pickerel fishing is at a standstill, as the ice, fifteen inches thick, is rather too much for pleasant cutting.

CONCHA.

Smelts have been in the New York market for a month selling at the rate of four pounds for twenty-five cents.

Shelter Island, L. I., Jan. 30.—The pound-net fishermen are busy getting ready their nets and pound-stakes, and will begin their work as soon as the ice disappears in February. The bunker-fishers are getting their vessels in order for the spring fishing and collecting their crews; and one fish factory here is having a steamer built for the service down in Maine, where they build good and cheap vessels. ISAAC.

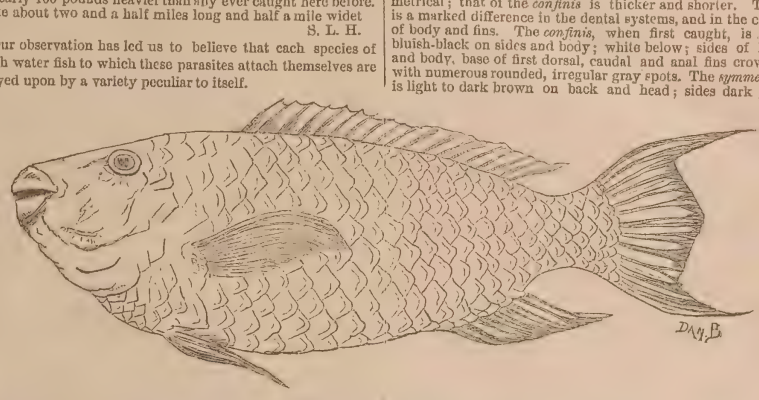
TENNESSEE—*Nashville, Jan.* 30.—A very large Jewfish, taken near Pensacola, was sent here the other day and placed on exhibition for several days. It weighed nett 151 pounds. The head and mouth were large and resembled somewhat the large river catfish. Its color was a dark blue. The flesh was white and in large flakes, and the flavor not unlike halibut. It was the first one of its kind ever seen here, and attracted considerable attention. Shad in considerable quantities are being received from Savannah. Now that the freshet in the Cumberland is subsiding, the pot-fishermen will make sad havoc with their nets of the fish as they begin to return from the many small tributaries. J. O. H.

MURDOCK LAKE CLUB.—*St. Louis, Jan.* 30.—The annual meeting of the club was held at Barnum's Hotel on the evening of the first Monday of the present month, and D. L. Dickinson was elected as President, Secretary and Treasurer for the ensuing year (this being his third term). His report of receipts and expenditures for the past year was read and accepted, and showed that although we had passed through hard times our club was still holding its own. We had some forty odd members who paid yearly dues, and fifty-six trip ticket visitors. These included made 194 visits to the club house during the past year. Fishing and duck shooting was remarkably good during the spring and early summer, and we had glorious fun with the game black bass and the less pretentious croppie. Our register kept at the club house shows that a large predominence of the fish were taken in the first half of the year, as from some cause they did not take the bait well during the late fall. Total catch, 2,296 black bass, and 4,380 croppie, not a large number for so many visitors, but enough to give an abundance for eating during our stay at the club house. But don't we have jolly good times there, when we get away from the wear and tear of business, and launch our boats (of which we have about twenty) and cautiously approach the favorite lurking places of the sharp-biting bass. Some of our most expert fishermen take sixty to eighty in a day. Then we return at night to find a comfortable club house and meet around our well filled supper table to recount the various adventures of the day. Then, indeed, all feel it is good to be there. Our club is composed of good solid men, and includes members of the varied professions, not leaving out clergymen, physicians, etc. We have a committee appointed to confer with our State Fish Commissioner "Reed" for the purpose of taking proper steps to increase the stock of fish in our lake, by propagation or otherwise. I see by some notices recently the sportsmen of Illinois are to hold a hold a State Convention at Springfield on the 12th Feb., and I expect some representatives of our club will attend. We must see to it that our waters and game preserves shall be protected from the netters and pot-hunters who are depleting our stock of fish and annihilating our game. Hereafter we shall hold our annual meetings in March, as members are not inclined to be enthusiastic about fishing in mid-winter. D. L. D.

A BIG STURGEON AND ITS PARASITES.—*Menasha, Wis., Jan.* 20—*Editor Forest and Stream:* A couple of sixteen-year-old boys yesterday speared the old settler of all sturgeon in inland waters. Gross weight, 212 lbs.; dressed, 131 lbs.; length, 7ft. 4in.; spread of tail, 18in. It was speared with spears such as are used for pickerel. He was plump and round as a barrel, but had a lamper or lamprey eel fast on his back about two feet from his tail. This sturgeon, the big one, was caugh in Little Lake, Butte des Morts, just below the city limits. It is nearly 100 pounds heavier than any ever caught here before. Lake about two and a half miles long and half a mile widet

S. L. H.

Our observation has led us to believe that each species of fresh water fish to which these parasites attach themselves are preyed upon by a variety peculiar to itself.



THE GREAT PARROT-FISH (*S. Quacamaia*).—The specimen from which the accompanying drawing was made was originally taken off Vera Cruz, Mexico, in the Bay of Campeche. It was caught, however, by your artist at rather a curious fishing ground, for he fished it out from among alligators, snakes, black bears, wild cats and humming birds. The bait used to catch it with was the end of a lead-pencil, a tolerably glib tongue and a smattering of natural history. In other words, he found the specimen at the taxidermist's, Wallace (with whom many of your sportsmen readers are well acquainted as an expert who "sets up" their rare specimens in an artistic and life-like manner).

The odd beak-like mouth and large scales, upon which still lingered traces of some of the brilliant colors it wore during life, proclaimed at once the specimen to be a representative of that large and beautifully decorated tribe of cyclolabroid, called the parrot-fish. It measured three feet one inch from tip of nose to tip of tail and thirteen inches maximum width, and probably weighed thirty pounds or over. From the color remaining on the scales I could form a presumably correct idea of its apearance when alive, with its brilliant blueish-green back, green fins and bright yellow belly. When seen in this gay dress it is not difficult to understand why it was named the parrot-fish.

The large scales which cover the body range from twenty-one to twenty-five in number along the longitudinal line, and from eight to ten in vertical line; nine spiney, ten articulate dorsal rays; two spiney and eight articulate anal rays. The most curious fact connected with the anatomy of the sea-parrot is the manner in which the teeth are renewed after having been worn away browsing among the calcareous beds of coral. The teeth are incorporated with the bone and arranged in an intricate manner in crowded quincuxes, the oldest teeth upon the outer or cutting edge. As these are worn away new ones form behind them, take their place and in turn become the incisors, thus furnishing this fortunate creature with an inexhaustible supply of teeth and without the disagreeable and expensive luxury furnished by modern dentists. When worn, the teeth present narrow ellipses of dentine surrounded by enamel. The lips are fleshy and simple.

"No. I love not what is new;
She is of an ancient house."

These fish—of which there are about one hundred varieties—are found among the coral reefs of both the East and West Indies; but the best known is the parrot-fish of the Mediterranean, of which we find frequent mention among ancient writers. Cuvier was of the opinion that the *Scarus cretitus* of Adrovandus is the species celebrated by the ancients, by whom it was endowed with most wonderful qualities and intelligence. They attributed to this *scarus* a voice, and further asserted him to be a sort of good Samaritan, going about doing good to his neighbor by releasing all unfortunate fish found entangled in the nets set for them by their enemy—man. It was also believed that this species alone among all fish slept at night and had the power of ruminating. The parrot-fish was highly esteemed as a delicacy, the flesh being tender and palatable. (This on written authority, for I have never tried for myself.) They were cooked like woodcock—without removing the intestines—and are so cooked and served to the present day. Elipertius Optatus, commander of the Roman fleet in the time of Claudius, sailed to Greece with the object of obtaining large supplies of these fish with which to stock the Italian seas.

So "there is nothing new under the sun." Even our great and enthusiastic piscatorial culturist, Seth Green, but follows in the path trodden by his ancestors many hundred years removed. DAN C. BEARD.

LAKE WINNIPISSIOGEE TROUT.—*Boston, Feb.* 2.—*Editor Forest and Stream:* Our Mass. laws reach the lake trout and forbid possession, while in New Hampshire it is specially excepted and allowed taken in Jan., Feb. and March, so these delicious fish I send you are about half contraband. While I consider them scarcely excelled by *S. salar* or *S. fontinalis* as a table fish, yet I dispute the propriety of giving them the same protection, so I resort to the only present available sport and go up to Winnipissiogee a few days. I took fourteen, average weight two pounds. Presuming you may not have seen a specimen from that water, please pronounce upon their edible qualities. Prof. Agassiz classed them as differing from those in any other water. They are, perhaps, much finer and handsomer than similar fish taken from the lakes of Maine or New York, for there are but few lakes with such rocky sandy bottoms and pure crystal water as our lovely old Winnipisiogee. E. M. MESSENGER.

The trout sent us are beautiful specimens of their species. Concerning their characteristics we extract the following from the "Sportsman's Gazetteer," where the subject is fully discussed:

In Lakes Winnipissiogee and Monadnock, in New Hampshire, there is a trout so different from other recognized species that its individuality is admitted by scientists. It is known as the *Salmo symmetrica.* Its form is slender, symmetrical; that of the *confinis* is thicker and shorter. There is a marked difference in the dental systems, and in the colors of body and fins. The *confinis*, when first caught, is of a bluish-black on sides and body; white below; sides of head and body, base of first dorsal, caudal and anal fins crowded with numerous rounded, irregular gray spots. The *symmetrica* is light to dark brown on back and head; sides dark gray above lateral line, and light salmon below; pectoral and ventrals gray. The whole fish, including fins, is thickly sprinkled with small circular spots of a drab color on sides, olive on back approaching to light salmon below. They are caught in great abundance with the hook in winter, through the ice, and are highly esteemed for the table. It is hardly worth while in this work, to educe arguments to convince the skeptical; our readers will not care much whether there is one species or a dozen, if so be that they only bite well.

TROUT JUMPING FOR OXYGEN.—The recent cold weather destroyed the trout fishery of I. C. Frazier, between Truckee and Lake Tahoe. The trout require fresh running water, and when the supply is cut off it is impossible for them to survive more than two or three days. On Tuesday night the temperature was twenty-four degrees below zero. Solid ice filled all the ditches from the reservoir to the fish ponds. Ice covered the various ponds to a great depth, and all the outlets were choked with massive cakes of ice. Not a drop of fresh water could reach the imprisoned fish. When holes were cut in the surface of the ponds the large beautiful trout would leap clear out of the water in their efforts to get the oxygen which the water lacked. The fishery was the finest one on the Sierra Nevada.—*Truckee (Nev.) Republican.*

SIZE OF THE BLACK BASS OF FLORIDA (*Grystes pallidus*).—We have never seen in Florida or elsewhere such a heavy string of black bass as that referred to below by our correspondent. The diagram measure 22¼ inches in length. The average of six pounds to fifty fish is still more remarkable:

GAINESVILLE, Fla., Jan. 27, 1879.

EDITOR FOREST AND STREAM:

I send you outlines of a black bass, one out of a string of fifty, caught at a large lake called Payne's Prairie, about two and a half miles south of Gainesville. The fifty weighed a little over 300 pounds, so you will see they make a very good string. This fish was put upon the inclosed sheet of paper, and marked out just as he lay; weight, 12¼ lbs. There were several nearly as large, from 8 to 11¼ lbs. each. This is not an exceptional string either in number or size. In fact have often seen larger of both; saw one fish (bass) on the street the other day which turned the scales at 20 lbs., caught by a darkey. These black bass, always called trout here, are very plentiful in all of these lakes wherever I have been in Florida, and they average large, requiring strong tackle for their capture, and good muscle in the fisherman is necessary to land them successfully. We often have "whales" get hold which take spoon and part of line with them, and that without any ceremony—merely a strike, a big tug, and he is off. We in the East have heard of big men taking spoons; here it is the big fish that take them. I have often wondered what they do with them, for have never heard of any being found in their possession in either case; think the fish either work them out of their mouths or perhaps die, while the men can more easily dispose of them.

We can catch these bass with a strong rod, line and reel, using live bait, or with spoon hook, the latter being mostly used by the darkeys and natives, who seem to be generally successful, and notice that at times the live bait will be taken, while the spoon will not be touched; at another time it is the spoon which catches the largest string.

What glorious weather we are having for fishing and hunting. The days are nearly all alike, mild and pleasant, some of them quite warm. We pull off our coats about an hour after sunrise, and they are forgotten until sundown. All this while you are blocked up with snow and surrounded with ice.

Yours in haste, C. O. G.

GAINESVILLE, Fla., Jan. 26, 1879.

There is very good black bass fishing here, parties catching thirty to fifty a day, ranging in weight from one pound to twelve. I have seen several of the latter weight, and they seem very large to me who has never caught any larger than three to four pounds in the St. Lawrence River. Mr. J. B. Wistar keeps a good house here called the Arlington, which I am pleased to recommend. G. M. J.

GAINESVILLE, Fla., Jan. 27, 1879.

Black bass fishing good in the lake near this town. I went fishing twice last week. First day caught thirty-eight bass in four hours total weight, ninety pounds. Caught second day thirty-five bass, two of them weighing eight pounds each. I saw several fish that were caught which weighed from eleven to twelve pounds each. Greatest catch reported last week, sixty-nine bass, by one person in one day. Speckled perch of good size are now beginning to bite. This locality has been overlooked by the lovers of good fishing.

JOSEPH WILLCOX, Philadelphia, Pa.

—See Bohemian Glass Company's advertisem ent.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

WILD PIGEONS.—We shall esteem it a favor if correspondents will send us information concerning the whereabouts of wild pigeons.

TORONTO GUN CLUB.—*Toronto, Jan.* 25.—The following gentlemen were elected for 1879: A. McGregor, President; A. A. Riddle, M. D., Vice-President; J. B. Graham, Secretary and Treasurer; Executive Committee, H. Miller, J. Webster, Thos. Wingfield, R. Morrison. R. M.

PENNSYLVANIA.—A Titusville correspondent writes of successful deer shooting in Forest County ten miles from Sheffield, Pa.

SEMPER FELIX GUN AND ROD CLUB.—The annual meeting was held at Philadelphia, Jan. 28, and the following officers were elected to serve for one year: President, F. P. Summers; Vice-President, E. W. Young; Treasurer, Wm. Emsley; Captain, Dr. C. T. Smith. All communications addressed to the Captain, 106 East Cumberland street, Philadelphia.

G. H. S.

DON'T GO THERE.—Lest the recent sketch of deer hunting referred to below should mislead some of our readers, we publish this from "E. S.," the writer of the sketch headed "A Deer Hunt in Maryland":

I notice you locate my late hunt in Maryland; it was not in Maryland where I hunted, and if I had located it, it might send troops there, and where I am welcome, but strangers would probably not not be. Strangers taking their dogs there usually get them killed. It is my old hunting ground for twenty-five or thirty years. "I know everybody, and everybody knows me," and the hunters would as soon kill their own dogs as mine. I keep three or four dogs there for bear and deer hunting, and for many years past. Hunting has prolonged my years; I am 85 years old, and can knock over a buck as readily as any hunter of 25. E. S.

TENNESSEE—*Savannah, Jan.* 27.—The past week brought a rich harvest to the pot-hunters. The river has been out of its banks, overflowing all the low-lying bottom lands. The quails and hares have been forced to take refuge on drift, corn-pens, stumps and anything that could afford a resting-place. Large numbers have been shot, and I heard of one instance where a whole covey were destroyed while huddled on a stump, receiving three shots before all were killed, none taking to flight The river has fallen considerably, and, at present writing, is again within its banks. This has certainly been a season of extremes. On Saturday I was shooting near a pond which not two weeks before was covered with ice three inches thick, but on Saturday the frogs were out in full chorus, and the mud turtles were sunning themselves on logs. On the same day a party searching for cattle near the river found and killed a large snake. WILL.

Nashville, Jan. 30.—Game of all kinds is still very plentiful in the market. Mr. Mitchell, one of our crack shots, has gone to Pulaski for some days' shooting. He took with him Buckholz's fine red Irish setter Jeff. I hear of a number of fox chase fixtures to come off as soon as the ground dries up a little more, foxes being very plenty all through the country.

J. D. H.

A SNOW-WHITE BUCK.—A party of Richmond, Va., gentlemen returned to that city last week from a hunting trip in Amelia and Dinbiddin counties. They killed six deer, among them a snow-white buck four years old.

SOUTH CAROLINA—*Charleston, Jan.* 28.—The weather has been quite warm for the last week and very little hunting has been done in this section. During the cold snap in the early part of the month woodcock in large numbers made their appearance and capital sport was had during their stay. I heard of one man bringing in a bag of over fifty in one day. As soon as the warm weather commenced they began to leave, and there are very few to be found now in our best cock grounds. Several good bags of partridges have been brought in, and a few snipe. Snipe are becoming more plentiful, however, and large bags may be expected very soon. The deer hunters have been making use of the last few day left them before the season closes, which will be on the 1st of February. I was out with a party on Saturday, and we started twenty-three deer and several turkey during the day. Several shots were had, but we succeeded in carrying home only one—a fine doe. During this hunt I was fortunate enough to have a practical illustration of "horn shedding." A splendid buck was started in the second drive we took, and he passed two standers without either of his antlers; one of the antlers was picked up in the exact place that he had crossed the road, and was apparently just shed, as it was quite fresh where it had parted from the skull, and the gristle around the root of the horn was quite moist and soft. In the next drive a fine buck was started with both antlers intact; he was fired at by one of the drivers and passed out to one of the standers with only one antler, having shed the other just before getting out of the den. One of the party, who had hunted in this part of the country before, states that on one occasion he started a fine buck with a very handsome head of horns, and had run him only a very short distance when he picked up both horns very near each other. The older the buck, the earlier they shed; the young bucks seldom, if ever, shed before the middle of February.

MINNESOTA—*Brainard, Jan.* 30.—A few of us had a most enjoyable time rabbit shooting one day last week, a few miles east of town. The party consisted of your friend Hicks—he whom you refer to in your notes of a year ago as the champion hawk killer,—S. J. Wallace, C. A. Cavener, Dr. Campbell, and yours truly. We left town in a wagon (think of that in this far northern country, and drove on a trot—you know Weed's horses are good ones), seven or eight miles, where we tied up, and, scattering out, commenced shooting. At two o'clock we had forty odd head, and at four o'clock counted up sixty-two rabbits. T. P. C.

IOWA SPORTSMEN'S TOURNAMENT.—The next annual convention and shooting tournament of the Iowa State Sportsmen's Association will be held at Marshaltown, May 20th.

WISCONSIN—*Madison, Feb.* 1.—Reports from many of the counties of the State are that prairie wolves have been committing sad ravages of late among the sheepfolds, and many scalps of these pests have been taken. Aside from the State and county bounties, rewards are being offered by the towns wherein the greatest havoc has been made. ROVER.

THE STEVENS GUN.—This old established house, well known as manufacturers of breech-loading fire-arms, has recently begun the manufacture of double-guns. Heretofore, the genius of Mr. Stevens has been exercised on revolvers, pistols and rifles, with an occasional single-barrel breech-loading shot gun, his success in this direction having been almost proverbial. The new Stevens double shot gun has some new and desirable features, among which is the action. The snap is placed on the under side and inside a guard in front of the trigger guard. The extractor is absolutely positive in its action, and ordinarily will throw a shell clear of the chamber, while the entire construction of the piece is simple, substantial and reliable in action. Messrs. Stevens & Co. have attained a wide reputation in the manufacture of gallery and sporting rifles and guns, their "Hunter's Pet" having had an enormous sale. Sportsmen using the Stevens shotguns speak very highly of them, and pronounce them among the cheapest guns for the money now in the market. Send to J. Stevens & Co., Chicopee Falls, Mass., for further particulars.

A NEW FIRM.—The late firms of Schoverling & Daly and Spies, Kissam & Co. have united and will continue the business of wholesale gun and pistol dealers under the name of Schoverling, Daly & Gales, occupying for the present both 84 and 86 Chambers street and 279 Broadway.

SCOTT'S HAMMERLESS GUN.—The new hammerless gun recently perfected at the W. & C. Scott Works has been on exhibition at the warerooms of Schuyler, Hartley & Graham for the past week, and has been admired by hundreds of sportsmen. When first taken in hand the weapon has a curious feel, and, as one gentleman expressed it, puts one in mind of a bull pup with close cropped ears. The hammers are not there, and instead, the top of the stock passes with a smooth and graceful curve over the lock and along the upper rib of the barrels. The gun is trim and snug to handle. While in action it has a long catalogue of merits. It is safe, since there are no hammers to catch in the clothes or on projecting points and cause premature discharges. Capt. Bogardus with such a gun would not have found himself in the predicament of working through a day's rapid shooting with a broken hammer. By the single motion of opening and closing the breech, both triggers are set. A glance at the lock-plate shows the gunner whether the piece is loaded or not, and after loading, should he desire to stop the action, a slight motion of the thumb at the side fastens both triggers. For quick shooting this gun far surpasses the ordinary hammer gun, while for field use it needs but a trial to convince any sportsman of its superiority.

—The Remington Company have a rifle on exhibition at their store in Broadway that was used by Texas Jack for five years on the plains. It rather looks as if it had seen some hard service, but is pretty good yet.

WOODCOCK SHOOTING AT THE SOUTH.

EDITOR FOREST AND STREAM:

About Christmas the flight of woodcock (*Philohela minor*) arrived here, and the shooters of Vermilion Parish have enjoyed fine sport since that time. They will remain until some time in February, when they commence their migrations to the North again. They are here by millions, and in fine order. Hunting the woodcock here is a very different thing from the same kind of sport in the North. The instructions of Frank Forester and Lewis are of little use here. The season, the place, and the actions of the bird are all changed in Louisiana. Woodcock are not found here in warm weather—no sweltering heat, no spoiling of birds before you can get them home here. On the contrary, the weather is cold and the air bracing; the birds will keep a week or two, and greatly improve by keeping hung up a few days. Thousands of them are sent to the New Orleans market. In the Abbeville market they sell for fifty cents a dozen. Think of that! ye hungry denizens of Gotham! Fifty cents for one dozen fine, fat woodcock! The birds are to be found by day in the thick woods and briar patches, in warm, dry, sunny spots. Here they spend the day and here they are to be hunted. At night they fly out into the prairies to feed in marshy places. One or two shooters, with several dogs—"curs of low degree"—go into the woods, and the dogs go into the thickets and flush the birds, while the shooter takes them as they rise. It is no sickly, lumbering flight your Louisiana woodcock makes. He comes up out of the cover like a flash, makes a dart, and drops out of sight in an instant behind the thicket. It takes a pretty quick workman and a sure eye to stop his flight. Ah! then there is royal sport! The woods are full of them, and plenty of shooters, too, generally, and the reports of the guns keep up a constant fusillade like that of a skirmish line at the opening of a battle. Any one that can make a good wing shot cannot fail to get plenty, even if he misses three out of four birds, and twenty birds is a common day's work for a common country lout or a negro to make. The prairies, too, are full of snipe at this time of year. I do not know of a finer country for game now than the Parish of Vermilion.

The weather has been unusually cold here this winter—ice and sleet a plenty of it, which is very unusual. The weather has been so cold that the geese and ducks stay in the sea marsh, and have not been out on the prairies and small ponds much this winter. The weather, however, is now warmer, and the geese and ducks are coming out pretty freely, and a good many are being shot. I have been out shooting woodcock several times this winter and enjoyed it finely—in fact, highly; but I am not one who boasts of slaying my thousands, Samson-like, but am content with a moderate bag. Mr. Editor, I would be ashamed to let you know and the world know that I killed a hundred birds a day for several successive days in the manner some of your correspondents boast of. It smacks of the *pot* too much for me. *Au revoir.*

Abbeville, La., Jan. 18, 1879. PAPABOTTE.

THE DITTMAR POWDER.

The following communications regarding the wood powder we publish in justice to the manufacturers and because they represent the other side of the story from that as given by correspondents in other letters recently printed:

LAWTONVILLE, Ga., Dec. 31, 1878.

EDITOR FOREST AND STREAM:

As a personal favor to myself, will you publish the following? I know that a great journal like yours cannot praise guns, powder and other sporting goods; but I also know that your columns are always open to fair play. It is with this knowledge that I ask you to publish what I know about Dittmar powder:

On the 15th day of last November, Mr. Henry C. Squires, of your city, sent me 100 shells loaded with the Dittmar powder. Circumstances not necessary to mention here kept me from giving the powder a fair trial until very recently. Some days back, going with a gentleman to fish for suckers, I concluded to take my gun with me, in order to try a good piece of snipe ground lying on our route. On the right side of the road there is a "piney-woods" pond, covering perhaps two acres of ground. Never has there been seen a duck in this pond until that morning. We had passed the pond, driving at a quick pace, when, happening to look back, I saw a large black duck. To stop the buggy, to stalk him behind a large pine and to shoot him, was the work of a few minutes. Well, nothing remarkable. No; but I killed that duck, canvas-back at that, over seventy-five yards, with Dittmar powder and No. 8 shot. Well, you say, the gun had much to do with that. Granted; but good powder had much to do with it. Since that time I have given the shells a fair trial on quail and snipe To a man who has used black powder for twenty-five years it seems childish at first to use powder whose report you cannot hear at 200 yards. It is with something like amazement that you see the strong, swift old cock quail step so suddenly in his arrowy flight. And you see it all: from the sudden wilting to the cloud of feathers all is plain, for there is no smoke to get in your eyes. You take the bird from your dog, and to your surprise you find that the Dittmar has driven the shot clean through. You can scarcely realize that powder which makes so little noise can kill birds so clean.

I know nothing of the manner in which Mr. Squires loaded his shells, but I infer from the pattern that 1 oz. of shot was the load. I fired ten of the shells at a 30-in. circle, 40 yards, and the pattern and penetration, especially from the choke-bore barrel, was fully equal to the black powder of the best brands, without the disagreeable concomitants of recoil, noise and smoke. I hope to be well enough to try the powder on ducks and turkeys, and if it drives large shot like it does No. 8, I shall never use any other powder. I. W. ST. CLAIR.

WALKERTON, Ont., Jan. 2, 1879.

EDITOR FOREST AND STREAM:

Some time ago there appeared in your columns a letter giving an account of damage done to several guns by the use of Dittmar powder. I had at that time been using this powder, and found it preferable in every way to the black, and was exceedingly surprised at the statement made that it had shattered a Scott and a Parker. The gun I use is a "decarbonized steel" barrel, made by Parker, and this kind of barrel is, I believe, considered less strong than twist and other barrels, so I stand a fair chance of destroying my weapon if Dittmar powder will do it, for I intend to continue its use, having as yet discovered no ill effects from it; but I cannot believe that there is as much danger in using it as the black, for this reason: The Dittmar undoubtedly gives greater penetration and less recoil than the black, and therefore it expends its force in propelling the shot and not on the shooter's shoulder or the sides of the barrel, and must be less dangerous than the black.

I think it a pity that anything should be said against the use of the Dittmar unless fully warranted by facts, and through your columns I hope by this letter to obtain from others who have been using it the results of their experience with it; for since the letter before referred to but little has been published by you respecting it, although it has been in very general use. I also think Mr. Dittmar will make a great mistake if he makes it of different strength, as stated by him in his letter to you, for he would increase the danger in its use (if there is any). The careless would be apt to use both kinds indiscriminately, and would sometimes overcharge their guns. Its present strength seems to me to be the proper one for the charge by measure, being the same as with the black; no one need experiment to find the proper charge or change his measure.

Is it possible for the strain on the gun to be as great with slow burning powder as with quick? If any one thinks so let him put a charge of dynamite in his gun, explode it, and see what becomes of his gun.

Yours truly, GUNNER.

PIGEON MATCHES.

NEW YORK—*Buffalo, Jan.* 14.—Eighteen yards rise; cloudy, with light snow:

Brown's Driving Park, Jan. 31.—Fifty birds; American rules; 80 yards boundary; 27 yards rise; for championship of local club and general satisfaction:

Owen E Newton......1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1
1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—46.

Allan P Nichols......1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 0 1 1 1 1 1 1 1 1 *—46.

W R Henderson......1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 0 0 0 1 1 1 1 1
1 0 1 1 1 1 1 1 1 0 0 0 1 0 1 1 1 1 1 1 1 0 1 1 1 0—38.

Henry F Foley......0 1 1 1 1 1 1 1 0 0 0 1 0 1 1 1 1 1 1 1 1 1 1 1 0
0 0 0 1 0 0 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1—37.

In shooting off tie Mr. Nichols won by killing six birds straight, Mr. Newton killing five straight, missing the sixth. Mr. Lloyd Foley, of the Philadelphia Gun Club, was referee. Umpires—Nat Crosby, Earnest Bell and Robert Newton, Esq., of this city. E. WM. HUDSON.

FOUNTAIN GUN CLUB.—*Brooklyn Driving Park, Jan.* 24.—Third monthly contest for a gun, presented by the club, shot for at seven birds each, from five ground traps, using both barrels, handicapped rise, 100 yards boundary, 1¼ oz. shot, Fountain Gun Club rules:

J Bohling	25 yds	1	1	1	1	1	1	1—7
C Williams	27 "	1	1	1	1	1	1	1—7
J White	25 "	1	1	1	0	1	1	1—6
Durfee	7 "	1	1	1	1	0	1	1—6
De Fraine	25 "	1	1	1	1	1	1	0—6

J J Gillespie	0 1 1 1 1 1 0 1 0 1 1 0 1 1 1–11
W W Foss	0 0 1 1 1 1 1 1 1 1 1 0 0 1 1–11
C Morris	1 1 0 1 1 1 0 1 1 1 1 0 1 1 1–12
C E Felton	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1–14
Dr Rowe	0 0 1 1 0 0 * 0 1 1 0 1 0 0 1–6

TWIN VALLEY SHOOTING CLUB.—A pigeon shooting tournament is held under the auspices of the Twin Valley Shooting Club, near West Alexandria, Ohio, to-day.

WISCONSIN—*Baraboo, Jan.* 29.—North Side Club match, at glass balls; Bogardus trap and rules; weather fine:

Kartack	1 1 0 1 1 0 1 1 1 1 0 1 1–11
Brewer	1 1 1 1 1 1 1 0 1 1 1 0 1–11
Warren	0 1 1 1 1 1 0 1 1 1 1 1 1–11
Whestalice	1 0 1 1 1 1 1 0 1 1 0 1 1–10
Obert	0 1 1 0 0 0 0 0 1 0 0 1 1–6
Pomtion	1 0 0 0 1 0 0 1 1 1 0 1 0–6
N Brewer	1 0 1 0 1 1 1 0 1 0 1 0 1–7

Scarcity of balls prevented shooting off ties.

ED. HOLLAND.

TENNESSEE—*Nashville, Jan.* 31.—Matches shot at the Fair Grounds, Tennessee State Sportsmen's Association rules; plunge trap; 26 yards rise; 80 yards boundary; unless said out. Messrs. Cook, Perkins and Wells tied on two each, Cook winning the shoot off at 31 yards with 5. In the second match Perkins won with 1. Third match Cook and Higgins divided with 1 each. Fourth match won by Perkins. A series of glass ball matches followed.

FINDING A MAN FOR BOGARDUS.—*Bell's Life* says that a London gentleman, desirous of promoting the sport of pigeon shooting, and to find a man good enough to contend against the American Champion, Bogardus, will, under the patronage of the leading gunmakers of London, give a monster champion challenge cup, value 100 guineas, open to the world, to be shot for at 25 pigeons each, 30 yards rise, under the Gun Club rules; entrance fee, 5 guineas. The winner to hold the same against all comers for the space of twelve months, and should he succeed in doing so it to become his own property, the cup to be delivered into his possession on giving a guarantee to Mr. E. Smith, of *Bell's Life*, to whom all entries must be made. The winner must be prepared to accept any challenge and to shoot within six weeks from the time of being challenged, for the sum of not less than £50 a side and the cup, at 50 birds, the holder to produce the cup on the day of shooting. The money to be staked previous to shooting in the hands of Mr. E. Smith, of *Bell's Life*, who will act as stakeholder and referee in all matches. A first-class shooting ground will be selected, and every attention paid to the comfort of the shooters and visitors.

—See Bogardus' Advertisement.

Rational Pastimes.

ARCHERY.

THE CHARACTER AND CONSTRUCTION OF BOWS.

ARCHERY is by no means a novelty in the United States, but it has never become popularized. In Canada it was in vogue twenty years ago. There clubs are numerous and "meets" common. Fully five years ago we attempted through the columns of this paper to present the attractions of this pastime in a light to encourage its growth; but pastimes, like diseases, are epidemic. When the spirit moves, the practice and infatuation of archery will spread like a prairie fire, but isolated or intermittent efforts to stimulate its growth seem almost useless. Whatever may be said or written serves as a preparation of the soil for its future culture when all conditions are the most favorable. In England there are societies of lady archers which have been organized and kept alive for one hundred years. The ladies of Arden have twanged their bows ever since 1794, and the Golden Bugle and Arrow, won on such occasions, are treasured as heirlooms. Some of our more interested correspondents have requested us to give them some information concerning bows. We have no objection to repeat what we have several times written since 1874; but there have been marked improvements in the construction of these implements since that date. Until recently we imported our best bows from England, where archery, as a pastime and as a useful art, was indigenous in the early centuries. Now we have American bows which will bear favorable comparison with the foreign, and we are happy in the possession of two materials far superior to anything known in England, namely, the bamboo and the osage orange, or *bois d'arc* of the Plains Indians. We have already printed some description of the bamboo bows: the curious can inspect them at their leisure at the house of Conroy, Bissett & Malleson, in this city, which makes a specialty thereof. Those of our readers who have friends in the far south west who will obtain a *bois d'arc* for them, will secure a treasure beyond estimate, as bows go. Of the standard bows sold in the shops there are two varieties or descriptions, termed "Self" and "Backed Bows," the former made from one piece of wood; the latter of two or more pieces joined together longitudinally. Of the latter is the bamboo bow. The outside is usually made flat, and is called the back; the inside is round, and is technically known as the belly.

As regards the manufacture of the bow, when nearly finished it is strung and suspended by the handle at one end of a steelyard; the string is then drawn down to the length of twenty-eight inches for a gentleman's, and twenty-five inches for a lady's bow, and the weight of the bow is indicated at that point of the graduated scale where the bob (as the weight of a steelyard is called) balances; the number, which indicates the weight, is then stamped on the back of the bow. Ladies' bows range from twenty to thirty-two pounds, while gentlemen's from forty, sometimes exceed sixty pounds; but for the generality of gentlemen's, from forty-seven to fifty-two may be recommended; while for ladies one of twenty-five pounds will be found sufficiently strong to commence with.

No directions, however, can possibly be given on the choice of a bow, as it depends entirely on the strength of the purchaser, his height, and length of arm. It has been considered by some that the height of a man should be the length of his bow; this rule, however, will not hold good under all cases. A man under five feet nine inches ought not to use a bow longer than five feet ten inches, and we would not recommend one above six feet even for a person over six feet in height.

A bow too strong causes fatigue, and from the inability of the archer to draw the arrow up as far as is requisite, one too weak is to be rejected, as it may easily be over-drawn and broken, from no other cause than the application of too much strength. The proper weight, then, for the bow, is that which a person can draw somewhat easily, and without distortion of countenance or position. As he acquires skill in shooting, he will also find an acquisition of strength to the extent of several pounds weight.

With regard to stringing and unstringing the bow, there are innumerable rules and directions given, more or less complicated. The best plan is for the novice to have it shown to him practically. It may, however, be here stated that a gentleman's bow should be strung up six inches, and a lady's five inches and a half; the string opposite the handle should be so far from the belly of the bow.

It is not necessary that a bow should be unstrung during shooting, when, from the company being numerous, some little time will probably elapse before the archer's turn to shoot arrives; but after the shooting is over it must be unstrung; and if wet, or even damp, should be wiped dry before it is put into the green baize case, which may be well protected from the ill effects of rain by India rubber or oil silk cover, made large enough to admit the bow and green baize bag easily.

A piece of ribbon is generally put through the hole in the extreme end of the upper horn; it is then passed through the eye of the bowstring and tied in a bow-knot. The object of this is to prevent the string from slipping down the upper limb of the bow when taking it out of the case, or from coming off the lower horn altogether, as in either case the string would untwist and receive injury. It is sometimes necessary to lengthen or shorten the string; previous to doing this the ribbon must be untied, and when the string is adjusted to the required length the ribbon brings it up to its proper place and keeps it there.

A new string requires lapping with silk to prevent the nock of the arrow from cutting the fibres of the hemp, or the string itself from being frayed by constantly striking the guard. Commence the operation by first stringing the bow, then rub with shoemaker's wax about six inches of the string opposite the handle; three pieces of stout netting silk of contrasting colors, about a yard in length, should be well waxed with beeswax; with a firm beginning, lap these three pieces of silk round the string, drawing each turn as tightly as you think the silk will bear. A piece of floss silk, about an inch in length, should be laid along the string opposite the top of the handle, and at each alternate round made to appear by being *held up*, and the silk lapped round the string *under it*. The lapping should be carried on about an inch and a half higher than opposite the top of the handle, and there fastened off. The part may be rubbed with some beeswax, and afterwards with a piece of leather; the heat caused by the friction makes it both smooth and uniform. The entire string should occasionally be waxed and rubbed in this manner. The object in inserting the floss silk is, that there may be a distinguishing mark on which the arrow should be nocked. The best of strings will, at first, stretch a little; consequently, the different gradations on that part of the lapping where the floss silk appears, will point out exactly the proper place for the succeeding arrow when it has been ascertained from the flight of the previous one. The space of an inch will allow for any little alterations of the string.

The best strings are imported from Germany and Brussels, and it is good economy always to buy the best.

An archer should always have with him, when engaged in shooting, a spare string, previously lapped, and adjusted to the length of his bow.

THE BARTELL FIZZLE.—Annie Bartell, the young woman from Westchester County, has signally failed in her attempt to walk 3,000 quarter miles in 3,000 quarter hours, having retired from the track last Sunday at the close of the 556th quarter. She endured an amount of physical agony which might have done credit to a martyr, but in this time and place were simply shocking to decency. Hughes, the hero of two former disreputable *fiascos*, it appears, had a hand in this also. The public has now had enough of him; he should retire behind his beer counter. We have had also enough of female pedestrianism to last until the next century. We have had enough of the didos of designing sharpers who do not hesitate to induce weak-kneed young ladies to torture themselves for gate money. It behooves respectable people to withhold the sanction of their presence from such exhibitions.

BOSTON PEDESTRIANISM.—The contestants in the 25-miles professional walk at Boston last Wednesday were: E. C. Holske, formerly of the Harlem Athletic Club of New York, and the amateur champion for one and three miles in 1877; Christopher Toole, Bangor, Me.; John D. Wayne, Boston Athletic Club; R. F. Nelligan, Cambridge; Owen Thomas McDermott, Boston; Frank F. Dole, Lawrence; F. L. Edwards, New York. Nelligan led until the end of five miles, with Dole second and Holske third. Then Holske took second and went to the front in the eighth mile, and after the next mile had the race to himself. He won in 3h. 56m. 13½s.; Toole second in 4h. 16m. 23s.; Harriman third in 4h. 25m. 21½s.

In the amateur contest of the following evening there were seven entries in the quarter-mile run, the winner being A. L. Brackett, of the Union Athletic Club; time, 1m. 13s. The hard work in the one-mile walk was done by Armstrong, of the Harlem A. C., and Merrill, of the Union A. C. In the closing laps both made spurt after spurt, Armstrong holding the lead and finishing in 7m. 3½s., while Merril's time was 7m. 30⅘s., a difference which is merely nominal. J. M. Soule, of the Union A. C., won the half-mile run in 2m. 29s. Four contestants appeared in the three-mile walk. Mott, of the Harlem A. C., was the winner in 25m. 39⅓s. The one-mile run fell to Bibber, of the Union A. C., who covered the ground in 5m. 53⅘s. In the seven-miles walk Armstrong won in 1h. 2m. 58s.; Holt was second, in 1h. 3m. 8s.; O'Keefe third, in 1h. 4m. 32⅘s.

NEW JERSEY PEDESTRIANS.—The pedestrian tournament at Asbury Park, N. J., was completed Saturday evening. In the twenty-five mile walk the best time was made by Edward Brand, which was 4h 41m 12s. The one mile walk was won by D. Sullivan in 8m 28s. William Fletcher made a mile in 9m. Uriah White, weight 284 pounds, the largest man in the township, walked one mile against James Kipp, weight 130 pounds, the shortest man in Asbury Park. The following time was made: White, 12m 34s; Kipp, 12m 26s; Commissioner Githens, 10m 45s, against unknown, 10m 45s. White then walked one mile against A. D. McCabe, the latter carrying 90 pounds. Time: White, 12m 52s; McCabe, 12m 53s. The five-mile walk was won by A. D. Baily in 55m 45s. The running race of two miles was won by Frank Tilton in 14m 52s; John Carroll, 15m 2s. Running one mile: W. Stout, 7m 29s; R. Wortman, 7m 41s.

NATIONAL PEDESTRIAN ASSOCIATION.—This is the name assumed by a party of speculators who propose organizing a great pedestrian tournament in Brooklyn next March. Among other feats for which "champion diamond badges" are to be given are walks of 4,000 quarter miles in 4,000 quarter hours; 3,200 quarter miles in 3,200 quarter hours. These contests are confined to ladies only. Six days' walks for ladies and gentlemen, and a score of other competitions make up the extensive programme.

WESTON'S ENGLISH WALK.—Weston, the American pedestrian, is making 2,000 miles in England over the turnpike roads. His task is 2,000 miles in 1,000 hours. He also delivers a series of fifty lectures during the task. This is a new wrinkle which we hope will be confined to the sea-girt isle. The Fates forefend that Hughes or Campana or Mrs. Tom-Ri-Jon should inflict fifty lectures upon the American public.

BILLIARDS.—In the billiard tournament held in this city the standing of the players Tuesday evening was: Shaefer, won 5, lost 0; Slosson, won 4, lost 1; Sexton, won 4, lost 2; Daly, won 3, lost 3; Rudolphe, won 1, lost 4; Garnier, won 2, lost 4; Gallagher, won 3, lost 3, Heiser, won 1, lost 6.

SKATING CHAMPIONSHIP.—The contest for the skating championship of America was held at the Manhattan Rink, this city, last Saturday. The race was for the distance of twenty-five miles, and the following contestants started: E. G. Gurney, G. D. Phillips, Frank Fromel, Charles Pfaff, Jr., W. T. Livingston, W. H. Griffen, Floyd Sherwood, M. Ryan, W. R. Brown, Harry Hamberg, George Montgomery and Thomas Clare. Gurney fell at the end of the fourth mile, seriously injuring his knee-caps. Ryan at the end of the fifteenth mile fell fainting on the ice. Others had already dropped out, and the race was easily won by Mr. Phillips, who kept at the front from the start. He skated the twenty-five miles in two hours, five minutes and forty seconds. Mr. Floyd Sherwood, of Brooklyn, came in second, about one minute after Phillips, while Harry Hamberg, of New York, captured the third prize. The sharp turns of the course affected materially the time made.

PAINE'S

Feather-filled Glass Ball

EXTINGUISHES COMPETITION

AND

Receives the SPORTING WORLD'S ENDORSEMENT.

Decision of the Judges of the American Institute Fair:

That for the purpose intended, the PAINE GLASS BALL, filled with feathers, is a great improvement over any article heretofore used by marksmen. It has received from them the highest encomiums, and we are pleased to add our approval of its merits, and recommend that it should have

THE MEDAL OF PROGRESS.

Important Notice to Dealers and Consumers

The feather-filled having reached the acme of popularity,

Our Immense Sales Enable Reduced Prices!

which will preclude the use of all others, and be satisfactory to our patrons, as

THE BALL ONCE USED IS FOREVER THE FAVORITE.

Referees' Duties are Lightened—Natural Effect Secured—Disputes are Obviated—Pleasure Assured—Envious Allusions Dispelled by Facts.

An unwarranted and unbusiness-like allusion having been made in a late advertisement by a would-be competitor, as regards the breakage in transportation of our ball, we pronounce the assertion untrue, and worth about as much as the said party's late *record at Gilmore's Garden.*

WE REFER NEW DEALERS to our OLD PATRONS

PRIORITY OF CLAIMS TO PATRONAGE

having been lately made in the shape of piteous appeals to charitable consideration (merit being proved lacking), on the score of having invented this amusement, once for all it may be well to inform the forgetful that

IRA A. PAINE

invented the sport of Glass Ball Shooting; proof of same handy for reference to settle the question. Patents, dates, practical use, etc.

DEALERS, SEND FOR NEW PRICE LISTS promptly

and remit orders immediately to prevent the delays of last season, as the entire resources and

CAPACITY OF OUR FACTORY, RUNNING DAY & NIGHT, TESTED

by some *bona fide* advance orders from all parts of the AMERICAN CONTINENT, ENGLAND, FRANCE (notably a Monac order lately), bear evidence of the future demand, and the genuine success achieved by the unequalled

Paine Standard Feather-filled Ball.

Every Ball is weighed and examined, then packed with greatest care in Barrels of 250 or 300 as ordered.

SEND FOR PRICE LIST.

HEADQUARTERS, Bohemian Glass Works, 214 Pearl St., N. Y.

SHERIDAN OUT SHOOTING.—The following compliments were paid to Sheridan in Norfolk by an Irish servant belonging to Mr. Coke, who attended him on his shooting excursion, and which Sheridan re-told with great glee: Shot the first (the birds all getting away)—"More power to your honor! Did you see one little fellow drop his leg as he went off? He'll never stand on his tin toes again." Shot second (ditto)—"Tare an'agers, there they go! But didn't your honor hear the shot rattle among them like pase agin a windey? They'll pray never to see your honor agin on this side of the country." Shot third (birds all off again)—"Thunder an 'ouns, but they've cotched it!" After watching them a while—"There's three wounded anyhow, for they had hardly strength to fly over yonder hedge; the divil a wink of sleep they'll get this blessed night!" Shot fourth (a pheasant gets away)—"Well, I never seen a poor gentleman taken like him; he'll remember your honor many a long day for that. The spalpeen is carrying away more shot than would sit up an ironmonger at Skibbereen." Shot fifth (a snipe gets off)—"Bother! You may cry crake, my fine fellow—you may take your long bill to the other world. You'll wake to-morrow morning with a lumbago in your soft head." Poor Sheridan could stand this no longer, but gave his countryman a fee for his ingenuity and proceeded on his beat alone.

THE DERIVATION OF MANITOBA.—Manitoba Lake, which lies northwest of Fort Garry, and has given a title to the province formed out of the Red River region, derives its name from a small island, from which in the stillness of night issues a mysterious noise. On no account will the Ojibway approach or land on this island, supposing it to be the home of the Manitoba, the "Speaking God." The cause of this curious sound is the beating of the waves against the "shingle" or large pebbles lining the shores. Along the northern coast of the island is a long, low cliff of fine, grained, compact limestone, which under the stroke of the hammer clinks like steel. The waves beating on the shore at the foot of the cliff cause the fallen fragments to rub against each other and to give out a sound resembling the chimes of distant church bells. The phenomenon occurs when the gales blow from the north, and then as the winds subside, low, wailing sounds, like whispering voices, are heard in the air. Travelers assert that the effect is impressive, and that they have been awakened at night under impression that they were listening to church bells.—*Helena (Mont) Independent.*

A BURGLAR ALARM.—To those, either in town or country, who are timid, the following instrument, described by an exchange, will be hailed with joy. It is simply a little brass wedge, with a small piece of the same metal attached to its sloping side. The wedge has only to be pushed from the inside, between the closed door and the door sill. No other fastening is necessary, as any attempt to open the door only tightens the wedge. An ordinary torpedo may be inserted between the wedge and the piece of metal riveted upon it. The slightest attempt to force the door will explode the torpedo and create an alarm. This style of wedge may be made of hard wood, with a little piece of tin riveted on, under which to place the torpedo. In this case the tin should begin low down at the sharp end of the wedge to protect it. It is sometimes a good plan to have a hole bored in the wedge so that it may be temporarily secured to the floor (with a nail or pocket gimlet) about three inches in front of the door. In this way any attempt to open the door is sure to meet with failure and detection the same instant.

NICOTINE IN HER SMACK.—I wonder how any women who has ever kissed a clean man can go through the pretense even of kissing a tobacco chewer. Did you ever see one suffer the penalty? This is how she does it. There is a preliminary shudder, and then she sets her teeth hard, holds her breath, makes a little pigeon dip at the foul lips of the grinning beast, and then, pale with horror, flies to the kitchen, where, if you follow her, you will find her disinfecting with soap and water. Many of the blessed little hypocrites pretend that they like the smell of a cigar, but even hypocrisy is powerless to force from a women the confession of a fondness for hanging like the bee on the flower to a tobacco-worm's lips.—*Mrs. Garrison.*

A MULE THAT CAN COUNT.—There's a mule, driven on one of the First South-street cars, apparently a little more sensible than others. It is generally on the morning shift, and has to make five round trips before the team is changed. Every day, as soon as the mule comes on the fifth return trip from the upper end of the line, it begins to whinny a half a block before reaching Second East-street, and if the change team does not happen to be waiting, and the driver has to run to the bank corner and return before changing, it will stretch out its neck and whinny again, louder than before, about the same distance ere it reaches the place. How that mule keeps track of the fifth trip is more than Gunn has found out.

TO COLOR A MEERSCHAUM IN FIVE MINUTES.—"Sympathetic pipes" are a recent novelty. The bowl of a meerschaum may be colored in five minutes by first tinting it with a solution of nitrate of silver in ether and alcohol, to which essence of roses and camphor are added. Figures of any pattern are produced by the heat of tobacco, and when produced are permanent.

MANY LIVES SAVED.—Cock robin and 1,319 of his fellows were destroyed in one night by a North Carolinian, "thus saving," as the Louisville *Courier-Journal* remarks, "the lives of many million worms."

—It does not follow that a blacksmith has no virtues because he is always to be found at his vice.

SOMETHING FOR MOTHERS.—The baby-carriage is condemned by the Berlin physicians in cases where the little one sits facing the nurse and is pushed backwards. The natural desire of the eye is to draw nearer to what it sees, and the practice of reversing this normal order of things and causing surrounding objects to recede is liable to affect injuriously the development of both sight and brain.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

Pennsylvani Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RETREAT, SHINNECOCK BAY, L. I.,

By a practical gunner and an old bayman. Has always on hand the best of boats, batteries, etc., with the largest rig of trained wild-geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests, and satisfaction guaranteed. Address WM. N. LANE, Good Ground, L. I. Nov8 tf

ARLINGTON HOUSE,

GAINESVILLE, FLA.

This popular house is located in the highest and dryest portion of Florida, on the line of railroad between Fernandina and Cedar Keys. The fishing is unsurpassed, black bass being larger and more abundant than any place in the South. The shooting is the finest in the State. Quail, English snipe, ducks of every kind, deer, etc., are very plenty, and afford the choicest sport to the hunter, while the ARLINGTON, being strictly first-class in all its appointments and cuisine unexcelled, makes this favorite winter resort without a rival in the South. Terms moderate. Address J. B. WISTAR. feb6 4t

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

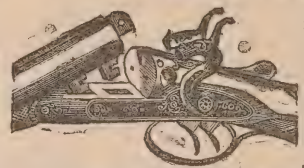
W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.



At the international pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an *objet d'art* valued at £169, and a money prize of £705, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondley Peanell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 29½ yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for $500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 103 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 168,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

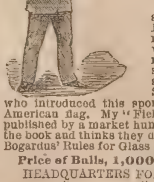
Tatham's IMPROVED "CHILLED" SHOT New York
RED LABEL.

Compressed Buck Shot.

FIRST PREMIUM, CENTENNIAL EXHIBITION—REPORT.—"Exact uniformity of size nly spherical form, high degree of finish and general excellence."

A. H. BOGARDUS.



My Patent Rough Glass Balls are now made even, and carefully packed, with 250 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filed ball is the same. Now,

I Will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where clubs use them you can readily see which is the hardest shooting. In matches reported in paper-, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot and will follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and shot and upheld the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, $14; by single barrel, $1; "Field, Cover and Trap Shooting," $2.

SLEIGHING.

A NEW SONG TO AN OLD TUNE.

IN January, when in the dairy
The cream and clabber freeze,
When snow-drifts cover the fences over,
We farmers take our ease.
At night we rig the team,
And bring the cutter out;
Then fill it, fill it, fill it, fill it,
And heap the furs about.

The windows glisten, the old folks listen,
To hear the sleigh bells pass;
The fields grow whiter, the stars are brighter,
The road as smooth as glass.
Our muffled faces burn,
The clear north wind blows cold,
The girls all nestle, nestle, nestle,
Each in her lover's hold.

Through bridge and gateway, we're shooting straightway,
The tollman was too slow!
He'll listen after our song and laughter,
As over the hill we go.
The girls cry: "Fie! for shame!"
Their cheeks and lips are red,
And so with kisses, kisses, kisses,
They take the toll instead.

Still follow, follow! across the hollow—
The tavern fronts the road.
Whoa, now! all steady! the host is ready—
He knows the country mode!
The irons are in the fire,
The hissing nip is got;
So pour and sip it, sip it, sip it,
And sip it while 'tis hot.

The bells are ringing, the ostlers bringing
The cutters up anew;
The beasts are neighing; too long we're staying;
The night is half-way through.
Wrap close the buffalo robes,
We're all aboard once more;
Now jingle, jingle, jingle,
Away from the tavern door.

So follow, follow, by hill and hollow,
And swiftly home we glide.
What midnight splendor! how warm and tender
The maiden by your side!
The sleighs drop far apart;
Her words are soft and low;
Now, if you love her, love her, love her,
'Tis safe to tell her so.

EDMUND CLARENCE STEDMAN.

For Forest and Stream and Rod and Gun.

Bachewana Bay.

IT was in July, 187—, that the Major and myself, with F., who was a young but enthusiastic fisherman then (he is not any the less enthusiastic now), took our first coasting trip out from Sault Ste. Marie. Our objective point was Bachewana Bay. We intended to fish the Harmony and some other streams emptying along that coast.

Bachewana Bay is one of the most beautiful of Lake Superior's many beautiful bays. There are some wilder in scenery, more abrupt in their shores, and with higher adjacent mountains. Thunder Bay has a magnificence of view, with its grand old cape and the bold heights of Pie Island, not to be equaled; but for a calm and quiet beauty, which charms to dreaminess and is full of restfulness, Bachewana Bay surpasses all I have ever seen. Entering it along the wooded coast of Goulais Point, which shuts out the view until the last little cape is turned, there comes suddenly upon one's sight, clear and distinct over the green island and the miles of quiet water, the mountains of its northern and eastern shores, while the sky and water are of that intense blue which seems so unreal upon canvas. The mountain line extends beyond the actual shores of the bay on the southeast, so that it seems one unbroken chain away beyond where we know Goulais River lies, while upon the north the sharp gap through which Harmony pours its waters comes into view, with the higher mountains seen through it beyond. And with the summer sun casting the shadows of the clouds upon the bay and mountains, as it did the day we first sailed upon its waters, the whole made a picture which rivalled the Bay of Naples. It only needed, we all thought, the busy life of Italy to be even more beautiful than any Italian scene.

It was after some hard rowing in the teeth of heavy head winds that our guides had the evening before brought us to Gros Cap. We had rested on our way at the Point of Pines and plucked the trailing arbutus and the wild strawberry in bloom. We had cast, as I have always done, on passing (and with the same success, or, rather, want of success) about Gros Cap rocks. (Fine trout are sometimes caught there, however, notwithstanding my failures, at least tradition has it so.) We had taken, as I have seldom failed in doing, some fine lake trout just off the southern point of the island. We had suffered from mosquitoes at night until they were blown away by the storm of wind and rain, which prostrated our tent and wet our stores. So the next morning we were in the wood to welcome what came—a fresh fair wind and a lovely day. So we crossed the mouth of Goulais Bay, and, rounding the point, the beauty of the scene burst unexpectedly upon us. But it is not alone first impressions from which I speak of its beauty. I have been there more than once since, and the charms of that sheet of water and its surroundings have not grown less by long acquaintance.

We had so fair a wind that instead of going directly to Harmony River we went up into the extreme south east corner of the bay to a stream known as Cady's River, and but seldom visited. We had found some fine fishing along the projecting points and stoney shores of Goulais Point. We passed on the way one or two parties of fishermen, who seemed to be having good sport. Indeed, the fishing all along the exposed points about Bachewana and Goulais bays is very fine, probably as fine as almost any place along the whole lake shore, and as good fish are caught as anywhere except in the Nepigon. Many of the most experienced North Shore fishermen prefer this part of the coast to any other. The fishing is mostly from the boat, and therefore pleasanter than stream fishing, where a long cast is surer of a bush than a trout. A week's absence from the Sault will give, ordinarily, several days' fine sport. I am sure if this was better known the bay would be more frequently visited.

We reached Cady's River shortly after noon, and, unloading our boat, we pushed up as far as the brush and logs would permit, casting our flies as occasion offered. But no trout tried to hit a fly with his tail there. So John, one of the voyageurs, and myself went ashore and pushed through the brush up the stream to find some rapid water. John preceded me, breaking a path through the undergrowth, and soon I saw him beckoning me to come to him. I reached him and found him peering over the bank at the first pool between two ripples. The sun shone brightly in upon the clear cold water, showing in a space hardly ten feet square more trout than I had ever before, or have ever since, seen at one view, unless it was in a trout preserve or hatchery, and it was a view worth going far to see. Out of the hundreds there seemed to be none less than ten inches in length, with many eighteen or twenty. Stepping cautiously back and taking up my line to within three feet of the tip of the rod, and thrusting the butt back into the brush, I tightened the line so as to bend the tip joint, and snapped the fly into the pool. In an instant I had a beauty of near three pounds in weight. It took time and patience to kill him there, and when it was done John crawled on the ground to the bank and reached down his hand and lifted him out, for we could not get a landing net through the brush. Calling for the Major and F., we took in a few minutes six fine trout with a united weight of over fifteen pounds; and, strange to say, though we tried all sorts of flies and even bait, we could not get another to rise. We could not get higher up the stream, the wilderness was so dense; so, when tired of our fruitless efforts, we went back to camp.

But for the mosquitoes, the camp was a pleasant one. The bar we had brought from home proved too light, and to have enough breaches to let in a regiment, and Bachewana Bay lost that night the restful and dreamy influences it had thrown over us during the day; so we smoked and applied mosquito oil by turns until toward morning, when a breeze from the lake relieved us.

The next morning I noticed a change in the level of the lake, and set to making observations. I found a rise and fall of about fifteen inches. Between ten and eleven in the forenoon it rose a foot, and by twelve three inches more. At four in the afternoon it had fallen a foot. All this was without any apparent change in the force or direction of the wind, but an appearance in the distance of threatening storm. I have become convinced, from that and subsequent observations, that this tide is mainly "barometrical," if I may use such a term.

We changed camp that evening to Jones' River, where we found an Indian lodge with six inmates. That night the elder Indian, with his oldest son, went out in a canoe to spear sturgeon. The weather was threatening, but the family was hungry, and off they went. We watched the canoe's tossing light until the storm broke upon us, and it disappeared. The women—the old mother and the wife of the elder Indian—were dreadfully frightened. But about three in the morning the canoe came in with a huge sturgeon for spoils, and there was general rejoicing.

We took some fine trout the next morning, but the Indian boy of eleven or twelve years old, with a twine line, a hook, and a piece of pork we gave him for bait, went out when we did, above us, and came back with a bigger string, though of smaller trout than we had. In the afternoon we sailed for Harmony, giving the Indians at parting some bread, pork and tobacco, and receiving in return a strip of sturgeon flesh about three feet long by nearly four inches wide.

We reached Harmony before sunset. The river below the falls is sluggish, dark and unattractive; but the falls suddenly burst upon us as we rounded a turn in the river, and the scene became lively and grand beyond my powers of description. The heights were steep and wooded upon both sides, and the falls between, with intervening foam-flecked pools, made it a wild and beautiful place. I had no idea of finding such attractive scenery. I do not now recall the height from the top of the main fall to the dead water below the lower fall, but my impression is that it must be considerably over a hundred feet. I have never visited it since that time, for the reason that lumbermen the next year began work there, and until they desert it (I think they left there a year or two ago), its charm as a fishing stream was lost. The character of the scenery must have been changed by the destruction of timber.

The river was very high from recent rains, and the usually dark color of the water changed to a muddy hue. We knew our lines would not fall in pleasant places, and so fished none that evening. We camped upon the large granite rock just above the lower falls, securing our tent by anchors of stone. The black fly was out in force, and about daylight the next morning we felt the approaches of that insidious little pest—the sand fly.

The river was somewhat lower in the morning, but hardly in suitable condition for angling. We took a few fine trout, however, and I had part of my tackle carried away by some fish while fishing with bait at the foot of the lower fall; but I did not think it was a trout. In the afternoon the water became clearer, and I went up near the foot of the upper fall, just above a fine pool, and took several. There was, just across from the rock from which I fished, a pool covered with foam, which I found difficulty in reaching with my fly, partly on account of unskillful casting, and partly on account of the overhanging trees; but, whenever I did reach it, a trout was sure to rise, and when he did I was sure of a trout. But I had one grevious disappointment. A huge fellow (I guessed his weight at five pounds), rushed at the fly as it struck the foam, and I hooked him. Between him and me was a swift current some twenty-five feet wide, and at the lower end of the pool a log and some brush were lodged. If he got there he was lost; so I determined to risk the current, and drew him toward me. He was a powerful fish, and it strained every fibre of line and rod to control him. Striking the current, down he rushed until I checked him and gradually persuaded him up a few feet, where he stopped. He had the "sulks." I couldn't move him a foot, for I had all the strain on the rod which it would bear. If I diminished the pressure he wouldn't go down stream an inch, and to slack the line would be to lose the trout. It was a trial of endurance, and how it would have terminated I cannot tell; for there was a sudden snap, the rod straightened, and the fly went into the air. I reeled up and found my hook broken just below the barb. He was a majestic fellow—I saw his broad side as he struck—and once in the current, his powerful tail came to the surface in full view. It was as broad as the length of my hand. Why is it that the fish lost is always bigger than those caught? I leave that to be answered by philosophers, not fishermen.

We did not think the fishing remarkably fine, but when we came together in the evening we had captured so many that we concluded it would be murder to take more.

The next morning we left the Harmony. A moderate breeze took us along past the Indian village on the west, and past the Bachewana and Carp Rivers. We had so many fish we did not care to try them. Indeed, we had rather tired of stream fishing, and thought a day or so of rock fishing would make a pleasing variety. Fishing is fine in Carp River. Landing at or near an old pier built by some miners, and following an old railroad grade until it crosses the river, and thence coming down the river, there is to be found very fine sport. Trout of three pounds are not uncommon, and two and a half pounds are frequently taken. The railroad referred to was built up to some iron or copper mines several miles inland, now abandoned.

We passed Corbier (pronounced Kirby) Point about two o'clock, and, going around up the coast, we made camp on Pancake Bay, or just near its entrance. About four o'clock in the afternoon we took the boat and went off a little point on which the sea was breaking noisily and dropped our flies on the water. The fish rose splendidly, and in an hour we had a dozen weighing nearly twenty pounds. F. hooked one of two pounds in the side, and the fight was vigorous and long. The Major struck, and finally captured, one which weighed three pounds, and which had the "sulks." It was curious to watch him in the clear water, every fin in position, but not trying to move. We fished in water about twelve feet deep, the bottom of which was covered with huge rocks or boulders. At times, when a fish was hooked, several others would come out and follow him around in his struggles, regardless of the boat or the fishermen. We were joined at camp that night by three boat loads of fishermen who had been having fine sport along the Goulais Point

coast and elsewhere. A heavy rain fell about nine in the evening, and the night all through was hot and muggy. The sand fly was terrific. There was no sleep for any one. Smoking was unavailing, and fun reigned rather dismally.

Our boat put off for Sault Ste. Marie the next morning, passing Bachewana Bay in the fog, and reaching the Sault in due time, with faces so burned our friends waiting there hardly recognized us.

I had fished the year before around the Bayfield coast, not camping out, however, and I found the fishing of Bachewana Bay much to be preferred. Of course tastes differ, and both places are charming. In either the over worked business or professional man finds rest and ease. I would prefer the bay now even more than years ago, for the very reason that one is a little further from newspapers, letters and telegrams there than at Bayfield or Ashland.

For Forest and Stream and Rod and Gun.

A NOVICE ON THE PRAIRIE.

IT was on a bright October day last fall that I made my *debut*, in company with several congenial spirits, on the great Prairies of Iowa to shoot my first chicken. My objective point was Albion, Marshall Co., Iowa, situated on the Central R. R. of Iowa, about 150 miles West of Davenport. Arriving at Marshalltown, we were met by our expectant host, whose genial face and hearty hand-shake betokened a warm reception at his prairie home, seven miles farther on. We got there on time, and were immediately escorted through the principal Avenue to Hotel De Patrick, where we were made more than welcome by his good wife, whose largeness of heart is only exceeded by the broad acres upon which she lives. Congratulations having ceased, each one suddenly realized that they possessed a stomach that had known no food for a "long ride." We were not kept waiting long, however. Supper was announced. Hunger dissipated, we were ready—aye, ready—for chickens; we had come 1,000 miles for chickens, we must talk chickens, eat chickens, and chicken it generally. All turned out in good season next morning, and after partaking of a royal breakfast, we were ready for George to come with the team. In went our traps, luncheon, guns, dogs and all. Hip, hip, hurrah! Bound for Story Co., 23 miles, for chickens. A bright and lovely morning, pure air, and jolly company made the ride seem but a short one. Jess, our friend and guide, and an old prairie bird, enlivened our trip with reminiscences of his early shooting days in Marshall Co., when to walk but a short distance from his dwelling, with dog and gun, meant a good bag; but very different now, scarcely any chickens in the immediate vicinity of Albion, where formerly there was fine quail and chicken shooting. Passing from Marshall into Story Co., Jess said, "Look out now, boys, we shall soon make game." Jess was right; dogs out, all out except Pat, who shot with the lines. I was chock full of "expectation," (had never seen a chicken rise). How eagerly I watched every movement of the dogs as they quartered the ground finely. "Ah! there's a point. Get up here," says Jess. I got up, and so did the chicken. Bang, bang—Jess and I simultaneously. Result; one old cock bird, no claim made by either. The ball had opened, and a right merry ball it was. From modesty and inexperience. I held back a little to see how it was done, while Boisy and George went to the front, each with a fine chicken, while following to the left some distance (they having the dog) I walked up my first chicken and killed it, whereupon my gun reduced its weight to about two pounds and a half; my height increased about eighteen inches. Of course it was the largest chicken killed, and the prairie seemed to blossom as the rose. Well, I had come a thousand miles to do it, had done it, and now I was ready for dinner. Pat unhitched the team, and then did the agreeable by making the spread upon the ground. We gathered around it; twenty-three miles of "jolting" had done its work—we were thoroughly settled. Never shall I forget that dinner; doughnuts, sandwiches, cold meats, etc., etc., disappeared with surprising rapidity. The five of us rose fuller if not wiser men.

Jess ordered all aboard for a stubble, about one-quarter of a mile distant. We make the stubble in good time, are out in a jiffy, dogs working well but birds very scarce and wild, as season is pretty late. We managed, however, to score several more. It was now time to look for a lodging place, and a lonely look it was, one unbroken prairie on every side; but Jess and Pat were equal to the emergency; one espied a house "on the distant prairie," and the other drove us to it. Our presence created a great commotion in the family; heads appeared at every aperture—many of them—we doubted the capacity of the house to hold us; it was a regular prairie house. At this juncture the landlady appeared on the scene. We asked her how many children she had; she replied that eleven were at home and one had gone to town for flour and other luxuries; but we could stay. Our "schooner" was immediately unloaded. We arrived in at supper time, and the manner in which all struggled with huge specimens of Iowa potatoes was a terror to the kind-hearted daughter of Old Erin.

The evening was whiled away with smoke and a recapitulation of the day's doings. To bed was next in order: we filled the order and bed too. Three in a single bed made a crowd, but all said they were happy. Next morning more potatoes, and all were ready for the homeward shoot. Pat shot off the left-hand line and we were soon out upon the rolling prairie again. Our second day's hunt was a repetition of the first, full of pleasant incidents, fair success, and with a long-to-be-remembered dinner.

Home in good season, birds dressed, all were ready and willing to eat the fruit of their labors served in true Western style the next morning, with genial faces around the board, each with a steaming hot chicken before him, I lived over again the pleasures of "my first chicken hunt."

SALINE.

RUBBER GOODS FOR SPORTSMEN.—Messrs. Hodgman & Co., of 27 Maiden Lane, this city, have opened a new rubber store at 425 Broadway, a few doors above Canal street, where they offer one of the largest and most complete assortments of rubber goods in this city. They still retain their present store at 27 Maiden Lane, corner of Nassau street, where they have been established for the past forty years. In both places they will open this season some entirely new styles of rubber clothing, sheeting, fancy goods, boots, shoes, etc. They are fitting out Mr. Boyton with new dress and appointments.

Fish Culture.

ANNUAL GROWTH OF LAND-LOCKED SALMON.

GRAND RAPIDS, Mich., Jan. 18, 1879.

EDITOR FOREST AND STREAM:

An article in FOREST AND STREAM some weeks ago spoke of a salmon caught in a small lake near Kalkaska, Mich., in October or November, 1878; have not the paper with me now, and do not recollect the exact date. The fish was about twenty-two inches long and weighed 8½ lbs. Dr. Parker, of Grand Rapids, one of the Michigan Fish Commissioners, has a photograph, and I think told me he saw the fish. The doctor has since shown me statistics of fish culture in Michigan, which gives the time of first planting of salmon in the lake where this "daisy" was captured as May, 1876, making him, if one of this plant, two and a half years old when taken.

I should like the opinion of the FOREST AND STREAM as to the probability or possibility of a salmon attaining the proportions of this specimen in the time named. I was informed by Mr. Clark, of Northville, Mich., of whom I purchased salmon and whitefish for stocking Rome City Lake three years ago, that the former would grow to a ten or twelve-inch fish in two years. A. Palmer, Boscobel, Wis., in FOREST AND STREAM of Dec. 26, speaks of his four-year-old salmon being but little larger than his two-year-old trout.

An article in FOREST AND STREAM, Oct. 4, 1877, headed "Salmon in our Lakes," copied from the St. Paul *Pioneer Press*, says: "The two-year-olds are now twelve to fourteen inches long. In Iowa they have been in the business longer, and have four-year-olds that are twenty-two inches long and weigh from nine to eleven pounds." As this article was published in September, several months after hatching time, the fish spoken of must have been two and a half and four and a half years old. Salmon were planted in Bear Lake, near Little Traverse Bay, early in 1876. Some five or six months later, while netting minnows, I took from my net one of the fry about three inches long, in diseased condition, being covered with dark warty spots, and showing but faint signs of life while in my hand, though he swam off lively enough when returned to the water.

In October last, two and a half years after the first and six months after the second planting, a nine-inch fish, said by reliable persons who saw him to be a genuine salmon, was caught in this lake. As this fish was but little less than the size I had supposed a two-year-old salmon to attain, I have believed him to be one of the first plant, 1876.

After the testimony of Dr. Parker and others who were "called to the feast" at Kalamazoo, where the eight and a half pound by twenty-two inch fish was served, I cannot doubt this being a veritable salmon; but with some of my friends, readers of the FOREST AND STREAM, I do question the probability, or even possibility, of his being but two and a half years old. I should be pleased, as I have no doubt many of your readers would, to have the opinion of the FOREST AND STREAM, or any other good authority, upon this subject—the usual annual growth of the land-locked salmon. As I have contended with Dr. Parker and others that such a growth in so short a time was, from any information I have ever had, impossible, I should like to be set right if I have been in the wrong. An answer either by letter or through your columns will much oblige, yours truly, J. M. METHUANY.

Ans. We must not forget that there are analogies all through nature. Fish, like men and animals, do not all attain the same size; do not attain equal size in the same length of time. It is the experience of all fishculturists that there are runts in every hatching, just as there are runts in litters of rabbits and dogs. We have seen some notable specimens at Madison, Wis., State Hatchery of varying sizes of fish from the same hatching, not only in trout, but in salmon trout. Supt. Welcher has land-locked salmon even smaller than those designated by our intelligent correspondent. Naturalists can ascertain the period required to bring to maturity fish of specified varieties; but it is quite beyond their ken to determine whether a variety of fish which attains maturity in one water in a given time, will attain maturity in some other water in the same length of time. Conditions of water, food, temperature, weather,—rains, snow, freshets, drouth, short summers or short winters—all must come into consideration, and even then a fair solution cannot be reached. In most of the lakes of Maine land-locked salmon vary from two to four or five pounds; in others six to eight pounds; in the upper Saguenay they run about four pounds average, and seldom exceed six pounds, while in the Stoney Lake region, Ontario, they sometimes reach twenty pounds. Some of these salmon have attained weight at the rate of a pound a month; others only a few ounces.

Categorically, we cannot answer what the usual annual growth of a land-locked salmon is.

Twelfth Report of the Commissioners of Fisheries of the State of Maine for the Year 1878.

The Maine Commissioners report a year of signally marked prosperity. The constantly increasing interest in fish culture, as indicated by continued demands from every part of the State for fish to stock exhausted waters, for new fish ways, etc., is most gratifying and promises much for the future of the work. Several pages of the present report are devoted to a review of the lax and wholly inefficient protective laws, which we shall notice in a subsequent issue.

The results of the salmon planting have been very satisfactory, as exhibited on the Penobscot, St. Croix and Medomac. The Penobscot yield was especially large, and the Androscoggin and its tributaries have yielded more the past season than for years before. It is suggested that small hatching houses be established at Rangeley, Moosehead, North Twin Dam, Eaton, and Grand Lake Stream. By thus replenishing the supply of salmon and trout the attractions offered to angling tourists may be perpetuated. No single interest of the State now brings so large an amount of evenly distributed money to its people through the Commissioners as do the inland fisheries. This revenue can be made vastly more important still by judiciously restocking the lakes and streams. Much may also be done by fostering the blue back, the small red fin and the several varieties of the *Cyprinidæ*, which furnish food for the other fish. To the presence of this food and the absence of the togue, cusk and perch, the game fish owe their great size. While collecting spawn the Commissioners recorded the weight of the trout captured at Rangeley, and the figures range from two to ten pounds. Apropos of eels, the report contains the record of three which were killed by the weight of water driving them between the logs in the apron of the dam at Rangeley. They tipped the beam at 8½, 11½ and 13¾ pounds, respectively. The Commissioners strongly urge the stocking of Moosehead with blue-back trout, and the planting of brook trout and land-locked salmon, with the appointment of efficient wardens.

A hatching house for land-locked salmon has been established on the Songo River, and it is the purpose of the Commissioners to stock as many of the inland lakes with this superior fish. There have been distributed from Grand Lake the past year 100,000 fry. Of blue-back trout some 40,000 have been distributed. There has been a large demand for black bass. After some forty ponds and streams were supplied the distribution was necessarily stopped from lack of funds. It is hoped in another year to fill all demands. The Commissioners regard it as a very important State measure that the alewife should be restored as early as possible to the rivers. The erection of mills has materially reduced the supply. Seventy alewives were transported in cans from Bucksport to Enfield in May last, and the first school of young fry were seen descending the Penobscot River in the following September. The fish will make their reappearance in two years. To keep up a continuous supply, it is proposed to transport more spawning fish to the same pond next May.

THE AMERICAN FISH CULTURAL ASSOCIATION.—The next meeting will take place at the Directors' room of the Fulton Market Fishmongers' Association, New York, over the wholesale market next to the ferry-house. We hope for a good attendance, as the interest is increasing every year, and the character of the papers read, as well as the discussions following are such as to engage all who take an interest in fish hatching, catching, buying, selling, or in studying their habits and life history. Many anglers are now joining, and we hope that such of our readers as may be interested in fish matters will forward their names for membership. The association has many members whose business or infirmities will not permit their personal attendance, but who take great pride in contributing to the grand work in which it is engaged, and who read the published reports with great interest. Persons wishing to join will, upon application to any of the officers, or to FOREST AND STREAM, receive blank forms for this purpose, or they can join at the meeting without further ceremony. The initiation fee is $5, and the annual dues $3.

The following gentlemen have signified their intention to join this association: C. F. Fearing, G. W. Van Sicklen, John E. Develin, S. M. Johnson, Boston, H. H. Thompson, Fliess.

MCDONALD'S FISHWAY.—Not very long ago we printed a diagram of this useful ladder, and we are glad to know that the inventor is now busy designing one of them to put in the dam at Lexington, Va., for the purpose of settling those details of construction which can only be worked out in practice. The annual loss to production from the depletion of the Potomac fisheries is $300,000. The loss to the States of Virginia and Maryland in taxes from the reduction in real estate values, consequent upon the destruction of those fisheries, is not less than five or six thousand dollars per annum. These are deductions from careful statistics prepared under the direction and at the expense of the U. S. Commission of Fisheries, of whom Mr. McDonald is one.

THE SPAWNING OF HERRING.—As this subject is now engaging the attention of scientific men, the following may be of service to fishermen and naturalists in this country, although the data comes from England and an English paper, the *Land and Water:*

Whenever an agitation against trawling for herrings or other fish is got, one of the reasons urged for the abolition of the system is that it is pernicious to, and destructive of, the spawn of herrings, the belief being that herrings deposit their spawn on the bottom, where it remains until vivified.

From long observation my opinion is that the herring sheds its spawn near the surface, where it remains suspended, receiving the rays of the sun and a higher temperature, which hastens the vivifying much sooner than if deposited on the bottom, a prey to all the crustacea and fish which keep the ground.

My reasons for arriving at this conclusion are the following: During the month of August the best takes of herring are got at from two to four fathoms from the surface, often in a spawning state. According to the current belief, the fish should have been at the bottom when this act takes place.

In August and September of last season very large quantities of herrings in a spawning state were caught at Peterhead at from two to three fathoms from the surface, in water from thirty to fifty fathoms deep.

It may be urged that the spawn sinks to the bottom and remains there until life is produced; but the idea of those who hold to the old theory is that the herring selects a rocky or stony bottom on which it deposits its spawn. That this is not always the case we have ample proofs, as we have often seen large takes of half-shotten herrings taken where the bottom was pure sand, and this is a yearly occurrence.

Every one at all observant must have seen the back ropes and nets, as well as the swing ropes by which the nets are attached to the boat, thickly coated with spawn from coming in contact with it while floating in the water.

I have been assured by fishermen that when herrings are in the act of shedding their spawn, they often get the roe herring in one side of the net and the milt fish in the other side, thus indicating that the fish while in this state cross each other like the salmon, so that the milt and roe may be brought into contact.

It is now a recognized fact that cod, mackerel, and other fish spawn at or near the surface, and were Professor Sars, or other learned investigators, to devote their attention to the spawning of herrings, I believe a like result would be established for herrings. J. R. (Peterhead).

TROUT EGGS FOR SALE—*Rochester, Feb. 7.*—Parties wishing fish for the public waters of New York State will receive attention by addressing the undersigned. Our season for receiving orders will close March 10. SETH GREEN.

Natural History.

MORE AROUT THE PARTRIDGE FLY.

AS might have been supposed, the topic of the insect enemies of the ruffed grouse has excited great interest among sportsmen generally, and we have received many letters relating to it. Too many of these contain mere expressions of opinion on the subject, unbacked by any facts of special interest, and are not, therefore, worth printing. Others, however, containing more or less that is of general interest, we print this week. It is somewhat unfortunate that, owing to the small size and retiring habits of this fly, it easily escapes the observation of such sportsmen as are not naturalists as well, and it appears to be a difficult matter to secure specimens of it. We were lucky enough, however, just at the close of the season, to secure one, which has been kindly identified for us, and of which we shall have more to say further on.

It is to be observed that no one appears to question the existence of the partridge fly, and that to many gunners both it and the young seem to be well known. Among the letters which we have received relating to this matter are the following:

BOSTON, Jan. 14, 1879.

EDITOR FOREST AND STREAM:

The articles in your paper in relation to the mortality among the ruffed grouse during the past season, caused by its insect enemies, have been read with great interest by myself and friends. The letter in your last number concerning the partridge fly I submitted to Mr. G. B. Cutter, of Weston, who is well known in this vicinity. Few gunners have had a larger experience or killed more land game in this State during the last forty years. I inclose a copy of his note, which may interest you. Very truly yours, T. G. WILDMAN.

The letter referred to in the above note is as follows:

WESTON, Jan. 13, 1879.

T. G. WILDMAN, ESQ.:

Dear Sir—I have read carefully the article in FOREST AND STREAM on the parasite fly on the partridge. The partridge I showed you had two on it in a dried state; one of them I ripped off in a hurry (not thinking of them) and it fell among the dirt and feathers, and I could not find it. It had imbedded itself on the body just forward of the hip to the depth of a quarter of an inch. The incision was somewhat in this shape V, with point toward the vitals. There was a discoloring of the flesh, yellowish for an inch around it. The other had dried up or fallen out. There was a bunch of dried feathers and skin, but with my eyes could not discover any grub. I kept the bird some two weeks before picking, and it was slightly frozen. It was the fattest partridge I ever picked.

I am sorry I did not find the first grub, for I think it was large and fully grown, as I felt it between my thumb and finger. Respectfully yours, GEO. B. CUTTER.

LAKEVILLE, Mass.

EDITOR FOREST AND STREAM:

I was speaking with a friend about the scarcity of ruffed grouse in Eastern Massachusetts, and expressed my doubts as to its being caused by the woodtick which we find on rabbits and sheep. My friend gave it as his opinion that the grub of the partridge fly caused the damage, and not the woodtick. On my asking what he meant by the partridge fly he laughed at me and said that he had supposed that all bird-shooters knew about the fly, and then he explained its habits, and what he said coincided exactly with "Straight Bore's" observations. As he is a good sportsman and a man that observes the habits of game very closely, and those of their enemies, I think he has hit pretty near the mark. Now there is one thing I would like to know, and I wish S. B. would rise and explain, and tell us how he knows that the fly, when the bird is flushed, leaves the bird and flies alongside. It seems to me it would require a marvelous keenness of vision to watch the flight of such an insect keeping pace with such a bird as our grouse is known to be. LEFT SHOULDER.

TAUNTON, Mass., Jan. 17, 1879.

EDITOR FOREST AND STREAM:

I have seen several statements in the FOREST AND STREAM in regard to the scarcity of partridges—*i. e.*, grouse—by ticks, or flies, that destroy the young birds. Some time in the fore part of June my dog started a flock of young partridges, perhaps one-third grown, one of which seemed to lag, as though it was wounded. The dog caught it and brought it to me. I noticed several ticks on the side of its head about as large as No. 4 shot and about the same color. I remember having seen them before, and the fly I always called a hawk-fly, as I never killed a hawk but that had several of those flies on it, although I have seen them on partridges occasionally.

Two years ago last June I took a stroll through what I call my hunting-ground and shot three hawks, all of whose nests were within the circle of an acre. They all had more or less of these flies on them. In the fall I shot fifty-five partridges on that ground—four old cocks, five old hens, and all the rest young ones.

Last June I was unable to go down there, so the hawks had it all their own way. This fall I shot but ten grouse there, of which six were old birds, so I accused the hawks of destroying my young grouse. It may have been the fly, or tick, that killed them, but hawks will kill birds and crows will suck eggs. In this locality there are as many hawks as partridges, and ten crows to one partridge. Now, if the sportsman or gunner would hunt hawks in their breeding season, and now and then kill a crow, we should have more partridges and quails, and would, perhaps, compensate the farmer for trespassing on his grounds by protecting his fowls from the hawk, which is destructive to young chickens, and from the sharp-eyed crow that is almost sure to find the nest and destroy the eggs of a hen that may chance to steal her nest a few rods from home.

I think if the State, county, town or clubs would pay a bounty on hawks, or female hawks, and watch the snares and fine a few trespassers so they could afford to pay a good bounty on hawks, we should have more partridges and quails. There is some wholesale snaring about here, I think. Not long since a man who goes about the country collecting game told me that he found ten birds that had been snared to one that had been shot. Not long since I passed through a piece of woods and saw a low bush fence five or six rods long, with a snare about every six feet. In the snares I found five partridges and all of them partly destroyed by cats or some other animals. It is worse to set and then neglect snares than to attend to them.

Yours respectfully, CHARLES BAYLIES.

As above remarked, we recently obtained a specimen of the parasite referred to in these communications. We were promised others by several correspondents, none of whom, however, appear to have been able up to this time to secure the flies. The one which we have we handed over to Mr. S. W. Williston, of the Peabody Museum of Yale College, who very kindly looked the subject up and identified our capture. The species, as was conjectured by us in our comments on "Straight Bore's" letter, and published some weeks since, belongs to the family *Hippoboscidæ*. It appears to have no English name, except as we have given it one, but to make up for this want it has a very long Latin one—*Olfersia (Feronia) americana*, Leach. This species appears to be somewhat widely distributed over North America, and it seems probable that it may be parasitic on other birds besides the ruffed grouse. It has been found in Massachusetts by Harris and in Georgia and the Hudsons Bay region by Walker. Allied species have been found on the great blue heron (*Ardea herodias*) by Say, or the marsh-hawk (*Circus hudsonius*) and the bittern (*Botaurus minor*) by Mr. S. W. Williston.

The young of this insect are produced alive and very far advanced toward the pupa state. They remain for a few days attached to the bird and live by sucking its blood. Their appearance during this stage has already been described. We shall be very glad if any of our readers can contribute further facts in regard to this parasite. We know what it is; now let us see what can be done to relieve the grouse from its attacks.

For Forest and Stream and Rod and Gun.

ABOUT THE BIRDS OF CENTRAL NEW YORK.

BY J. P. HUTCHINS.

ACROSS the east end of Oneida Lake are five miles of low sandy shore, whereon for centuries the winds and the sandpipers have played.

The waves, too, when the November winds sweep up the lake, hold wild frolics there, dancing many a cold night to their own hoarse music, mingled with the hissing roar of the leafless forest that skirts the shore, till the luckless sportsman awakes to inquire if the wild waves will never cease whispering to those old piperidge trees. But they do have their tranquil periods, when they recede and leave a wide margin of bright sands, pure and unruffled, until again

> Boreas shrieks o'er the naked land,
> And howls at shivering tree;
> Records his freaks on the virgin sand
> As though it were writ by fairy hand,
> Then hurries out to sea.

The shore is from ten to fifteen rods wide, of clean sand, except here and there a few bunches of scrubby willows, and bordered its whole length by an almost unbroken line of forest.

Here is the exciting arena for the sportsman, as well as an interesting field for the naturalist, at times when shore birds are numerous. Some seasons, however, there are few to be seen.

I think it was in the latter part of August, 1874, when there was a wonderful flight of these birds. Many sizes, from least sandpiper up to white-rumped godwit, swarmed the shore by thousands, for one day only, and then disappeared. From whence they came, or whither went, I know not. I have never heard of a similar occurrence here, although there are generally birds enough on the shore in the season to give the sportsman some fair shooting. I am reminded of a singular incident which happened, I think, in May of the same year above mentioned.

After one of the lake's turmoils, my friend C. A. Burt and myself gathered up more than a milk-pail full of small birds in good state of preservation, which had been drowned in the lake and washed ashore along the land for a mile and a half. There were also many others which were either buried in the sand or partially devoured by other birds and animals. Among them was the robin (*Turdus migratorius*), golden-winged woodpecker (*Colaptes auratus*), hairy woodpecker (*Picus villosus*), downy woodpecker (*P. pubescens*), myrtle-bird (*Dendræca coronata*), house wren (*Troglodytes ædon*), brown creeper (*Certhia familiaris*), white-bellied nuthatch (*Sitta carolinensis*), and, I think, several other warblers which I have forgotten. Several of the species mentioned are not residents of the locality in question, but pass in May. If these birds had been all of one kind the ready inference might be that a flock of them was caught in a tornado and swept into the lake and so washed ashore, all nearly at the same time. Or, if this was not the first instance recorded of such birds being found dead on the shore, we might perhaps attribute our phenomenon to the winds. As the case stands—although the solution may be simple enough—I do not see it, and will leave it to others.

The lake is quite a resort for eagles and other large birds that subsist on the numerous dead fish that are washed ashore. Last October a raven (*Corvus corax*) was taken, the first I have ever seen in this part of the State. Although the eagles feed mainly on what they find along shore, they sometimes attempt to fish for themselves. A few years ago one was taken in the act. He was seen struggling violently on the surface of the water, apparently with a large fish. On approaching the spot a boatman found the eagle's claws firmly imbedded in the back of a muscalonge weighing sixteen pounds. They were both taken from the water together, and both very much exhausted. It was with great difficulty that the bird's claws were removed from the fish.

While on the subject of birds, I will notice several kinds found among the scrub-oaks and dwarf-pines in the poor, sandy regions about the head of Oneida Lake, that do not live in the fertile hills and valleys of eight or ten miles away. As the reasons for this can hardly be in any difference of climate, I am inclined to attribute them to the soil, timber, water, etc. For instance: the brown thrasher (*Harporhynchus*) likes to wallow in the warm sand and make himself understood from an oak or chestnut tree. The towhee bunting (*Pipilo erythrophthalmus*) will be heard to say "chewink" in the lower limbs of a dwarf-pine about three feet above the ground, and well screened from view by one or two intervening cedars. I think it has not been fully determined among naturalists that the olive-sided fly-catcher (*Contopus borealis*) does not secure a harder or more forcible intonation to his clean-cut whistle by delivering it from the dead top of a tough old piperidge tree, which the lightning has long since given over as a hard case. Moreover, it seemed good to Dame Nature to instruct the white-throated sparrow (*Zonotrichia albicollis*) to tarry on those dreary heaths and sing five of the sweetest little cadences that ever cheered the heart of traveler—merely for compensation, maybe. Finally, if not settled by naturalists, it has been strongly suspected by the infatuated collector that the water wagtail (*Seiurus noveboracensis*) shrieks over some inaccessible marsh or dismal fen to lure him on to misery; and when he finds himself far above his boots among the mud-turtles and other slimy things, the bird drops suddenly down from its high perch into the jungle below, and is not seen or heard from again that day.

None of the above birds live twelve miles up the Oneida Creek Valley, where we have hard water, clayey soil, and no scrub oaks or piperidge trees, while on those sandy heaths they seem as happy as the day is long. The white-throated sparrow passes us in great numbers in the migrating seasons, lingering, and now and then dropping snatches of song as though he had half a mind to stay with us. What can we do to induce him to add the charm of his pretty song to our lawn? We have planted a large grove of larch trees by the sand hills, where last spring I saw, for the first time in this locality, a towhee bunting hopping among the trees and calling, as though he required only a mate to consummate his happiness.

But let us return to the lake, which is twenty miles long and five or six wide. In the fall it is quite a resort for ducks and sportsmen, and it is not always easy to tell which are the more numerous. The lake abounds in many kinds of fish, such as pike-perch, pickerel, etc., which are taken in large numbers, especially about the mouths of Oneida and Fish creeks. These streams enter the lake only two miles apart, entering wide and deep channels through our sandy shore, and are very different in character. The former approaches from the south, its sources being among the lime-stone hills of Stockbridge and Peterboro. The water is therefore hard and of a milky or muddy appearance. On the other hand, the waters of Fish Creek are soft and very pure. The stream's tributaries are near those of Salmon River in the woody regions of Northern New York, where the trout delights to dwell.

In boyhood I used to wander among those streams, angling for the speckled beauties. There is a strange enchantment connected with those youthful dreams. I used to go far into the wilderness, up one of those wild torrents, its noisy waters leaping and dancing through a lovely green forest that echoed to its clamor like a thousand silver bells. In some places the water glided over smooth slate and anon leaped and writhed among boulders. I have wandered from rock to rock along this stream with my fishing rod, till the unceasing din produced, if possible, more solitude than silence itself, and my fancies ran wild with the leaping torrent, peopling the surrounding forest with screeching elves, and the very water with sylvan shapes and shadows flitting and dancing in the feathery foam like weird and strange phantoms.

In those days that region was much resorted to by sportsmen from both city and country, and it is said that capital sport may still be had.

AN EARLY BIRD.—*Williamsport, Pa., Jan. 28.—Mr. Editor:* Yesterday (January 27) I noticed a kingfisher (*A. alcyon*) perched on a tree on the banks of Lycoming Creek. Is it not unusual to find this bird in our latitude in mid-winter? The Susquehanna and tributaries at our place have been closed for weeks, excepting where the current is very swift, and the bird must have lived very precariously at best. His appearance justified this conclusion, as he looked as tattered and demoralized as a tramp. About a week since my brother and I noticed a large flock of snow buntings, *Plectrophanes nivalis*, (the originator of that name ought to be hung). My brother knocked seven out of the flock, one of which was snatched by a sparrow hawk almost as soon as it touched the snow, and, as the second barrel missed fire, the bold robber escaped with his booty. Of the remaining six, which my brother skinned, there were five females and one male. With the exception of a flock we saw in the winter of 1876 these are the only birds of this species we have ever seen here. BOBOLINK.

LINNEAN SOCIETY.—In the absence of the president at the meeting held February 8, Mr. Herrick occupied the chair, Mr. Bicknell acting as secretary, *pro tem.* Mr. N. T. Lawrence read an interesting communication from Mr. Spencer Totter, on the occurrence of certain rare birds at Philadelphia, Pa., principally collected by Mr. C. D. Wood. Sixteen species from the locality were noticed, all interesting, and some not previously recorded. Among those of especial interest were *Protonotaria citra* (two specimens) *Pyranga æstiva, Vireo philadelphicus, Plectrophanes lapponicus, Euspiza americana*, (regularly breeding at one point), three specimens of *Goniaphea cærulea* and *Mergulus albus*, the latter being found exhausted in September last sixty miles from the ocean. Mr. C. H. Eagle made some remarks on zoological nomenclature, after which the subject of trinomial nomenclature was discussed. The majority of those present seemed opposed to the arbitrary fashion of combining varietal and specific names favoring the use of the separating abbreviation, var., or Mr. Ridgeway's system of using the letters of the Greek alphabet to qualify varietal names. Mr. Herrick read from Dr. Coues' "Birds of the Colorado Valley" one of the author's illimitable pen pictures of bird life, Mr. Bicknell following with several newspaper clippings on scientific subjects, and remarks on Dr. Gregg's record in the *American Naturalist* of the occurrence of the pied duck (*Camptolarinus labradorius*) —supposed now to be almost extinct—at Elmira, N. Y.

TWO MORE ALBINOS—*Editor Forest and Stream:* My attention was called to a purely white skin purchased among a lot of furs. Upon inquiry I found that it was the skin of a white, or albino, raccoon. The rings on the tail were a cream color and distinct. The man who caught it said he could not tell the color of the eyes as he caught it at night.

While making inquiries in regard to the raccoon, I found there was also an albino opposssum in the city, the property of Mr. C. H. Wilson, who has it stuffed and mounted. It was caught about a year ago, and is perfectly white, with pink eyes.

"De 'possum and de 'coon
Dat lives in de sycamo',
Turns dere jackets berry soon
For one as white as sno'.

That is the belief of the negroes. They believe that all 'coons and 'possums that live in sycamore trees become white by climbing the white trunks of the trees. VAL.

Hickman, Ky., Jan. 23, 1879.

HIGH SPEED STEAM YACHTS.

IN their more primitive form yacht engines were copies—on a small scale—simply of the various types in use on merchant vessels. No great speed being arrived at, or even deemed attainable, it was but natural that both at home and abroad the pattern most in use among steamers of limited tonnage should have been selected as the best suitable guide to the designer only occasionally charged with the duty of supplying motive power to a class of vessels really beyond the scope of his professional sphere. As the sailing yacht represents in the abstract the highest possible development of naval architecture—nothing in the way of form, stability or speed being sacrificed to mere carrying capacity, as in the merchant vessel or man-of-war—so does the modern steam yacht indicate the highest pitch of refinement of the engineer's art and the draughtsman's skill. The problem which the builders of steam yachts have to meet is one not be solved by the cruder approximations and commoner experiences of the ordinary engine builder, with whom a little more or less weight in the framing, want of perfect alinement and accurate adjustment of parts, sufficiently large wearing surfaces and the closest economy in fuel are all matters of less importance than to the designer anxious to obtain from his yacht engine the closest approximation in performance to the theoretic standard.

The growth of steam yachts in the past and the probable expansion which the building interests will undergo, can best be estimated from the figures compiled from English records. While in 1850 only three steam yachts were enrolled in the British clubs, the number had increased in the next fourteen years to over ten times that number, or at the rate of one thousand per cent. From 1864 to 1878 the development in number and size was rapid, the club lists showing at the end of that period nearly 300 steam yachts, exclusive of lots of steam launches of all kinds and sizes, from the tiny steam canoe up to the 40 and 50ft. boat. Statistics relating to the number of steam yachts in America are difficult to obtain, the number of cabin craft approximating to perhaps one-half as many as in England, though most of them are of less tonnage and more especially fitted for river and lake service. The fleet of launches has been rapidly augmenting in the last few years, and as the advantages of travel for all purposes by high speed launches and light-decked vessels become more generally appreciated and popular, the fleet of steam yachts in our waters bids fair to assume vast proportions.

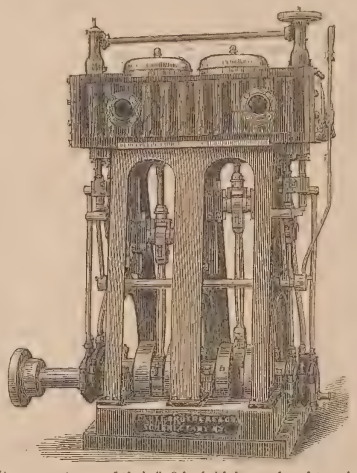
In the light of recent investigation and experiments, the essential elements contributing to success in a high speed steam yacht—and it is needless to mention that, excepting auxiliary steamers for cruising purposes, all steam yachts will be built with a view to the attainment of the highest speed possible—are a long, narrow, easy form, the immersed cross areas of which should bear to each other the same ratio as the relatively situated ordinates of a cycloidal curve of the length of the load line; a reduction of immersed skin surface to the smallest amount compatible with the displacement necessary; a skin as smooth as practicable, easy lines aft, so as to render a free passage of solid water to the screw, and as deep an immersion to the latter as possible without the addition of more than a very limited amount of deadwood, and without much inclination to the shaft. The hull, boilers and engines should be as light as consistent with the work they are to be put to, and consequently steel will be the best material that can be employed. Its use, however, entails additional care and close scrutiny as well as responsibility on the part of the builders. The importance, then, of intrusting such work only to houses of the highest reputation in the engineering world becomes self-evident.

Boilers should contain as large heating and evaporating surfaces as possible, so that plenty of steam may be rapidly generated. The water and steam space must be ample as a matter of security as well as to prevent foaming, priming and irregular pressure. With high pressure no trouble will be experienced in obtaining draft, but with condensing engines and boilers below deck, this point needs special consideration. Large ventilators or blowers and ample height to the stack are most effective in securing rapid combustion and a strong draft.

Concerning the engines for this type of vessel, it will only be required to say that practice has developed the absolute necessity of depending upon high piston speed, many turns, and fine pitch, rather than of following the custom of the past in which the same objects were sought after with long stroke, few turns and coarse pitch. With the refinement in engineering science, and with the particular attention devoted in practice to this class of steam engines by certain firms, among whom we may instance, as being at the head of the list, the Messrs. Clute Bros. & Co., of Schenectady, N.Y., no difficulty is experienced from the rapid travel of the piston and all the connected parts of the movement. It was once thought, and not long ago either, that the high speed of the present day would rack and wear out any engine in very short time, and that no brasses or bearings could be got to withstand the heat due to the friction generated. It has been found, however, that these troubles can be obviated only through the most thorough fitting and workmanship of detail, and in the use of the very best quality of material. For this reason, good engines of this character are necessarily higher in cost and call for more skilled supervision than the comparatively rougher work sufficient for ordinary speeds.

The propeller or screw should be two, or at most three bladed, of fine pitch and small surface. The slip should be as great as possible, for it is an error very generally entertained that slip is a sign of inefficiency and waste of work. On the contrary, slip indicates the action of the propeller against the water, and the greater the volume it throws astern, the greater is its re-action on the ship, for the two must always be alike. Practically this may very readily be shown by a fan with the blades athwartship. No slip will then be generated, but no power either, for the fan will merely cut the water. Turn the blades to an angle and slip with corresponding re-action or driving power will be the result. The more slip in line with the keel a propeller shows the more effective its action.

The practice of Messrs. Clute, Bros. & Co., is best illustrated by the cut herewith annexed.



It represents one of their 9x9 inch high speed yacht engines, and is suitable for a hull 55ft. long, 9ft. beam, and 48in. draught. The simplicity, excellent proportions and distribution of metal in line of the strains will be apparent to any engineer, while even the unprofessional mind will not fail to be impressed with the grace of the structure as a whole, and the happy outline of the details. This pattern is, we believe, the result of long experience and pains on the part of the builders to attain an engine which should give the results aimed at and be a credit to themselves. That their business has rapidly extended, and that they are certain to reap a fair share in the future is to be laid to the conscientiousness with which all their work is laid out and completed. That a firm in the central part of this State should succeed in drawing to its establishment a larger number of orders than the sea-board ship yards, and keep its hands running full time on marine work, speaks volumes for the popular favor with which their specialties are received, and their method of conducting business forms an example that might be imitated to advantage among the sleepy engineering concerns of the metropolis, Philadelphia and the East. No less than fifteen marine engines were turned out and fitted by Messrs. Clute to vessels on the St. Lawrence, the great lakes and other inland waters; and it is only fair to state that in their specialties they are as a consequence ahead of the many mill and locomotive engine-shops which undertake to turn out a yacht's engine on the same plan that a shoemaker fits his shoes over the same last. The 9x9in. engine, illustrated, turns up to 450 revolutions without jar or heating, and a larger one, 20x20inches, of similar pattern, has been at work with 250 revolutions without vibration to the hull. These engines are finding their way into the Eastern markets, and will give our friends in this neighborhood a good deal of work to rival, unless some new life be soon infused into their operations, and unless they freely recognize the advantages of high speed cambined with a form of engine in which the single cylinder is displaced by two, and the cumbersome iron box casting supplanted by a frame in which the material is put in the strongest and lightest form.

THE ADVENTURES OF BOYTON.—With all of Europe at his feet, our good friend, the gallant Boyton, has turned his eyes toward fresh fields and conquests new in the broad expanse and winding rivers of his native land. His descent of the Alleghany will rank among the most perilous of all his deeds and goes far to prove what has been said in favor of the rubber suit that enables him in midwinter, with thermometer nearly down to zero and ice abounding, to take to the river at any hour of the day or night. From Freeport, Pa., where the Captain last indulged in a fair night's rest, he put out boldly into the cold water and the whirling mass of drift ice of the Alleghany, early morn at five on Feb. 9. When the current caught him, he worked his way with all the strength he could muster, through the pack. When Tarentum was reached, the sun burst forth, but its mild rays were not enough to melt from the captain's face the spray that had frozen solid. Puckietty was passed at twenty minutes past nine, and the hardy swimmer hove in sight at Hulton about two hours later. The ceaseless paddle and the untiring efforts of Boyton alone enabled him to reach the city of Pittsburg and finish his trip at the mouth of the Alleghany, the mark set, in the afternoon. With flags flying, he sailed under the bridges of the Smoky City amid the applause of the multitude assembled, who gave the dark, queer looking object in the river a perfect ovation as he was taken out of the water and carried ashore aboard a tug. At his hotel, where the needed rest and nourishment awaited him, it was found that he had suffered from the cold, and that his face, exposed to the winds and spray, had been frost-bitten and was exceedingly painful. The whole distance accomplished since the 6th inst. was probably 150 miles and over, considering the many winds and turns of the upper waters of the Alleghany.

DEEP DRAUGHT vs. LIGHT DRAUGHT.

TORONTO, Jan. 3, 1879.

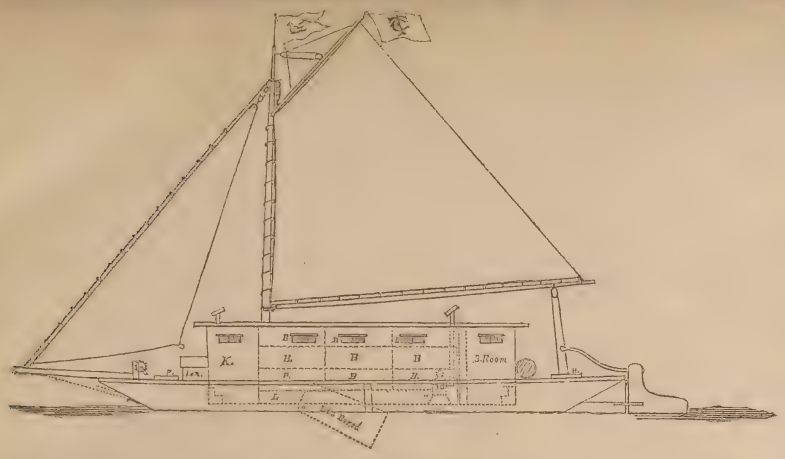
EDITOR FOREST AND STREAM:

I am desirous of getting a boat that will be weatherly in rough weather, as well as fast in light winds. I have tried shallow boats, of different kinds and have found them sail well enough till I wished to beat to windward, with some sea on.' Then they were wanting and were much inferior to what I expected. I have read descriptions of deep draught boats and think that they should be an improvement in this respect. I intend to sell my present boat, a centre-plate sail boat, and get a boat built on the lines of the Clyde sail boats. I am not aware that there are any boats of this style in Canada, but perhaps some of the readers of the FOREST AND STREAM may have had experience of them. The dimensions are as follows: Length, stem to sternpost, 19ft.; length, including counter, 23ft.; beam extreme, 6ft.; draught forward, 1ft. 6in.; draught aft, 2ft. 9in.; freeboard least, 1ft. 10in.; freeboard at bow, 2ft. 9 in.; ballast on keel lead, 6cwt.; ballast in boat (under floor), iron, 10cwt.; ballast (shifting), shot bags, 4cwt. It is rigged with lug sail and jib, and carries a spinnaker for running. Length of mast, 19ft. 6in.; length of gaff, 20ft.; bowsprit outboard, 5ft. 6in.; main boom length, 18ft.; spinnaker boom length, 18ft. 6in.; total area of main and jib, 340 sq. ft.; spinnaker about 120 sq. ft. extra. The boat will be decked forward of the mast (4ft.) and will have waterways at each side 6 inches wide, with 1 inch coaming. The counter will also be decked. The boat will be built of white pine, with oak for keel, stem, sheer strake, etc. In some points it differs from the Clyde sail boats.

The freeboard is larger than the average, as the boats are intended for all kinds of weather. I intend cruising around Lake Ontario in this boat, and as I do not intend to go knocking around bars, etc., I think that the 2 feet 9 inches she draws will not prove in the way. The cost of the boat, spars, sails and ballast will be $320.

If any of the readers of the FOREST AND STREAM have had experience with deep draught boats I would be glad to hear from them. Shallow boats seem to be most in favor, judging by the correspondence, etc., but I am open to conviction, though it will take a good deal to convince me, that light draught boats are equal to deep draught ones in all kinds of weather. DEEP DRAUGHT.

The experiences of "Deep Draught" are those of any one who has attempted prolonged cruising in a shallow boat. The sharpie is an excellent craft for certain purposes, such as short distance sailing, fishing and hunting, in which the object is to obtain, at as low a figure as possible, a fairly effective boat which will render all that is required of her; the carrying readily from place to place of her crew, with good speed under suitable circumstances, and safety in rough weather, if it be met with. But the reader must not confound safety with weatherliness, for there is a vast difference between the two. It is quite another thing to work a boat to windward under sail at a rapid rate in rough water than to merely lie to and ride out the sea, or run before it. The shallow wide vessel is a safe boat for living through a gale if carefully handled, owing to her extreme bouyancy, averting the danger of swamping and keeping her dry above the sea. But when it comes to driving the boat, to screwing out to windward, it is a matter beyond dispute that the deeper and narrower craft has much the advantage; and should such work constitute one of the requirements of the boat, we counsel decidedly in favor of the deep yacht of moderate beam, easy form, and low centre of gravity. In them the possibility of carrying on with safety from capsizing in a heavy wind and steep sea, their easy behavior in going through the jump, and their great stability when pressed, are of far more consequence than is generally conceded by those accustomed to smooth-water sailing, and much more than counterbalance the supposed advantages of the light draught in relation to less keel and greater comfort. We say "supposed advantages," because they have no existence in realty, but only in the over-sanguine imagination of the admirers of the sloop-rigged racing craft. When hard pressed, the narrow deep boat's curve of stability will show decidedly more to her credit than the sloop can attain; and the very buoyancy of the latter, while contributing to safely riding over the seas, is altogether incompatible with ease and hard work or speed to windward. These facts are not only in accord with figures and reasoning, but are borne out by the experience of those who have tested all types under all conditions, and are likewise substantiated by the very valuable results deduced from miniature or model yacht sailing. The smaller the boat the more important to provide for sea-going qualities, if she is to be used in open water, as for example, on Lake Ontario. A large sloop may be able to overpower a sea and force her way through it in spite of it where the smaller craft, if built upon the shallow wide model, would be compelled to give it up out of sheer impossibility to hold its own in an attempt to work to windward. It is not to be inferred from our articles on the sharpie that she can be made to displace the deeper yachts—not at all; she is useful simply in answering the needs and demands of sailing of a certain kind and under certain conditions. For real hard-weather work and distant cruising, depth, easy form and a handy rig are absolutely indispensable. The crowded condition of our yachting columns prevents our going into the subject from a mathematical standpoint at present, and we must content ourselves with occasional remarks anent model until a more opportune period. In the meantime the deep-water cruiser may retain full faith in the sea-going form; for should he build on something like the design published in our last week's issue, he cannot go far astray, and is certain to find his craft, for "all round qualities," much ahead of the improved scow or the racing affairs unfortunately in such common vogue.



THE TULE BELLE, OR MUD HEN.

WE print herewith a diagram of the San Francisco shooting scow which should have accompanied the written description in our issue of Jan. 23, which see.

—See Bohemian Glass Company's advertisement.

The Kennel.

THE MINNESOTA FIELD TRIALS.

WITH two letters published in this issue the correspondence regarding the Minnesota Field Trials must close as far as our columns are concerned. We have already given more space to the discussion than justice to our readers in general would warrant. Mr. Lincoln's letter we consider important as definitely placing the responsibility of Tempest's score, and it occurs to us that the after cry of "fraud" was totally unwarranted, and to be attributed entirely to causes alluded to in Mr. Hallock's letter published last week. We have just received letters from Mr. D. C. Sanborn and Mr. Davidson, but cannot see that their publication would do more than to add fuel to the flame of animosity and bitter feeling which now prevails. We would say that Mr. Whitman's and Mr. Lincoln's letters have been in type for some days, and but for an accident would have appeared in our last issue:

MR. LINCOLN HEARD FROM.

DETROIT, Mich., Feb. 1, 1879.

EDITOR FOREST AND STREAM:

Messrs. Davidson and Whitford having called upon me for an explanation of the facts connected with the awards in the "Nursery Stakes," I append a brief statement, having no personal interest in the matter beyond a truthful representation. The *Pioneer-Press*, of St. Paul, sent out a special reporter to get the results of the running of the first day. He came to me, and asked me to get them for him as early as I could, as he wished to telegraph them to St. Paul. I went into the judges' tent and said: "Gentlemen, can you give me the score." Both Mr. Davidson and Mr. Whitford replied that it was not ready; they were at that time discussing the points. I went in two or three times again, and still found them debating. Finally, Mr. Whitford said, "Get me a clean score-blank, and I will give you the score." I procured him one, and then informed the reporter of this, and said I had no doubt he would get it in a very few minutes. Mr. Whitford came out of the tent very shortly afterward, and gave me the score, which I gave the results of to the reporter; Mr. Hallock promising him at the time to send the results of the other stakes by telegraph as soon as he reached Sauk Centre. This was the score I gave to the sporting papers and paid the money from. CHAS. LINCOLN.

CHICAGO, Feb. 3, 1879.

EDITOR FOREST AND STREAM:

I was in hopes not to be called on to say another word regarding the Minnesota Field Trials, but Mr. Whitford desires me to give the contents of his letter regarding Jennie, etc. This I do with pleasure, as I have no desire in any way to injure him by a wrong construction of it. The extract is from his letter dated Nov. 7, '78, dated at Pembroke, Ky., and is as follows: "When Jennie was running I called the attention of the judges that she was not as fast as she appeared to be, and I was opposed to allowing the credit others were disposed to give her for a long point, saying to Mr. D. that she evidently wheeled on the scent the birds had left in their trail, and I did not consider that act—which was much applauded—as a criterion of her nose." (In this I think Mr. Whitford was correct, judging by her subsequent work, as the next day she got four flushes and no points, and, I have heard, at Nashville, five flushes and no point.) "All these objections I raised against her while others were so carried away by her peculiar style that they were disposed to credit her with more than she deserved. I censured Mr. D. for the flush Prairie Belle got, and would gladly have given her another opportunity. To you there is no blame until it can be proven—a thing I feel cannot be done." I now propose to review these trials. The charges were that by collusion with a judge, or judges, the dogs owned or bred in one kennel were to be run to the front, right or wrong. The charge pointed so directly to me and Mr. Davidson that I felt compelled to notice it, and by the certificate of the judges proved the charge of collusion false. Now, as regards Mr. D.'s efforts to run my dogs, or those bred by me, to the front: Both Mr. Morgan and Mr. Whitford claim that Prairie Belle—bred by me, or out of my Prairie-Ranger bitch Pearl—did not receive fair treatment at the hands of Mr. D., which disproves the second charge so far as she is concerned; and your contemporary says the others that were placed won on their merits, except Tempest, and that she won by fraud. To satisfy myself as to the truth or falsity of this charge, I wrote to several parties inquiring if they had heard any fraud charged prior to the night I left. I cannot learn that any of them had. It appears singular to me that as I roomed with Mr. Whitford the night the award was made, that he should not have at least intimated to me if there was any truth in it. After the trials were over and Mr. D. had returned home, I wrote and asked him if there was any truth in the charge, and received his reply that there was not a particle of foundation for any such charge, sending me the score or memoranda kept by Mr. Whitford in the field. This showed no signs of alteration, and corroborated his statement. It was for a long time denied that this document was Mr. Whitford's score, but in last week's *Field* he virtually admits it was, but calls it a memoranda. I presume the same document will appear in your paper. He says: "It is as near as I can recollect its appearance at night after stakes were run;" as printed it looks enough like a score to call it one. He further says: "I was the only judge that kept a memoranda of the dogs' general points in the field." Admit all this to be true, does it not look a little singular that if Mr. D. was desirous of giving Tempest the second prize, right or wrong, he should not have accepted the figures Mr. Whitford's memoranda shows without discussion? It will be noticed his memoranda gives her, when correctly added, 46 to credit and 2 to debit, or a net total of 44. In this respect it differs ½ point from the one I had in my possession. Mr. Whitford says: "They acknowledge having made some alterations, and inform the public that I endeavor to ignore it." If when he says *they* he includes me I have only to say the assertion is easily made but not susceptible of proof. Regarding the coat he has prepared, and so kindly offers me if it fits, I must decline, as it does not fit, and the material is too thin for my use if it did. I regret that in discussing this matter my opponents have shown so much feeling, even going so far as to insinuate many things that have no foundation in truth, and even descended so low as not only to use personal abuse against the parties, but have classed dogs as well bred as any they own amongst the curs of the country, thereby showing a desire to injure the parties charged more than to prove the charges made. With these remarks I close my articles on the Minnesota Field Trials, hoping it will be a long time before I shall again be called upon to defend myself against such unfounded charges.

J. H. WHITMAN.

THE LOUISIANA OFFICIALS CRACK THE NUT.—Last week, under the heading "A Nut for the New Orleans Authorities to Crack," we mentioned the fact that one Jennings, of this city, had gone to New Orleans with a number of bull-dogs for the "Grand National Dog Fight" which it was proposed to hold there this month. It affords us much gratification to record that the Governor of Louisiana has signed the bill for the prevention of cruelty to animals, under which provision it is hoped that the New Orleans authorities will be able to suppress the proposed encounter.

BENCH SHOW POINTS OF DOGS.—Our Kennel Editor has compiled from "Stonehenge's" latest edition of "Dogs of the British Islands" the scales of points for judging all varieties of dogs at bench shows. As these scales have been adopted by all the kennel clubs in the country to be used at their shows, the book, which is a neat pamphlet of 52 pages, becomes particularly valuable to intending exhibitors. The "points" are analyzed and described in detail.

INFLUENCE OF PREVIOUS SIRES.—We have had brought to our notice recently a number of interesting cases illustrating the influence of previous sires in dog breeding. A majority of them carry out our recently expressed theory that this influence is confined more to color than to characteristics. One of the most peculiar cases is that of a Spitz bitch owned by the night watchman of the *Christian Weekly* building in Nassau street, this city. The bitch, a white Spitz, has had three litters by three different dogs. The first sire was an Esquimaux dog, the second was a pure black Spitz, and the third a red and white Irish setter. This last litter was marked as follows: Two puppies are almost all black, two are marked with black and white spots, two are red and white, and one red with white blaze on face. We must say that in general appearance the puppies resemble setters more than they do a Spitz.

DEATH OF SPRING.—Below is a neatly written bit of obituary poetry which commemorates the good qualities of a fine old setter dog, Spring by name, the property of A. L. Emerson, Esq., of York, Maine. Spring was the last of a strain of setters quite noted about Portsmouth, N. H., their progenitors having been imported by a Roman Catholic priest residing in that town. Spring had perhaps hunted a greater variety of game than any living dog, his owner having shot over him in England, China, California and South America. Although he was getting old, Mr. Emerson shot over him, this past fall eighty-eight ruffed grouse, besides woodcock, snipe, etc. A marble monument is being erected to his memory:

IN MEMORIAM,
ON THE DEATH OF "SPRING."

Through many years of calm and storm,
In every kind of weather,
Have you and I, my good dog, "Spring,"
Sailed o'er the seas together.

And thirteen times around Cape Horn
We've steered without disaster;
In foreign lands, on distant seas,
You've claimed me friend and master.

Serener times have come since then:
Our sailing days well over,
I fondly hoped, my faithful "Spring,"
That we might live in clover.

But "best laid schemes of mice and men"
Are cut upon the bias;
They seldom can be straightened out:
'Tis meant, no doubt, to try us.

Still we have had our share of sport;
You pointed and I brought 'em.
We've been a terror to the birds
Through all the golden autumn.

What noisy greetings filled the air,
And what a joyful racket
Whene'er you saw me take my gun
And don my shooting jacket.

We've traveled many a weary mile
In quest of duck and plover;
Through Berwick woods, both North and South,
From Kittery Point to Dover.

We've shared our mess in sportsman's style,
The green grass for our table;
Not waiting for a bill of fare
Like gunners famed in fable.

We never had a bone to pick—
I mean one of contention—
And only two or three small tiffs,
But these I needn't mention.

And now, farewell! Your race is run;
No name in canine story
Can boast a nobler pedigree,
Or a life more fraught with glory.

Then weave a shroud, Oh, falling snow!
His lonely grave encumber;
And sing your dirge, ye winter winds,
Around his place of slumber!

—The Kennel Editor returns thanks for the unexpected honor done him by the Palisade Gun Club, of West Hoboken, N. J., in electing him an honorary member of their organization.

MEASUREMENT OF CELEBRATED DOGS.—Our English contemporary, the *Country*, is publishing the measurements of celebrated dogs, mostly prize winners. This is a capital idea, as it affords breeders and others the opportunity of comparing the measurements of their own dogs with others. We reprint a number of these as being of value to our own readers. We have been struck more particularly with the size of some of the deerhounds. Surely there have been none exhibited in this country, unless it might be Mr. Paul Dana's Bran, that would measure thirty inches at the shoulders.

Mastiffs.—Dr. J. Lamond Hemming's His Lordship (champion): Age, 1yr. and 10mos.; weight, 180lbs.; height at shoulders, 33in.; length from nose to set on of tail, 53in.; length of tail, 22in.; girth of chest, 44in.; girth of loin, 36in.; girth of forearm, 11½in.; length of head from occiput to tip of nose, 12in.; girth of muzzle midway between eyes and tip of nose, 15½in.; girth of head, 28½in.

St. Bernards.—Mr. J. C. Tinker's bitch Mab: Age, 3yrs. and 8mos.; weight, about 128lbs.; height at shoulder, 29½in.; length from nose to set on of tail, 53½in.; length of tail, 26in.; girth of chest, 37½in.; girth of loin, 29½in.; girth of head, 25in.; girth of forearm, 10in.; length of head from occiput to tip of nose, 10½in.; girth of muzzle midway between eyes and tip of nose, 14½in.

Spaniels.—Mr. A. H. Eastern's black spaniel Brush: Age, 2½yrs.; weight 40lbs.; height at shoulders, 15in; length from nose to set on of tail, 38in.; length of tail, 5in.; girth of chest, 26in.; girth of loin, 24½in.; girth of head, 16in.; girth of forearm, 7in.; length of head from occiput to tip of nose, 9½in.; girth of muzzle midway between eyes and tip of nose, 9in. Same owner's black spaniel Bona: Age, 2½yrs.; weight, 32lbs.; height at shoulder, 15in.; length from nose to set on of tail, 35in.; length of tail, 4in.; girth of chest, 21½in.; girth of loin, 22in.; girth of head, 14½in.; girth of forearm, 6½in.; length of head from occiput to tip of nose, 8in.; girth of muzzle midway between eyes and tip of nose, 7½in.

Deerhounds.—Dr. J. Lamond Hemming's Doctor: Age, 3½yrs.; weight, 98lbs; height at shoulder, 36½in.; length from nose to set on of tail, 50in.; length of tail, 27in.; girth of chest, 33in.; girth of loin, 25in.; girth of head, 18in.; girth of forearm, 8in.; length of head from occiput to tip of nose, 12in.; girth of muzzle midway between eyes and tip of nose, 10in. Dr. J. Lamond Hemming's Linda: Age, 5½yrs.; weight, 95lbs.; height at shoulder, 29½in.; length from nose to set on of tail, 48in.; length of tail, 24in.; girth of chest, 34in.; girth of loin, 25in.; girth of head, 17½in.; girth of forearm, 8½in.; length of head from occiput to tip of nose, 11in.; girth of muzzle midway between eyes and tip of nose, 9½in. Mr. H. Fitts' Bruce: Age, 6yrs.; weight, 83lbs.; height at shoulder, 30in.; length from nose to set on of tail, 45in.; length of tail

23in.; girth of chest, 31in.; girth of loin, 23in.; girth of head, 17½in.; girth of forearm, 7in.; length of head from occiput to tip of nose, 11¼in.; girth of muzzle midway between eyes and tip of nose, 6in.

FIELD TRIAL DERBY.—The entries for the Fifth Field Tria Derby Stakes for pointer and setter puppies bred in 1878, to be tried on partridges in May (under the auspices of the English Kennel Club), have closed with 121 subscribers, being an increase of fifteen over last year. The following is a list of those making nominations, with the number of dogs entered by each: "*Pointers.*—Mr. W. Arkwright, 5; Mr. J. Bishop, 5; Mr. T. B. Bowers, 1; Mr. Staples-Browne, 2; Viscount Downe, 3; Mr. Barclay Field, 4; Mr. T. E. Issard, 3; Sir T. B. Lennard, 2; Mr. A. P. Heywood-Lonsdale, 4; M. G. Lowe, 1; Rev. J. C. Macdona, 1; Mr. G. Pilkington, 10; Mr. Lloyd Price, 8; Mr. S. Price, 5; Count G. de Pourtalis, 1; Mr. J. H. Salter, 3; Prince Albert Solms, 2; Mr. C. Watts, 1; Mr. J. H. Whitehouse, 4; Total, 65. *Setters.*—Mr. W. Allison, 1; Mr. E. Armstrong, 3; Mr. G. Thorp Bartram, 2; Mr. E. Bishop, 2; Mr. Elias Bishop, 5; Mr. T. B. Bowers, 3; Mr. G. Brewis, 2; Mr. Staples-Browne, 2; Viscount Downe, 1; Mr. W. Douglas Duncan, 3; Mr. C. F. Fauntleroy, 2; Mr. Barclay Field, 4; Mr. R. H. Purcell-Llewellin, 7; Mr. A. P. Heywood-Lonsdale, 4; Mr. H. Lowe, 1; Mr. J. C. Macdona, 1; Mr. G. de Landre Madona, 3; Mr. S. Nott, 1; Mr. Parrott, 1; Major H. Platt, 3; Mr. S. E. Shirley, 4; Mr. T. Slatter, 2; Mr. J. Todd, 3; Total, 57.

A very pretty quarrel has arisen over this event, owing to Mr. G. Thorp Bartram having entered some puppies with pedigree unknown, against which objections have been lodged. Mr. Bartram claims that under the general rule, which states that "every owner of a dog must give (if known) the name of sire and dam of dog entered," not knowing the names of sire and dam he cannot be compelled to give them; while the objectors point to a clause on the entry blank, which states that persons making entries must give full particulars as to color, marking, sex, pedigree, etc.; and another which reads: "I make the above entries subject to the rules of the Kennel Club and the *special regulations of this stake.* As Mr. Bartram in a letter addressed to the Kennel Club states that he has had the puppies since they came from the dam, it seems very singular that he should not know their breeding. There will be some very lively correspondence regarding this matter in the *Field* and other English sporting papers.

THE IRISH KENNEL CLUB.—The annual dog show of this club will be held in Dublin on the 1st of April, and the prize list is a most liberal one. Members of the Irish Kennel Club are allowed to enter four dogs at half fees, and are eligible to compete for two fifteen guinea cups. £500 are given in prizes, exclusive of extra cups. Some classes have four prizes given, and none less than three. Fox-terriers have eight classes allotted them, in which four five guinea cups are offered for competition, together with the FOX TERRIER CLUB grand challenge cup, value 50 guineas, and the I. K. C. challenge cup, value 15 guineas. The judge selected for these classes is Mr. T. H. Scott, who visited this country last year and judged at Boston. In the other classes the following gentlemen have been asked to officiate: Mr. Hugh Dalziel, mastiffs, St. Bernards, Irish wolfhounds, bulldogs, dandies, Bedlingtons and miscellaneous classes; Mr. S. E. Shirley, M. P., retrievers, bull terriers, English setters and spaniels; Mr. Ridgway, Irish terriers; Mr. W. W. Thomson, collies; Mr. J. G. King, Irish setters.

FOX HUNTING IN PENNSYLVANIA.—A correspondent writes from Hamorton, Penn., as follows:

Our country is a great resort for numerous packs of foxhounds, some perhaps the best in the State, and nearly every day at this season of the year their music is heard over the hills and through townships of Pocopson, Kennett, Newlin, Marlborough's and Bradford's. It is of no infrequent occurrence to get up two foxes the same day within short distance of each other. But few "bag" hunts are indulged in, foxes being so plenty little difficulty is experienced in jumping one any damp morning, and they make a far better run than those that are dug out and kept up for weeks in confinement. Frank Clayton's hounds, of Marshallton, take the lead in the county, but we have numerous packs in our immediate vicinity nearly equal for running. SHETHAR-BOZNAL

February 4, 1879.

SPAYING—*Lakeville, Jan.* 18.—*Editor Forest and Stream:* Every few weeks I see in your valuable paper a communication from some one asking for information in regard to canine ovariotomy; also asking who can perform the operation and how it is done. I carefully read the article by "South Fork," published in your columns several months since, and having a litter of setter puppies (five of them of the feminine gender), concluded to try to perform the operation as there described. It was a perfect success; all five of the pups were operated upon and all got well in a short time, leaving nothing to disfigure the animal or to interfere with its motions. The puppies were about five week old when the operation was performed. I have since operated upon one at the age of three months with equally happy results. I shall not attempt to describe the operation, as "South Fork" has already done it much better than I could, but if any brother sportsman has an animal to operate on and wishes to learn how by seeing the operation performed, and will bring it to me, I will gladly show them all I can. It is easy enough after you know how. LITCHFIELD.

Box 20, *Lakeville, Conn.*

GREYHOUNDS VS. RETRIEVERS.—A correspondent writes: "In FOREST AND STREAM, of Jan. 30, I notice a communication from "C. B.," who wonders if any one has ever used a greyhound as a retriever. I have a dog (grayhound crossed with terrier) who retrieves very well; have sent him into the river to recover a friend's hat, in a storm, when the waves would frequently wash clear over him, but he never hesitated, and brought the hat in without tearing it in the least, notwithstanding it was soaked through. I ordered him overboard one day after a large river rat that was swimming around in the dock. He swam to it, grasped it in his mouth and brought it ashore without hurting it. He is an excellent swimmer; in fact he quite astonished me, as I had no idea a greyhound could be induced to enter the water. Sometimes in warm weather he will jump out of the skiff, preferring to swim after us to riding in the boat. A. A. B."

Camden, N. J., Jan. 31, 1879.

SOUR MILK FOR WORMS.—With regard to sour milk for worms in dogs: I have noticed that all of your correspondents that have said anything about it have agreed one and all that it is very efficacious. Now I would like to disagree, having tried it thoroughly, as have several of my sporting friends, and found it did no good whatever. I don't think we will subscribe to that monument that Cyrus speaks of. LEFT SHOULDER.

COCKER SPANIELS.—As owner and breeder of Gypsy, winner of first prize for cocker spaniels at Detroit, I was pleased with your article on spaniels in your issue of 2d of January. I am sure the useful qualities of good cocker spaniels only require to be more generally known among sportsmen to be appreciated. Yours truly, E. T.

Hamilton, Ont.

MONSON DOG SHOW.—*Monson, Mass., Feb.,* 8.—*Editor Forest and Stream:* Monson sportsmen's and Fanciers' Club will hold a show in this place at Green's Hall, the 18th, 19th and 20th of the present month. Show is to consist of dogs, fowls, fire-arms, etc. The number and quality of entries thus far are sufficient to warrant success. C. R. K.

—The red Irish setter bitch Bridget Plunket (Plunket-Stella), owned by E. J. Robbins, of Wethersfield, Conn., whelped on the 30th inst., 14 puppies; sire, Champion Elcho. Bridget Plunket is one of a litter of 14 puppies, and, strange to say, has herself whelped two litters, and only two, each of 14 puppies.

—Mr. C. N. Gibbs, of Northampton, Mass., claims the name of Tin Tag for his liver and white ticked pointer dog puppy, four months old, out of Fanny II. by champion pointer Snapshot.

—Claude Guthrie, Esq., of Norwalk, Conn., claims the name of Rake of Mallow for Irish setter puppy by Buck out of Quail II., whelped Nov. 20, 1878.

—In our issue of last week, Feb. 6, under "Names Claimed" we gave the name of O. R. Twain, of Painesville, Ohio, when it should have been C. R. Tinan.

—If your dogs are troubled with fleas, wash them with Sapanule as directed on the label. It has been tried and found sure death to the vermin. The owners offer to refund the money paid in every instance where it fails.

THE PITTSBURGH DOG SHOW.

PITTSBURGH, Pa., Feb. 3, 1879.

EDITOR FOREST AND STREAM:

I see your correspondent, giving a report of the Pittsburgh Bench Show in one of your late issues, makes some mistakes which I would like to correct. In the first place it surprised me to see the dog that took third premium reported as being a pup, when one gentleman asked the owner the age, weight and name of the dog; and I think, Mr. Editor, that if the tape was put on that he would score closer to Thunder than Thunder would to Jersey Duke. I think Jersey Duke one of the finest dogs I ever saw, and I think the owner ought to be proud to have such a dog, even if he is a native. The dog I speak of is five and a half years old, and is the same dog you were written to about two years ago on account of his nose having become hard and cracked. Another thing which I wish to make known to you is that, according to the rules of bench shows, the pure Laverack, Thunder, cannot compete in the native class, but it seems queer to me that he could take the special premium—the gun given by J. Palmer O'Neil & Co. for the best native dog in the show. I think also that your correspondent makes a serious mistake when he says that President Gregg's Irish setter bitch was full in all points, except that she was a little light of nose. I think that if she was to go to New York the prizes she would get would hardly pay the freight. It is very easy to win without any competition, and I think he exaggerates a little when he says that the St. Bernard dog Bruno weighed 143 lbs., when the gentleman taking care of the dog told us distinctly that he had weighed him that day and he weighed 121½ lbs. It was a pleasant surprise to us when we learned that Mr. Davidson was going to judge, and I think that if the members of the association would take a little more interest, and not charge so much for entrance, and get Mr. Davidson again for judge, the show would be a great success. When a man enters his dog he pays $2 for entrance for a $5 premium, and 10 per cent. for specials, which I think is too much, for it costs about $15 to enter; and if you happen to be so lucky as to get second place you are only out $12, and that is a good bit just now when a dollar is about as big as a cart wheel. I hope they will see to this and try and make it a little easier. FAIR PLAY.

New Publications.

VENNOR'S WINTER ALMANAC AND WEATHER RECORD.—By Henry G. Vennor. Montreal: "Witness" Printing House. 1879.

The success of Mr. Vennor in predicting the weather has long been such as to induce a very general faith among his readers. His system is based upon careful records of the past from which approximately accurate forecasts of the future may be made. How he goes to work we will let him tell in his own words: "First I examine myself respecting impressions formed intuitively from recent out-door life. These I always find lurking in some corner of my mind, and ready to put themselves into shape when called for. On some occasions one of these in particular will loom up definitely above all others, and urge strongly its claims; while at other times a number present themselves, all equally plausible and likely. In rare instances I search and find no definite impressions formed, but all alike faint and flickering, and I may state here that on such occasions I feel considerable hesitation in hazarding a forecast. My first step, then, is to write down on a sheet of paper, off-hand, the main impression or impressions which naturally occur to me. This is what some have called 'guessing.' It may be so; but if so, it is 'guessing' based upon out-door—not closet—experience, and consists of natural inferences from nature's laws. The forecast, however, thus written down, is not yet to be settled upon as the proper one; other steps are necessary. The next is to draw up from field notes an abstract of the actual weather experienced during the whole summer, noting carefully every leading feature. Has it been a year of drought, rains, heat or cold? Has it been marked by severe storms, or by calm equable weather? All are carefully noted, and averages are taken of temperature, rain fall, storms, etc. Newspaper clippings, covering the length and breadth of the Dominion, are next studied, and the various weather items sorted and systematically arranged for further reference. Now, from all these data, and guided by past experience in such matters, I write off another—a No. 2—forecast, in the preparation of which I do not allow myself to be in the slightest degree influenced by the first, or No. 1, forecast. Next, setting these two forecasts aside and obliterating them entirely, if possible, from my mind, a third is prepared in the manner following: Diagrams of the weather of some 30 years are spread out and posted up on my study wall. These at a glance show the general characters of the past springs, summers and autumns, and further, the winters which have followed these. The diagram, say, of our last spring and summer, is in my hand, and the problem to be solved is embodied in the question now asked me, viz.: What are our approaching autumn, winter and spring to be like? Most assuredly these will resemble in some respects some of those which have preceded them. Sitting down in my easy chair in the middle of my room, I gaze long and earnestly at that terrible array of weather charts on my wall. No. 1 is the leading impression intuitively formed. No. 2 consists of natural deductions from the actual weather experienced during the past season. No. 3 is based upon analogy and a close comparison of former weather charts. My manner of proceeding now is different in different cases. Are all forecasts fairly similar? Then I guide myself mainly by my first or leading impression. Are two, only, alike? Then I rearrange and form those into one. Are all different? Then I depend chiefly upon that naturally deduced from the action of the past six months. In this way are my general outlines formed. Further details, which I have several times attempted during the winter, have been chiefly deduced from the comparison of the weather charts of past years, but this has been found to be an insecure basis to build upon, and I have, as I deserved to, failed repeatedly in these attempts. But I here maintain that my general outlines for the years 1875, '76, '77 and '78, have been in the main correct, although I have on several occasions spoiled the effect of these by subsequent attempts to give them in greater detail."

THE SAILING BOAT. By H. C. Folkard. Longmans, Green & Co., London, England. Price $7.

While the ground of yacht and boat design has been pretty well covered from a scientific standpoint by the excellent works of Mr. Dixon Kemp, the fourth edition of Folkard's "Sailing Boat" will serve to supply the demand for a popular and historic account of all the varieties of boats used throughout the world, civilized or otherwise. Especially will his book be of service in originating new ideas, or introducing in a modified shape the intuitive constructions of semi-civilized tribes. When we remember the recent attempts at bringing into favor the flying proa in the regenerated shape of a "catamaran," as well as the probabilities of our adopting the bamboo stayed mainsail in deference to the acknowledged superiority of the ancient Chinese custom, the many explanatory and descriptive chapters, accompanied by numerous illustrations, will be found of value in giving to the boat-sailing fraternity a general bird's-eye view of all that has been done, and even suggested, in the way of adaptations of model and rig to special purposes. As the text is entirely free from anything approaching to scientific or mathematical investigation, but is confined strictly to verbal description, no one will find trouble in following the author throughout the work. Though the chapters on the modern American and British yachts and boats are perhaps a little meagre and behind the day, those relating to boats of the ancients, of the Nile, of the Mediterranean, Norway, Holland, China, Bombay, Malacca, Polynesia, etc., form a more complete collection than elsewhere to be found. The last edition has been materially enlarged, and contains also a vocabulary of nautical terms, and some excellent and concise directions as to the management of boats under sail.

CAMP LIFE IN THE WILDERNESS. By Chas. A. J. Farrar Boston: H. Williams & Co. 1879.

Mr. Farrar has been a frequent contributor to the FOREST AND STREAM, and our readers are already familiar with his pleasant style of narrating woodland adventures. The book before us is made up of sketches which have already appeared in print, and have been so well received as to seem to deserve a more permanent form. The pages will recall to those who have visited the the Rangeley Lakes many pleasant days spent there, and those who contemplate visiting the wilds will find in Mr. Farrar's little book much practical and useful information.

ANNUALS OF THE GRAND NATIONAL CURLING CLUB OF AMERICA. For 1875-'6-'7.

These substantially bound volumes contain a vast amount of statistical matter and information about the curling clubs, curling rules, records of games, etc. There are several pages of judiciously selected literature pertaining to the sport, and the volumes are invaluable to the devotees of this lively sport. They may be obtained at the "Scottish-American" office, New York.

HOUSEHOLD AND FARMER'S ENCYCLOPEDIA; Or, One Hundred Thousand Facts for the People. By Daniel R. Shafer. Archer Publishing Company: St. Louis. 1878. Sold by subscription.

The Household Encyclopedia is a book of useful information about all matters of importance pertaining to the farm and household. The contributors are men of high standing in their respective fields, and the book may therefore be considered authority. The topics treated of range from LAW to Fish Culture.

—Mrs. R. J. Philbrick will shortly begin in the Savannah *Weekly News* a story of Southern life entitled, "Warp and Woof."

THE FEBRUARY MAGAZINES.

The mid-winter number of *Scribner's* opens with the third paper of the series devoted to American poets, the subject this month being Emerson. The portrait and engravings which accompany the article are of equal merit with those which have preceded. "The Tile Club at Play" is illustrated with a score of engravings by its members, and is a thoroughly interesting article. "The Glacier Meadows of the Sierras," "The Fortunes and Misfortunes of Co. C.," a paper on "John Leech," with reproductions of his drawings, "Aerial Navigation," "Insanity and Modern Civilization," stories, poems and editorial departments complete the number.

Harper's gives the place of honor this month to Mr. J. C Beard's article on the "Treasures of the Deep;" a delightful subject, and delightfully illustrated with rare drawings in the author's best style. Mr. S. G. W. Benjamin concludes his 'Rambles in the South of France," and twenty illustrations add much to the text. The two more noticeable illustrated papers, in addition to these, are—"At the Mouth of the Amazon" and "Old Flemish Masters," the latter being devoted to Weyden, Jordaeno Quellen and Snyders; "Mendelssohn's Letters to Madsme Moscheles," a sketch of the late Rear-Admiral Hiram Paulding; "French Farmers," and several stories and poems by well-known writers make up a valuable number.

Lippincott's has a paper devoted to the celebrated Hungarian painter, Michael Munkacsy, whose life of romance and self-wrought success is well worthy of record. Mr. Edward King has a paper on "Hungarian Types and Austrian Pictures." "A Gato in the Nether World" is descriptive of the great barranca Jorullo. "The Latter Days of the Blennerhassetts" treats of a subject which is always of interest to Americans. "The Daughters of the Legion of Honor" is a pleasant description of how the "Daughters" are educated. There are poems by Howard Glyndon, Margaret J. Preston and "E. S. F." The editorial departments discuss a variety of timely topics.

The *Atlantic* contains this month the first of a series of papers on Roman Life by Mr. W. W. Story, whose contributions are ever welcome. "Musicians and Music Lovers" is a discussion by Mr. William F. Althorp of the difference between these two classes. Mrs. Stowe, in "The Modern Martyrdom of St. Perpetua," inveighs against the follies of the day. Mr. Clarence Cook discusses "The New Catholic Cathedral in New York." Bayard Taylor is the subject of some interesting reminiscences by Mr. Stoddard. Richard Grant White writes in a gossipy way of "London Streets." By way of contrast, we may mention in the same sentence Mark Twain's funny description of "The Recent Great French Duel," Mr. Sedgwick's "International Copyright by Judicial Decision," and an anonymous paper on "Limited Sovereignty in the United States."

Appleton's having joined the ranks of the purveyors of foreign literature, comes to us this month laden with a judicious selection of articles from the English and French periodicals.

The Eclectic has its usual complement of substantial literature. There are seventeen titles in the February number, including articles of historical, literary, scientific, social and speculative interest. There are fiction and poetry, and the editorial departments of literary notices and science and art are well filled.

The *Nassau Literary Magazine*, published by the senior class of Princeton College, is a very creditable production. It has the faults of all amateur journalistic work, and much of its so-called literary matter is made up of under-graduate efforts. In the class of periodicals to which it belongs, however, the Princeton's boy's magazine holds high rank.

THE ZOOLOGIST.—The January number of this magazine contains several very attractive articles. Captain Feilden contributes two papers relating to Arctic zoological explorations, which are especially interesting. The first of the two is entitled "The Natural History of Prince Albert's Land" and the second "Notes from an Arctic Journal," this latter being a continuation of his observations on the fauna of the extreme North while attached to the British Polar expedition. In the present number too we have an account of a collector's trip in Holland, by Mr. F. S. Mitchell, and "A List of the Land and Fresh Water Mollusca of Mayo and Sligo," by Miss Amy Warren, both very entertaining papers.

BRENTANO'S AQUATIC MONTHLY SPORTING GAZETTEER is the name of a new monthly venture in the sporting literature of America. Mr. Chas. A. Peverelly will have control of the editorial chair, and we wish him success in the very arduous task of floating the new periodical and making it self-sustaining. Brentano, of Union Square, New York, is the publisher.

—Messrs. Schuyler, Hartley & Graham have just received a large invoice of Scott Premier guns, which will be cheerfully shown to sportsmen and bear their close inspection.—[*Adv.*

—Wading pants can be procured from Hodgman & Co., in New York, for $9 and $12, according to quality of material.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

C. H. T. and others—See editorial on speed of ice yachts this week.

J. W. H., Mexico, Mo.—Bycycles are manufactured in Boston. Address the Pope Manufacturing Company, Boston, Mass.

E. D. R., U. S. A., Fort Gratiot, Mich.—Would you advise the use of Dittmar powder in a Winchester rifle, .45 calibre? Ans. Yes.

L. W. K.—What No. of wads are used to load No. 12 gauge paper shells and 12 gauge brass shells? Ans. No. 12 for paper shells, No. 11 for brass shells.

NEW JERSEY, N. J.—What do you consider a good target for a No. 12 choke-bore gun at 50 yards, target two feet square? Ans. 150 pellets, No. 8 shot.

SUBSCRIBER, Stamford, Conn.—Where can I procure live pigeons for trap shooting? Do not want to pay over forty cents per pair. Ans. Tom Stagg, Chicago, Ill.

C. W. H., Greenville, N. J.—Where can I get a copy of the book "Frank Forester and his Friends?" Ans. T. B. Peterson, Phila; Orange Judd Co., 245 Broadway, N. Y.

SUBSCRIBER, W. P. N. Y.—Please tell me where the Phœnix single-barreled breech-loading guns are made? Ans. Address Merwin, Hulbert & Co., 83 Chambers street, New York.

C. P. C., Boston.—Please inform me where the best trout fishing is to be had, besides Cape Cod, within one hundred miles of Boston, obtainable by bycicle requiring good roads? Ans. Go down into Tolland Co., Conn.

W. M. W., Peabody, Mass.—I have a dog, and about all of his hair on his ears has come off. What would be good to make it grow again? Ans. Applying crude petroleum would probably cause the hair to grow again.

B. R., Rosedale, Kansas.—You may address W. & C. Scott & Sons, care of William Read & Sons, Boston, Mass.; and Clabrough, care of Schuyler, Hartley & Graham, this city. These firms are the American agents.

DOMINO, Pittsburgh.—It does not follow that the cross would not necessarily produce a good dog, but the fact of the dam never having been broken, and the sire being gun shy, would indicate that the puppy might prove worthless.

F. J. H.—Jersey Blue sends the following in answer to your query: Have built a canoe from experiences, but not like *Shadow*; think her superior. Plans and drawings will be published shortly, and will give F. J. H. all information necessary.

MEDICUS H., Vinal Haven, Md.—Is there a gunmaker in London bearing the name of B. Grove? I have a gun, an imitation of the Scott gun, marked as above. Can you tell me anything of the reputation of the above as a gunmaker? Ans. No such maker.

M. B., Batavia, Ohio.—I have a pointer one year old; gun shyness the worst kind. Sometimes when he is on a point he will leave it, he is so afraid that I am going to shoot; and when I shoot he will follow behind me. Ans. See answer to W. P. G. in this column.

H. F. A., Closter, N. J.—Will you be so kind and let me know through your paper where I can purchase wild rice and proper time for sowing and at what depth it will flourish, and what it costs per bushel? Ans. Too late to purchase wild rice now. Must wait until next fall; $2 to $4 per bushel.

C. H., Shawneetown, Ill.—I live close to the church and court house. Every time they ring the bell my dog gets on the porch and howls. Can you tell me what causes it and what will prevent it? Ans. It is caused by his love of music. Application of a dog whip every time he does it will finally cure him.

C. F. B., St. John, N. B.—Can you give me the address of any dealers from whom I can procure some natural colored feathers of foreign birds for fly tying? Ans. Almena & Co., 99 Bleecker street; Joseph Andrake, 145 Duane street; J. T. Burns & Co., 33 Union Square; Victor Balny, 97 Greene street; H. Picot, 870 Broadway.

ARCHER, Albany, N. Y.—Wishing to offer a prize for a match at archery, I would like to draw up a set of rules to govern the match, and can find no book giving the usual rules. Can you give me information as to where such a book may be obtained? Ans.—See "Witchery of Archery," by Maurice Thompson, published by the Scribners.

SUBSCRIBER, Baltimore.—The cost of the U. M. C. Co's. No. 8 paper shells is not yet decided. They will be ready in about two weeks, and probably proportionate in price to the other sizes. The Winchester shells No. 8 cost $1.75; No. 10, $1.30. No. 4 buckshot are the best chambering large shot for a No. 10 bore. We never saw the wads with numbers stamped.

A. C. B., N. Y.—I have a litter of seven setter puppies six weeks old. How would you make a choice of the two best for training purposes? Ans. If markings were all equal we should choose the strongest and those with the best shaped heads. At that age it is difficult to predict which will turn out the best.

N. B., St. Louis.—A fine bred spaniel of mine seems out of sorts. Only eats after exercise. Runs right to the water pan and drinks, and when seemingly asleep will jump up and yelp, or when the slightest thing comes in contact with his head seems in great pain. Ans. It is more than likely that your dog is troubled with worms. We should give him areca nut.

L. W., Cambridge.—Some time ago I saw a communication in the F. & S., claiming that tobacco stems and sweepings were good to prevent fleas on dogs by putting in the bed of the dog. I have no doubt that it would prevent fleas, but don't you think inhaling the dust might injure the dog's health or powers of scenting? Ans. No, and besides it would be easy to cover the stems with something.

H. M. P., Boston.—1. What is the fare from New York to Norfolk, via Old Dominion Steamship Co.? 2. Is the Phœnix, .40 to .50 cal. rifle, 28-in. barrel, manufactured by the Whitney Arms Co., a good shooter? How far can it be depended upon with 50 grains powder, 280-grain patched ball? Ans. 1. $12. 2. We believe it to be so, and it could probably be depended upon as far as any rifle of similar calibre and charge.

J. W. H., New Brunswick, N. J.—My setter pup 11 months old has been rather dull at times for about a week, having very poor appetite and his hind legs seem at times to be weak. When I first noticed it he had a very bad diarrhœa, but this is better. He has always passed small flat worms. Ans. If you dislike to use areca nut give him santonine, 2 grs. each day for three days, following the last with a dose of castor oil. All worm medicines should be given when the dog is fasting.

A. C. K., Jefferson City.—A sharpie is the best boat to work against a current. About 24ft. will be a good size. Would not make her much shorter. Taking her speed at six knots free, she will make a little over four to windward, and if the current runs more than that, it follows that you cannot work to windward against the current, but may with a fair wind. A sharpie steam launch would serve you better. Cost about $150 or $200 more than a sailing sharpie.

GULF CITY, Mobile, Ala.—In a match a bird is shot at; it falls, is challenged, retrieved, and found to have the wing feathers cut off close to the flesh, so as to prevent its flying. Should the bird be scored as lost? Ans. If the feathers were so cut by the shot, and the bird did not fly out of bounds, it should not be scored lost. If feathers were previously cut it was a case of palpable fraud, and another bird should be ordered, unless party shooting was a party to the fraud. In that case he should be put out of the club.

W. W., Brooklyn.—1. What part of a breech-loader is the greatest strain on, and if there is much on the hinge-pin, and if there is not less on latter the farther from breech same is? 2. Is the extension rib used by Scott, Daly, Wesley Richards and others patented? I see a number of cheap guns with extension ribs and of different forms. Would we have to pay royalty in making arms after that fashion? Ans. 1. On the barrels nearest the breech. 2. Formerly they would, but all patents have expired except Greener's.

H. D. E., Sterling Run, Pa.—I wish to make a fly rod for trout fishing, but piece to be ironwood, second joint and tip to be lancewood What would be the proper length and weight for such a rod? Ans. You can make a rod of any weight you wish. You can make long and limber, or short and stout. There is no possible way of answering your question categorically or mathematically. Shop rods of the best quality, with ash but and lancewood tips, are made to measure some 11 feet in length and weigh 8 to 9 ounces.

J. C., Phila.—To bleach sails, scrub with soap and fresh water on both sides, rinse well, then sprinkle with the following solution: Slacked lime, 2 bushels; draw off lime water and mix with 120 gallons water and ½lb. blue vitrol. This also preserves the sails. It is almost impossible to prevent mildew. Never furl with sails damp. If weather compels you to, hoist to dry at first opportunity. Or, have sails sent to Philadelphia Waterproofing Co., and let them be treated by their process, which is an excellent one, and not expensive.

ROB, Vienna, Ohio.—I loaded a shell with 5 drs. powder and 1¼ ozs No. 8 shot, heaping measure, 584 pellets, and fired at a 30-inch circle at 40 yards; put in 309 pellets. The gun is a Parker, 10 gauge, 9 lbs., 30-inch barrels; one of the cheapest grade. Was that a good target? And at a 9-inch circle at 30 yards, put in with the right barrel 41, and 44 with the left, same load. Ans. Yes, though not extraordinary for a choke-bored gun, and if the measure was well "heaped."

J. K. H., Watsontown.—For boat or bateau or skiff 14ft. long, make beam 5ft. on top, 4ft. 4in. on bottom. Stern-piece rakes 40 deg.; 3ft across top, 2ft. across bottom, and 12in. wide, ¾in. thick. Sides 5-8in thick; also bottom plank. Stem 4¼in. deep, 3¼in. thick aft, champered off to ½in. forward with rabbets cut in it. Depth amidships, 14 in.; forward, 20in.; aft, 18in. Round up bottom to meet stern-piece, put 1in. thick skagg underneath, and keel strip fore and aft to meet it about 1¼x¾in.; chafing strakes, round top, 2x5-8in. See back numbers of FOREST AND STREAM.

F. H. B., Bridgeport.—A learned M. D. and sportsman from Maine and I had a lively discussion this morning in regard to the weight of fishing or fly rods, I holding that rods of 10ft. length being made and used of 3½ oz. weight; he that rods 10 or 12ft. long the lightest weight was 9 oz. One gunsmith here states that they are made less than 5 oz. and another says less than 9 oz. Ans. An 11ft. wooden rod of proper pliability and action should weigh, say, 6½ oz.; adding 1¼ oz. for mountings, 7¾. A 10-feet rod would weigh 1 oz. less. See answer to similar question elsewhere in this column.

W. P. G., Wakefield, Clay County, Kans.—What can I do to prevent my pointer pup, 8 months old, from "skinning out," "leaving for home," "obsquatulating," every time a gun goes off? She is well bred and very timid, and I am afraid to use a spike collar. She hunts well, and this is her only fault. Ans. Directions for breaking a dog of gun shyness would take up more space than we can give here, but you will find them printed in several books, notably "Hallock's Gazetteer." There are breakers who make a specialty of breaking dogs of this unfortunate habit, and as yours is so young he can probably be cured.

OLD SPORT, Van Buren, Ark.—1. Can I get English chilled shot, No 6, of either Lane & Neshame, or of Walker, Parker & Co., London (standard size, 280 pellets per oz), or of any dealer in sportsmen's goods in New York, and of whom? 2. I have a Scott & Son choke-bore (12) gun. Have tried all sizes American shot—No. 6 at 30-inch circle, 40 yards, 12 shots, St. Louis 6's, average 287; Tatham chilled 6's, 12 shots, average 178; but the latter are large-sized sixes, only 218 per ounce. Are the above good patterns? Ans. 1. The Newcastle chilled shot, 268 pellets to ounce, is sold in this city by H. C. Squires, No. 1 Cortlandt street, and is, we believe, the only English chilled shot on the market. 2. Yes; very.

W. G. S., New York.—1. Is it necessary for a thoroughbred Irish setter to have a black nose and mouth, dark red eyes, and be entirely red in color? 2. Is much white in an Irish setter considered a sign of good breeding? 3. Is there any book published on this subject (Irish setter)? Ans. The Irish setter should have a dark nose, but not a black one; the color should be about that of gutta percha or deep mahogany; his eyes should be a rich brown. 2. Much white does not necessarily indicate poor breeding, but all red is the standard. 3. No book devoted exclusively to the Irish setter. "Stonehenge's" latest edition of "Dogs of the British Islands" has the best description. We can send you for 50 cents a pamphlet compiled from the above work, with the "points" of the Irish setter and all other dogs.

H. G., Milwaukee.—1. Is the measure or weight of powder or shot apothecary's or avoirdupois weight? 2. How many grains powder will make a pound? 3. How many grains will make a drachm? 4. How many drachms will make a pound? Ans. One pound avoirdupois weight is 7,000 grains; one pound apothecary, 5,760 grains; one pound troy, 5,760 grains; one ounce avoirdupois, 437½ grains; one ounce apothecary, 480 grains; one ounce troy, 480 grains; one drachm avoirdupois is 1-16th of 437½ grains, or 27⅜ grains; 1 drachm apothecary is 1-8th of 480 grains, or 60 grains; 27½ grains of powder in a drachm, and 480 grains of lead in an ounce. You will find this formula, and many others, in "Hallock's Sportsman's Gazetteer," published by Forest and Stream Publishing Company.

U. S. A., Fort Bliss, Texas.—I hand you herewith inclosed a crude sketch of what our boatman called a "painter," which he used in fishing for "charr" in Lake Windermere, England, in June, 1876. As we had never heard of it before or since, please inform us if you know anything of the origin and use of it in Europe or the United States. If not, it will be a new kink for American fishermen. When placed in the water it keeps on edge, lead down. When the boat is in motion it sails nearly abreast of the boat, keeping the cord taut. Would this manner of fishing come under the head of trolling? Ans. Your contrivance is technically known in this country as an "otter." It is often so called in Europe. We have printed a description of it and its operation more than once. The method is a species of trolling, and very killing.

PAROUS, Readington, N. J.—My red Irish setter, about two years old, for a week past has been troubled with a difficulty in breathing. When he inhales he makes a noise very much like a person suffering from a hard paroxysm of asthma. In all other respects he seems perfectly well, very lively and active, but when running even 100 yards distance his breathing when he inhales can be distinctly heard. It sounds as if he were in great distress, but he does not seem to suffer at all. Can you recommend anything for a cure? I have done nothing for him. Ans. Give your dog every night a pill composed of calomel, 3 grs.; digitalis, ½ gr.; nitre, 3 grs. If this does not relieve him 2 grs. of iodide of potassium, with 5 drops of ipecacuanha wine and 5 grs. of nitre mixed in a little water, three times a day. The diet should be rather low, and he should be given plenty of walking exercise.

G. F. W., Fairport, N. Y.—The spread of canvas of the sharpie is small, as you say, but it takes very little to drive them, on account of narrow beam and little immersed skin. The amount depends largely upon beam, for stability and resistance increase roughly as the square of the beam up to one-third the water-line for the latter, and beyond that as the cube. In speaking of the number of yards carried, reference is made only to linear yards of canvas of customary width, of 28in. for 8 and 10oz. Woodbury, not to square yards. It is better to express sail areas in square feet. With one-quarter the water-line for beam in a sharpie, use canvas area equal to length over all multiplied by half that length in square feet. The model of the English yawl does not differ from the cutter. Sometimes the mainmast is stepped a little further forward, but often only in the same place as for cutter. Difference lies in the use of smaller mainsail and shorter boom and the small mizzen or jigger over the counter. Very handy, safe, and faster than the schooner.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 13, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

MAGAZINE SPORTING LITERATURE.

IT is highly gratifying to those who have long labored to to cultivate the public taste for field sports to find the highest literary publications awakening to the importance of catering to that taste; and it is surely in no spirit of envy that we would suggest to them a slight improvement in the manner of doing it. If there is any kind of descriptive writing in which faithful representation of the soul of nature is indispensable, and minute photographic pictures of the mere limbs and outward flourishes is a bore, it is the description of our American field sports; and so long as the best descriptions are attainable, publications that pay liberally for everything they print have no excuse for publishing anything but the best.

We will not hide behind hints, but specify the most prominent example, *Scribner's Monthly*. Of five or six sporting articles which have appeared there within the last eighteen months, two, "Canvas-back and Terrapin" and "Deer Hunting on the Au Sable," show plainly on their face that the writer was destitute of any prior experience in hunting that kind of game, and had probably been sent out for the very purpose of seeing something to sketch and describe. This view is confirmed as to the Au Sable article by the President of the Michigan Game Protective Association, who, in his annual report, made long before the article appeared, stated that "a representative of *Scribner's*" had been sent out to get up and illustrate such an article. We would mildly suggest that a man who is competent to write such an article does not need to be sent anywhere; that the glorious sports of our fields and forests cannot be written up like a watering-place, a manufacturing establishment, or public institution, by a reporter detailed for that purpose; and that pencil strokes, however good, are no substitute for true pen strokes. These two articles show throughout the perfunctory yard-stick of the mere reporter, who gets with punctilious nicety of measure and detail, all the outwardness, and leaves the heart and soul of truth to our imaginations. The opening illustration in this sketch shows two deer, one of which is smelling a lantern in the hands of a hunter. It shows at the commencement the author's ignorance of the nature and habits of *O. virginianus*. Further along the writer says, "Arctic hares exist in great numbers." This sentence shows plainly that the author is about as well posted on the distribution of the species of the genus *Lepus* as he is on the habits of the white-tailed deer. In speaking of elk and the weight of bucks he says, "I heard" so and so, and "learned from credible sources," etc., but apparently *knows* little or nothing of the subjects he attempts to treat. He says, "In the rutting season, which occurs in the earlier part of the winter," etc. There he makes a guess, being two months behind time. His next wild statement is "that the younger and weaker males go unmated." In selecting a place on a runway he talks as follows: "The place was exposed, there was no shelter; the cold wind and driving snow and rain had it all their own way with me." What a "stand" for a *hunter* to select! On page 763 he sets himself up in plain sight on the cold windward side of a tree, facing a driving snowstorm, in preference to taking the lee side for protection and concealment. In conclusion he goes on to say that deer "pay no attention to a small fire, and the keeping it alive furnishes excellent occupation." Ye hunters, imagine a deer approaching a camp-fire in broad daylight, with the hunter skirmishing around it in the dry leaves for fuel!

Such an article as the above is not even chaff for the sportsman; at the same time it misleads and mis-informs young readers who read to learn.

"Hunting the Mule Deer in Colorado" is an improvement upon the other two, but is evidently the work of one but little past the tyro period, one whose principal *forte* is the ability to draw pictures. Contrast the best of these three articles with the recent one on "Moose and Caribou," and note the difference between the work of the mere reporter and the sportsman. Culture is indeed necessary to write a good magazine article, but experience is absolutely indispensable for a sporting article; and as long as the two can be combined, their combination should certainly be considered a *sine qua non* of the writer.

Every sportsman knows how sadly even the best pictures fail to reach the soul of field sports. Good pictures are indeed a pleasure to the experienced sportsman, but only because they are landmarks which guide memory back to bygone happy days. But bad ones only provoke him; while to the inexperienced they are only ridiculous suggestions of work without fun and butchery without palliation. What can be more insufferable than most pictures of deer hunting—a large animal standing broadside at ten or fifteen paces gazing in mild innocence at a man with a rifle at his shoulder, with nothing but a pair of antlers, a few trees, and the absence of fences to distinguish the scene from calf murdering in a barnyard? A brilliant specimen of this is the square of printers' ink found in the August, 1878, number of *Harper's*, on page 416, in "MacLeod of Dare," which, by reference to the index, we learn is an "illustration." Strike out from this the three guns, and imagination's wildest flight could never guess what it is intended to represent. That this atrocious botch is not the fault of the *Monthly* engraver is evident enough from the other pictures in *Harper's;* and we are told on the back cover that "'MacLeod of Dare' is illustrated by Pettie, Millais, Boughton, and other first-class English artists." This is doubtless true, and serves well to prove how powerless the pencil is even in the hands of the best artists when uncombined with thorough knowledge of the field itself. For we are compelled to assume, in charity to the "first-class English artist" who perpetrated this enormity, that he had never been in the field. Yet, after all, his work is about as good as the pen-work it illustrates, which in itself is also a striking proof of the incompetency of a writer, however brilliant, to handle scenes of which he knows nothing. This assumption also in charity to Mr. Black.

There is no interpretation of nature which requires so deep an insight and so deep a love to describe as the sports of the field and flood. The mere friend or casual acquaintance cannot do it—only the lover can. There is no branch of description in which the adjective daubing, now so fashionable, to hide the bareness of want of honest truth is so tawdry. Nor do we mean to say that even the cultured sportsman can do full justice to the subject; for no one can. But it is sacrilege almost for the pen of Ignorance to touch it, and his pencil strokes are not much better. There is, unfortunately, too much chaff in the work of even the very best sporting writers, but when one does strike a solid kernel it is wheat A No. 1, and not that little dark brown ellipsoid sometimes found in its place.

THE SPEED OF ICE-YACHTS.

THOUGH the apparently paradoxical problem of the speed of ice-yachts under weigh has cropped to the surface time and again, the frequent recurrence of the query would seem to indicate that the riddle has not yet been sufficiently clearly explained in the public prints to give to the inquiring minds of the scientifically inclined Paul Prys that quietus which only a thorough exposition of the matter in language within the grasp of all can hope to afford.

With the advance of the wintry season, and the marvelous tales of the Hudson ice-boats still ringing in their ears, it was to be expected that we should have been surfeited with numberless demands to decide for the uninitiated the oft-repeated query—Can the ice-yacht really sail faster than the wind?

In the following lines we hope to make the matter clear, and save many a rash tyro in mechanics the consequences of too hasty wagers that no boat can sail faster than the wind.

First Case—Wind forward of the beam.—The ice-yacht is going along with the wind anywhere forward of her beam, having started from a position of rest. Every body having weight and in motion, accumulates—to put some well-known laws of mechanics into popular phrase—a desire to keep on moving in the same direction. This desire increases with every increase of speed, and is known as momentum, expressed by multiplying the weight of the body in pounds by its velocity in feet per second. As the yacht attains speed after once starting, it is evident that she will continually increase her momentum. The only resistance to the onward motion of the ice-boat consists of the friction of the runners or skates with the ice. It is easily understood that when a certain speed is reached, the momentum will counterbalance, and even more than counterbalance, this resistance, leaving the boat virtually without any at all. Each successive shock or impulse of the wind is now adding to the speed in succession, for the momentum already engendered serves for a moment to preserve her speed already attained. The fresh columns of wind finding the boat already moving at a certain speed, add to the latter by a fresh stock of driving force brought to bear upon the sail. Thus the wind acts in a cumulative manner, the speed of the yacht becomes greater and greater, and with it her momentum or tendency to conserve or keep up the speed acquired. This is plain enough. The question may now naturally suggest itself—What, then, is the limit to the ice-boat's speed; why under these conditions can she not attain infinite speed ultimately, and move so fast that the retina cannot catch her image, and thus the boat become actually invisible? She can attain a certain speed and nothing beyond, for the following reason: The faster she goes, the more does the wind draw ahead relatively. Any one acquainted with boat sailing is aware that the pennant at the masthead always shows the wind more ahead than what its actual compass direction is at the time, provided the wind be, as now considered, forward of the beam. This apparent discrepancy in the direction of the wind arises from a combination of the paths pertaining to the wind and boat; and the faster the latter is sailing the more acute will the angle become at which the wind strikes the canvas, and therefore the smaller and smaller will become its effect. In other words, as the boat reaches higher velocities, the cumulative shocks of the wind become less and less, and the momentum due to the highest rate is no longer fully sustained; for it is constantly being eaten into by the loss due to the friction of the runners without being sufficiently fed by the weakened impulses of the wind—drawn further ahead—to maintain the highest rate. Her speed, then, has attained its greatest under the circumstances, and begins again to diminish until the fall in velocity brings the wind once more further aft, when the latter's effective force is again on the increase, a fresh supply of momentum is stored up at a more rapid rate than its loss from friction, and the boat receives new life and a higher rate of speed. In this manner, though of course in an almost imperceptibly small degree, the yacht keeps forging ahead, then slowing down when the limit is reached, and again forging ahead, and so on, touching, as it were, the greatest velocity attainable with the strength of wind then blowing, receding, and again touching, *ad infinitum*.

Second Case—Wind right abeam.—If sails were absolutely flat, and trimmed perfectly in line with the keel-plank of the ice-boat, it is easily understood that, with the wind right abeam, there would be no force whatever tending to drive the boat ahead, but the whole pressure would be felt in sending the boat square to leeward. If the steel runners are sharp, so as to have a strong nip on the ice, the tendency of the wind acting upon the centre of gravity or centre of efforts of the sails would be to capsize the boat, and if strong enough would actually lay her over on her beam ends, or as one would say in ice-boat parlance, lay her over on her runner plank ends. As no sails sit perfectly flat, but are always more or less "off," owing to slack canvas and the gaff sagging over to leeward as well as the clew of the jib, it follows that in no case, even with sheets pinned hard down, can a boat experience a true beam wind. The direction of the latter will always be more or less ahead in relation to the sails, and the case will then fall under the first heading and the reasoning applied to a wind forward of the beam will hold good for this supposition as well.

Third Case—Wind abaft the beam.—Should the wind be abaft the beam an entirely different phase of effects presents itself, one in fact almost the reverse of the cases heretofore considered. For as the boat gathers way and gains in momentum the relative angle of the wind becomes greater and greater; in other words, the wind appears to draw aft more and more until finally a speed is reached which will bring the wind dead aft, that is in line, with the keel. No higher speed than this can be obtained and, moreover, this speed cannot be greater than that of the wind. If we assume it to be greater it is evident that the wind would suddenly seem to chop out dead *ahead*, sails would be taken aback and the yacht at once drop down again to a lower rate. In addition, with the wind abaft the beam, an ice boat will always have it right aft and her boom must be kept broad off, the same as in sailing an ordinary boat when right before the gale. A little reasoning will show the cause. The successive impulses of the wind and the continual addition to the boat's momentum send her ahead at a rapidly rising speed until the wind is brought relatively in the wake. Let the yacht slow down a little and the wind appears again over the quarter, when once more the increase in the momentum stored starts the craft ahead at a livelier pace and aft the wind comes again. As when on a bowline the wind is always kept nearly ahead and the yacht close hauled, so is the wind brought always relatively aft, when actually blowing from 90° to 180°, with the line of direction taken by the yacht.

Fourth Case—Wind dead aft.—Under these circumstances it is evident that the yacht can sail no faster than the wind; for if she did, the wind would be brought out ahead and take

her a-back. She can, however, sail just as fast as the speed of the wind, and cannot, except in the lightest airs, sail any slower. For it will take but a very light breeze indeed, to overcome the friction of the runners, and as subsequent impulses go to increase momentum, the yacht's speed must of necessity rise until it reaches that of the wind itself. This is, of course, on the supposition that the canvas does not leak. She can sail slower than the wind only when the momentum generated is not great enough to overcome the drag of friction; for then the excess of friction will have to be provided for by a certain portion of the wind force which is thereby lost to the production of speed.

Conclusion.—From the above it will be gathered that ice-yacht sailing differs materially from the handling of an ordinary boat. The ice-yacht's sail can be trimmed only in two ways—they must be kept flat aft or squared away. No mean position for the boom is to be permitted, and these are the reasons why, as many of our readers may recall to mind, they have never seen an ice-yacht with their mainsails over the quarter.

With the wind abeam, or forward of the beam, the ice-yacht invariably sails faster than the wind, except in airs too light to create momentum greater than the friction. With the wind abaft the beam, or dead aft, the ice-yacht can sail no faster than, but must sail just as fast as, the wind, subject to the same exception as when on the wind.

Whenever we print a recipe, as for instance, against rust, the very next week a half dozen "constant readers" ingenuously ask if we know of a good rust preventive! The stated querist who has been wont to ask if there is "any good shooting within an hour of New York" has gone West, with a bumble-bee in full chase.

Homosassa Heard From.—We have just received a letter from Maj. Alfred P. Jones, of Homosassa, that delightful resort in the Gulf of Mexico, where seventeen varieties of the citrus family grow, where the fig trees cover an area of sixty feet each in diameter, and deer, fish, and feathered game are obtained in satisfying abundance. Mr. Jones says he has had his usual number of guests throughout the present winter, some of whom will stay on until May.

But this is not all. Mr. Jones has also sent us his fifth annual gift of grape fruit and oranges—three boxes, in which he was joined by Theo. Gordon, a well known fruit dealer of Cedar Keys. Never have we eaten more delicious fruit. The oranges are as solid as marmalade, very sweet and very satisfying. We hope these gentlemen will continue to prosper and their trees always bear good fruit in great abundance.

GAME PROTECTION.

NEW PROTECTION FOR QUAIL.

THE destruction of quail in a large portion of the country has been so universal this winter that immediate legislation for their protection is imperatively demanded. As this has been a year of exceptional hardship for them, so the coming season should be one of exceptional security and freedom from destruction. We have already suggested to our readers the voluntary self-denial of sport which will bring with it its own reward of increased opportunities hereafter; and we now heartily join with our valued correspondent, Professor Charles Linden, of Buffalo, N. Y., in urging upon game clubs the necessity of some special legislation in this matter. Sportsmen may be influenced by intelligent motives and forego their days in the field. For them no special laws are needed. But, as has often been urged, the man who is thinning out the game, who knows no moderation, who relentlessly follows with dog and gun the last lingering, solitary bird, and who defies the laws of nature always and the laws of man when he dares, is not the sportsman but the market hunter. For him it behooves the game societies of every State covered by the great snow falls to secure the enactment of special temporary laws prohibiting the killing of quail, having them in possession, buying, selling or transporting. Now is the time for action. If anything is to be done, let it be done at once.

We are glad to see non-sporting papers devoting their attention to the subject. It is an instructive commentary upon the extent of the sporting interest that such influential papers as the Cincinnati *Commercial* have taken the pains to collect from their widely scattered correspondents reports concerning the fate of the birds. It augurs well for game protection when its advocacy is not confined to sportsmen's papers. We have already reminded our brothers of the pen that they can be of vast power here as in any other cause, and it is gratifying to see them respond. Professor Lindon writes:

A recent visit to Central Ohio, where I spent my Christmas vacation in quail hunting, has afforded opportunities to me to offer a few suggestions which may be of some value to the more efficient protection of this choice game bird. A late communication in Forest and Stream enjoins sportsmen to follow the laudable example set after the rigorous winter of 1853, when quail hunting was virtually abandoned during the following season by a sort of a mutually observed agreement between all parties concerned. This had, as stated, the good effect of increasing the broods, and birds were as abundant as ever the year after. Times, however, have unfortunately altered since, and the high price offered in great markets like New York has developed corresponding destructive agencies. It is no longer the sportsman proper who inflicts the greatest damage, but the professional hunters and trappers who are stimulated in their propensities by the perambulating purveyor of all kinds of game, which he ships off wholesale to the Eastern markets, whence they find by means of improved facilities their way to great caldrons of the European cities. There are, however, ways and means open still by which efficient steps could be taken to check their threatening extirpation, and if these were enforced in the States or counties where they are most abundant enough might be left to afford fine sport at least.

The shipment of all birds from such districts should be rigorously prohibited by local laws, which could be easily passed and be in operation for a specified length of time. The amateur sportsman himself should not be privileged, but be made to conform to them by not being allowed to carry away with him any more than what may be considered a fair yet limited amount of game, determined by the length of his visit.

There are now on the statutes of several States fixed provisions prohibiting rigorously the trapping of birds, but these are but a dead letter, and hardly ever enforced. Thousands of trapped birds from Ohio, for instance, have been exposed for sale this winter in the Buffalo market at merely nominal figures on account of the excess of supply to consumption, and express companies forward such consignments with perfect disregard to all laws, the same as any other legitimate articles. If the express agents stationed along the points of leading railroad lines could be made responsible for infringement upon them by accepting and forwarding these contraband goods, it would unquestionably exercise a salutary effect upon this present reckless traffic. Finally, measures could be set afoot to prohibit transatlantic shipment, blocking up thereby the most exhaustive drain of all upon the game birds on this continent.

From my observations I have become convinced that a minimum of birds are killed in Ohio by residents and visiting sportsmen, but that the recently developed professional market hunter is the great enemy. These men, as I had occasion to notice, are provided with as good outfits of breech-loaders and well-trained, experienced dogs as anybody would wish for, and their exact knowledge of the grounds they hunt over every day during the open season renders them familiar with every possible retreat of the birds. Neither are they embarrassed to dispose of their gains, as any country store will pay ready cash for them, which is returned in full with accruing interest by either stationary or perambulating agents of eastern wholesale dealers. Quail will be, of course, very scarce next fall, but their very scarcity will tend to raise their price and act as a powerful stimulant to the vampires, who will realize a higher profit from their sale than by treble the amount during the past year, when they were sold in Buffalo at the unprecedented rate of one dollar per dozen.

A general organized movement alone, extending throughout the great game producing States of the West, could lessen the immense damage inflicted upon poor Bob White by the heavy snows which may be said to cover even now the whole vast belt of our Middle States to beyond the Mississippi River. Such a movement might be set on foot perhaps by means of a carefully prepared circular mailed to every game club of recognized standing, whereby legislative bodies of the different sections of the country might be petitioned or influenced to crown the good work by the stamp of legal, effective enactments.

The Massachusetts Game Law.—The Massachusetts Game Law, which is in a very unsatisfactory condition, is now undergoing a process of revision. A committee of the Legislature who have the matter in charge, have had submitted to them a number of bills, some of which are palpably inefficient and calculated rather to defeat the desired ends than to secure any correction of existing evils. The provisions contained in some of these bills to allow trapping upon one's own land is directly opposed to the cause of protection. New Hampshire has only recently abolished the section of her law allowing it. Connecticut and Rhode Island will soon take the same course, simply because experience has demonstrated the terrible destructiveness of the practice. Confining the snaring to the owner's property does not help the matter. There is a loop-hole here for the pot-hunters; and it is a well established fact that a pot-hunter, like a prowling cat, will go through a very small hole. For a State which does not now allow it, to legalize it is simply a step in the wrong direction. Why should Massachusetts take this backward step?

Another provision which is not only wrong so far as the game interests of the Commonwealth itself are concerned, but which, in its relation to other States, is thoroughly unjust, allows the buying and selling of quail and pinnated grouse until June 1, provided they are killed outside of Massachusetts. We have already commented severely upon this section of the proposed bill, and here repeat our belief that it is monstrous. It is, in effect, paying a reward for the violation of the laws of sister States. The close season for these birds elsewhere begins with the 1st of January and the 1st of February. The Massachusetts marketmen therefore offer a premium to the pot-hunters and unscrupulous poachers of the Eastern States to violate their own laws, trap their prey and ship it through to the Boston market. If no other motive influences the law-makers, the simple one of inter-State courtesy and justice should be sufficient to induce the rejection of this so-called game law. We take pleasure in indorsing the bill presented by the Massachusetts Fish and Game Protective Association, believing it to be, of all those submitted, the one best designed to accomplish its purposes. We would prefer, however, to have more uniformity, if possible, in dates of close seasons. It fixes the close seasons as follows: Woodcock, Jan. 1 to August 1; partridge, Jan. 1 to Sept. 1; quail, Jan. 1 to Oct. 15; wildducks, May 1 to Sept. 1; plover, Jan. 1 to July 15; deer, until Jan. 1, 1880, and from Dec. to Oct. 1 after that. Snaring is prohibited wholly, as it should be. We hope to record the passages of this act, and to see it intelligently and stringently enforced. A bad law is possibly no worse than no law at all, but a good law is better.

One Phase of the Trespass Law.—Mr. Seth Green writes that he has received many letters from correspondents desirous of restocking the streams of their sections, calling attention to a very serious difficulty against which they have to contend. One of these letters reads:

There is so much dissatisfaction in regard to some parts of the game law as it now is, that we cannot get an appropriation for the purpose of stocking our streams. The first season we raised money by subscription, stocked the streams, and parties owning land along the streams, a majority of them, would not pay anything toward it, but went on and put up signs on their own land prohibiting fishing; so they get the benefit, while those who do not own the land furnish the funds. Now it seems to me that this part of the game law is wrong. I think if streams are stocked by the public they should be free to the public.

The trouble alluded to is one which must adjust itself in its own way in particular cases. The laws of trespass are none too strict nor too rigorously enforced. They cannot be made more lax. If one man is so fortunate as to own the whole of the property through which a stream flows, and if he has a trait of the dog in the manger in his composition, the public will act wisely in not stocking his stream. Such an instance, however, we conceive to be the exception; in most cases wisdom suggests and secures a compromise.

New York Association for the Protection of Fish and Game.—At the monthly meeting of the Association, held last Monday evening, the Secretary and Treasurer, Mr. Thomas N. Cuthbert, reported that he had deposited $500, making the reserve fund in all $5,000. Mr. Whitehead, from the Committee on Game Laws, reported that he was preparing a uniform law, to be submitted to the Legislature, the provisions of which would make the close season for prairie chicken, ruffed grouse, quail and deer commence on Feb. 1. Dr. Greene and Mr. Meyer thought if measures were taken at all to amend the game laws they should be energetic. The markets of New York during the month of February were glutted with quail and grouse which were utterly unfit for food, and ought not to be exhibited for sale. Mr. Whitehead said that inasmuch as a great deal of the venison coming to this market was from Minnesota, where it was killed in season, but did not arrive for some weeks after, owing to the difficulty of transit, it would be only just to allow thirty days after the season here had closed to dispose of it. Mr. Meyer said he would be perfectly satisfied to accept the proposition as far as venison was concerned, but thought the law in relation to the sale of birds should confine the period to Jan. 15. Ex-Senator Luddington and Mr. Chas. Hallock favored Mr. Meyer's views. Mr. Fleiss thought the law in relation to fish was in need of amendment. At present the law was such that poachers could escape punishment unless a dead fish were found in their possession, no matter how many live fish they may have. Senator Wagstaff announced that the Senate had appointed a Committee on Game Laws, consisting of Senators Oakley, Sessions, Turner, Marvin and himself. He hoped Mr. Whitehead would frame a bill codifying the game laws in such a manner as to make them satisfactory to sportsmen in all parts of the State, and he would guarantee that it should have prompt attention. Mr. Charles Hallock thought that one good way to aid in enforcing the game laws would be to enforce the trespass laws. This would make every farmer a special constable, and bring him into harmony with the various associations for the protection of game. Mr. Whitehead moved, as the sense of the association, that the season for the sale of all kinds of game and venison should close on Feb. 1. The motion was adopted. Mr. Munn thought the law should be amended so as to prevent the shooting of woodcock on Long Island in July. The date for the commencement of the shooting of quail and partridges was fixed for Oct. 15, with the additional provision that woodcock be shot during the month of July, then close, and open again with the shooting of other game birds in October. These suggestions will be submitted to the Committee on Game Laws. On motion of Mr. Munn, it was ordered that a resume of the game laws be printed and posted conspicuously in every post office throughout the State.

Onondaga County Fishing Club.—The Onondaga County Fishing Club of Syracuse has been most active in the enforcement of the protective laws. The county officers have recognized the value of their labors by a recent appropriation to further the work.

Pinnated Grouse for New Zealand.—*Abilene Kas., Jan. 31.—Editor Forest and Stream:* It will doubtless interest the readers of your paper to know that on Jan. 12, F. P. Baker, of Topeka, shipped twenty-eight live prairie chickens to New Zealand. Over a year ago he received a letter from a gentleman in San Francisco saying he was agent for a British colony in New Zealand, and he was getting fish, birds, etc., of the American Continent, to ship there for the purpose of acclimation and propagation, and wanted some prairie chickens. Owing to the fact that we had little or no snow last winter, the birds could not be trapped, when the snow came this winter the sons of Hon. John Brown, of Auburn, were engaged to trap a lot, and after considerable trouble succeeded in getting thirty-two chickens. Four of these died before shipment. The twenty-eight were put into a cage with four compartments, seven in each. They go by rail to San Francisco, then by steamer to New Zealand. It is to be hoped that they may reach there safely, and grow and multiply in their new home. Dirigo.

Michigan Deer Hunting.—Commenting upon the article on this subject published two weeks ago in these columns, our correspondent, Prof. H. B. Roney, of East Saginaw, Michigan, suggests very pertinently that in deducing any arguments for or against the use of dogs from the statistics of a deer hunt, we must record not only the amount of game secured, but also the number engaged in the sport, the time, etc. He adds:

Thus it was with the Battle Creek party referred to, which was double the size of ordinary hunting parties. The company consisted of twenty men, who spent five weeks of the most delightful weather of the fall in camp—their first and only hunt for the year. Which is worse—to take one long hunt, or two or three shorter ones? The party did not lose a pound of meat by spoiling, but utilized it all, sending the majority home to their families and friends from time to time, and every man had to work over seven days to get a deer. It is not the gentlemen sportsmen of the State, with their hounds, that are killing off the deer, but the market-hunters, nearly every one of whom are still-hunters, and the killing for hides, which is entirely done by still-hunters. There are more deer killed in Michigan yearly by pleasure hunting parties from other States than by similar parties who reside in Michigan, and not less than 10,500 deer were shipped out of this State to outside markets last year, while

less than 1,200 deer were killed by residents of Michigan with their dogs. The enormous market shipments of venison, and the outrageous depletion of our deer forests, which has gone on for years unchecked, are about over. If your game dealers desire enlightenment and consolation on this point, I beg them to await with patience the issuance of the next volume of the "Compiled Laws of the State of Michigan."

INDIANA SPORTSMEN'S ASSOCIATION.—The Indiana Sportsmen's Association held its biennial meeting at Indianapolis, Feb. 7, Judge Byron K. Elliott in the chair. The meeting proceeded to consider the "law as proposed" by the committee appointed to draft it. General Morris stated that he had given a copy of the proposed law for presentation to the Legislature. It extends the time for shooting prairie chickens from September 15 to September 1. Hon. Sylvester Johnson, President of the Horticultural Association of Indiana, here addressed the meeting, favoring the united efforts of the Sportsmen's Association and the Horticulturists toward the adoption of more stringent laws looking to the protection of quails. The executive committee was authorized to confer with them on the subject. The association next proceeded to elect officers for the two years ensuing. Gen. T. A. Morris was unanimously re-elected President; J. D. Lyle, of Columbus, Vice-President; John C. Wright, of Indianapolis, Treasurer; D. C. Bergundthal, of Indianapolis, Secretary. Peter A. Huffman, Judge H. C. Fox, W. A. Fisher, J. G. Barren and Thomas H. Sharpe were appointed to act as an executive committee. Gen. G. W. Russ, P. A. Huffman and Judge B. K. Elliott were appointed a committee to confer with the Legislature regarding the adoption of the game law proposed. It was proposed by Dr. H. G. Carey to change the name of the association from "Indiana Sportsmen's Association" to "Indiana Game Protective Association," which was unanimously agreed upon. On motion of J. G. Barren it was decided that the association meet semi-annually, and the next meeting set for the week of the State Fair in September next.

A NEW TEXAS CLUB—*Editor Forest and Stream:* A gun club was organized here yesterday, having for its object the procuring of legislation necessary for the protection of game, etc. The name of the club is "The Harrison County Gun Club," and its officers are as follows: Pres., A. H. Stuart; Vice-Pres., Morys Haggar; Sec'y and Treas., J. H. Gody.

Marshall, Tex., Feb. 4, 1879. J. H. G.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT For the Short-Range Championship of 1879

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

The captains of the several teams, entered before 9 o'clock on the evening of Feb. 22, will meet at Conlin's Gallery at that hour and fix upon the arrangements for carrying out the match, choose referees, and decide in what order the respective teams shall shoot. The assembled captains shall decide upon the date of opening the matches, and the date at which the entries shall close. The referees shall elect an umpire, whose decision in all cases shall be final.

There are already assurances of eight teams offering in the FOREST AND STREAM Tournament of off-hand shooting, and there are fully as many more who could do credit to themselves by offering as contestants. The New York, the Zettler, the Seppenfeldt, the South Brooklyn, the Empire and other clubs are preparing for the contest; but the Irish-American, the Scottish-American, the Yorkville, the Police, Hellwig's and a dozen regimental rifle clubs should appear, if the tournament is to be all that its projectors intended. The gathering of the representatives of the teams entered up to that time will be held at the gallery on the evening of the 22d, when the match will take definite shape in respect to date of shooting. Many of the club men are now practicing steadily, and some big scores are hinted at, one experienced gallery shot saying, a day or two ago, that an average of 46 would be required to carry off first place.

MASSACHUSETTS—*Medford.*—On Wednesday, February 5, the Medford Rifle Association held the first contest in the classified match. The distance was 200 yards, 7 rounds, any rifle. The shooters were divided into three classes, first to include all who have made a match record of 32 in the possible 35, the second class all having a record between 28 and 32, and the third class those with a poorer score. The winners of prizes to be decided by the aggregate of two best scores whenever made. At the initial competition the leading score of the 48 entries stood: First class: R. Sawyer, 32; C. H. Russell, 31; H. H. D. Cushing, 31; H. Withington, 31; E. W. Archer, 29; J. H. Eames, 20. Second class: H. S. Harris, 32; J. R. Tule, 29.

Walnut Hill Range, Boston, Mass.—Mr. William M. Farrow, of New York, was one of the contestants in the sixth renewed competition of the Massachusetts Rifle Association for the Maynard rifle and collateral sport and consequential glory. The members turned out in good numbers, swelling the entry list to 66. The wind was quiet, but with 200 yards of glistening snow between the marksmen and the little black bull's-eye speck some irregular firing was done. Farrow, the "schuetzenfest" king, took first place with 46 in the possible 50, a total which Capt. W. H. Jackson tied but did not pass. The best scores stood:

W M Farrow	4	5	4	5	5	4	5	4	5	5—46
Capt W H Jackson	5	5	5	4	5	4	5	5	4	4—46
K Davis	4	4	5	4	4	4	5	5	5	5—45
W Charles	4	5	4	4	5	4	5	4	5	5—44
F A Brown	4	5	4	5	5	4	4	5	4	4—44
E W Archer	4	4	5	5	4	5	5	4	5	5—44
E H Southee	4	4	4	4	5	5	5	5	5	5—44
H Tyler	4	4	4	4	5	4	5	5	4	4—43
L Saunders	4	4	4	5	4	4	5	4	4	4—42
J Nichols	4	4	4	3	5	5	4	4	5	4—42
W R Guerrier	4	4	3	5	4	4	5	4	4	4—42
H S Harris	3	4	5	5	4	4	4	4	4	4—41
R P Schaefer	3	4	5	5	4	4	4	4	4	4—41
W C Thomas	4	5	3	4	4	5	3	4	4	4—40
E E Hardy	4	4	4	4	5	4	5	4	3	4—39
A B Archer	4	4	3	4	4	5	3	5	4	4—38
H W Wharton	4	3	4	5	2	3	4	3	3	4—35
F S Reynolds	5	4	3	4	4	4	2	2	4	2—34

BOSTON GALLERY SHOOTING.—The February monthly shoot opened with a very good score list, and there are many one's hopeful of taking the $20 cash offered to the first maker of a clean score of eight bull's-eyes. This prize is in addition to the three regular of the match. The record for the first week stood, at 150 feet, eight rounds at reduced target:

E W Archer	4	5	5	4	5	5	5	5—36		
Geo Lamb	5	5	4	4	4	4	5	5—36		
W H Restarick	4	5	5	4	4	4	5	6—35		
R J Restarick	4	4	4	4	4	5	5	5—35		
C O Barrett	4	5	5	4	4	4	4	5—35		
J Thomas	4	4	4	4	4	5	5	5—35		
F S Tobey, Jr	4	4	4	4	4	5	5	6—35		
W S Arnaud	4	4	4	4	4	5	5	5—35		
W Bradford	5	4	4	4	4	4	5	5—35		
R C Staples	5	4	4	3	5	4	4	6—35		
L J Plucker	5	4	4	4	4	4	5	6—35		
H Thomas	5	5	4	4	4	4	4	6—35		
A B Archer	3	4	5	4	4	5	4	5—34		
Geo E Everett	4	4	5	4	4	4	4	6—34		
A K Jones	5	4	4	4	4	4	4	5—34		
Geo E Rice	5	4	4	3	4	5	4	5—34		
F H Hartshorn	5	4	4	4	4	4	5	5—34		

Springfield, Feb. 11.—"U. S. Armory Team;" 300 and 500 yards, off-hand. The 500 was made with quite a strong wind blowing about 8 o'clock across the ice upon which we were standing without shelter:

S S Bumstead	300	5	3	3	4	5	5	3	4	4—41
	500	4	4	5	5	3	3	4	4	5—41
R T Hare	300	3	4	4	3	5	5	5	4	4—38
	500	0	4	5	5	5	5	4	4	2—37
M W Cull	300	3	5	4	5	3	3	4	4	5—40
	500	4	2	0	4	4	4	4	3	5—34
J F Cranston	300	4	5	4	3	4	4	4	4	4—39
	500	4	0	3	4	5	3	2	5	4—33
F R Bull	300	4	4	4	4	4	3	4	5	5—42
	500	2	3	5	2	0	5	3	3	4—30

S. S. BUMSTEAD.

CONNECTICUT—*Collinsville, Feb.* 6.—The following are the scores made at a regular meeting of the Canton Rod and Gun Club to-day; 200 yards, off-hand, 10 shots:

	Mass.	Creed.		Mass.	Creed.
O B Hull	101	45	J D Andrews	73	38
J H Bidwell	86	39	H Sanborn	65	32
J Laubenstein	84	39			

SEPPENFELDT'S RIFLE CLUB.—The following officers have been chosen for the following year: President, John W. Adams; Vice-Pres., Max Kerr; Capt., Ernest Holtzman; Treas., Isaac Garrison; Sec., Geo. C. Walters; Financial Sec., Wm. Seppenfeldt. The club will be represented in the FOREST AND STREAM gallery tournament. At the last meeting of the club the following scores were made by the members out of the possible 50:

Isaac Garrison	48	Ed Drescher	44
Max Kern	48	J Chambers	44
G C Walters	47	P Brennan	44
E Holtzman	47	E B Douglass	40
John Schultz	47	Chi Laing	39
A Gruenegerg	46	O Decker	39
Wm Seppenfeldt	45	Chi D Colen	38
John Adams	45	G E Magurk	38
John Haas	44	J Hoagland	37
John Leary	44	W J Leary	35

The Police Rifle Club, practicing at Seppenfeldt's Gallery, scored as follows at their last weekly competition:

Pat Brennan	44	M Johnston	42
J J Cornell	42	J Haggerty	42
Frank Fuchs	44	G F Muller	39
D Ryan	43	W Stutt	39
John Maher	43	B Kane	38

Feb. 7.—Creedmoor rules, possible 50:

John Schutz	49	John Chambers	42
John W Adams	48	E B Douglass	42
E Holtzmann	48	T Regan	40
Isaac Garrison	48	L Bachman	42
G C Walters	47	John McCoy	41
Max Kern	47	Chi Laing	40
John Schultz	47	Chi J D Colen	38
Wm Seppenfeldt	45	G E Magurk	38
Ed Drescher	45	O Decker	37
P Brennan	44	W J Leary	35

G. C. W.

—A match will take place at Zettler's rifle gallery, 207 Bowery, for the Championship of the United States; open to all comers; entrance fee, $5. Will commence Monday, Feb. 17. Rifle, 22 calibre, 3 pound pull.

STATEN ISLAND.—The Rossmoor Rifle Club have laid out an interesting series of matches to be competed on the Huguenot Height Range during the present shooting season. There are a number of members' badges and all-comers' badges as well. Of these latter the most important is the "Rifle Badge," presented by Mr. J. R. Le Roy. The conditions of the match provide: Distances, 200 and 300 yards; position, standing; rifle, any; rounds, seven, with privilege of two sighting shots at each distance. Entrance fee, twenty-five cents. To be held by the competitor making the highest score at the first meeting, and until the next, when the highest score will take it and hold it till next competed for; and finally to be awarded to the competitor winning it three times (not necessarily consecutively) in any one year (January to December). The dates fixed for competition are April 12, May 10, June 7 and 21, July 19, Aug. 16 and 30, Sept. 13, Oct. 11 and Nov. 15. On these days also pool matches will be fired, at which, as with competition for the rifle badge, all members in good standing of any rifle club in the world are admitted. To reach the range train boats may be taken from the Whitehall street ferry at 9 and 11 A. M. and 1 P. M., connecting with trains for Huguenot. The officers of the club for the current year are: Pres., Lewis M. Carnes; Vice-Pres. and Capt., George W. Ellis; Sec'y and Treas., William M. Wright; Lieut., Henry T. Metcalfe; Surgeon, C. Alfred Grymes, M. D.; Directors—Eugene Britton, Lewis M. Carnes, Cornelius C. Ellis, George W. Ellis, C. Alfred Grymes, J. Rutgers Le Roy, Henry Mason, Henry T. Metcalfe, William M. Wright.

—The New York and Bergen Point rifle clubs met at the range of the latter club on the 8th inst., and indulged in something having a faint resemblance to a match. After almost getting at sixes and sevens, the marksmen settled down on a nine by ten arrangement, and the New Yorkers shooting ten men against the nine for the Jerseymen, of course showed the better total and won the glory. It was a queer match all round, and it was evident during the contest—as it certainly does look now—that somebody had blundered. 'Nuf ced!

GERMAN SHOOTING SOCIETY ELECTIONS.—At an adjourned meeting of the New York Schuetzen Corps, held at their headquarters, 98 Forsyth street, Capt. Aery having declined a re-election, Mr. David G. Yuengling was chosen unanimously and honorably installed. The increase in the number of members has necessitated the increase in the number of Lieutenants to three. The full list of officers stands: D. G. Yuengling, Captain; Anton Meyer, First Lieutenant; J. N. Crusius, Second Lieutenant; John H. Meyer, Third Lieutenant; Henry L. Meyer, Treasurer; B. H. Fienken, Prot. Secretary; D. Meschendorf, Financial Secretary; John Eggers, Custodian; Philip Klein and John Brumerhop, Shooting Masters. All other officers, as doctor, color bearers, etc., are nominated by the captain. The several clubs below have chosen the officers named for the year 1879.

New York Central Schuetzen Corps.—Captain, C. F. Generich; Prot. Secretary, Henry Kroger; Financial Secretary, D. Meersse; Treasurer, Charles Lehritter; Custodian, J. Luhrs. The captain named the following: As Orderly, John F. Zeller; First Lieutenant, H. Reiling; Second Lieutenant, George Bulter; Third Lieutenant, H. Meyer; Fourth Lieutenant, L. Miller. Shooting Masters—Jac. Dux, W. F. Klee; Color Bearers, John Page, J. Bottcher, C. Alders; Stewart, John Ranges.

Jersey City Schuetzen Corps.—Captain, B. Lippmann; Secretary, R. von Radowitz; Treasurer, John C. Wenner; Financial Secretary, John Miller; Shooting Masters—Theo Gubelmann, Ludwig Miller; Custodian, Fred. Schafer.

Newark Schuetzen Association.—President, Hermann Schalk Vice-President, F. H. Wismer; Shooting Masters, Joseph Belcher, Albert Seitz; Treasurer, John Kienert; Prot. Secretary, A. C. Fromann; Financial Secretary, William Schmander, Jr.; Directors, F. Haefeli, Wm. Hayes, Aug. Bergerow, Carl F. Seitz, Joseph Christl, Frank S. Harrison, Jacob Gauch, F. Lehmacher, Otto Hilpert, Chr. Kroegel.

Toledo, Ohio, Schuetzen Club.—Gustav Baither, President; Hermann Baumbach, Vice-President; E. L. Valois, Corresponding Secretary; E. Goldman, Financial Secretary; M. Yesenthal, Treasurer; Shooting Masters, A. Muller, H. Muller; Ulr. Geisbuchler, Color Bearer; Directors, H. Heineman, Fritz Grasser, George Weber.

New York Schuetzen Gilde.—Jacob Best, Captain; Geo. Schindler, First Lieutenant; Ph. Ettel, Second Lieutenant; H. E. Henckel, Prot. Secretary; Geo. Hoepfner, Financial Secretary; Peter Mahn, Treasurer.

The Jersey Schuetzen Corps opened a regular practice on the 12th, and will continue on each alternate Wednesday.

The Helvetia Rifle Club, the oldest of all shooting organizations of New York and vicinity, never ceased having their practice day during the winter; they intend now to practice on mid-ranges—another step forward.

A "Bundesschiessen" similar to that held at Union Hill last summer, will be given at Chicago in June.

One of the greatest events of the season will be the excursion of the New York Independent Schuetzen to Niagara Falls in the month of June. The first day after arrival will be devoted to a grand shooting festival at the Falls, and the second day to sight-seeing, and in the evening a ball-champetre and summer night's festival.

PENNSYLVANIA WAKING UP—*Editor Forest and Stream:* It was with pleasure I read the account of the proposed rifle range at the Driving Park at Philadelphia in your issue of this week. We Pennsylvanians have (I say *have*) been quite backward in establishing a thorough system of rifle practice in our State, but we have determined to wake up a little and commence our work in earnest, and to that end we have organized the Pennsylvania State Rifle Association, with the following named as its officers: Pres., W. H. Rauch, Esq.; Vice-Pres., J. M. Root; Sec'y, Lieut. Geo. Barry; Treas., A. B. Parker. With an energetic gentleman like Mr. Rauch at its head, we feel sure that the Pennsylvania Rifle Association will be a success. We have in this association some of Pennsylvania's best military officers and disciplinarians, who are very much interested, as it is desirable to have a range whereon our State military may practice. This association also includes a number of prominent scientific and reliable shots, such as Messrs. Leopold, Price, Fox, Bartley, Root, Capt. Chris. Kunzig and others. The working material is plentiful and efficient, but as yet we are not in possession of a suitable place or range on which we might find to what effect we have labored and on which we may see the fruit of our future work. In fact, we are a rifle association without a range, or very similar to a jug without a handle—we are all here, but the handle is minus. What we desire is a good range in a convenient and central locality, easy of access to all affiliated rifle clubs. Had we a suitable range, I would vouch for the numbers of skillful and scientific shots which our State is certainly capable of putting in the front rank, as compared with organizations of a similar growth, which may be seen from the following maiden efforts of some of its members (shooting in accordance with N. R. A. rules, 8-inch bull's-eye):

Best record at 100 yards				22 consecutive bull's-eyes.	
"	200	"		45 in a possible 50 points.	
"	300	"		39	" " 50 "
"	400	"		48	" " 50 "
"	500	"		68	" " 70 "
"	800	"		69	" " 75 "

while some have made creditable scores at the 1,200 yards range. The range at Philadelphia which you have mentioned in the FOREST AND STREAM is not quite central enough for our purpose, but if we could not do better we had better try it. But my opinion is that some tract of ground suitable for the purpose might be found along some railroad which could be had of the railroad authorities on favorable terms, which would make it convenient to the Pennsylvania State Rifle Association and profitable to the railroad company.

Yours truly, A. B. P.

Norristown, Pa., Feb. 8, 1879.

NEW ORLEANS, *Frogmoor.*—The general dulness here has not been without its effect on field sports, and we have as yet had but little worthy of note. Frogmoor, the rifle park of the Crescent City Club, was opened a short time ago, and yesterday the second contest for the Military Trophy was shot there. The trophy, which is really an elegant affair, was won by the Louisiana Militia Team, in Mobile, in July, 1878, and these contests are held to decide which command of those composing the team shall act as the custodian of the prize for a certain period. By a rather curious arrangement the men composing the sub-teams, if I may use the expression, are numbered, and only the corresponding numbers allowed to shoot, that is to say if, as on yesterday, numbers 2, 3 and 4 of any of the teams are absent the number one only is

allowed to shoot. The first contest, July 28, was won by the Louisiana Field Artillery. The score of yesterday's shoot was as follows:

	200 yds.	500 yds.	T'l.
Bradford—Washington Artillery............	24	29	—53
Boregeay—Louisiana Field Artillery......	29	23	—52
McQuithy—Continental Guards............	27	23	—50

Immediately after the rifle match the New Orleans Gun Club held a glass ball match for the Montgomery Cup, which was won in July last by Mr. F. O. Cousin by a score of 21 balls; Mr. Da Ponte carried off the cup by the same score yesterday. Mr. Da Ponte has done some very good shooting here, both in matches and practice, and has on two occasions lately while shooting for pleasure broken 49 successive balls out of 50 thrown him from a trap. *Au plaisir.*

New Orleans, Feb. 3, 1879. PORTE-PLUME.

OHIO—*Cincinnati, Feb.* 3.—The rifle team of the Cincinnati Shooting and Fishing Club made the following score in their practice shoot to-day; 200 yards, off-hand:

D T Disney..........................4 5 4 5 5 4 4 4 5 4 4 5 4 5 4—66
W Caldwell..........................4 4 4 4 4 5 5 4 5 5 4 4 4 4 4—64
W Hull..............................5 3 4 3 5 4 4 4 5 5 3 4 5 4 4—62
A Koehler...........................5 4 4 4 4 4 4 4 4 4 4 4 4 5 4—62

The following match then took place for the suppers.

Caldwell's Side.

W Caldwell..........................4 3 4 5 5 4 4 4 4 4—41
W Hall..............................5 4 5 4 4 5 4 4 4 4—43
G Henson............................4 5 4 4 4 4 3 4 4—40—124

Fender's Side.

L Fender............................4 5 4 4 4 5 5 4 4 5—44
M Gindelin..........................3 5 4 5 4 4 4 4 4 3—40
D T Disney..........................4 4 5 4 3 4 4 3 5 3—39—123

C.

MICHIGAN—*East Saginaw, Feb.* 1.—The thirteenth weekly practice of the East Saginaw Amateur Rifle Club to-day scored as follows; 200-yard target reduced; possible 50:

Capt W J Shaw.......................5 4 5 5 4 5 4 5 5 5—47
C C Yawkey..........................5 4 4 4 4 4 5 4 4 4—42
H G Hamilton........................5 3 4 5 4 3 4 4 4 5—40
J H Houry...........................3 4 2 4 5 4 4 4 4 4—38
R F Corbyn..........................3 4 3 4 4 3 3 4 3 4—35

East Saginaw, Mich., Feb. 8.—At the thirteenth weekly practice of the East Saginaw Amateur Rifle Club the following score was made; 200 yard target reduced; possible 50:

Capt W J Shaw.......................5 5 4 4 5 4 5 5 3 5—45
O C Yawkey..........................5 5 4 5 4 4 5 4 4 5—45
R F Corbyn..........................5 4 5 3 4 3 5 4 4 4—42
H G Hamilton........................4 4 4 4 5 4 5 4 4 4—42
J H Howry...........................4 4 3 4 5 4 3 5 5 4—41

In shooting off the tie for the club medal the following score was made:

Yawkey..........5 5 4 5 5—24 Shaw..........5 4 4 5 4—22

J. H. HOWRY, Sec.

CALIFORNIA.—Capt. H. J. Burns, whom all our Eastern riflemen will remember as one of the good fellows of the California rifle team of 1877, is still bringing up the white disk. On the 31st ult. he shot a match of 100 shots, off-hand, at 200 yards, with a military match, against Officer Burdick, who claims a record of 92 in a possible 100 at this range. The match took place at the Schuetzen Park, San Francisco, Capt. Burns using a Sharps Borchardt, and Officer Burdick a Springfield Armory piece. The scores stood:

Capt Burns.....4 3 4 5 5 4 5 4 5 4—43 5 4 4 4 5 4 5 5 4 4—44—87
4 4 4 4 5 4 4 5 4 4—42 5 4 4 4 4 4 4 5 5 4—43—85
5 5 4 4 4 5 4 4 5 5—45 3 5 4 5 5 5 4 4 4 5—44—89
4 4 4 4 5 5 4 4 4 4—42 4 4 4 4 5 5 5 4 4 4—43—85
4 4 5 4 5 4 4 4 4 4—43 5 4 4 4 4 4 4 5 4 4—42—84—430

Officer Burdick.5 4 4 4 4 4 4 3 4 4—40 5 4 3 3 3 4 4 4 4 4—38—78

TURKISH RIFLE PRACTICE.—The steamer *Norman Monarch* has just taken out 25,000,000 cartridges for the Turkish Government in addition to the 50,000 rifles from Providence, R. I. This twenty-five million cartridges is the last of the order for cartridges from the Turkish Government, which the Winchester shops in this city have been filling. In all, the Winchester Repeating Arms Company has supplied cartridges to the Turkish power to the enormous number of four hundred million.

FOLDING BULLETS.—*Editor Forest and Stream:* I regret that Mr. T. S. Vandyke has misconstrued my article in regard to folding bullets, trajectory, etc. In speaking of low trajectory, I mean flat trajectory or reduction of the trajectory curve; hence any 900 or 1,000 yards curve would, of course, be flatter in proportion at 200 and 300 yards distance. The gentleman also seems to infer that I had allusion to hollow or Express balls, while I mean the solid projectile, which, from its doubling over or folding property (upon striking) makes a large and frightful wound, when we bring to bear in addition its rotary or twisting action. The great weight of ball also necessitates a longer barrel to insure perfect combustion of the large charge of powder required to flatten the trajectory in proportion to that of lighter balls with less powder. The advantages of the small diameter and great weight of bullet are apparent, *i. e.*, less resistance by atmosphere, and the doubling or folding over of the solid cylinder, coupled with its boring effect, due to axial rotation, and disturbance of the equilibrium at the moment of striking. I have had only a few experiments on .22 cal., and my conclusions are based upon the effects observed in this small rifle, which produces large wounds by the clubbing or folding of the long bullet. I would like if others would experiment with large calibre rifles. WM. J. LAND.

Atlanta, Ga., Feb. 4, 1879.

AN OCEAN STEAMER AND A POODLE.—Here is an odd coincidence of names. Gellert, it will be remembered, was the famous hound which saved the life of his master's child from a wolf, only to be shot by that master. It is a touching and beautiful story which will live a long time, in spite of the labors of Mr. Baring-Gould, who has taken the pains to prove it a baseless myth, and has consigned it to the William Tell catagory of tales:

As the Hamburg-American steamship *Gellert* was steaming down the River Elbe on her last trip on January 8, a small black speck was discovered in the distance on an ice-floe and floating out to sea. It proved to be a black poodle. Captain Kuhlewein gave orders to stop and back the engines, a lifeboat was lowered and manned, and the almost frozen little beast, completely covered with icicles, was with no little difficulty brought on board and soon restored to his normal vivacity. The sagacious little animal seemed to be accustomed to good treatment and soon became a pet on shipboard. He was christened in a formal manner by the captain and given the appropriate name of Ice. He was taken back on the *Gellert* to Hamburg on Thursday last and will be restored to his home if his owner can be found.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachinotu scarolinus*
Drum (two species). Family *Sciænidæ.*
Kingfish, *Menticirrus nebulosus.*
Sea Bass, *Sciænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Snapper, *Lutjanus blackfordii.*
Grouper, *Epinephelpus nigritus.*
Trout (black bass), *Centropristis atrarius.*
Striped Bass, or Rockfish, *Roccus lineatus.*
Tailorfish, *Pomatomus saltatrix.*
Black Bass, *Micropterus salmoides M. pallidus.*

FISH IN MARKET—RETAIL PRICES.—Bass, 25 cents; smelts, 15; bluefish, 12½; salmon, 35; mackerel, 18; shad, $1; white perch, 15; green turtle, 12½; terrapin, $24 per doz.; frostfish, 8; halibut, 18; haddock, 6; kingfish, 15; codfish, 6; flounders, 10; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 15; scallops, 25 per quart; soft clams, 30 to 75 per 100; whitefish, 15; pickerel, 15; salmon trout, 15; red snapper, 12½; smoked haddock, 10; hard crabs, 30 cents per doz.

WEIGHT AND STRUCTURE OF RODS.

OUR readers will recall to mind several articles which we published within the past three months on this very interesting subject. These grew out of an editorial statement that split bamboo rods were relatively lighter than wooden rods of the same length and diameter. This statement was challenged by the venerable rod-maker, Mr. William Mitchell, and the comparative merits of bamboo and wood were fully discussed. Mr. Mitchell was contemporary with Dr. Bethune, Thad Norris, James Stevens, John Krider, the Conroys, Genio C. Scott, and dozens of other anglers who have long since passed away, or are now on the decline of life, and was well known to them. They relied on his judgment, his experience, and his handicraft, in matters piscatorial. It has been our good fortune to receive occasional visits from this gentleman of late years; and we are pleased to state that his head has not yet lost its equipoise, nor his hands their cunning. Mr. Mitchell still makes rods—*wooden* rods,—but only to order, for gentlemen acquaintances, or for those who are recommended to him by friends. Strictly, he is not in competition with the trade, any more than the genial Thad Norris was, in the quiet seclusion of his little workshop in a rear room of his large and luxuriously appointed house in Logan Square, Philadelphia.

Mr. Mitchell, although an admirer, and sometimes a maker, of split bamboo rods, is a firm advocate and champion of wooden rods, and he has been willing to demonstrate his faith and the pertinacity of his belief by making for us the most beautiful wooden rod we ever beheld. He took for his pattern our favorite Leonard split bamboo salmon rod which measures 16½ feet in length; and although somewhat shaken at first by its delicate poise and pliancy, its well seasoned material, and the quality of its general workmanship, persisted in his shaving, turning, fitting, and weighing, until, after some weeks of patient labor and contrivance, he triumphantly entered our office with the pattern and the counterpart, and majestically called for the post-office scales! When he drew the rod joints from their case we found an ash but; three joints, of ash, greenheart, and lancewood respectively; and four tips, three of which were of lancewood, and one of greenheart. Thus, by combination, we had a full ash rod with a lancewood tip; a lancewood rod with ash but; and a greenheart rod with ash but. The test rod was the one of ash. When compared with the bamboo it showed a like amount of stiffness and pliability, the same dimensions under the calipers, and the same length. On the scales it weighed just half an ounce more than the bamboo. However, there was no quarrel about the half ounce; the difference in weight was inappreciable and Mr. Mitchell had conquered belief, prejudice, and even absolute fact. He had solved the problem, and demonstrated that a skilled workman could make a wooden rod equal in all respects to a bamboo, with an additional advantage of cheapness, imperviousness to water, less sensitiveness to temperature, etc. This was a black eye for the notion that the supposed superior advantages of a bamboo rod made them desirable at a superior price. In finish Mr. Mitchell's rod was beautiful: the mountings light but strong; the parts nicely fitting, the reel seat easily adapted to the reel plate, and the color of the rod a rich rosewood. One little device was a greasebox in the but-end of the rod for anointing the ferrules, to prevent them becoming tight, or aid their taking apart. Such a rod as the one in review, with a but, two joints, and four tips can be made for $40, while an equal bamboo would cost $75—an apparent difference of 38 per cent.

Those who have not made the construction of rods a study, or watched the gradual improvement in their quality, will be interested by a little resume of the history of the bamboo rod in the United States, and the reasons why it was expected to supersede the wooden rods:

It is generally supposed that the bamboo rod was an American invention, but we can find no positive evidence that it was. The first bamboo rod that we are cognizant of was owned by Mr. James Stevens, of Hoboken. It was a 12-feet rod. He brought it from England about twenty-eight years ago. It was made to order by Mr. Blacker. Subsequently Pritchard Brothers, now of 65 Fulton street, this city, made an elaborate one for the first Paris exhibition. It was a unique affair, and to be purely American, was striped like a barber's pole, in true loyal colors, red, white, and blue! Fortunately for the credit of American good taste, the rod was not sent. The Pritchards had previously made some rods. Since those days of comparatively inferior workmanship, great improvements have been made. It is not necessary to mention here who the best makers are. Our immediate object is to consider what was the primary inducement to make a bamboo rod. Evidently the belief that they were lighter, and could do the same work as heavier rods. This impression grew from the handling of a natural bamboo, the cane having all the elements required in a rod, viz., strength, toughness, stiffness, lightness, suppleness, and uniform elasticity. But the bamboo being in one piece, was unwieldy. Wherefore they were cut into sections. The ends of the sections were finished with ferrules, which added to their weight, and broke that continuity of pliability which is indispensable to make a good cast. Also, being hollow, they lacked solidity and splintered immediately when they broke. An iron cylinder which weighs a pound is stronger than an iron rod or bar which weighs a pound, but it is vastly more bulky. To remedy these and other obvious defects, the rod makers sawed the cane longitudinally and glued the strips together. This made it a solid body; and it also brings us back to the issue whether a solid body of bamboo is really lighter than a solid body of ash and lancewood of the same dimensions. Mr. Mitchell claims that the wood is more durable, more impervious to moisture, less sensitive to changes of temperature, and therefore requires less care. It is more trustworthy in the hands of the inexperienced, and safer in the hands of the careless. A good bamboo rod requires almost as much care as a good gun. Its parts should never remain jointed together over night; it needs to be wiped dry after being wet; should never lie out in the rain; should never be subjected to extremes of heat and cold. It must not be racked or strained in the handling, but used with an equable movement. It should not be hung on pegs too wide apart. If a man is careless of a good gun or rod, leaving it to go to rack and ruin, a common affair would do him just as much service while money would not be wasted. Granted that there is no disparity between the best bamboo and the best wooden rod, the latter is at least the most economical. We congratulate Mr. Mitchell on his success; we thank him for his gift; and shall be glad to exhibit it next June when we visit the Lower St. Lawrence on our salmon fishing cruise.

By the way we reprint here for the benefit of several inquirers who seem to have overlooked it, a table of relative weights and measurements, which, however, can be only approximate.

Length of Rod,	Weight of Reel Plate.	Total Weight.
11 feet..............	1¾ ounces.	9 ounces.
11½ feet..............	2 "	10 "
12 feet..............	2¼ "	12 "

18 feet..............	3½ "	44 "
19 feet..............	3¾ "	50 "
20 feet..............	4 "	54 "

HOW DOES A TROUT TAKE A FLY?

SEVERAL weeks ago this question was started in this paper by a careful reader of William C. Prime's delightful book entitled "I Go a-Fishing," and to him we made editorial reply substantially as Mr. Prime has now stated in this communication which follows. Since the discussion opened we have received opinions from many of the best known anglers and fish culturists in the country, and we are pleased to say that all our writers save two have endorsed the original views enunciated by the FOREST AND STREAM. Considerable subtle information has been evolved by the discussion, and we are glad, for the sake of the student, that it has not only been somewhat prolonged in our own columns, but has been extended to those of other papers, sporting and non-sporting. We have noticed, with some amusement, however, that in the effort to appear wise, or to champion what they covertly believed might be the strongest side, some of the writers in non-professional papers have committed themselves directly to error and the utterances of nonsense. If these young men wish to sift the debate to the bottom, and find the premises out of which the debate grew, we will now give them an opportunity. Let them read Mr. Prime's letter. If they have any conscionability and wisdom to discern, they will see the danger of Quixotic meddling with topics of which they know little. We think all mature anglers will give Mr. Prime and the editor of this paper the credit of having had little ground of difference between them in the physiology or metaphysics of angling for the past thirty years.

MR. PRIME HIMSELF SPEAKS.

EDITOR FOREST AND STREAM:

The discussion of this subject in your columns has wandered far from the original question. Who ever imagined that a trout flops a fly into his mouth with his tail? Not I. You are a capital editorial and practical angler, and tie a neat fly. That idea, very nicely tied and cleanly cast, in your editorial (Dec. 5), has provoked a number of sharp rises. Now let us go back to the original question, for it is important, and so get some good out of the discussion.

Surely no one doubts that a trout sometimes strikes a fly with his tail, and sometimes rushes at it with his mouth. The stroke with the tail, intended to bring the prey out of the air and into the water, is analogous to a similar use of the tail by many animals. There is nothing wonderful about it. The only question is which attack of the trout is most common, and what circumstances determine the trout in making it.

The discussion seems to have been roused by something I said in "I go a Fishing." I desire, therefore, to say that my observation has been close and studious, fo very many years,

but I would be a very foolish follower of the gentle art if in this or any other idea I were not ready and anxious to have the observation of other anglers, and quite ready to give up my notion for good cause shown.

But impressions from memory of how trout have risen to our flies are not observation. Let anglers hereafter make careful study of the motions of fish and give us their results. There are several easy methods. Select a shallow spot where young fish are plenty, cast three flies with hooks broken off, and draw rapidly, watching the bobbers. Under such circumstances you may see a row of flashing tails thumping at the flies and dashing water over them. Try the same cast over a rough rapid in the early season when the fish are on the rapids. Better still, sit in a boat and let another person cast from another boat and draw rapidly near you. Again, watch a large dragon fly, or any other large insect, in a light breeze, flying near the surface, and observe the attacks of successive fish. Better than all, use a good binocular glass, while an experienced angler casts and draws across your field of vision. Notice with care what we call the *swirl* of a large fish. Is it a whirlpool, due to a swift, circular motion of the fish? or, is it a mere wave as he comes up or goes down? Finally, if you are a good fisherman, and rightly exercise your "wrist-knack" in "striking a fish," note expressly whether your nerves do or do not sensibly distinguish between two sensations—the blow of the tail and the instantly following grasp of the mouth. When you hook a fish through body or tail, try to remember whether you struck him or he struck your fly. If you struck him you struck too hard; don't do it again. It takes a hard blow to drive even a sharp hook through a fish's skin; "wrist-knack" ought not to do that.

My opinion, based on such observations, is this: Trout more frequently strike first with the tail, and anglers often strike an instant too soon, mistaking the blow of the tail and the dash of the water over the fly for the grasp of the mouth. I have seen a friend, the best fly fisherman I ever knew, acting on this principle, take two dozen and more trout, when two good fishermen, who did not believe the principle, casting over the same water with constant rises, had only four fish to both rods.

I think some circumstances controlling the fish are these: The tail-fly is more rarely struck with the tail than the bobbers. The rougher the water the more frequent the stroke on the tail. The tail-fly is more frequently struck with the tail in rapids. Large flies are more frequently struck by the tail than small flies or gnats. The more rapidly the flies are drawn, the more likely the stroke of the tail—in fact, the general principle seems to be that where a fly is moving above the surface of the water in such way that a sensible trout thinks he is more likely to get him by dashing water over him or hitting him with his tail, than by catching him in his mouth, he attacks him with his tail, and then turns with a swift, sharp turn like lightning and takes him in his mouth. The movement is exceedingly beautiful. I have seen it a thousand times. The only question is whether it is so common a habit as to be properly called a rule with the fish. As I said before, I have no theory to sustain, and only trust that this discussion will lead to careful observation and correct information, for we all know that the habits of fish vary in various waters; and I perhaps ought to add that in my very limited experience in English and Scotch waters, I have thought the attack with the tail less common, while in Switzerland and the Tyrol the fish behave much as in America.

Respectfully yours, W. C. PRIME.

38 *East Twenty-third street, N. Y., Jan.* 30, 1879.

Editor Forest and Stream: From a long experience in killing trout in many of the streams of Northern Michigan and the Eastern States, and study of the habits and actions of the fish, it is my opinion that when the fly is taken in the vast majority of cases it is done in one of two ways. 1st. When the trout is seen on top of the water, rising behind the fly, he takes it by describing a half circle out of water and seizing the fly from above as he descends. It is easy to see that this is altogether the easiest method for the trout to pursue when he is hungry and active, and it also accounts for the frequency of his failures to get the fly. By dropping on it head foremost with open mouth he has a very sure thing if he don't miss it entirely. 2d. When the fly is taken from beneath the water where the trout isn't seen, my idea is that he rushes straight for it from where he is lying, and at a distance of two feet or so turns over on his back, and in that position seizes his prey. I think it conclusively proven from the fact that in such cases the light colored belly of the fish is often seen where the water is clear enough and the distance not too great, and this would be impossible did the trout not turn it uppermost and swim a short distance on his back before taking the fly. There are several fish of other kinds which do this. A. H. OAKES.

West Bay City, Mich., Jan. 23, 1879.

COLORADO—*Jan.*, 1879.—I have wanted to laugh a little at the peculiar acrobatic trout with which your columns have been treated, pictorially and otherwise, lately, but it seems like wasting space on a small subject. Admitting that certain favored localities have "speckled beauties" that turn handsprings, perform on the flying trapeze, and shoot flies on the wing, which facts seem to be established by clouds of witnesses, I am now only dying to learn whether they use "choke" or straight-bore in the latter performance? We have no such talented trout in this Western country, but we do have a dry land frog that has horns and flips flies into his mouth with his tongue. They are good to eat—the flies—the frog thinks so. QUIEN SABE.

HOW THEY MAKE FISH-LINES.

IN 1859, at Harlem, could be noticed an humble and unpretending rope-walk, established by Mr. Henry Hall, who had come to America to introduce an improved English, or North of Ireland, style of linen and silk fish-line, so balanced and interwoven as to defy the large bass that then endeared and decoyed to Hell Gate such men as the Hon. Dan'l Webster, mine host Stetson, of the Astor, and our old-time, well-known piscatory friends, Messrs. Richard T. Fosdick, Sam Warner, Wm. F. Brough, Henry Inman, N. A., John Farren, Sherman Brownell, Preston Hodges (the host of old Carlton House), Tom Jerome, Henry Miner, Uncle Ben Raynor, Dick Carman, Leff Snediker, old Uncle John Weeks, John Harlow and Mr. John Evers (better known as the Fifth Ward John's), with the gentlemanly Prime brothers.

In 1861 the improvement then taking place at ye old Harlem compelled Mr. Hall to pull up stakes and remove to Astoria, L. I., off the shores of the once coveted bass fishing ground, and to be within ear-call of his expert friends. These true Waltonian disciples of ye old Izaac had noised about in their various piscatorial excursions to the mountain and wood brook streams of the island, the South, North, East and States of the West, the grand excellence of the Hall line—its wonderful sway to and off the reel, and its gleeful freedom from kink. Thence the predominating excellence of the Astorian cord-winder's line soon got abroad.

Hence the once small cord-winder of ye old North Riding found it necessary to pull up stakes once more. So, by the advice of the late Thos. H. Bate and Mr. Clerke, he located at Woodbury, on the little stream that skirts and divides at the base of the Ramapo Mountain range of hills, thence mingling its waters with the Beaver Kill, near Coffee's, on the Ramapo River, close by the narrow pass in the hill range made notorious by that revolutionary scoundrel, Claudius Smith, who made the road a terror to the traveler and gave Washington no little trouble by capturing his forage parties—officers and men—for whom he either demanded a ransom or took them to the British headquarters of Gen. Howe, then located at the old Nathaniel Prime House on Broadway, now known as the "Washington Hotel," in commemoration of its once being the headquarters of that genial sportsman, the father of American liberty.

The fish-cord winder continued to prosper, and soon the goods manufactured by him became known to every fish-tackle dealer in the States and Canadas, and finally gained the distinction of being the best manufactured in the Union. Soon it was found necessary to extend the facilities of the establishment. Hence Mr. Henry Hall (like all good and wise fathers) took his sons, James and Henry Hall, Jr., into business with him and founded the firm of Henry Hall & Sons. Now the goods manufactured by this old expert house not only rival anything made in Europe, but stand at the head of its manufacturing profession.

This establishment, since its introduction of machinery, and its transfer to more commodious quarters at "Highland Mills," possibly turns out more goods than all others of a like business in the State combined, and of such superior excellence as to defy competition.

The Henry Hall goods are made the standard by the trade. Every sort, kind and description of fish line is made at this now world-wide renowned factory, as the Hall goods swept the deck at the Centennial Show, and wherever they have come in competition with foreign goods of decided reputation, the Henry Hall goods—cotton, linen and silk—have at all times asserted their distinct superiority.

In 1867 Mr. Henry Hall, Sr., went to Europe and perfected arrangements to have a certain kind of linen manufactured, specially prepared with the utmost care for the winding of their best lines. This article is sent to them in its crude state, the bleaching, dyeing, etc., being done at the American factory.

We would here say, in Mr. Hall's own words, viz.: "In ordering stock from Europe, we will give instructions. For instance, we want to make an A line, 3,600 yards, to weigh so many ounces, just, and to have a given amount of twist to the inch. Also to be spun from such a grade of flax, viz.: One-third Dutch, to make fine and silky quality; one-third French, to give strength; with one-third Irish—this to be what we call cut flax, *i. e.*, buts and tips cut off."

The most of the fine lines sold to the trade in this city, Chicago, St. Louis, St. Paul's, Detroit and San Francisco, has its manipulating history within the spinners of this extensive factory, from the braided silken thread, cat-gut finished line—so fine in make as to defy the cunning of the most wary brook trout—to that used in the lakes to land a sixty pound bass.

Mr. Hall is an inventive genius, and has patented several machines applicable to this business, which enables the firm to successfully undersell all competitors.

As we stand in converse, he has set in motion 100 braiding mills, used exclusively to make the silk, linen and cat-gut finished lines for bass and trout. The capacity of these machines reaches a product of $12,000 per week. They have in their factory a large run of machines for braiding every description of line known to the art, from the finest silk to the heaviest linen and cotton. The machines are the outcome of the ingenuity of the Hall brain, and the finer grades of goods made by them are marvels of beauty, the braided silk line manufactured by them surpassing anything of the kind hitherto manipulated or that we have previously seen. We had no idea of the delicacy of finish with which these machines turn off the linen lines. These machines are very ingenious, and do their work with the greatest precision. This establishment has attached to it a walk four hundred feet long, and the car machines that work into it are each capable of turning out daily 60,000 yards of line.

All the details of the business are complete, even to the manufacture of boxes, both paper and wood; and creels to wind the line on are prepared by men in this employ. Hence all things leave this enterprizing establishment at its prime first cost. This business presents to view a solid specimen of what the patient and persistent labor of an expert will accomplish. Henry Hall, Sr., will be remembered after his death by the national reputation of his fish lines.

☞ We call the attention of anglers to the advertisement of the rentable salmon rivers in Canada, which the Dominion Government annually offers through our columns. Some of them are very desirable, and an early application is advisable in order to secure them. The London (England) *Fishing Gazette*, in copying from FOREST AND STREAM its article on Canadian salmon river leases, says:

We think we are doing English anglers, who may be thinking of Canada for salmon fishing, a good turn in publishing the above article from FOREST AND STREAM. We shall have more to say on the subject of the Canadian rivers and fishing, both salmon and trout. It is curious to see that the Americans think £60 a big price for the annual lease of a salmon water. We were in treaty a few weeks ago with a gentleman for one season's trout fishing on a stream, not twenty-five miles from London. There was not a mile of water, but we could not get it for £80; and on the Wandle as much as £100 is given for one hundred yards of trout water.—ED.

MOVEMENTS OF THE FISHING FLEET.—Twelve fishing arrivals have been reported at this port the past week, 5 from the Banks with 85,000 lbs. halibut; 1 from Brown's Bank with 35,000 lbs. codfish; 1 from Georges with 25,000 do., and 2,000 lbs. halibut; 3 from Grand Menan with frozen herring, and 2 from Southern codfishing trips. Considerable quantities of round codfish are received daily from the Ipswich Bay fishermen. The Newfoundland herring fleet for this season comprises eight vessels against twenty-six last year.—*Cape Ann Advertiser, Feb.* 7.

SEALS ON THE LONG ISLAND COAST.—Since the coming of the severe weather many seals and sea dogs have appeared upon the Long Island coast, in the vicinity of Atlanticville. A number have been killed by the residents.

KENTUCKY—*Hickman, Jan.* 25.—The disappearance of the ice and snow has brought forth the fishermen who have been frozen out for several weeks, but are very busy now arranging nets, etc., ready for the salmon run. Shipments have been very light, mostly fingerlings caught in air holes. They brought very good price owing to the scarcity of larger fish Business will be lively before long, however. VAL.

TENNESSEE—*Nashville, Feb.* 6.—Our market is well supplied with all kinds of fish. Shad are plentiful and selling at from fifty cents to one dollar each. Some magnificent red snapper and grouper from Pensacola have been brought here lately. Mr. Hillman told me the other day that some gentlemen caught in the Upper Cumberland, 14 very fine bass. J. D. H.

MISSISSIPPI—*Aberdeen, Feb.* 5.—"Red horse fish" are now running in the river, and the exciting sport of "gigging" them will soon be enjoyed to its full extent on the upper waters of the Tombigbee and its tributaries. W. K.

THE DETROIT FISHERIES.—We cannot have gas works, glue factories, railroad tunnels and good fishing all at once. A Detroit correspondent who sends us his plaint of the destruction of fishing about that city writes:

"I have often seen in your valuable paper letters from here about game and those who go after it. There are a great many here that go often, and how much they get is a mystery, as they have so many pockets in their coats they can hide away a large quantity.

I am not much on the game, but for fish I go heavy, still if we have for a few years to come as many detriments in the way as has been for the three years past, there will not be many fish in Detroit River, and as a great many depend on their fisheries for subsistence, I think they will come short.

First we have the coal tar from the gas works, which covers the bottom of the river now for four miles, and is stretching its way clear across; before long it will be all over the bottom of the river. Again, a nasty dirty lot of stuff is poured in the river from the glue works. Again the sewers are bad, but not so much so as gas tar and refuse from glue works; but worse than all is the blasting that is being done near C. S. R crossing. I will admit that the deepening of the channel at that point is of great benefit to navigation of the Western lakes, but I as well as others think that it would be more profitable to do the work in the summer season; days are long, weather warm, and men can work better at that season than they can in the fall, when it is cold, heavy west wind blowing vessels heavily loaded seeking the deepest water; and at that season the westerly winds blowing keep the water lower—from eighteen to twenty-four inches—than it is through the fore part of the season. Again, the blasts will kill all the fish that may be within a reasonable distance. I am credibly informed that the shock from the blasting is sensibly felt on Grosse Isle one and a half mile distant. Now, such being the case, I would wish that the Government would have the work done in the fore part of the season, say commence April 1 and stop Oct. 1; that would allow us up the river to catch fish, if they come up the river as is supposed. For some years past the fisheries on Detroit River are almost a total failure, which, I believe, is owing to the dirt and debris put in the river here and the blasting done below. VERITAS."

SHOVEL-NOSE STURGEONS WHICH TAKE BAIT—*Fernandina, Fla., Feb.* 2.—In FOREST AND STREAM for Jan. 23 Dr. Estes, speaking of the shovel-nosed sturgeon, says, "No instance is known of their biting at the hook." In my boy-days I used to go fishing in the Wabash and in the lower Ohio. It was a very common occurrence to catch "shovel-fish," as we called them, and I have taken the hook from their peculiarly inexpressive mouth. We used a bait made of boiled Indian meal dough, which does not dissolve readily in the water. This bait was used in fishing for the "red-horse" and the "buffalo," both of them suckers. The shovel-fish takes this, and worms also—or used to. I preferred the shovel fish to the other two named, as all his bones were on the outside, and every time I eat shad I wish they were gotten up on the same plan. I think Dr. Estes will find on further inquiry that this sturgeon bites, if it can be said to have the power to bite. In the language of the elder Weller, they have "a werry good power o' suction," however, and go nosing about the bottom of the river, feeding upon such small creatures and substances as can be so taken up. MILES.

This species of sturgeon shovels up the clay, mud, and slime of the river bottoms with his long spade-like bill in search of molusca, crustaceans, larvæ, silt, or whatever may come within the line of his desire, just as the small boy turns over the earth with his spade in quest of angle-worms. He has no mouth, but sucks them into his pipe-like orifice. It is not unlikely that he would eagerly accept the dough bolus of Captain Miles, though he would not be enticed by the Doctor's minnow. His mouth is not adapted to the capture of darting fishes. Bottom fish will take bait of a certain kind when they find it on the bottom. Cats will often suck eggs, and goats and deer have been known to eat tobacco. Exceptions are common every where.

BARBLESS HOOKS.—*Rochester, Jan.* 30.—There is a wrong impression among fishermen in regard to a fish hook needing a barb to hold the fish on. The fact is, the reason why so many fish get off the hook is because the barb prevents the hook from penetrating the flesh and does not get hold enough to stop its being shaken out of the fishes mouth. Not only do you take more fish that are hooked in the mouth, but many more that are hooked foul if the fish strikes at the fly and misses it, or discovers the deception and starts back without striking at it. If he touches the hook he is most sure to be caught. Here is a fact which I think has something to do with the late discussion in regard to the trout knocking flies into their mouths with their tails. At least I think it is so with artificial flies. The trout starts for the fly, and just before he gets to it discovers the deception, turns and starts back, and is caught either in the side or tail, and is then given the credit of having tried to knock it into his mouth.* I got up the needle-pointed hook and have used it for years, and am satis-

fied that I can take one-fourth more fish with it than with a barbed hook. To have them a perfect success they must have proper shape, and the fish will hook themselves.

Yours, SETH GREEN.

* This carries us back to the beginning of the discussion, and the editorial explanation then given. We have several other letters, but the subject is becoming wearisome to many of our readers who are not anglers.

FISH AND FISHING OF OREGON.

PORTLAND, Oregon, Jan. 21, 1879.

EDITOR FOREST AND STREAM:

This far-away State is the sportsman's paradise, both in our own estimation and that of tourists who have been lucky enough to pull a trigger or cast a fly in pursuit of sport. Our fishing season commences as early as April 1, and continues until the heavy rains in the fall, generally about the latter part of October. We do not have the variety of fish here that you have in the Eastern States; in fact we have none but the trout and salmon. Of the trout there are several distinct varieties, viz., the lake trout, which is caught in many different localities, and is a large fish, often weighing twelve pounds. 2. The salmon trout, which we catch in the fall after the first heavy rains, when it follows the dog or hooked-nose salmon up the creeks to devour their spawn, of which they are very fond, and by baiting your hook with this you can catch all of them you would want to carry. Last, but not least, is our royal brook trout, which is an entirely different fish from the Eastern brook trout, inasmuch as it has no red spots on its sides, and is somewhat larger. This species is very abundant, and I could cite instances where as high as 300 of them have been caught in a single day's fishing with flies. They are a very game fish, and are sometimes caught as large as eighteen inches, and weighing from three to four and a half pounds. Their flesh when caught is of a pal rose color, but when cooked is white as "the driven snow." Our salmon when in fresh water rarely bite at anything, but are caught in large numbers by trolling in the salt water bays on Puget Sound, but a day's travel from Portland.

I will be glad to answer any and all questions concerning our shooting and fishing that may be asked of me. WM. LANG.
P. O. Box 514.

—See Bohemian Glass Company's advertisement.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA,

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

THE GUN GORDON CUMMINGS USED.—Somebody asked a while ago what kind of a gun Sir Gordon Cummings used in his Rocky Mountain shooting last fall. A Denver correspondent has kindly informed us that he used mainly an English Express rifle; next to that, a Sharps .45 calibre. His men used the latter altogether, and when he left the field he presented a number of the last mentioned rifles to local hunters of the neighborhood. The preferences of the mountain hunters lie between the Sharps .45 and the Winchester.

THE QUAIL PERFORMANCE.—"If she will she will—and there's an end on't" is true of every woman in the world, and emphatically so of a popular up-town hostess of this city. When she announced her intention of accomplishing the often attempted gastronomic and dietetic feat of devouring one quail every day for thirty consecutive days the boarders smiled incredulously, and when their bantering had no effect, it is rumored, with how much truth we do not know, that they bribed the cook to set before her mistress cunningly prepared *papier mache* birds, and kindred other obstacles that would have effectually disposed of a masculine subject. As a matter of course, however, the thirty birds—unsavory imitations, and all—were disposed of, and the charming heroine came forth from the struggle as triumphantly as Joan of Arc at Orleans, or Madame Anderson at Brooklyn. And now the enthusiastic gentlemen boarders all wear neat bird designs for their scarf pins, the ladies affect quail feathers for their bonnets, and the parlor mantel is adorned with the stuffed effigy of "the last bird" proudly mounted upon a music-box, which plays continually

There is a boarding-house,
Not far away,
Where all the boarders have
Quail every day.

THE NEW INLET AT SHINNECOCK BAY.—Here is a characteristic manly letter from one of the best known and oldest sportsmen in the country to another member of the veteran corps of the united fraternity. It was prompted by the purest personal motives, and deserves publicity, whether so intended, or not. We will take the chances on the possibility of giving offence to either party:

SHELTER ISLAND, Feb. 1, 1879.

Dear Hallock—I notice in your last number the article from our old friend Lane, of Shinnecock Bay, in which he corrects some statements I made in your columns as to the scarcity of duck and geese this season in his bay. I was led into the error by some verbal reports I had heard, but chiefly from reading an article which I clipped from a local paper, and which I presumed was correct. That article stated that the inlet was still closed, and that fowl were scarce, and that fish, clams oysters, etc., had suffered from the lack of the inflowing salt tides. I am glad that friend William has set the matter right, and that fishing and fowling in his bay are now so excellent, and trust that the new inlet may long continue open to furnish food and sport for all. Will Lane is a right good and reliable man, and few can equal his success in fowl shooting; and whoever wishes for sport with the ducks or the bay snipe cannot do better than try their guns in his company.

Yours very truly, MOL.

CANADA—*Belleville, Ont., Feb.* 7.—A few days ago a wild cat was shot by a farmer in the township of Tyendinaga under his barn, where it had taken up its quarters. The animal was a large one, and is the only one which has been seen in this locality for many years. A black fox was shot few miles east of this city recently. This is another species of game which has become almost extinct in this part of Canada. The man who killed the fox refused $25 for its skin.

NEW YORK—*Sawville, Feb.* 3.—A number of panthers are reported in the towns of Watson and Greig, Lewis Co., which join the Adirondacks. Two hunters of Sperreyville, Watson, followed one panther for three days without success. During that time they found two deer it had killed. Returning for supplies they continued the pursuit. Two panthers near Little Otter Lake, Greig, were pursued by a party of hunters without success last week. A deer last week came into a road in the woods, when, meeting a team drawing logs, turned out in the snow. One of the men followed and overtook it without snowshoes, killing it easily with his ax.

H. W. H.

TENNESSEE—*Nashville, Feb.* 6.—Messrs. H. C. Pritchett and R. Getterings had some fine sport near Dixon Station on Monday and a part of Tuesday last. They bagged 104 quail. Mr. Pritchett shot over his two puppies, which Gettings has been training, and G. had out Fisher's black dog. So abundant are quail that they are selling in our market from 50 to 75 cents a dozen. J. D. H.

KENTUCKY—*Hickman, Jan.* 25.—The weather has been so severe for past few weeks that geese and ducks were driven to the fields for food, but were very wary and wild; but few were shot. Messrs. Baird, Goodman and Jamison, of Nashville, and Parker, of this place, killed 375 ducks and 16 geese in three or four days' shooting on the Lake. Mr. Parker shipped 3 bbls. to Cincinnati, and the week before 5 bbls. to New York. Messrs. Roger, Parker, Jamison and N—— bagged 6 turkies in a day's hunt. Mr. Fitzgerald, clerk of steamer *Golden Crown*, while waiting for the ice to run out of the river, in company with Mr. Frenz, bagged 15 or 20 quails in an evening's shoot. Two large white swans were shipped yesterday to a party in Nashville. VAL.

OHIO—*Wapakoneta, Feb.* 6.—I had a pleasant call from Prof. Linden, of Buffalo. He spent a week here in Dec. (the last week) quail shooting and gathering additions to his collection of birds. A few ducks have made their appearance here on the river and some at the big reservoir at St. Marys, this county (the largest artificial lake in the world, covering nearly 18,000 acres), where we have a piece of land, shooting-box, stable, boats, etc. We have put out a large quantity of wild rice, both in seed and roots. Cannot say yet what success will attend its growth. I am using mercurial ointment on my gun and find it just the right thing to preserve a gun from rust. Thanks for the information received through the FOREST AND STREAM. C. P. D.

Ravenna, Feb. 2.—On account of the recent cold weather and deep snow, quail have suffered a great depletion of their number. Rabbits abundant but shadowy. Rev. A. M. Hills recently bagging 13 in one day. D. D. L.

ILLINOIS—*Carthage, Feb.* 8.—Since our stringent game laws have come into force again in regard to chickens and quail, our sportsmen have stopped their almost ceaseless warfare against them, and which they have kept up ever since the law expired. Ducks and geese will soon begin to arrive in thousands, so our Nimrods will not long be idle. Much fine sport is anticipated for them the coming spring. The idea of sowing wild rice in lakes and rivers as food for wild game is becoming very popular in this Western county. Many prominent sportsmen living near and on the Mississippi River intend to stock the many sloughs and lakes in their respective localities this spring with this excellent food for wild game. So mote it be. GAY.

IOWA STATE SPORTSMEN'S ASSOCIATION.—The next annual tournament of the Iowa State Sportsmen's Association is to be held at Marshalltown, May 20, 1879. A large number of prizes have already been secured for the shooting competitions. Local clubs are invited to affiliate with the State Association, and to send their representatives to the convention. The president is Mr. L. L. DeLano, Atlantic; the secretary, Mr. Samuel Lowe, Des Moines.

KANSAS—*Wakefield, Clay County, Feb.* 2.—We have had good quail shooting all winter, and grouse are very plentiful indeed, but hard to get at, and the only way we can get near them is with a horse and low wagon that we can slip off when we drive in among them. For the information of some of your more Northern readers, I would say that geese are beginning to pass by in large flocks, and we are looking out anxiously for the "green-heads," who were here in abundance one week later than this last year. We look forward to the receipt of your paper with as much pleasure as a boy does to his first circus, and wonder how we have managed without it for so many years. M. D.

COLORADO—*Gilroy, Jan.* 27.—*Editor Forest and Stream:* We have been having some grand shooting here this fall and winter. Quail, snipe and duck have been very abundant. I was out a couple of weeks ago after snipe, and with a party of four managed to bag 161 in about five hours. Was out last week after ducks at "our duck pond," which bears the plebeian title of "Soap Lake," and brought to grass fifteen of the toothsome teal and one solitary canvas-back, which are very scarce here. At some future time I will try and write you an account of our yearly fishing trip, which to some of us here is an event looked forward to with the greatest of pleasure.

Denver, Feb. 5.—First flock of blackbirds appeared from the south Jan. 26; first flock of wild geese going north Jan. 27. Weather then warm and spring-like. February 4 another snow storm, followed by cold at night. B.

NEVADA—*Columbus, Esmeralda Co., Jan.* 28.—I have had one little duck hunt this season, killing twenty-four, mostly mallard, bringing some of them down at 85 paces, with four shot, with a 30in., 9½ lb., 10-gauge M. L. gun, made to order by Allen & Co. (now Forehand & Wadsworth), and the strongest shooting gun I ever fired. One of the ranchers had a 12-gauge B. L. Clabrough, which was his boast and the admiration of the valley; but its glories, departed when brought in competition with the one I carried there. D. S. L.

THE DITTMAR POWDER—*New York, Feb.* 4.—*Editor Forest and Stream:* At a meeting of the Ouleout Sportsman's Club, held in the village of Franklin, New York, January 1, 1879, it was, we regret to say, found necessary for the comfort and enjoyment of many of its most beneficial and respected members to prohibit the use of the Dittmar powder from all of its club shoots and contests. Perhaps this may be an extraordinary case, and, again, perhaps here it might be used by extraordinary reckless, and also green inexperienced hands, when with careful sportsmen, experienced in the use of it, it may be as safe as any black powder made.

OULEOUT SPORTSMAN'S CLUB.

KAY'S SUBSTITUTE FOR GLASS BALLS.—A. B. Kay & Co., of Newark, offer to the public their "new and perfected ball," which they pronounce the superior of any glass ball in use, as it breaks into small fragments when struck by one or two shot only, and is readily seen by the shooter, scorer and judge from their position at the score. In a card which the manufacturers have sent to us for publication they say that in case a ball be slightly hit by a spent shot, or by the use of shot which are too small for long rises, so as not to break into fragments, they must not be condemned. On examination they will be found to be punctured, with many cracks radiating from the puncture. These balls are of a uniform thickness of one-twelfth of an inch, of a sombre amber color, and readily distinguished in their transit through the air. Their durability is not in the least impaired by the solubility of their material, and it is one of their chief recommendations that they can be used without restriction anywhere, even on the finest lawn, as they leave neither injurious nor unsightly refuse.

AN ODD FREAK.—*Chatham Village, Dec.* 25.—*Editor Forest and Stream:* A sportsman of our village, who for many autumns has traversed our woods and fields in quest of game, informs me that though this season has been an uncommonly poor one for pigeon shooting, yet it has been better than ordinary for partridge. This gentleman relates (and he is willing to vouch for the truth of what he says) how his dog one day flushed a partridge which lit in a tree about five rods off. He brought his gun to his shoulder and was taking aim when a second one started up and flew directly toward where the first had lighted. My friend, possessing the quick perception and steady nerve of a practical sportsman, saw that if the bird on the wing continued his flight in that direction he would approach very nearly to the bird upon the limb. So, with his eye along the barrel and his finger upon the trigger, he holds his fire for a moment, when, sure enough, the two birds are in a line with his sight, covering the muzzle of his gun, and by one discharge he bags both. This feat I conceive to be possible, but it is of rare occurrence—once in a sportsman's lifetime is about all—for everybody knows that you cannot make birds fly just where you will. I have curiosity enough to inquire of each reader of this incident whether anything like it has ever happened in their experience? Such exploits with the gun may be more frequent than I am disposed to imagine. A chapter or column now and then of incidents of an uncommon character like this, either in fishing or hunting, would make very interesting reading. Recent numbers of the FOREST AND STREAM have contained some pleasant allusions to the habits of the trout, and it seems still to be an open question as to whether they bite with their head or their tail, or both. Now let us learn whether it is common or not for a bird to fly right in a marksman's eye for the pleasure of being shot. HIX.

SUMMER WOODCOCK SHOOTING.—*Editor Forest and Stream:* I am quite an old shooter, and must give you my experience for the past two years against summer woodcock shooting. The summer of '77 was unusually hot and dry for this country. I did not venture out after the noble cock, although my friends told me there were a few birds to be found after the close season expired, July 4. I heard of several being killed before it was lawful to do so. The only reasonable excuse that could be advanced for this was that the dry weather of July would drive the birds all away, and if not shot in June they could not be shot at all. It was too hot for me, and although my young dogs needed exercise and training, I wisely gave it up and said let the birds go, they may come back again, at least a few of them. October was a beautiful month; weather delightful. Fall woodcock are truly noble game. I was out quite frequently and bagged about thirty-two cock. I shot five or six at a time of a few hours' tramp. My dogs improved, and I did not suffer with excessive heat. The birds were large, full-grown, strong flyers and very delightful eating, and indeed in every respect in marked contrast to summer birds.

The summer of '78 was more favorable for the birds to remain here longer. It was not so dry, yet exceedingly hot and very unfavorable for hunting, as I have every reason to know, and the sequel will prove. I knew of a favorite locality were birds were quite plenty, and was persuaded to go out and try them as soon as the close season expired. I drove my waggon to the ground and met a friend there by previous appointment. It was very early in the morning, but one of the hottest days I ever experienced. The ground in many places was very soft, which rendered walking difficult; the cover thick and shady, very fortunately, and the game reasonably abundant, yet I soon became so exhausted by the intense heat I could scarcely walk. I think myself a man of considerable endurance, a tolerably fair shot, but after several "brilliant misses" I gave it up with the magnificent result of one poor, lean, featherless little bird that made me heartily ashamed of myself and to resolve never to do the like again. I came home a sick man and immediately dispatched a servant for the doctor. I was prostrated for two months with chills and fever, and the doctor said I got the malaria in the swamp after the woodcock. It served me right, and I fervently hope every body will be served in the same manner that shoots the poor, miserable birds in the summer. I was advised to go to the "Mountains," which I did, and the change was very beneficial, as I've not had a chill since my return. I felt quite like myself again, strong and well, when the beautiful October days came back. I could not resist the great temptation to try my old haunts for the long bills. I was abundantly rewarded. I shot about forty at different times and never saw such fine birds in my life, and such sport as they afford in the fall is not excelled, in my estimation, by any other game bird. M.

QUAIL NOTES FROM VIRGINIA.

CHARLEMONT, Va., Feb. 1.

MR. EDITOR: With the old year, according to the new regulations, closed the quail season in this State. Just at a time when that sporting bird is getting even more capable of taking care of himself from pot-hunters and negroes, the wiseacres who sit in the capitol at Richmond have ordained that he is to be let alone. An excellent move in that direction was made in '77—namely, the alteration of the opening day from Oct. 15 to Nov. 1, giving thereby the half-grown birds more time to mature and the frost more time to cut the weeds. For some reason, however, incomprehensible to all,

the old date was last year resumed, and the January shooting, when birds are wild and go like bullets, was abolished. So there is nothing for it but to resign the trusty barrels to their accustomed corner—unless, indeed, your lot be cast upon the sea coast or upon the banks of any of the larger rivers, where geese and duck resort.

Quail have been, I think, as plentiful as usual in the southern portion of the State. The best day the writer assisted at produced seventy odd head of birds, besides rabbits and woodcock, to four guns. The latter bird has been wonderfully scarce this year in his usual haunts, and as the country rises to the Blue Ridge, it is the merest chance if you ever stumble on one.

Sporting dogs are very plentiful in Virginia, but really good pointers or setters are not by any means common, and well-broken ones are rarer still. I have shot for a great many seasons in the State and over a great many different dogs, but have never yet had the good fortune to see one that could conscientiously be advertised as "broken." I do not presume to say that such a *rara avis* could not be found, but simply state that I have never seen one. There are an immense quantity both of pointers and setters in the State, such as they are after generations of in-breeding, careless raising and general neglect. It can scarcely be expected that in the universal, happy-go-lucky state of affairs that has always existed in this part of the world, the kennels (if one may burlesque the word) can have escaped contamination.

The Virginia setter as often as not plays the part of family watch-dog, sleeping on the porch throughout the coldest nights of winter. He is trained by day to drive the chickens and calves out of the yard, and all the time he has to himself he employs in pursuing rabbits with the most plebeian companions he can collect. This affectionate and domestic quadruped always has his three meals a day with the family, while his unrestrained amatory rambles are not infrequently productive of torn ears and peppered hind quarters. Who can wonder that when the season comes round he should be the cause of placing much bad language to his master's account and ruin the first week of the shooting? At one time he is dumped with the butt of a gun, kicked or shot for chasing fur; at another he is urged in the excitement of the moment to pursue a hare that his owner has hit but failed to stop. So frequently is Master Ponto in these parts a devourer of dead birds that on one occasion I was out with five setters, every one of whom accounted for a brace before the day was over. It is a laughable and undignified spectacle to see a stampede of elderly gentlemen, with brandished guns, in full cry after a cunning dog who is chewing a bird in his flight.

It is not uncommon to hear people say that in these days of breech-loaders the "down charge" is unnecessary. Can anything be more absurd? Imagine yourself, brother sportsman, enjoying that very cream of quail shooting, when a covey after the first rise has scattered beneath the tall stems of an oak or chestnut forest. Huddled up like feathery balls upon the dry leaves, they dash off, one by one, on every side of you, sometimes before the most experienced and sagacious old pointer has got so much as a whiff of the delicious odor. How is it, then, to have even one dog go blundering on after your first shot, much less two or three of them?

Sportsmen in a thinly settled country who are busy in agricultural pursuits, who have not much opportunity of mixing to any extent with their fellows, and who are not bound (as in England for instance) by an unwritten sporting code that conventionality forbids them to break through, are very apt to get slovenly in sporting matters. It is to the cities that American sport looks for everything that tends to forward and elevate it. I cannot help thinking that pointers and setters must eventually shift their headquarters to this side. The way in which they have been (partly from necessity) shelved of late years in England, and the utter ignorance that the rising squirearchy of that country are growing up in concerning them points to that conclusion.

The use of the pointer and the setter in England, as every body knows, has all but become a thing of the past. Short stubbles and high farming have left the birds nothing but turnip fields for a refuge, and even during the first part of September when they will lie to dogs it is equally, or more, easy to walk them up, so it would perhaps be unfair on the present generation of English sportsmen to blame them for ceasing to cherish breeds that would at any rate be no practical help to them in the field. The grouse shooting, of course, for a week or two keeps up a demand for setters more particularly, but yet as one thinks of all this it is hard to shake off the idea that the great field trials in Wales, at Shrewsbury, and elsewhere, with their great entries of highly broken and high pedigree dogs have come rather late in the day, and are rather sad mockeries of a time that has passed away. We over here, however, can look at things from a more cheerful point of view. Field trials, perhaps, are in their infancy, but yet they have a great and useful future before them. The pointer, the setter and the spaniel is not with us merely a useful adjunct at the best, or the possible winner of a cup, but he is as necessary to us as our guns themselves, and hundreds of thousands of acres of prairie, stubble, and woodland holding game would be of little account without the valued companions of our sporting expeditions.

I don't know anything that so readily produces that uncomfortable feeling within me that is supposed to be common to most of us a hundred miles out from Sandy Hook as being asked that jarring question of "Who beat?" after a day's shooting with friends. It should be doubly irritating to the true sportsman if he happen to have shot straighter than the rest of the party. This district boasts some few of as good shots as ever pulled a trigger, but the way these veterans shoot and claim one another's birds would make a stranger suppose that competition was the sole object of the day. The ordinary laws of courtesy in shooting as elsewhere observed with regard to single shots, etc., seem to be unrecognized, and to crown all, the odious question of "Who beat?" invariably greets the returning sportsmen and encourages the random jealous shooting. RINGWOOD.

DITTMAR POWDER.

FAIRLAND, Ind., Jan. 27, 1879.

EDITOR FOREST AND STREAM:

I have used the Dittmar powder from the commencement of the season to its close in quail shooting, with better results than I have ever had before; and the absence of smoke and dirt are considerations of paramount importance to the sportsman. All sportsmen have experienced the annoyance of the smoke from the first barrel hanging like a curtain between him and the birds fired at, so that it was impossible not only to use the second barrel, but even to know if the first one had been effective. This is entirely obviated by the use of the Dittmar in the first barrel, if it is not desired to use it altogether. For a number of days I pursued this course, but I so disliked the shock of the black powder in my second that I finally abandoned it entirely. When using the black powder I used the Orange Ducking No. 4, which is far the most pleasant of any of the black powders I have used.

If your correspondent and all others who may wish to avoid the smoke, dirt and shock incident to the use of black powder, will try the C. Dittmar, loading about the same in all respects as the most approved method of loading the black powder, I do not hesitate to say that it will be found incomparably more pleasant, and the results entirely satisfactory. I only see one drawback to its general use in the field, as well as in glass ball shooting by professionals like Bogardus, Carver and others, namely, its expense. Most sportsmen use for ordinary field shooting the FG rifle powder that costs but forty cents per pound, and do not care to pay one dollar per pound for a fine powder, however free it may be from the faults complained of in the black powder.

Apropos of quail shooting: Your correspondent's sketch of "Quail Shooting in West Jersey" was very readable and highly interesting, but it seems to me that in sketches of that kind care should be taken not to violate any of the well-known facts pertaining to that kind of sport. Shooting nine quail out of a covey of ten is a little overdrawn I should think. In an experience of eighteen to twenty years quail shooting, with companions whom I know to be good shots, and more than an average at that, I have never failed to see a few escape, at least three or four, especially in woodland or in the neighborhood of thickets. It is a fact that no sporting writer whom I have ever read, not even Forester, has ever mentioned, I believe, that in quail shooting, however well the birds may lie, you never succeed in shooting more than five or six before the balance of the covey take the alarm and fly away. I have tried the experiment after marking the birds down, and, when they were partially scattered, of shooting two or three birds, then, retiring some distance, reload and proceed again to pick up two or three more birds. But even these tactics, so very successful in grouse shooting, fail utterly on quail, and that, too, when they "hold their scent." So that you may have to tramp over the same ground many times before flushing a bird, and that, too, when your dogs shall utterly fail to give any notice of the presence of birds. C. W. W.

WATERPROOF SHOOTING SUITS.

PHILADELPHIA, Jan. 9, 1879.

EDITOR FOREST AND STREAM:

In a recent issue of your paper I notice some suggestions made to the manufacturers of waterproof clothing that are well worth their attention. It is to be hoped that they will act upon them, for, whether intentionally or not, they, in a certain sense, ignore the wants of sportsmen both in the make-up and color of their goods. Starting, for a light and serviceable gun coat what do we find except white and black? The former may do among the snow and ice, but how near under any circumstances will you get to wild-fowl in a black one? There is a coat sold as waterproof, the material of which is called flock, and in various colors; price, without cape, $6 to $7. If these goods were really waterproof they would be just the thing, but, alas! they are a delusion and a snare, and we advise all sportsmen to stand from under. The one we secured was of the favorite dead-grass shade, and we rejoiced with exceeding joy until the fact leaked in, as well as out, that though there may be some things that will turn water, it is not one of them The English gossamer coat is a splendid article, but expensive and of the wrong color. They are made without gloss, but this amounts to nothing, practically, as the rain puts on a polish instanter. What we need is a thin, soft and tough material, that will retain its color when wet, thoroughly waterproof, and the proper shade for marsh or point shooting, as this covers all requirements, save, as before intimated, among the ice, and there a perfectly white one is preferable. A light and convenient rig for snipe shooting would also be a very desirable garment, and should consist of a short boot—say six to eight inches—with regular pantaloon attachment. The usual black material should not be used for the latter, as it draws the sun fearfully, and will not stand chafing for any length of time. There is a cloth-faced goods that is admirable for the purpose, but any we have been able to find in this city is too heavy to tramp in. It would be excellent, however, for duck shooting, as a person could sit in a damp boat, or drop on his knees on a wet marsh with impunity; and besides, there is great warmth in it. The old plan of wading about in shoes or defunct boots may suit some, but the majority of sportsmen prefer to keep dry—and very sensibly so. We feel sure, therefore, that if the manufacturers of rubber goods would study the wants of sportsmen, acting under the direction of some really practical person, they would be amply repaid for their trouble. As to ordinary shooting suits they seem adapted to all tastes. Some are a mass of pockets, the utility of which no fellow can find out. In fact, I doubt if it were ever intended we should know more than that they are there, and for some wise purpose—faith does the rest. On the pocket question I am in the same quandary as "Jake," of New Haven, and with him believe that two-thirds of them could be dispensed with to advantage. And now, while in the direction of bodily comforts for the angler or sportsman, allow me to suggest the propriety of some of our leather-goods manufacturers getting up genuine Indian tan buckskin suits similar to the English. They are infinitely superior to any kind of cloth for warmth and wear, and have only to be worn once to be fully appreciated. I am aware that leather is used as a lining, etc., but as far as our observation extends, they are not what we are after.

H.

RUST PREVENTIVE.

MONTPELIER, Vt., Jan. 20, 1879.

EDITOR FOREST AND STREAM:

My attention has lately been called to the substance called "Cosmoline (*Unguentum petrolei*), one of the products of petroleum, and my object in writing you is to ask whether you or your readers know anything in regard to it as a rust preventer. It is said to be absolutely free from moisture, and to possess a strong non-affinity to both moisture and oxygen; to keep in any climate, and not to ferment or become rancid. It comes in the form of a soft paste, which I think very convenient to carry about and to use on guns; but I presume it might be cut in turpentine, or something of that nature, and used like oil. Can you enlighten me on that point, and also as to the effect salt water would have upon it? I am using it on guns with good results thus far, but it has not yet been subjected to any test sufficient to demonstrate its entire adaptability to all the requirements of the case.

Yours, MAJOR.

We have not used this substance, but perhaps some of our correspondents have.

PIGEON MATCHES.

RAYMOND SPORTSMAN'S CLUB—*Boston, Feb.* 7.—The Raymond Sportsman's Club held their regular field day at glass balls, and was well attended, the day being glorious for the occasion. The club is in flourishing condition, and will hold regular field days twice a week.

WHISTLER.

MINER ROD AND GUN CLUB.—*Springfield, Feb.* 6.—First handicap match at 27 pigeons; 1¼ oz. shot, 80 yards boundary:

Miner....27....1 1 1 0 1 1 1 1 0 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 1 1 1 23
Aery......25....0 1 1 1 0 1 1 0 1 0 1 0 1 0 0 0 1 1 1 1 1 1 1 0 1 0 1—17
Englert...28....1 1 1 1 1 1 1 0 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1—23
Judge....28....0 1 1 1 1 1 0 1 1 0 1 0 1 1 1 1 1 1 0 1 1 1 0 1 0 1 0—19
Davis.... 25....1 1 1 0 0 1 1 0 1 1 1 0 0 1 0 1 0 1 1 1 1 1 0 0 0 0 1—16
Miller....28....1 1 0 1 1 1 0 1 1 1 1 0 1 0 1 0 1 1 1 1 0 1 1 1 0 1 0—19
Stears....25....1 0 1 1 1 0 0 1 0 1 0 0 0 0 1 0 1 1 1 1 0 1 1 0 0 1 1—15

NEW YORK—*Buffalo, Feb.* 4.—At Byron Schultz's; sweepstakes, 21 yards rise; weather raw and cold; ground traps:

J P Fisher	1 1 1 1 1—5	C Gerber, Jr.	1 1 1 1 0—4
T Collins	0 1 1 1 0—3	G Vine	1 0 0 1 1—3
E Smith	1 1 1 1 1—5	H Twitchell	0 1 1 1 0—3
W Coombs	1 1 0 1 1—4	A W Eggert	1 0 1 0 1—3
G K Smith	0 1 1 1 0—3	P Heinz	1 1 1 1 0—4
S E Green	1 1 1 1 0—4	J Beier, Jr	1 1 1 1 0—4
Jas Rafferty	1 1 1 1 1—5	C Suckow	0 0 1 1 1—3
Geo Marsh	1 1 1 1 1—5	J Franklin	0 0 1 0 0—1

Ties of five, 25 yards, won by Rafferty; Coombs, Heinz and Beier tied on two at 26 yards, the latter winning with three at 31 yards; Collins and Smith tied again and divided. UNCAS.

FOUNTAIN GUN CLUB—*Parkville, L. I., Feb.* 5.—Regular monthly handicap shoot for a gold badge; shot for at seven birds each; handicap rise, 80 yards boundary; from H and T traps; 1¼ ounces of shot; the club rules to govern:

A Eddy	27 yds	1 1 1 1 0 1 1—6	Miller	23 yds	1 1 1 * 0 0 1—4
L Bohling	25	1 1 1 1 0 1 1—6	Conover	27	1 0 1 0 1 0 0—3
Lemken	23	0 1 1 1 * 1 1—5	White	23	0 1 1 * 0 0 1—3
Carlin	21	1 1 0 1 0 1 1—5	Clark	19	0 0 w
Kearney	27	1 1 0 1 * 1 0—4			

Ties on six.

Eddy .... 1 * 1—2 Bohling .... 0 1 0—1

Same Day—Sweepstakes, $2 entry, at 3 birds each, 25 yards rise; had eight entries, making $16; divided, $8, $5 and $3:

Smith	1 1 1—3	Bohling	1 * 0—1
Conover	1 1 1—3	Lemken	* 0 1—1
Carlin	1 0 1—2	Garrett	0 w
White	1 0 0—1	Madison	0 w

Smith and Conover divided.

Brooklyn, Jan. 10.—Lexington Gun Club monthly shoot; nine competitions; blue rock pigeons; H. and T. plunge traps, twenty-five yards rise, one hundred yards boundary. The following is the score:

J Gutierrez..........1 1 1 1 0 1 1 1 1 1 1 0 1 1 1—13
E Booth..............1 1 0 1 1 1 1 0 1 1 1 0 1 1 0—11
C Havern.............0 1 1 0 1 1 1 1 0 1 1 1 0 0 1—10
S Craft..............1 1 1 0 1 1 0 1 0 1 1 0 1 0 1—10
W Goodman............0 0 0 1 0 1 1 1 1 1 0 1 1 0 0—8
C M Coons............1 1 0 0 1 0 1 1 1 0 0 0 1 0 1—8
R Blinn..............1 1 0 0 0 1 1 1 1 1 1 0 0 0 0—8

Cyprus Hills, L. I., Feb. 10.—Fifty birds, 28 yards rise, 80 yards boundary, for satisfaction and suppers:

Allan P Nichols (Mr Nichols was handicapped to 30 yds)—1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1—48

Loyd Foley (of the Philadelphia Gun Club)—1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 0—45

Ellis Livingston (Chauncey Club)—1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—47

Owen E. Newton (Hyde Park Gun Club)—1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 1 1—46

Referee, E. Wm. Hudson.

Mr. Nichols' shooting has never, to our knowledge, been equaled, although the birds favored him. In the shoot-off between Newton and Livingston the latter won by killing three birds straight, over the two of Newton's. A match to be shot next week, between Mr. Nichols and Mr. Livingston, is looked forward to with interest. E. HUDSON.

SHOOTING TOURNAMENT AT SYRACUSE.—At the meeting of sportsmen held at the Astor House last December, arrangements were made for a tournament, to be held at Syracuse, N. Y., Feb. 20, 21 and 22. It is probable that a large number of sportsmen from different parts of the country will be present to participate. There are four regular contests arranged for purses of $800, $400, and $200 and $1,000, respectively, each a purse except the last, which is divided into five. The manager is Mr. Charles R. Wright, of Syracuse.

JERSEY CITY HEIGHTS GUN CLUB—*Marion, N. J., Feb.* 8.—Regular competition for 20-ball gold badge from three Bogardus traps:

A Heritage......21 yards....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1—19
G B Eaton.......18 ....1 0 1 1 1 0 1 1 0 1 1 1 1 1 0 1 1 1 0 1—15
R C Johnson.....18 ....0 1 0 1 0 1 0 0 1 1 1 0 1 0 0 1 0 1 0 0—9
J Powell........18 ....1 0 1 0 0 1 0 1 1 1 1 1 1 1 0 0 0 1 1 1—13
J Cole..........18 ....1 0 1 0 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1—16
A Andrews.......18 ....0 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 0 1 1 0—15

JACOBSTAFF.

THE SOCIAL GUN AND RIFLE CLUB OF PHILADELPHIA."—*Editor Forest and Stream:* In the otherwise full and correct account of the match, Brooklyn vs. Philadelphia, published in the last number of your paper, you make the serious and unfortunate error of calling the club from this city the "Philadelphia Gun Club." You should have said, "The Social Gun and Rifle Club of Philadelphia." The Philadelphia Gun Club is an older and entirely distinct organization, having on their roll many of the most expert shots in this part of the country. We are very sure they will feel annoyed at being named in a match with which they had nothing at all to do; the more especially so when the score ascribed to them was so far from winning. By kindly publishing this correction you will greatly oblige "The Social Gun and Rifle Club of Philadelphia."

To mistake a man's name is to give unpardonable offense. We therefore cheerfully make what restitution we can by promptly correcting the error. But why do our Philadelphia friends assume such a voluminous appellation? A name one-fourth as long would be handier in every way.

ALABAMA—*Mobile, Jan.* 30.—Match for championship of the city; 21 yards, 80 yards boundary, plunge traps, Gulf City Gun Club rules:

Tunstall..........1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—14
Vass..............0 1 1 1 1 1 1 1 1 1 1 1 1 1 1—14
Holt..............1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—14
Bush..............1 1 1 1 1 1 1 1 1 1 1 1 1 0 0—13
Scales............1 1 0 1 1 1 1 1 0 1 1 1 1 1 1—13
Prichard..........1 1 1 1 1 1 1 0 1 1 1 1 1 1 0—13
Ladd..............1 1 1 1 1 0 1 1 1 1 1 1 1 0 1—13
F P Davis.........1 0 1 1 0 1 1 1 1 1 1 1 1 1 1—13
Goodall...........1 1 1 1 1 1 1 1 1 1 1 0 0 0 1—12
Carre.............0 1 1 0 1 1 1 1 1 1 0 1 1 1 1—12
Harwell...........1 1 1 1 1 0 1 0 0 1 1 1 0 1 1—11
Semmes............1 0 0 1 1 1 1 0 1 1 0 1 1 1 1—11
Priester..........1 0 1 0 1 0 1 1 1 0 1 0 1 1 1—10
Alexander.........1 1 1 0 1 1 1 0 1 0 1 0 0 1 1—10
Goode.............0 0 1 1 0 1 1 1 1 1 0 0 0 1 1—9
W Sheffield.......1 1 0 1 0 0 1 1 0 1 1 1 1 0 0—9
F Sheffield.......1 1 1 0 1 1 0 0 0 0 1 1 1 0 1—9
Primo.............1 1 0 1 0 0 1 0 1 0 1 1 1 0 1—9
Nason.............1 0 1 1 0 1 0 1 0 1 0 1 1 0 1—9
George............0 0 1 0 0 1 0 1 1 1 1 1 1 1 0—9
Danne.............1 0 1 0 1 1 0 0 1 0 0 0 1 1 1—8
Gordon............1 1 1 1 1 1 0 0 1 0 0 0 0 1 0—8
D W Davis.........0 0 0 1 1 1 0 0 1 1 0 1 0 1 1—8
Farley............0 0 1 0 0 1 0 0 1 1 0 0 0 0 0—4

Ties of 14 shot off at 26 yards, miss and out, won by Vass with 3.

Sweepstakes at 21 yards:

Vass	1 1 1 1 1—5	Holt	1 0 1 1 1—4
Sheffield	1 1 1 1 1—5	Ladd	0 0 1 1 1—3
Bush	1 1 1 1 1—5	Gordon	0 1 0 1 1—3
Cottrill	1 1 1 1 1—5	Tompkins	1 0 1 1 0—3
Prichard	1 1 1 0 1—4	Carre	1 1 1 0 0—3
F Davis	1 1 1 0 1—4	Goodall	1 0 0 1 1—3
Harwell	1 1 1 1 0—4	Alexander	1 0 0 1 1—3
Scales	1 0 1 1 1—4	Primo	1 0 0 1 0—2
Tunstall	1 1 0 1 1—4	W D Davis	1 0 0 0 1—2

Ties of five shot off at 26 yds., miss and out, won by Bush; Prichard, Scales, Tunstall and Holt tied again on 3 at 26 yds., Scales winning with 3 at 26 yds., and Tompkins won with 3 at 31 yds.

Mr. Vass has accepted a challenge from Mr. Bush for a match at fifty birds and the championship.

ILLINOIS—*Chicago, Feb.* 7 *and* 8.—Sweepstakes match at the Exposition Building; purse $100, divided into prizes of $50, $30 and $20; 20 single balls, 3 traps:

Gillespie..........1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—18

Willard	0 1 1 1 0 0 0 0 0 0 0 1 1 0 1 0 0 1 1 1— 9

The shoot-off for second money, at five balls, resulted in favor of Price, who broke them all, the others missing one each. Gardner then beat Kleinman for third money.

Match between Master Eugene Bogardus and George Buzzard resulted in a tie of 47 out of 55.

Match between Bogardus and Abe Kleinman, Bogardus having broken 50 single balls straight, to decide the stand-off in the Gilmore's Garden match:

Bogardus.

COLUMBIA COUNTY POULTRY SHOW.—*Chatham Village, N. Y., Jan.* 30.—*Editor Forest and Stream:* The third annual exhibition of the Columbia County Poultry Association which was held in our village last week, afforded an unusually attractive centre for the poultry fanciers of the county. Indeed, it ought, in strict justice to the members of the association, to be observed that the interest in their very worthy enterprise was not confined to the county by any means; it extended over the line into Massachusetts, one hundred of the entries coming from Pittsfield alone, of which D. G. Roberts sent fifty-eight. This gentleman was the largest exhibitor. He was awarded twenty premiums, and most of them were the first. G. D. Millington, of North Bennington, Mass., entered eight coops and took several premiums. F. W. Tanner, of West Stockbridge, Mass., was awarded the 1st premium on Dominique chicks. Our local exhibitors received a fair share of the awards. Geo. E. Drummond, the largest exhibitor residing in the village, with twelve entries, took ten premiums; Dr. M. L. Bates, of Canaan, had eighteen competing entries and bore off seven premiums. The perceptible increase in local representation as contrasted with previous years, indicated a growing interest in poultry-breeding. I was about to add a few lines advocating the formation of county poultry associations, but the benefits accruing from them must be manifest to the most superficial mind that will take the pains to reflect for one moment upon them, therefore I forbear. Our village taxidermist, Theodore Schurr, won five premiums on his splendid display of stuffed animals and birds. Particularly noticable among his animals was a wild cat of the bay lynx species, which was shot early in the winter on Mercer Mt. Specimens of this sort are occasionally found among the Berkshire hills. They are said to be cowardly, seldom if ever attacking anything larger than a pigeon, and subsisting chiefly on quails and partridges. This particular one looks extremely wild and fierce, and weighed when killed seventeen and a half pounds. HIX.

WISCONSIN STATE HORTICULTURAL SOCIETY.—*Madison—Editor Forest and Stream:* The State Horticultural Society, now in session in this city, have chosen the following officers for the ensuing year: President, J. M. Smith, Green Bay; Vice-President, C. H. Greenman, Wauwatosa; Secretary, A. L. Hatch, Ithica; Recording Secretary, F. W. Case, Madison; Treasurer, Matt. Anderson, Cross Plains; Superintendent, D. T. Pilgrim. The session is a harmonious and interesting one. ROVER.

February 6, 1879.

—A subterranean forest of oaks has been discovered in Germany in a valley watered by the river Fulda. Dr. Maesta, a Government geologist, who made the discovery during an official exploration, pronounces the trees to be of enormous size, and to date back in their origin to a remote period. They are entirely buried beneath the surface of the valley, but several hundred of the outermost trunks that border on the banks of the Fulda have been laid bare by the gradually encroaching current of the stream. The wood has acquired a deep black color, and has become exceedingly hard. It is believed that it was excellent material for sculpture. One trunk that was found in the bed of the river has been removed to Berlin to be placed in the National Zoological Museum. Whether these trees are of a species now in existence or one that is extinct has not been determined.

National Pastimes.

OLYMPIC CLUB.—The Olympic Club, of San Francisco, Cal., has recently moved into its new rooms, which all the papers of that city unite in commending as models in every way. The gymnasium is fitted up with all kinds of apparatus and appliances for muscular development. The club is now in excellent condition, and everything is auspicious for its future. One commendable feature which we may look for before long is the extension of the privileges of the club to the ladies.

BOW-STRINGS.—We have received the following note from Messrs. Conroy, Bissett & Malleson, with a sample of their bow-strings—very fine:

MR. EDITOR—We notice in your last issue a very admirable article on archery, in which you mention that German and Belgian bow-strings are the best. While we admit that heretofore such has been the case, we believe that our new strings, the loop of which is covered with leather, are superior to any imported. We broke 22 imported strings on one of our split bamboo bows. These seem to stand. Please give it a trial, and oblige, CONROY, BISSETT & MALLESON.

BUTTS FOR BOTH IN AND OUT DOOR ARCHERY.—*Editor Forest and Stream:* Will you please publish the following description of the butts used by the Buffalo Archery Club in answer to the numerous inquiries I have received:

Procure sufficient of some cheap material like coffee bagging, to make a mattress 8 ft. square and 8 in. thick; stuff with hay and sew with a mattress needle every 10 or 12 in. This is to be suspended in a strong upright frame made of stuff 2 in. by 8 in. (the narrow side should, of course, be toward the archers) with a cross-piece of the same on top, but none at the bottom. To this should be laced the mattress and suspended to the top piece by two stout cords which should pass entirely around the mattress, and it is better to sew it on the inside before packing with the hay. The mattress should come to within an inch or less of the ground or floor, and the uprights should have broad, substantial feet, extending back, front and on the side opposite the mattress. The target should should be suspended to the cross-piece so as to hang over the centre of the butt. By covering this butt when not in use by a piece of canvas it may remain out doors without injury. W. HOLBERTON.

65 *Fulton st., N. Y.*

THE COMING ARCHER'S TOURNAMENT.—*Chicago, Feb.* 8.—*Mr. Editor:* Many clubs and societies have alread joined the National Association, lately organized at Crawfordsville, Ind., and many more have applied for admission. Our great meeting next July, in this city, now promises most brilliant success, and will be participated in by from 100 to 200 archers. I have received letters from the leading bow manufacturers of London, begging to tender numerous prizes for competition at the forthcoming tournament.

Yours truly, HENRY C. CARVER,
25 *Wabash ave.* Sec. Nat'l. Archery Assoc'n.

THE GREAT BILLIARD TOURNAMENT—SCHAEFER THE CHAMPION.—The last regular game in the J. M. Brunswick & Balke tournament for the billiard championship of the world was played in Cooper Institute on the evening of Feb. 7. The contestants were Slosson and Schaefer, and the game is considered to have been the most extraordinary game ever played. Schaefer made the greatest average and Slosson the largest run on record. The winner's average is 85 5-7; the losers, 81 4-7. Schaefer's highest runs were 283 and 298; Slosson's 71 and 464. The score last night was as follows: Schaefer, 600; Slosson, 571. The following is a tabulated summary of the whole tournament:

PLAYERS.	Schaefer.	Garnier.	Slosson.	Sexton.	Daly.	Rudolphe.	Gallagher.	Heiser.	Won.	Lost.
Schaefer	—	1	1	1	1	1	1	1	7	0
Garnier	0	—	0	0	1	1	0	1	3	4
Slosson	0	1	—	1	0	1	1	1	5	2
Sexton	0	1	0	—	1	1	0	1	4	3
Daly	0	0	1	0	—	1	1	1	4	3
Rudolphe	0	0	0	0	0	—	1	0	1	6
Gallagher	0	1	0	1	0	0	—	1	3	4
Heiser	0	0	0	0	0	1	0	—	1	6

NEW YORK ATHLETIC CLUB.—The second annual assault at arms will be held Feb. 21 and 22 next. The amateur championship matches in sparring, wrestling and fencing will take place for gold and silver medals. All entries must be made on or before Friday, Feb. 14, to Secretary N. Y. Athletic Club, P. O. Box 3101, New York.

AMERICAN BICYCLISTS ABROAD.—Boston bicyclists are arranging for an English tour next summer. It is designed to leave Boston by steamer during the first week in July, and return about Sept. 1. Arriving at Liverpool, each tourist's bicycle will be unpacked and the following route ridden over by easy spins of about thirty miles per day: Liverpool to London, thence to Portsmouth, Southampton, London, Bath, Gloucester and Shrewsbury, to London as a terminus. The route extends over capital roads, through charming scenery and among various objects of interest. An inspection of the immense bicycle manufactories in Coventry will prove a peculiar attraction. It is designed to limit the party to twenty, and the distance ridden on bicycles will be 680 miles, making the entire distance covered by the excursionists nearly 7,000 miles.

CRICKET CLUB ELECTIONS.—The following officers have been elected by the Staten Island Cricket Club: President, Mr. William Krebs; Vice-President, Mr. W. H. Clark; Secretary, Mr. W. H. Davidge; Treasurer, Mr. William Betts; Board of Directors—Mr. R. B. Whittemore, Mr. George S. Schofield, Jr., Mr. L. P. Bayard, Mr. E. W. Stevens and Mr. W. M. Donald.

The St. George Cricket Club have elected for the ensuing year the following officers: President, Mr. J. T. Soutter; Vice-President, Mr. George T. Green; Secretary J. R. Moore; Treasurer, Mr. Berkely Mostyn; Committee—Messrs. R. J. Cross, E. H. Moeran, D. B. Gilbert, J. P. Conover and T. C. Richardson.

WESTCHESTER HARE AND HOUNDS.—The third race of the season came off last Saturday, and the thaw rendered the sport somewhat difficult. The hares were Messrs. Harry Smythe and W. J. K. Kendrick, and the hounds were Messrs. G. H. Hilwig, George Dolde, William O. Merrill, F. W. Banham, L. A. Berte, W. Dubois and W. S. Vosburgh. Mr. G. H. Hilwig and Mr. George Dolde acted as whippers-in, and Mr. William O. Merrill as master of the hunt. The run was from 138th street, Mott Haven, and was of about an hour's duration.

TIME IS MONEY.—On the 3d of March W. Cummings and D. Livingstone, the best runners in Great Britain, will attempt, at Little Bridge, London, to beat the fastest mile time, and, as an inducement, J. G. Chambers offers the following prizes for each second under 4m. 30s: £5 a second under 4m. 30s., and £10 a second under 4m. 25s.; 4m. 29s., £5; 4m. 28s., £10; 4m. 27s., £15; 4m. 26s., £20; 4m. 25s., £25; 4m. 24s., £35; 4m. 23s., £45; 4m. 22s., £55; 4m. 21s., £65; 4m. 20s., £75; 4m. 19s., £85; 4m. 18s., £95; 4m. 17¼s., £100. Cummings is thought capable of at least equalling the record.

MADAME ANDERSON SPEAKS.—Those who are anxious to meet Madame Anderson now have an opportunity. That spunky lady is out with a challenge: "Having received many challenges purporting to emanate from lady pedestrians, I hereby state that I will walk any lady or ladies on the following terms: To walk one quarter of a mile at the commencement of every ten minutes, all to start at same time, the last party to leave the track at finish of same task to receive all the proceeds arising from the above contest, each one to pay share and share alike of all expenses, and the same to be deposited two weeks prior to the contest taking place."

SCOTTISH AMERICAN ATHLETIC CLUB.—The winter games of this club will be held at Gilmore's Garden, February 8 and March 1. The programme includes the usual walking, running and tug-of-war competitions. Entries close February 21, with Mr. E. More, Secretary, 329 West Fifty-fourth street.

MAGNET FOR SALE.—The English setter bitch Magnet, brought to this country in 1877 by Mr. Macdona, and winner of 2d prize at New York show, is offered for sale, her owner having bred from her and obtained all the stock he wants. Magnet is very highly bred, being by Heming's Rock out of Lilywhite. Her full pedigree is in the English Kennel Club Stud Book. She is now in whelp to Belton, sire of Sanborn's Nellie, and the litter should be worth more than is asked for the bitch. Full particulars can be had at this office.—[*Adv.*

4—S-Q B3 (a)	4—S-Q B3 (b)	15—S-K R5 (i)	15—B-K B (j)
5—QS tks KS (c)	5—P-Q4	16—S-K S3	16—P-K S3 (k)
6—B-Q S5 (d)	6—P tks S	17—R-K B	17—B-Q3
7—S tks K P	7—Q-Q4 (e)	18—R-K R (l)	18—B tks S
8—B tks S ch	8—P tks B	19—R P tks B	19—Castles
9—S-K S4	9—B-Q R3 (f)	20—B-Q S2 (m)	20—K R-K
10—S-K3 (g)	10—Q-Q5	21—R-Q R	21—P-K6 (n)
11—P-Q R4	11—Q R-Q	Resigns	

NOTES BY D. P. NORTON.

(*a*) White may play S tks K P with an even game. If Black answer 4—P-Q4, White gets a sharp attack by 5—S tks K B P. If K tks S, then 6—Q-R5 ch, etc. If Black play 4—Q-K B3, White can retreat the S-B3, with a safe game. If White play 4—Q-K2, Black 4—P-Q4. If 5—S tks P, Q B K3. If 6—P-Q3, K S B, or P tks B, and the game is even.

(*b*) Better than S tks S.

(*c*) Not so good as P-Q3.

(*d*) Exceedingly weak; should play B tks P, P-Q3, and Castle.

(*e*) An eye-opener; a bad look for White.

(*f*) Excellent. Black is now master of the situation. White is in a most awkward predicament; he can neither Castle, play his Q, or advance Q P.

(*g*) Not a good place for S, but the only place for it just now.

(*h*) To prevent the advance of B P.

(*i*) Suicidal; weak as water, and twice as thin. Up to this point White has made a gallant effort to free himself from the toils, but now he throws away his last chance—should here play S tks B, then Q-K2. If Black declines to exchange Queens, White can then Castle with an even game, or nearly so. If Queens are exchanged, the Castling is not so important.

(*j*) P-K S3 would be as good.

(*k*) To prevent a repetition of the S's last antic. The S is now just where Black wants it, and cannot escape the slaughter.

(*l*) Up the hill and down again.

(*m*) As good as anything, when there is nothing good. A more helpless condition than White's it would take a talented problemist to construct.

(*n*) If either P tks P, R tks P ch. If P tks R, Q tks P ch, and mates next move. If Black moves otherwise, P tks Q P checkmate. A remarkable instance in a game of 21 moves wherein the first player has not played the Q or Q P.

PAINE'S

Feather-filled Glass Ball

EXTINGUISHES COMPETITION

AND

Receives the SPORTING WORLD'S ENDORSEMENT.

Decision of the Judges of the American Institute Fair:

That for the purpose intended, the PAINE GLASS BALL, filled with feathers, is a great improvement over any article eret ofore used by marksmen. It has received from them the highest encomiums, and we are pleased to add our approval of its merits, and recommend that it should have

THE MEDAL OF PROGRESS.

Important Notice to Dealers and Consumers

The feather-filled having reached the acme of popularity,

Our Immense Sales Enable Reduced Prices!

which will preclude the use of all others, and be satisfactory to our patrons, as

THE BALL ONCE USED IS FOREVER THE FAVORITE.

Referees' Duties are Lightened—Natural Effect Secured—Disputes are Obviated—Pleasure Assured—Envious Allusions Dispelled by Facts.

An unwarranted and unbusiness-like allusion having been made in a late advertisement by a would-be competitor, as regards the breakage in transportation of our ball, we pronounce the assertion untrue, and worth about as much as the said party's late *record at Gilmore's Garden.*

WE REFER NEW DEALERS to our OLD PATRONS

PRIORITY OF CLAIMS TO PATRONAGE

having been lately made in the shape of piteous appeals to charitable consideration (merit being proved lacking), on the score of having invented this amusement, once for all it may be well to inform the forgetful that

IRA A. PAINE

invented the sport of Glass Ball Shooting; proof of same handy for reference to settle the question. Patents, dates, practical use, etc.

DEALERS, SEND FOR NEW PRICE LISTS promptly

and remit orders immediately to prevent the delays of last season, as the entire resources and

CAPACITY OF OUR FACTORY, RUNNING DAY & NIGHT, TESTED

by some *bona fide* advance orders from all parts of the AMERICAN CONTINENT, ENGLAND, FRANCE (notably a Monac order lately), bear evidence of the future demand, and the genuine success achieved by the unequalled

Paine Standard Feather-filled Ball.

Every Ball is weighed and examined, then packed with greatest care in Barrels of 250 or 300 as ordered.

SEND FOR PRICE LIST.

HEADQUARTERS, Bohemian Glass Works, 214 Pearl St., N. Y.

INDIAN NAMES OF AMERICAN STATES.—It must be owned that such well known titles as Crazy Horse, Sitting Bull, Spotted Tail, Two Bears, Little Wound, Blue Nose, Little Big Man, One Horn, Young-Man-Afraid-of his Horses, do not suggest any very dignified or awe inspiring associations, although the "brave" of the prairie would doubtless find equal food for mockery in Smithville, Jonesborough, Indianapolis, and other astounding appellations which stud the transatlantic map from East to West. It is nevertheless interesting to note how many of the most famous names in America are of Indian origin. The long supremacy of the Dutch and French in the eastern and northern districts, and that of the Spaniards in the West and South have indeed left indelible traces; but a large number of the yet older names used by the aboriginal possessors of the soil are still familiar as household words, though all memory of those who gave them has long since lapsed into tradition.

Commencing with New York itself, we find the island on which it stands still retaining its ancient name of "Manhattan," given by the Manhato Indians who formerly held it—though Washington Irving, in that wonderful burlesque which has immortalized the name of "Knickerbocker," derives the title, with an infinitely ludicrous affectation of learned research, from "the wearing of men's hats by the squaws of the surrounding tribes, whence 'Man-hat-on.'" Of the thirty-eight States composing the American Union, nineteen are still known by their ancient inhabitants. Connecticut, slightly altered from its original form of "Quon-eh-ta-kut," is a Mohician word signifying "long river." Massachusetts implies "the land around the great hills." Michigan is the Indian name for a fish trap, suggested by the peculiar form of the great lake which has given its title to the surrounding country. Illinois was formed from the Indian word "Illin!" (men) by the addition of the French termination "ois." The stormy region of Minnesota merits its name of "cloudy water" as does Wisconsin, with its many rapid streams, that of "rushing channel." The appellation of Iowa, signifying "the drowsy ones," however appropriate to its original owners, is amply contradicted by the energy of the sturdy farmers who are fast peopleing its endless plains. The name of Missouri (muddy) has seldom been more justly applied than to the famous tributary of the Mississippi, which latter was styled with equal truth, by the once powerful "Natchez," whose name still survives in that of a local town, "The Father of Waters."

Those who have traveled through Ohio can judge for themselves with what justice its Shawnee possessors called its noble river "the beautiful stream." Indeed the rivers of the various States have very frequently stood upon ors to the States themselves. Tennessee implies "the river with a big bend;" Kentucky—"Kain-tuk-ee"—at the head of the river; Kansas, "smoky water," which, with the French prefix "aro" (bow), gives a name likewise to the adjacent State of Arkansas. Alabama, in the tongue of the Creek Indians, signifies "the land of rest." The name of Wyoming or "great plains," originally given by the Delaware Indians to the beautiful Pennsylvanian valley traversed by the northern branch of the Susquehanna, has been transferred to one of the most noted States of the far West. Dakota ("allied") was so called from the great confederacy of the northwestern tribes, better known by their generic name of Sioux. The Utahs or Utes gave their name to a Western State which has since become famous as the adopted home of the Mormons. The name of Texas, hitherto supposed to be of Spanish origin, proves to be the generic title of the various tribes inhabiting it, like that of Sioux or Iroquois. Indiana implies simply "the Indian country."

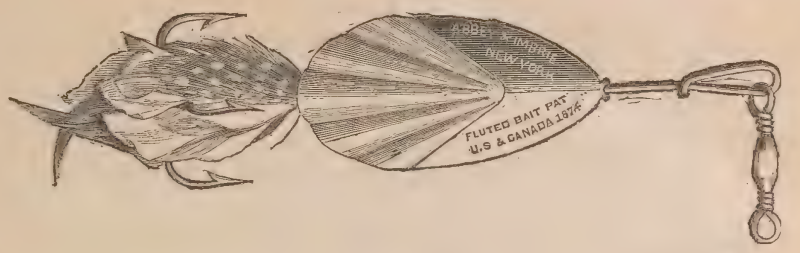
The titles of the other States tell their own story, the Western names being for the most part Spanish in their origin, the Eastern either English or French. The State of New York was named after the Duke of York (afterward James II.) when taken from the Dutch by England in 1664. Sir George Carter, one of the original proprietors of New Jersey, marked his affection for the beautiful island of which he had been governor, by giving its name to his western possession. Thomas West, Lord De la Ware, one of the earlier governors of Virginia, stood sponsor to the State of Delaware. Virginia itself was named after Shakspeare's "fair virgin throned by the West." Queen Elizabeth. Another English Queen, Henrietta, the wife of Charles I., gave titles to two States—Maine from her native French province, and Maryland from her second name of Maria. Her royal husband was god father to the Carolinas, as was George II. to Georgia, and Louis XIV. to Louisiania. New Hampshire was christened after the English county of that name; and Rhode Island, from its supposed resemblance to the famous island of Levant, although some authorities derive it from a corruption of "rood" (cross). William Penn gave his name to Pennsylvania at its founder; and the French complimented the beautiful hills of Vermont with the title of "Verts Monts" (green mountains), whence the Vermonters are still familiarly known as "Green Mountain Boys."

The traces of Spanish conquest are still visible in the titles of Florida (flowery), Nevada (snowy), Colorado (red), Montana (hilly). California is a much disputed title, its first appearance being in the Spanish romance of "Esplandian," where it figures as "an unknown region of vast extent, inhabited by female warriors, black and terrible to look on." The recently incorporated Territory of Nebraska takes its name from the Nebraska or Platte River, which traverses it from northwest to southeast. The derivations of Arizona, Idaho, and Oregon are uncertain.

Of the other Indian appellations still in familiar use, only a few can be given within the limits of the present paper. Niagara, now a household word in every part of the earth, is slightly corrupted from Oni-aw-ga-rah, "the thunder of waters." The grandest of the western valleys retains its native name of "Yosemite" (Grizzly Bear), while its most picturesque cascade is still called the "Pohono" (the Wind Spirit). The beautiful lake which is the admiration of every traveler, has preserved its Indian title of Tahoe; while the Potomac, Susquehanna, Wabash, Missouri, Mississippi, Kenawha, Ouachita, Penobscot, Suwanee, Cheyenne, Kennebec, Rappahannock, Saskatchewan, and a multitude of other rivers, continue to retain their beautiful appellations and to defy all the efforts of modern vandalism.—*Chambers' Journal.*

CROSSING THE NIAGARA ICE BRIDGE.—If a man chooses to emperil his own life he has the privilege of doing so, but no man has any business to endanger the life of a faithful horse as this man did:

This afternoon (Jan. 24) Mr. Andrew Wallace rode his horse across the ice bridge—a difficult feat in itself—but not satisfied with this, he ascended to the summit of the ice mountain at the base of the American Falls. The sight from the cliffs on the Canada side, which were covered with visitors, was thrilling. Slowly the horse toiled up the steep, slippery side of the great ice cone, winding round the foot path till the summit was reached. Here, enveloped in a cloud of mist, which concealed the white cone itself, horse and rider looked like a weird apparition suspended in mid-air. For some time the horse went careering about over the crest of the cone, where one false step might have hurled both him and his rider into the fathomless, foaming gulf, full seventy feet below. Presently the daring horseman rode slowly down the path, and, crossing the ice bridge, regained the Canadian side. Both he and his horse were drenched with spray. The intelligent, sure-footed animal that played such a prominent part in this feat is a moderate-sized brown gelding, with four white feet and a snip on the nose.



Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER.

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrel, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RETREAT, SHINNECOCK BAY, L. I.,

By a practical gunner and an old bayman. Has always on hand the best of boats, batteries, etc., with the largest rig of trained wild-geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests, and satisfaction guaranteed. Address WM. N. LANE, Good Ground, L. I. Nov8 tf

ARLINGTON HOUSE,

GAINESVILLE, FLA.

This popular house is located in the highest and dryest portion of Florida, on the line of railroad between Fernandina and Cedar Keys. The fishing is unsurpassed, black bass being larger and more abundant than any place in the South. The shooting is the finest in the State. Quail, English snipe, ducks of every kind, deer, etc., are very plenty, and afford the choicest sport to the hunter, while the ARLINGTON, being strictly first-class in all its appointments and cuisine unexcelled, makes this favorite winter resort without a rival in the South. Terms moderate. Address J. B. WISTAR.

Hotels and Resorts for Sportsmen

THE UNDERSIGNED has a fresh water lake of ten acres, well adapted for trout, with twenty acres of headland on both sides of stream. Very valuable for breeding troughs, etc. Pond free of pike. Trout in at present weighing four to eight ounces. Will rent, with accommodations for keeping boats, fishing apparatus, etc., to any club for a term of years at a reasonable price per year. Address ANDREW CONSELYEA, Springfield L. I.

This lake is twelve miles from New York city, on the L. I. R. R., via Rockaway Beach.

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT,* OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office

88 WALL STREET, NEW YORK.

GUNPOWDER.

DUPONT'S

Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength quickness and cleanliness; adapted for Glass Bal and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong and clean Powder of very fine grain for Pistol shooting.

DUPONT'S RIFLE, FG., "SEA SHOOTING,"

FFg and FFFg.—The Fg for long-range rifle shooting, the FFg and FFFg for general use, burning strong and moist.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder. U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L KNEELAND, 70 WALL ST. N. Y.

N. B.—Use NONE but DUPONT'S Fg or FFg Powder for long-range rifle shooting.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.,

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

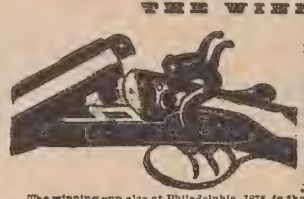
W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.



At the international pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an *objet d'art* valued at £169, and a money prize of £100, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Choumondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 13 at 28 yards and 1 look and 29½ yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, bearing 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. F. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for $500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 168,388. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 5,000 ball match, Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inner surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun.

A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

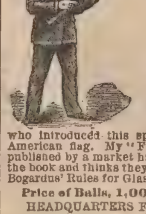
Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bores, modified chokes and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size, harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also, manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COMPRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

A. H. BOGARDUS.



My Patent Rough Glass Balls are now made even, and carefully packed, with 250 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the glancing of shot, while the smooth ball has to be made so thin to break successfully when hit that sometimes nearly one-third of them are broken by shipping, and the feather-filled ball is the same. Now,

I Will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where clubs use them you can readily see which is the hardest shooting. In matches reported in papers, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot and will follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and shot and upheld the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, $14; by single barrel $4; "Field, Cover and Trap Shooting," $2.

FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year. Ten Cents a Copy.

NEW YORK THURSDAY, FEBRUARY 20, 1879.

Volume 12—No. 3. No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

TIGER HUNTIHG IN INDIA WITH ELEPHANTS.

WE cross'd a brawling mountain torrent, far
From our Indian camp. The red, angry glare
Of crimson sunset shimmered through the clouds
Of dust that fill'd the air with their dull, coppery hues,
Presaging the near coming of a storm.

We pass'd the border-forest's gloomy belt,
Behind which, tier on tier, the mighty range
Of the majestic Himalayas tower'd in air,
Till their snow-clad summits seemed to pierce the sky;
Had pass'd thro' villages in dense mango groves—
Past temples, shadow'd by great tamarind trees;
Past vast borders, all fill'd with din and dust;
Past the low country, covered with green crops;
Past patches of rice stubble, with dense grass between,
Whence rose the partridge, plover and the quail,
And florican and pea-fowl in dense flocks;
Past groves of feathery bamboo and the palm,
And plumy plaintains that conceal the huts,
'Midst aloe-hedges festoon'd with gay vines.

There were few song-birds flitting thro' the gloom
Of wood arcades, to make them musical.
The sungle-s horn-bill darts from tree to tree;
The big woodpecker taps the hollow log,
With gorgeous plumage glistening in the sun;
Flights of green parrots scream above your head;
The golden oriole and the bulbul make
Their feeble chirrup, while at times resound
The melancholy hoot of blinking owl,
Or the golden pigeon's soft and murmurous coo.

There, on the borders of the jungle wild,
The hunters pause ere they invade its depths.
'Twas a dark, deep, impenetrable swamp,
Thick with tall reeds and wild vines interlac'd—
Homes of the savage creatures of the waste—
The tiger's haunt, fierce monarch of the woods!
Here ranged the brown hog-deer in browzing herds,
The wild pig and the boar, with gnashing tusks,
Here tramped the black rhinoceros on his way,
And wallowed the big buffaloes at will.
The jackals rais'd at night their fearful howl,
While overhead great flocks of vultures soar'd.

And here the hunting elephants are rang'd
In line continuous, ready for the charge:
Each bears a howdah on his towering back,
Whereon the hunter with his rifle sits,
To stop the royal game with fatal aim.
Soon the long line advances thro' the wood,
Trampling the bending branches and the reeds,
While loud the native beaters sound their drums,
And kindle into flames the jungle grass—
Kindle acacia shrubs and thorny bush.
So they press on, a wall of flame behind,
While fast before them flies the frantic game.

At length a tiger bounds away in fright,
And fast the goaded elephant pursues.
As fast he tears thro' tangled jungles green,
Like great ship surging thro' the ocean tides.
The Mahouts rain their blows upon his head,
The spearmen prick him with their lances keen;
While on thro' bush and brake, thro' thorny scrub—
Through stream, and down precipitous ravine
The headlong chase is urg'd, till brought to bay,
The tiger falls beneath th' unerring shot.

Shelter Island, Jan. ISAAC McLELLAN.

For Forest and Stream and Rod and Gun.

Winter Sports in San Diego Co., Cal.

BY T. S. VAN DYKE.

IN midwinter our field sports are really at their height; for, although the law has shut off hunting deer, yet it is open for everything else, and everything else is then in prime. At no other time is our gamy little quail so spry, so saucy, so swift or wing, and at no other time are both ground and weather in such fine condition for a cotillion with him as in those months when our Eastern friends consign their guns to oil, flannel and inglorious quiet, while the old dogs hug the rug by the fire and hunt again in happy dreams, and poor Bob White, starved out by deep snows, huddles up among his suffering brethren and resigns his little life to the merciless frost king, or still more heartless pot hunters.

Bob White was my first love, and three years of time and thousands of weary miles of space have not yet in the least divorced us; yet the sport to be had here with our little blue beauty of the jaunty plume is scarcely inferior to the pleasures of Bob's company when we consider the difference of the surroundings. Deep, indeed, are the joys of the buckwheat stubble, the briar wood and tangled swamps, even with benumbed fingers, chattering teeth or wet feet, so long as we can catch even an occasional glimpse of Bob's whirring wing; yet, on the whole, give me an hour among the roaring myriads of a California cañon, with the spangled green carpet, genial sun and flowery hills of San Diego for a background. Instead of the long and weary tramp so often necessary to a satisfactory interview with my old friend Bob, we have only to canter or drive a short distance up some cañon radiant with life and beauty, where soon the rich mellow ca-loi-o, ca-loi-o, ca-loi-o of the calling quail, or his sharp twit, twit, twit of alarm breaks on your ear, and in a few moments, or seconds, perhaps, you see hundreds of dark flashes of energy and life darting here and there through the bushes. Leaving your coat and other sudorific unnecessaries in the wagon or on the horse, in a few moments you have the whole air about you full of dark streaks of whizzing swiftness. Then begins a time that in the whole line of shot-gun shooting has no superior. To have from one to a dozen or fifteen birds rising at once, on all sides and at all distances, from five to fifteen yards, with more rising at the crack of your gun, and still more as you load, a wild medley of buzzing, pitching, squealing, wheeling and darting in almost every direction and from almost every bush, while your gun barrels burn your hand from the rapid fire, and your quickest motions cannot cram in cartridges fast enough; this is the very ecstasy of shooting.

This, too, is the time that tries the tyro's nerves almost as much as when, before the clamorous hounds, the buck, with crashing bound, first comes within sound and sight. Ye gunmakers who want opinions on your guns; ye cartridge makers, ye shot makers, ye powder makers and all who make sporting material, who would like to know their demerits, ye should stand awhile within earshot of a greeny, who thinks he can shoot a little, when he tackles a flock of California quails. To me few things are more exquisitely ludicrous than such a one, with face dripping with perspiration, hands and knees quivering with haste, and enveloped in a cloud of smoke through which birds are scudding like meteors, expressing himself upon the various causes of his failure to tranquilize a bird.

Such sport as this may be had within fifteen minutes' (more often five minutes') canter of almost any ranch house in the county. To the moderate shooter a single flock will afford many days or even weeks of good sport. I have shot all the winter on only three flocks, and expect them to last me all through the rest of it. All these are within five hundred yards of the house. Out of one of these I have already shot about two hundred birds, and yet it looks just as big as ever.

But variety is the spice of field life, and here, too, we have it. Along the base of the low hills that rise from the plains in the patches of weeds and grass that cover the plan itself, in the weedy meadows or the clumps of prickly pear, you may often at every few rods see the little cottontail whirl away through the brush in a zigzag flash of white; or the large hare, perhaps, springs from his form and glides away with arrowy rush. Here you may have snap shooting almost as difficult as the thickest of Eastern covert shooting, and carry home a load of game—unlike the Eastern hare, barely endurable even when well cooked—but game equal in flavor to anything we have, if one can only forget that he has ever before tasted rabbit and be uninfluenced by the fact that it is cheap and plenty. Or, if you prefer it, you may mount a good gravel-scratcher and see the lithe greyhounds, stretched out like telescopes, hug the flower-spangled sod of the plain, while the hare, a few yards ahead, lets out an extra length as they gain on him, lays down his ears for business and skims with airy foot the turf.

Or, when you tire of hare hunting, you may ride to the small ponds or lagoons along the river bottoms, where you shall hear the welcome quaack, quaack, quaack that used to delight your soul of yore, and see again the old mallard with head and neck of burnished green, spring aloft with obstreperous wing. There, too, the widgeon, spoonbill, sprigtail, blue-winged, green-winged, and cinnamon teal, and sometimes the splendid redhead, or more splendid canvasback, will vary the scene with their rushing wings and splashing tumble. There, too, you may see the old Canada goose, with his rich-toned honk, come sliding down from on high with neck outstretched and rigid wing, only, perhaps, to sheer neatly off as his watchful eye catches your crouching form among the weeds. But wait until old Phœbus has unhitched his wain and Dian runs the evening train, and then you may stand on a pass between the lagoon and the plain and stay his wandering wing. Or even by day, when he is feeding on the plain, you may, with a good horse, walk carelessly up to him in a slanting course, and, when directly to windward, suddenly turn and come thundering down upon his ranks; while he, compelled to rise against the wind, finds his accurate knowledge of the range of a gun at last a delusion and a snare.

Though geographically included within the game laws of the State, San Diego is nevertheless considered by herself as an independent colony in this respect, and makes her own laws. Far be it from me to advocate any infraction of game laws, and personally I have no occasion to break them; but circumstances surely alter cases, and where there are no market shooters or pot hunters, and a ton of game to every settler, laws made for the vicinity of San Francisco or other markets cannot be expected to command literal obedience. Hence it is a part of the unwritten code of this county that at no time of the year is a buck privileged to bite a settler, and, if in such attempt the buck should fall, it is his own fault. It is also the unanimous opinion of the people that at no time of the year, especially at the only time when he is really fat, has any buck a right to pack off a hundred and fifty odd pounds of venison while the settler, whose vineyards and fruit trees he has destroyed, has to repair the wear and tear of his fleshy tabernacle on bread and honey with perhaps the luxury of beans for a variety. As they are quite harmless, and in a very respectable business, the does are, however, treated with great respect throughout one-half the year.

Ascending into the mountains, which we may do to an elevation of about three thousand feet before it begins to get cold, we shall find in the oak-filled cañons the large mountain pigeon, a bird less swift of wing than the passenger pigeon, but surpassing him in beauty of plumage and wariness. Driven from their home in the high mountains by snow, these pigeons are often found in large numbers in the lower valley. Last week, on a little stroll of only half a mile, I took in seventeen of them in a very short time. It was mostly sitting shooting from high trees, but the stealthy caution necessary to get a shot, the bustling fluster with which they come down, the bright glossy lavender plumage of the head and neck, with a white collar around the latter, and the weight of a goodly bunch, gives it a very strong smack of game shooting, after all.

About this elevation, too, we begin to meet the large and beautiful mountain quail with his two long plumes of silken black, his plaintive quit, quit, queeah, queeah, and his mild simplicity, as with inquiring gaze he cocks his head from side to side to examine you with a queeah, queeah of curiosity, and hops up on a stone, perhaps to take better inspection.

The sea coast, too, affords in places good sport, though most of the wild fowl, except the black brant, come inland; but for the climate seeker the coast is by no means equal to the interior. Though it is mere summer compared with New York, San Francisco or even the boasted Santa Barbara, it is still winter compared with parts of the interior, although at night it may be warmer. Nowhere, perhaps, has nature played such curious freaks as in the climate of San Diego Co. Within thirty miles of where I write is winter equal to that of New York, and here the trees are full of ripe oranges. In one valley the frosts bite with as icy teeth as in many parts of the East, while in another, only a mile away, perhaps, and with scarcely any apparent difference of elevation or situation, tobacco and tomatoes stand as rankly green as in the noon of summer.

I could not but contrast the present winter in the South with winter here. Like the rest of the State, we have had the coldest weather for twenty years, and it has wrought sad havoc among the young orange trees. Yet, all the cold we have had has been only at night, and on the coldest of the days I hunted quail in what would be called East a summer dress. Owing to the dry air the nights are often cold here; but the very same cause which allows a rapid radiation of heat by night makes it heat up ten or fifteen degrees an hour after sunrise. We often go out doors here in the morning to get warmer. This is the only kind of cold we know here. The lowest midday temperature I have ever seen here was fifty-five, and it very surely stops short of sixty, though it may have been to twenty-eight before sunrise. The average winter temperature is about forty or forty-five before sunrise, fifty-five by nine o'clock, and sixty-five to seventy from eleven till four. I saw an account of a gentleman in Texas waiting about a month for a chance to go out on a hunt. Though painfully sensitive to cold, I have never yet staid in a day here on that account, and the thickest dress I have ever worn for hunting is two pair of duck pants, a flannel shirt and a single duck jacket, though an extra coat is often necessary for riding. Though our rainy season is half over, I have staid in only six days for rain, and all these days were days of warm, soft showers.

In my last article on San Diego appears a mistake either of my manuscript or the compositor. I meant to say that no one should come to California with any expectation of making a living out of the country *at once* by either mental or manual work. The omission of *at once* made the sentence absurd. As it stands above it is true, though I suppose it is very improper for a Californian to admit it. Thanks to Nordhoff and other lofty scribblers, who, not content with dipping their quills in the rainbow, tore up the whole arch by the roots and splashed it bodily all over their pages, California has long been overrun with geese who left good nest eggs at home and came here, without money enough to return, in confident expectation of finding a paradise. Besides the competitions of these there is that of the vanguard of the great Asiatic horde, who must not be kept back, because we made a treaty once, but more especially because God has

sent them here to be Christianized, at the rate of one a year, and also because "this is a great free country," you know, and we must therefore open our bosom to the filth of the world.

My first impression of California was that it was a land of solid realities and glittering humbugs, and I have seen little reason to change it. But to the sportsman, the climate seeker and tourist, who has sense enough not to squat in the first place he strikes, its realities are all solid and its humbugs very scarce.

For Forest and Stream and Rod and Gun.

THE SOURCE OF THE CONNECTICUT.

THE headwaters of the Connecticut having of late attracted some notice as a game region, I take occasion to relate some of my experience during two seasons spent in this locality. One evening in July, 1877, our party of three reached North Stratford, the last town on the railroad, staged it to Colebrook, two and a half hours' ride, that night, and the next afternoon found us at First Lake. At the hotel near the outlet we acquired some information of the wilderness beyond, and a 24-pound lunge (*Salmo confinis*, I believe,) was brought in from the lake in company with several of smaller size. We were almost induced to stop a day and catch a few ourselves, as we were assured would be easy to do. But speckled trout were the objects of our trip, and, though the big fish made us open our eyes to no small extent, nine o'clock next morning found us at the edge of the forest—a forest extending almost unbroken three hundred miles across Northern Maine and New Brunswick. The four-mile carry to Second Lake was not to be surpassed for mud, stones and fallen trees by any equal distance described in modern literature. Since that time, as I rejoice to know, it has been improved till one is not obliged to make a pack mule of himself, but may send baggage by buck-board and ride himself if he chooses.

The object of our trip was the exploration of the country with regard to the fishing. Certain indefinite statements as to the deer and moose in these parts had not even influenced us to bring our guns, but we were quite confident of finding trout somewhere. With revolvers, rods and two weeks' supplies we proposed to find trout if there were any. If disappointed in Connecticut waters, we intended to cross the mountains to the head of the Magalloway. These streams in turn proving barren, replenishing our supplies at Parmachene, we would try the Cupsuptic and Rangeley waters as a last resort.

At the last house on the road we were told of a bark camp a mile up the lake. Here we could probably get dinner. And before we got those fifty-pound packs over the five miles it was quite a fashionable dinner-hour. When at last we dropped the packs in the little clearing, we were surprised to find a large neat structure of peeled logs chinked with moss, and a high bark roof with gables. Inside it was just woodsy enough, and really fascinating in the freshness of its white logs and silvery bark. And Mr. Chester got us up such a dinner that we almost decided to give up our projected tramp in the woods and stay at the lake. But after admiring the lake and surrounding mountains awhile, the woods fever being still strong within us, Mr. C. rowed us across and we struck into the pathless woods, following up a quite large brook half a mile before pitching camp. For the week we were on this stream every day was a sort of recreation. Every pool was full of trout. With our little white tent beside the best pools, we were saved the usual long tramps back to camp. A few minutes' fishing usually supplied trout for a meal, and with perfect weather the days seemed charmed. From day to day we shifted camp, continuing our northeast course toward the Magulloway. Our pistols kept us supplied with Canada grouse, for they were very numerous along the streams, and so tame that H. put his hand within a yard of an old cock before he flew. The ruffed grouse abounds in the highlands. For a distance of three or four miles the stream flowed through alders and was nearly dead water. Along the upper part of this I fished about a mile one day, and found not a pool without moose or caribou tracks so confused as to be hardly distinguished from each other. Using no caution we saw no large game, but frequently found the water muddy where they had just left, and once I heard a caribou trot off through the alders. This part of the stream, as well as the best place for trout, has not been visited since that time.

After going half way to the Magalloway we held a council to decide whether to go back to Chester's camp or still forward. Sure signs of approaching rain, together with tender memories of the dinner which had attended our stop the week before, decided the question, and just before dark, after a terrible tramp of nine hours under the still heavy knapsacks, we stood on a log at the edge of the lake, each man with a revolver. The fusilade reached the camp across the lake, but a few minutes after Mr. Chester reached us with the boats the long threatening storm broke. In a few minutes we were too wet to be any wetter, and could only laugh at each other the rest of the mile and a half.

We remained a week at the lake, catching an unlimited number of trout, though the larger ones were still in deep water. August 10, H. and I returned and spent a month, which I still remember as the most pleasant of my experience. We hunted little on account of the wet weather, but caught as many trout as could be disposed of, many running from a pound to a pound and a half. The best I have heard of being taken in these waters is three pounds. Last summer (1878), I spent July and August at this lake. Our party secured four deer, and might have shot as many more without difficulty. On one occasion a large deer stood for several minutes about fifty yards distant, while my rifle was in my hands. It was hard to keep from shooting, but there was plenty of meat in camp, and I let her go. It is a beautiful lake! The mountains inclosing are still covered with the primeval forest. The lumberman—that curse of all the accessible lakes of Maine—has not yet touched my favorite, and the dark belt of evergreen forest surrounding it is in striking contrast with many of the northern lakes. The deer around its shores have hardly been disturbed as yet, and caribou and moose, though abundant, are never systematically hunted. With Edward Norton at the paddle on a dark August night, even a tyro is sure of a shot at a deer, unless he persists in pounding the sides of the boat with his but. Norton paddles from sheer love of the thing, and that he has appreciation his occasional letters in FOREST AND STREAM from Florida will testify. But Thomas Chester is the true woodsman, as perfect in the knowledge of caribou and moose, bears and otter, as any man his native Aroostook ever turned out; and, what is of importance to many of us, he is not of those who regard the sportsman merely as a subject to be plucked. Sharing the not uncommon prejudice which exists against making public one's favorite hunting grounds, it is with some hesitation that I have written the foregoing; but during the two seasons I have spent in this wilderness I feel that I have become acquainted with but a small part of the game inhabited localities. Many a stream and beaver pond have I tried but a moment, though swarming with trout and with shores trampled by the finest game in this part of the continent. Yet few enough, I know, are the sportsmen who will penetrate these more secluded places There is room for all. X.

For Forest and Stream and Rod and Gun.

A DAY ON THE PRAIRIE.

"DO you think the wind will shift to the North?" was the question asked by many sportsmen as they collected at the station of the New Orleans and Mobile Railroad preparatory to starting *en route* to Chef Manteur and Lake Catharine.

The rain was pouring down in torrents, and from under each umbrella peeped a hopeful face, prophetic of a bright tomorrow.

It was near the hour of five P. M. when the train was brought before the station, the locomotive puffing, ringing and blowing as they backed to attach the different coaches, prominent among which was that appropriated to the men of the field. The dusky suits of corduroys were bobbing about here, there and everywhere, looking after the dogs, guns, baggage, etc. At last, as the station clock strikes five, the long chain of coaches is gradually moved off, the church steeples, domes and spires of New Orleans grow dim in haze, and a few moments later all is lost to view of the distant city, and the train speeds through the hoary cypress forest, next moment emerging into a prairie almost like a sea of yellow grass. Bayous, coules and swamps are passed, and then in the midst of a sweeping prairie, far reaching beyond the scope of the human eye, three or four solitary huts are passed. These are the houses of the professional hunter. At intervals of half or three-quarters of an hour the whistle blows and the train is checked beside some wo-begone road-side house in the open prairie. These are section, or station-houses. After several hours' ride the brakeman opens the coach-door and cries "Chef Manteur;" four miles further he sings out "Lake Catharine." Then there is a general stir, and as the train moves on there is nothing left in the sportsman's coach save the volumes of smoke from the meerschaum, cigar and Creole cigarette. The hunters are all busy looking for Tom and Jerry on the banks of Miller's Bayou. Later on there may be seen a light large skiff steadily moving down the bayou filled with men, dogs and guns. By the glint of the lantern may occasionally be seen the flash of some polished weapon, and breaking the stillness of the night is heard a merry laugh or a snatch from some familiar song. A brisk row of several miles brings the little craft before Mrs. Miller's wharf, and very soon men, dogs and guns all disappear in the well warmed cabins—the hunter's retreat.

During some recent year the more devoted have combined and built what is known as the club room, a small cabin a trifle better than that built by the late good Miller. The houses are built on a small island of a few acres in area, principally composed of shell and sand, with an occasional tree dotted about the grounds. This island is not more than three or four feet above the level of the sea marsh that surrounds it for many miles. In the rear of the house, about a quarter-mile distant, lies in all its ripples the beautiful sheet of water known as "Lake Catharine," about fifteen or twenty miles in length and about half its length in breadth. Into this lake empty a great number of bayous, which drain the lower sea-marsh country. These waters abound in a variety of fish, the most prominent of which is the bass (commonly, but erroneously, known here as "green trout"). Miller's Bayou and Bayou Frederic are the most noted of the bayous through the prairie, and they furnish a fair channel to all small streams confluent. Situated on Miller's Bayou, on the side nearest Bayou Frederic, stands the "Retreat" described above. We will now take a peep into the "club room," the centre of attraction at the lodge. In the centre of the room is a large table, around which are collected the sportsmen.

The room is hung about with hunting suits, guns and such things as are common to a sportsman's hall. Presently the several occupations of the party are interrupted by Mrs. Miller entering with her arms full of plates, dishes, and etc. Cards, pipes, etc., are rapidly removed, and the delicious coffee, fish, ducks and eggs soon take their places as Mrs. M. arranges them before her guests. All have good appetites, and as they quaff the "rosy bowl" many jokes and repartees are exchanged across the table. Supper finished, games are resumed until some voice, a few hours later, exclaims, "Lights out, boys," and in less time than it takes a turtle to roll off a log all are in bed and dreaming of happy hunting grounds where ducks fly like chaff before the winds.

"Gemmen, it's time to git up," roars Tom at the door at half-past three o'clock; "de boats is ready, and I'se just waiting for you gemmen to speak de word."

All are dressed in less than no time. Mrs. Miller's coffee is hastily swallowed; there in a busy hum of voices and a flitting of lights at the wharf as each huntsman adjusts his chattels in his respective piroque; one by one in different directions the boats vanish in the dim morning light. And then all is silent at Miller's. In due time each sportsman reaches his grounds and anchors his decoys, places himself in his boat securely in his blind to await the dawn. Slowly the sky grows gray and the first "boom" is heard afar down on "Bayou Barbe"; the second and the third as the sky becomes streaked with red; and ere the sun is risen it seems as though there was a lively skirmish going on. The ducks whirl in every direction so confused that they seem at a loss to know where to alight. This skirmishing is kept up until one or two P. M., and, tired out, each one instinctively turns the prow of his peroque homeward. One after another arrives with his show of luck, some with two and some with twenty ducks. Tired, hungry and sleepy, prepared for a rest, a good repast a cigar and a nap; and while each in turn is being enjoyed Tom, Jerry and Philip are busy cleaning the game and guns for the respective gentlemen they have accompanied. After a nap has refreshed all they are ready to enjoy a good dinner about three o'clock. A siesta follows and is prolonged until the summons comes to prepare for the train. At half-past seven night is again upon all, and at this hour Tom and Jerry lay back on their oars and soon landed at Lake Catharine station. "All aboard," sings the conductor as the train rumbles up to the platform, and we are soon hurled back to the smoky city. Long live the ducks, that we may occasionally leave the turmoil of business and spend a day on the open prairie to inhale the free salt air and hear the melodious "boom" of the breech-loader echoing through Seven Ponds, Cerridore, Bay Frederic and other grounds too numerous to mention. J. M. S.

A TROPHY OF THE CHASE.

EDITOR FOREST AND STREAM:

On the 3d of January I killed a large mountain ram, or bighorn, on the Bridger Mountains. I send the measurement of his head thinking it might interest some of your readers. As you are aware, the base of horns occupies the full width of head on top, there being no interval between horns as in the domestic ram: Width of head across eyes, 8in.; width across both horns at base, 8in.; circumference of each horn at base, 16in.; diameter of each horn at base—largest diameter, 5½in.; smallest diameter, 4½in.; circumference of each horn at their half length (17in. from base), 14in.; length of horn, measuring around the curve, 34in.; distance between horns at tip (across nose), 16½in.; from outside to outside of horns at widest point (across forehead) 21½in.; each horn makes a complete turn excepting 2in.; measuring from centre of base of each horn to the tip each horn flares outward 6½in.; in making the complete turn the flare being mathematically regular; length of head from the crown to muzzle, 13½in.; length of ear on lower side, 6in.; length of ear on upper side, 4in.; circumference of neck just back of ears, 22in.; forefeet, 3½in. long by 2½in. wide.; hind feet, smaller, 2½in. by 2in. Judging from the rings on the horns his age was eleven years. His head, with small portion of neck, would weigh from 65 to 75 pounds (estimated). Estimated weight of animal in his present poor condition, 200 pounds; had he been fat, 300 pounds.

He was killed at an elevation of 6,000 feet above tide, with snow eighteen inches deep on the mountain side, with a temperature of zero at 12 o'clock M., and had to be dragged down the mountain side 400 yards to a point that could be reached by pack horse, where he was skinned, quartered and packed in. The above dimensions were taken after being brought into camp. The surroundings were so disagreeable that I failed to take the dimensions of carcass before being skinned. In spite of this labor and fatigue and the previous labor of climbing 1,200 feet vertically from the valley below to get a favorable shot, I felt well repaid in the possession of such a trophy. At the same time my hunting companion killed another ram of about the same size, the diameter of horns being a little less, but their length being a little longer, 35½ inches. Estimated age, 12 years, by rings on horn.

The color of these big-horns was a dark granite gray, brick color) on head, neck and sides. Rump marked like the elk, except the color was almost pure white, with a gray streak on top of rump, connecting the gray color of back with tail. Muzzle white. They were of the largest class that range the Rocky Mountains. There are a few larger, but not many. It is only during the heavy snows of winter that they are forced so low down the mountain sides in search of food, and it is then the most favorable time to kill them. The ewes are still fat. P.

Montana, Jan. 10, 1879.

FIRE HUNTING IN TEXAS.

BRENHAM, TEXAS, Jan. 18, 1879.

EDITOR FOREST AND STREAM:

Some time ago our jolly little crowd of five met again for the purpose of making arrangements for a camp hunt above the so-called Yegua Bottom, about eighteen miles from our home. No persuasion was necessary, as all of us were very fond of this noble sport, and we at once made up our minds to start the coming Saturday night and lay over Sunday. The time came on. E. A. F. and old John G. of our party, the more experienced, especially the first mentioned, being one of the crack shots, as he alone knocked eleven deer in our two last hunts, went in the afternoon well prepared with all necessaries for our pleasure trip. We were determined to look more for our old-time fun than for a large quantity of game. In the evening about 7 o'clock after business released the balance of us, we followed on horseback to join the hunt, and reached camp about 10½ o'clock. Fortunately, our two friends that left at noon were just in camp when we arrived, and they at once showed us a fine lot of ducks which they had shot late in the evening in a pond about 300 yards from us. We then stirred up the fire and made a good cup of coffee, and got away with some of our victuals. As usual, all the boys had a good appetite, and still old John cried out: "I can't eat anything on the whole trip!" While sitting here on the ground *a la maniere d'un chasseur*, we heard at least eight shots fired due south from us, so that one of us remarked, "Boys, let's up and start for deer, or else the fellows above will get the best of us!" Old John, though, said: "There are no deer where they shoot; I suppose they are raccoon hunting!" We again perceived heavy shooting, which led old John to believe that the parties must be killing stock, as there is plenty of it there. We all laughed for passing such a joke on those boys. At last we got up and started out for some game. G. G. and I went together, but had seen during the whole night only one pair of eyes—on the ground, too. I shot and was surprised with a large skunk. It was rather windy all night, so that the light of our open, old-fashioned lamp was most of the time blown aside, and we could hardly see any distance in front of us. About daylight E. A. F. and old John also returned to camp. We had all been very anxious to hear the result of their night's work. They gave us the following brief story: "Toward morning, after having passed the best country, we saw one pair of eyes about fifteen yards ahead of us. The animal finally got up and stretched himself, while E. A. F. turned around and said: 'John, here's old Jack!' John laughingly replied: 'Yes, this is surely old Jack down here!' Just at this moment E. A. F. noticed his eyes again and said: 'Hallo! a buck!' He quickly shot, and his 32 buckshot, which had been carefully chambered, laid him down flat—the biggest kind of a buck. After we had him hung up it was nearly daylight. Still not yet satisfied we all went out again, also our friend, A. J. R., and in a very short time we had a gang of turkeys, of which we only got five large gobblers, as they were very wild. Ducks had left the ponds and went southward for the creeks. We therefore concluded to leave and go for them at once, as we heard frequent shots in that direction in the early part of the morning, and were certain not to be disappointed. In a few minutes, then, we had taken a good breakfast. Mr. Cervus was fetched, and everything placed in the wagon. After three and a half miles ride we crossed Davidson and soon reached our destination; but, to our great surprise, met, within 300 yards of the Yegua, a scene that was not at all a pleasant one for us—a fine mare and colt lying right close together dead, both of them killed with buckshot, as the wounds showed. You may imagine the

we felt very discouraged, not having been within four miles of them the night before, as we went due north. We gave up duck hunting as a bad job, and at once left for home to make inquiry for the owner to inform him of the fact. He has up to date not received any compensation for his loss as yet, as this famous shot, *pura dico*, as it seems, is too dishonest to come up like a man or a true and right-thinking sportsman and settle the matter. All the Burleson County rangers are bitterly opposed to our future visits, as a matter of course.

Yours truly, O. C. O.

Fish Culture.

Third Biennial Report of the Superintendent of the Michigan State Fisheries for 1877-'78.

THE report of Superintendent Geo. H. Jerome now before us is a voluminous document, and makes a very creditable showing of the efforts of the Michigan fisheulturists, who are among the most energetic and intelligent of the State boards. The report is made up largely of figures—very large figures too—and unless recent bank defalcations and crooked election returns have demonstrated the mistake of the once accepted proposition that figures cannot lie, the statistics here presented indicate two busy seasons in the Michigan hatching-houses. The whitefish being the most important, and its supply of the most importance, has received a large share of attention. As the results of some very valuable experiments instituted to determine the most favorable conditions for whitefish culture, it has been found that the temperature of the water exerts a marked influence upon the work. A high temperature hastens development; a lower degree retards it. Whitefish ova from the same mother and fertilized with the same milt will, if placed in water at 60 deg. or 70 deg., become living fish in thirty days or less; in water at 33 deg. or 34 deg. five or six months are required for their development. If the alewive be placed in water of 50 deg. to 60 deg., the food in the umbilical sac is consumed in five or six days; in water at 34 deg., from fifteen to twenty days are required. The total number of whitefish deposited in rivers, the inland lakes and the Great Lakes aggregated 8,000,000 for the season of 1876-'7 and 12,000,000 for the season of 1877-'8. These numbers are far in excess of those of any previous years. These fish were all hatched at the Detroit hatchery, which in its workings has been a brilliant success. Prior to its establishment, the cost of hatching whitefish was one dollar per thousand. Now it does not exceed ten cents per thousand, and the commissioners expect to reduce even this cost one-half.

More than usual difficulty has been found in the hatching of the lake trout, but a very fair work has been accomplished, the number deposited in 1877 being 150,000, and in 1878 more than double that number.

Of the 100,000 California salmon eggs shipped from the McLoud River in October, 1877, all but about five per cent. were successfully hatched out at the Pokagon hatchery and deposited in the lakes of fourteen counties. These fish are found to change very materially when confined to limited supplies of water, being stunted or dwarfed. For their full development they require the strong currents and rushing waters. Experiments in hybridization have been made by impregnating the ova of the brook trout with the milt of the salmon, the result being apparently healthy fry.

But limited attention has been devoted to the land-locked salmon, owing to the difficulty of procuring eggs from Maine. It is hoped, however, to obtain a much larger supply from the hatchery at Grand Lake stream: and it is also believed that the Log Lake fish planted in 1876 have spawned there and that thus Michigan will be independent of other States. The number of deposits for 1878 was 25,000. In their efforts to secure spawn of the grayling, the Commissioners have been twice unsuccessful. No one has yet discovered with accuracy the season of their spawning. An expedition was organized in 1877 which reached the Manistee River on the 14th of April, but they were too late. The following year the men were on the ground by the 30th of March, but even this was found to be behind time, and the disappointed fish-culturists went to work to catch what adult grayling they could for transplanting to the State hatching house and various waters, the total number thus caught and distributed being 1,500. A fact of interest was developed in the course of their transportation: A fully ripe spawner being discovered was stripped and the number of eggs found to be 3,555, a yield which, in proportion to the weight of the fish, 9oz., was much greater than what should have been expected from former knowledge of its fecundity. The eel has now taken its place as a fixture, several hundred thousand having been distributed during 1877 and 1878.

The fish shute problem, as the readers of the FOREST AND STREAM already know, was solved by the Michigan Commissioners by the adoption of "Shaw's fishway," the invention of Hon. B. F. Shaw, of the Iowa Fish Commission. Two thousand lithographed diagrams of this way were prepared and scattered broadcast over the State, and as the cost of construction is slight, it is confidently believed that no more trouble will be experienced from this cause.

Altogether the report is one of much encouragement, and Michigan fish culture may be set down an assured success.

MORTALITY OF YOUNG TROUT.—Mr. Seth Green, very considerately for the interests of fish culturists, sends the following hints for publication:

ROCHESTER, Feb. 11, 1879.

MR. EDITOR: I have a great many inquiries from parties wishing me to tell them the cause of their young trout dying. The causes are so numerous that it would be almost impossible to hit the right one in any one case merely from what can be told in a letter. What would prove a perfect preventive in one case might fail in another. Brook trout spawn taken from fish which inhabit a soft water stream are much more delicate than those taken from fish that live in a hard water stream. The shell of the egg is much thinner, and they require very careful handling. But I recommend careful handling with all kinds of spawn. Three-fourths of the spawn that dies are killed by rough handling. I also recommend running as much water over spawn as they will stand and not wash them from their places, and when they are hatched, raise the water three or four inches. As soon as the young fish commence to swim a little they will cluster together. Then great pains must be taken to prevent them from smothering. When the yolk sac is absorbed I begin to feed them. They should be fed a little at a time, and eight or ten times during the day, taking great care not to feed more than they will eat. The troughs should be cleaned every day without fail, as cleanliness is as essential to the welfare of young trout as it is to everything else. A foul trough breeds disease very fast. A plan which has been adopted at our works with success in the rearing of young trout, is by the use of salt in the following way: As soon as the yolk sac is absorbed I make a weak brine, and shutting off the water, pour it in the trough. As soon as the fry commence coming to the top I turn on the fresh water and let it run pretty strong until the salt water is washed out thoroughly. After they have been feeding for a couple of weeks, I make the brine so strong that it will bear up a potato. I use about four quarts of water in making the brine and distribute it the whole length of the trough before pouring in the brine. I draw the water down so that but little more than an inch remains. This is done twice a week. Fresh earth is used with great success in some localities. The way it is used is by placing it in a sieve and shaking it over the trough until the bottom is covered. It should be done two or three times a week. The way I learned all I know about fish hatching was by experiments and observation. I try all the plans I can think of and all I hear of any one else trying. I have been experimenting ever since I have been in the business.

Yours, SETH GREEN.

FRESH NEWFOUNDLAND SALMON FOR ENGLAND.—Mr. A. C. MacDougall, of St. John's, Newfoundland, has entered into contracts for delivering in London four hundred thousand pounds of salmon, or about thirty thousand fish, the coming season. He has also engaged to deliver alive two hundred thousand lobsters. It appears that in Newfoundland salmon are naturally very plentiful and excellent in flavor, but unfortunately the markets are not numerous or near at hand to take them when in a fresh state. The salmon will be caught in the season, stored in refrigerating stores, and will be sent over to that country in a fresh condition as wanted, where they will be sold at a reasonable price.

THE POTOMAC FISHWAY.—Virginians are pushing the appropriation for a fishway over the great falls of the Potomac before Congress with reasonable prospect of success. It is believed that the McDonald fishway will be adopted, as it is necessarily a shadway, and none of the ways heretofore built even claim to be shad ways.

—We were in error when we stated, last week, that an initiation fee of $5 was required to become a member of the American Fish Cultural Association. There are annual dues of $3; nothing more. The doors of admission are open wide, without fee or charge. The annual proceedings of this association are most interesting. The next meeting will be held at Fulton Market Feb. 25 and 26.

Natural History.

THE ENGLISH SPARROW.

BY JULIA S. HOAG.

THE sparrow was probably first seen by Adam. What impression this special creation made upon him has never been recorded, but it is not improbable, with the interest and excitement attendant upon his own awakening, that the twitterer quite escaped his attention. At that time, too, there being but a single pair of these birds yet created, it is only just to presume that, the honeymoon not yet being over, they were dwelling together in peace and harmony, and that all their songs were of love, and all their attitudes beatitudes.

The early writers are comparatively reticent on the subject of this bird; although it is referred to in both the Old and New Testament; but the quality of the reference is so strained as to have lost any complimentary titbits which may originally have been intended. When two sparrows were sold for one farthing and five sparrows for two farthings, as in the days of the Apostles, we may safely conclude they were not ranked as treasures in the market.

The first large importation of the English sparrow to this country appears to have taken place in 1862, when two hundred were set free in New York. The Park Commissioners of that city first took them in special charge in 1864. Soon after forty pairs were imported for New Haven. The purpose of this importation was to suppress the increase of a measuring worm or caterpillar, which was then, and is now, despoiling the shade trees of the streets and public parks.

The value set upon sparrows in 1870 can be judged by some statements made by a gentleman of Newburgh, who advertised them for sale. He communicated the fact through the public journals that he soon expected a fresh supply by steamer from Southampton. The penalty imposed in New York for catching them being from five to ten dollars for each bird caught in that or in adjacent corporations rendered importation a necessity in order to supply the market outside of that city. In Europe, he further stated, where they were found by millions and were caught in traps, they were bought for a nominal price. But their freight and attention, with the mortality which would ensue during the passage across the Atlantic, together with the fact that their quarrelsome dispositions rendered a cage for each bird important;—these combined necessitated a price of $4 a pair for healthy sparrows. It seems almost impossible to believe that this gentleman was not trying to perpetrate a practical joke, so great a change in the value of sparrows has been effected in eight years.

The sparrow increase is very rapid. Under favorable circumstances one bird will produce about thirty eggs in a season. Mr. Gentry relates an instance of a pair which reared three families during the season of 1874, and were prevented from raising the fourth only by his severing the branch which held the nest in order to add it to his cabinet. This very same pair, he states, compelled the robins and all other birds to yield them undisputed sway. Close observers state that the *pater familias* permits no feathered intruder to approach within ten paces of the nest during the season of nidification and incubation, and that in all encounters with other birds the sparrow is the aggressor.

Inasmuch as nearly all the reliable statements with regard to the sparrow are decidedly to his discredit, it is only too pleasant to relate one or two incidents which indicate some desirable and bird-like characteristics. One which appeared to me very striking was related by a British lady whose favorite canary was accustomed to be hung in a tree outside the window. One morning a sparrow was observed to fly familiarly about the cage, perch upon the top, and apparently engage in earnest conversation with the canary, and then fly away. The result of this sweet converse was a worm brought and dropped into the cage. This was continued daily during the summer. To test the thoughtful generosity of this bird other canaries were hung near, but, while they were not utterly ignored in the feast, the earliest friend was the first provided for. An ill-disposed person could conjecture the possible logic in the mind of this apparently kind little sparrow, and conceive of a syllogism somewhat like this. This little canary is completely cut off by means of these wires from all interference with me or my kind; by showing it some attention I will perhaps gain favor with my increasing enemy—man. Therefore I will, by slight exertion, add a worm more than I need to my daily store, and therefore make an exhibition of exceeding generosity.

An incident connected with one of our large cities, and already made public, is interesting in demonstrating what an aggregation of small forces can accomplish. The owner of a public building caused a sparrow's nest, which was found under the eaves, to be thrown to the street. An indignation meeting was immediately called, and after a presumably very bitter denunciation of the act the sparrows for once (let it be recorded to their credit), agreed, and with remarkable speed and concert of, action they soon returned the nest to its original stronghold.

Dr. Pickering quotes from a French author as early as 1791 to the effect that in order to diminish the ravages of the sparrows a price was fixed upon their heads and the peasants were compelled by law to bring in a certain number yearly. Another French writer of about the same period estimated that the sparrows of France consumed annually about ten million bushels of wheat. In 1817 still another French author called this bird an impudent parasite, and stated that he found eighty-two grains of wheat in the craw of a sparrow shot by himself.

The testimony of a gentleman now resident in Vermont, whose verdict was rendered in 1870, is also adverse to our guest. He lived in England until twenty-one years of age, in a town where the sparrows were pronounced so great a nuisance that his own pocket money was the result of a bounty offered for killing them and taking their nests. The town gave one half-penny for three eggs, one half-penny for one old bird, and one penny for three young ones. He feared America would be sadly disappointed in the usefulness of the sparrow. In 1872 an English gentlemen, then resident in this country, stated that, although he knew the English sparrow in his own country to be an "unmitigated nuisance," yet, having a "special liking" for birds, he determined to watch them in this country without prejudice. After close watching for years, he fully believed they were not insectivorous in any sense. In New York they feed upon such grain as they can find scattered in the streets, and, on killing and dissecting great numbers of them, he could find only vegetable matter. He says, "We need not grudge them a little grain, but their pugnacity is insufferable." The same writer states that only a few years since, Paterson, N. J., abounded in bluebirds, orioles and wrens; but in an evil hour a citizen imported some sparrows, providing them with comfortable quarters, and now not another kind of bird can be seen; and he adds, "The worst of it is they are not rid of their insects, and for the loss of their song birds they have nothing to show, only a lot of screeching, pert, mischief-making sparrows." In 1874 a gentleman wrote thus: "The balance of power has been badly upset in Melbourne, Australia, by the introduction of the English sparrow. The native birds are driven away, and the small fruits are being devoured in a manner never before witnessed. In 1875 a gentleman from Germantown, Penn., stated that since the sparrows were introduced into the public squares of Philadelphia and found their way into the gardens the pear trees yield no fruit, this bird being the destroyer of the bitter buds. In the same year the same fear was reiterated by a gentleman residing at Irvington, on the Hudson, who watched the sparrows with a glass while they despoiled the pear trees. An Englishman by birth, now resident in Tennessee, "knows" that the sparrow is a great destroyer of wheat and other small grains, and of fruit buds as well, and hopes the bird fanciers will be satisfied before they allow them to reach Tennessee.

But the editor of the *Gardener's Monthly* attacked the antagonists on this point, quite discrediting the stories of the sparrows being essentially fruit or grain destroyers. In 1874, Dr. Thomas M. Brewer recorded himself in favor of the English sparrow, and, I believe, still maintains that attitude toward them. He wrote thus: "We have the sparrows in Boston in great abundance, and for six years I have, day after day, summer and winter, closely watched them. They never molest, attack or try to drive away any birds except their own species, and that only from amatory influences." He asserted that the native sparrows and their European cousins were the warmest friends, and that the blue birds molested the sparrows. The wise and revered William Cullen Bryant gave his testimony in favor of the sparrow, recording it in verse, thus:

> "The insect legions that sting our fruit,
> And strip the leaves from the growing shoot,
> A swarming, skulking, ravenous tribe
> Which Harris and Flint so well describe
> But cannot destroy, may quail with fear,
> For the old world sparrow, their bane, is here."

Whether or not his scientific observations or opinions were valuable I am not positive, but all his sentiments are now and ever will be dear to the American heart.

And thus in the research for testimony, I have often been forced to exclaim, "Who shall decide when doctors disagree?" yet this conviction has been forced upon me, though it may now seem a reiteration of Dr. Coues to those who have followed him, that scientific testimony is strongly adverse to the sparrow, and sentiment only is his warm ally. No testimony is needed except that of our individual eyes and ears to convince us that these birds are ever in a spirit of fierce antagonism with each other. They are even ungracious wooers, and the season of courtship is usually the time for best behavior with even the lower types of creation. A contributor to a recent number of *Scribner* contrasts their uncourtly attentions during that interesting period of even a bird's life

with the "courteous, restrained and graceful sallies of the robin;" and their noisy, unhappy screeching too, with the fine suppressed warble of the robin.

Dr. Elliott Coues, who has been apprehensive of the aggressions of the English sparrows since their first importation, and who, as early as 1874, published very strong arguments against their increase, furnished to the *Naturalist* some extracts from a lengthy paper then in preparation, from a voluminous mass of testimony which he has been collecting for two or three years past in regard to and against this pest. He has evidently become thoroughly outraged with the clemency and petting with which this bird has been treated by sentimentalists in opposition to scientists; or, as he states, by the "quasi-ornithologists" who have been misled by hasty expressions of favor to which they feel bound to hold, or by a very few intelligent and scientific persons who are not practical ornithologists. He is, in fact, so outraged that it is with difficulty he can restrain himself to a respectful choice of words in his denunciation. He grants that in Europe they have a mission, being a part of the natural fauna of the country, with their natural enemies, to maintain the equilibrium, but in this country he believes there is no use for them. The *diet of worms* is to them unpalatable, they can be forced to partake only by actual starvation. An insectivorous diet, he claims, is only an occasional variation. Having no natural enemy here, there is no check to their multiplication. Ten years ago a sparrow was rare, now they are numbered by countless millions. Dr. Coues believes if this increase be not speedily checked we shall soon be knocking at the Congressional gates for relief from the scourge. Among his specifications against the sparrows are the following: "They neglect entirely, or perform very insufficiently, the business for which they were imported. They attack, harass, fight against, dispossess, drive away, and sometimes actually kill various of our native birds which are much more insectivorous by nature than themselves. They commit great depredations in the kitchen garden, the orchard and the grain field." These few are, perhaps, the strongest of the specifications, though there are several others which I have omitted. Dr. Coues suggests that the authorities of some large city, preferably Boston, "where the sparrow combination is strongest," furnish five hundred sparrows, whose stomachs shall be examined by some competent botanist and entomologist together. If noxious insects, he says, shall be found to constitute the greater, or even any considerable, portion of their food, he will even then only partially yield the case. He recommends, first, that the birds be left to shift for themselves; that is, take down all the boxes, stop petting them, and cease to supply them with building material; second, abolish the legal penalties for killing them.

The Nuttall Ornithological Club, which is composed of all the ornithologists resident in and near Boston, and embraces in its corresponding membership all the ornithologists of note throughout the country, discussed the sparrow a few months since from an antagonistic point. Immediately all the sentiment of Boston was aroused, and a lively *pro* and *con* warfare ensued for a time. But the society was so strongly fortified by scientific study and observation, that the citizens became the crushed and fallen.

The sparrow question can very properly be classed with the much vexed. His arrival in this country was hailed with great rejoicing, although he brought with him neither beauty of proportion nor gorgeous attire, and not even the ordinary accomplishment of birds—a well trained voice; yet so promising was his advent of special results, that for a while all his foibles and shortcomings, and even his piping tenor and querulous temper were associated with praiseworthy attributes. Very little was ever written upon the subject until within the past few months. In fact no little moral courage was brought into requisition when one dared to assert that he was possessed of weaknesses, among them a strong preference for an herbivorous over an insectivorous diet. But the tendency of public opinion has been evident from the gradual withdrawal of the tender care and petting which for several years has been so lavishly bestowed, and both private and public expression now begins to be summed up to his discredit; and though there are still a few adherents to the sparrow, he is surely and rapidly losing caste.

In preparing this paper for the Dana Natural History Society of Albany, no effort was spared to look at the subject from every side. The old files of papers and magazines, in which facts or opinions on the subject were likely to be found, were searched with great care, and notes made both for and against; but in the summing up but one conclusion could be reached from my investigation, by the most unbiassed mind, and that was emphatically to his condemnation. The sparrow prefers city life, therefore in the country, where his depredations are few, and where he has not by numbers and consequent pugnacity overcome all the other species of birds, there is found the larger number of his small circle of friends. But his doom is surely fixed, and in the future we may be a wiser people as regards our importations, because of this experience.

LIST OF NORTH AMERICAN MUSCI.—We take pleasure in calling the attention of botanists to a work under the above title to be issued about the 1st of May next, by the Rev. A. B. Hervey and Mr. Eugene A. Rau. This list will make an octavo pamphlet of about 20 pages. In it the genera and species will be arranged in their natural order, and there will be an "Index Generum" at the end.

By this arrangement the list will serve the several purposes of a check and exchange list, a key to the natural order of the plants, and a guide to their classification in the herbarium. The geographical distribution of the species will be given. Orders are solicited at once, as but a limited number of copies will be printed. The money may be sent on receipt of the list. Price, postpaid: single copies, 25 cents; 5 copies, $1. Address Rev. A. B. Hervey, Troy, N. Y.

A CORRESPONDENT'S REQUEST.—"Atticus" sends us the following mild request, which we certainly hope some one will comply with. We venture to hope, too, that when in the fullness of time the great work desired shall be completed a copy of it may be sent to us. We certainly should appreciate the attention most highly. "Atticus" is notified that the information which he desires is not at present attainable, so far as we know, but we will endeavor to announce the appearance of the work which shall contain it as soon as it is published. This is what our correspondent desires:

"Will some person, thoroughly qualified by practical experience, have the kindness to give us a full description of the different parasites which are found on fresh-water fish, how and where to find them, and what is the effect on the fish? Also, a description of the so-called grub which is said to be found in the flesh of fresh-water fish during the hot weather, its history and effect on the fish, and how to conduct a scientific *post-mortem* examination on fish.

WHIP-POOR-WILL, OR NIGHT-HAWK.—We described these two birds in our issue of Feb. 6 and gave their characteristics. They are entirely different birds, of entirely different genera. This in answer to James Aiken, of Nashua Falls, N. H.

BONAPART'S GULL.—*New York, Feb. 10.—Editor Forest and Stream:* Inclosed you will find a description of a bird shot by myself on the Nation River near its junction with the Ottawa in Ontario, Canada, August 26. When shot it was standing on a rock near the water in company with a yellow-leg snipe. It was evidently tired out. Should think it a young bird of the gull species, but never saw one in that section before. Can you throw any light on the subject?

Very truly, ROBT. R. BROWN.

Our correspondent's excellent description inclosed with the above note enables us to identify his specimen as a young Bonapart gull, *Larus (Chræocephalus) philadelphia.*

A WINTER TRAMP THROUGH THE WOODS.

SCHRAALENBURG, N. J., Feb. 3, 1879.

MR. EDITOR: Game has never been scarcer than now on and west of the Palisades, the locality from which I write. I spent a large portion of my time last spring collecting, and never knew a year in which there were fewer nests. Hooded warblers, however, which have generally been considered straggliers, were rather common in low woods, and I discovered four of their nests; and hawk nests were unusually numerous, possibly accounting for the scarcity of smaller birds. Mentioning hawks, a duck hawk has nested for two years on the Palisades, but in an inaccessible locality.

To return to the present winter, rabbits were the only species of game that were abundant here, and great numbers of them were shot. They frequented the woods and open fields impartially, but always made their forms in the fields or in open woods, and never under wood piles or brush heaps. But quails were never scarcer. In all my oological tramps last spring I did not find a quail nesting, and there was not one shot last fall, where other seasons there have been twenty; and now within a radius of a mile or two from where I write there are only two bevies, and they are having a hard time of it.

There is now a complete absence of life in the woods. Last winter many of our hardier birds remained north, and one continually heard the cries of the red-headed woodpeckers, for these birds remained with us the entire year in unprecedented numbers, and because of their conspicuous plumage and peculiar habits were the most interesting birds in the woods.

One would suppose that the heavy snows and continued low temperature would bring northern birds down, but although I have been on the lookout for them I have only seen one flock of red polls and a few finches. One may walk for miles through the woods, and hear naught except the staccato cry of the nut-hatch, or perhaps catch a glimpse of a downy woodpecker as he dodges around a limb. Even the blue-jays and crows are missing. The silence becomes oppressive, and one returns home to await the return of spring, when I expect to spend the greatest portion of my time along the stream and in the woods. I do not wish, however, to convey the idea that there is nothing of interest in the woods during this season, for in midwinter many of the characteristic charms of the forest are more plainly seen than at any other time, and there are hours when the very silence and desolation are a rest to the mind. ALIANUS.

The Kennel.

For Forest and Stream and Rod and Gun.

A DAY AFTER THE DOGS AND THINGS INCIDENT THERETO.

BY ADAM PENN, OF VIRGINIA.

IT was in Hanover County, Virginia, that we had a hunt, which I shall here attempt to describe.

On a cold frosty morning of December, 1869, or thereabouts, a party of us met at P.'s at about 6 A. M. A warm breakfast was served up by lamp-light. Our bill of fare consisted of hot coffee, warm breads of several kinds, butter, meats, and last, but not least, stewed oysters; nor must I forget to mention that all who desired it had a stout appetizer before our meal.

Breakfast being ended, the dogs were fed lightly, and the horses brought around for the mount. The hunting party consisted of E., B., P., Bk., several others and the writer. Our pack numbered about forty-two as fine hounds as ever ran, at least so I was told.

A rousing stirrup cup, and see us mounted. E. had the only very fine horse in the party, a large bay, named Prince, King, or something of the kind. I shall call him King. Nevertheless there were some other good and fast horses. My own mount was a long, tall, lank and lean long-legged bay, named Bob. All hands laughed at me and said I would surely get a tumble or be left far behind, but I could do no better, so stuck manfully to my beast.

E. sounded his horn. Forty-two dogs gathered around the horses, yelping like so many demons, while the steeds, knowing and longing for the work before them, began some to rear and plunge and the rest simply to champ the bit and prance about. My horse stood bolt upright on his hind legs and missed falling backward—a circumstance which materially altered my opinion of him. In that country we had no whipper-in, did not couple up the dogs until we reached certain localities, but just let things take their own way. Every hunter, almost, rode with a long switch, and when he saw a dog at fault drove him into his proper place. When a dog broke down, or got thrown out, he just went back and staid with the old and cautious riders.

We reach a forest, and the dogs are sent out. "Hark! Touch him up, Abe!" came forth from E. "Look him up, Bully Boy." "He went right along there last night," chimed in B. "Blue and Blackie; speak boys, speak," chorussed Bk. "Ya-a-h o-o-o-o-o," came forth from Bully Boy. Talk to him, old fellow," cried B. "Ah! boys, that's the dog to have; just look at him now. Listen! He'll have that fox up directly." "Oh! dry up B.," said E., "that's nothing but a hare."

Thus chafing each other, and encouraging the dogs, we rode on about a quarter of a mile, the old hounds working quietly along to the left of the road, while the young ones, Bully Boy among them, were making things a little lively over some sort of a track to the right.

All at once a long, keen note rang out among the old dogs. E.'s eyes brightened with a sense of the (to him) coming joy as he straightened himself in his stirrups. "Hark!" he shouted. "Speak to him, Tempest! Touch him up, old gal! Go to her, Abe, and help her, old fellow!" Then, wheeling his horse to the right, he rode in among the young 'uns, saying, in the most animated but low tone of voice, "Hush! Hush! Hush! The other hunters rode around among the hounds which were not near Tempest, using the same expression, and 'twas wonderful to see how the dogs would stop, prick up their ears, and then dart off to Tempest and Old Abe, who were picking up quite a lively track.

Then followed a sight and some music that would thrill the heart of any hunter. The track was getting warm, and pug's lair not very far distant. Each one of forty-two hounds was striving to get foremost on the trail, not running yet, but bounding and bouncing the one over the other, and giving mouth, or whenever the fresh scent struck upon their sense of smell I saw Old Abe throw up his head and bound forward. At the same time E. beckoned to me, and we shot toward a little opening and stopped on the edge of the wood.

"Look! Look!" said he, "there goes Reynard's brush." Reynard pulled into a thicket a quarter of a mile ahead as the dogs came by us out of the forest. With the dogs came the huntsmen, and then with a yell, in sound like the well-known Confederate yell when the Rebs were about to rush into battle (none of your stale "View Halloos!" nor your tame "Hip, Hip, Hurrahs!"), pell mell they followed through the first run, until the dogs came to a balk. The thicket into which we saw the fox run was a small one and couldn't screen him, so our first rush was for two good miles. Bob came in third horse and I felt better.

When we reached the dogs they had bothered over a piece of frozen ground, but we soon got them off again. Our game was an old red, and he now went to work with a vim to save his trophy—his brush. We jumped him at 9 A. M., and he forced us to put in a whole day's hard riding. Let's pass over the details of the day and come in on the home stretch, so to speak.

'Tis nearly sundown as E. P. Bk. and myself ride out of the woods into a large flat field, one half a mile wide, bounded on the side opposite us by the Pamunkey River. The dogs are coming through the woods to the right of us, and our four horses are the only ones that can keep up. "He'll strike for the river and go to hole," says E., "but let him save his jacket if he can."

We miss seeing the fox, but the dogs break out near us, running at a marvelous pace considering their day's work. There are not more than twenty in the ranks, and they are strung out over a hundred yards. Fifty yards ahead of all Old Abe is bounding, head and tail up, giving mouth every two or three springs. The music of that cry is soul stirring, and the dogs seem to mean business. They know as well as we do that time for pug is nearly ended.

We reign up our steeds and nerve ourselves for another rush. Away we go, Bob this time ahead, King having struck lame, and P.'s and Bk.'s horses not having the bottom to compete with him. Right close up to the hounds he thundered, running better than he did in the morning and breathing as easily as in an evening's canter. The other three were running close together nearly one hundred yards behind. I hardly recognized myself beating three cracks in that way, but I was doing it and felt proud too.

But see! The dogs are leaping a low fence, disappearing down into a ditch covered with dead brush and clambering out on the other side. Behold! They are off again, and must I follow? This horse will break my neck, they said. He can't jump. But do or die, I think, and at it I go. I hold an easy rein, and dig my knees hard into his side. No riding in stirrups for such a leap as that, at least not for me. Give me a tight, firm seat, with legs free to jump if he falls, though I hope to break the jolt by slightly bearing on my stirrups if he lands safely over. The gallant horse rises four feet in the air, and clears with ease a space not less than twelve feet. Safely over, the next minute I am galloping along on a line with Abe, who is flying up the river bank.

Where are the other boys? I saw their horses balk, and then didn't look back for some moments. "Surely I shall get that brush," says I. Abe bothered a little and I held Bob in. Suddenly Bk. rushes past me on up the river. I let him go and say nothing. I look back and see P. spring from his horse (he is on the opposite side of the ditch from me at the mouth where it enters the river, forming a gully impassable for any horse) and rush headlong into the timber down under the river bank. E. is just disappearing around a clump of bushes on the same side of the ditch with P. Abe wheels and darts like lightning down the river. I turn and dash furiously toward the yawning gully. When there, I spring from Bob, clamber across and run with all my speed to where I saw P. disappear. I reach him and, behold, he is standing quietly with E., both looking at a den into which the fox has just entered. The cunning scamp had doubled under the bank and cheated the fastest dog and foremost rider out of a hard earned brush. Such is life.

We dug Pug out, intending to have another run out of him, but by bad management an unruly dog got hold of him and crippled him so that we had to kill him. We rode to B.'s to spend the night, arrived there after dark, and E., as was usually the case, waved aloft the trophy of the chase, he having got first to the den.

Some fine old rye and a warm supper set us all to rights, after which the song and joke went round. Your humble servant, being called on for a song, gave them on the spur of the moment the following, which E., the hero of the day, is supposed to have rendered:

THE FOX HUNT.

Call up the dogs; come, wind your horn;
The horses, sirs, have had their corn.
Haste! Mount your steeds; to saddle spring—
Here, groom, hold hard while I back King—
We'll fly to-day like birds a-wing
And ride for Reynard's Brush.

We reach a wood, list Tempest's cry;
Old Abe chimes in, and bye-and-bye
Sounds Music's voice; next, Bully Boy—
Then joins the pack—hearts leap for joy—
The cover's broke—"huntsmen! Ahoy!
Ha! There goes Reynard's Brush!

With shout—Halloo! Away! Away!
O'er hill and dale we'll race to-day.
Hark! There he went! Speak to him, boys;
Fus from the jump. This monarnoys
Old hug than holy prayer alloys
The Ployes of Satan's soul."

Bass, alto, tenor, contralto notes
Sound forth from forty yelping throats.
The forests with the wild notes ring—
More sweet to hear than birds of spring—
And here's the song the hounds do sing:
"We'll run for Reynard's Brush."

A rushing pace, a rousing leap,
Soon brings me where, piled in a heap,
The dogs are ending Reynard's life.
Each over each in maddening strife,
For which may first end Reynard's life—
Naught care they for the Bru-h.

Down from my panting steed I jump,
Whip back the writhing, yelling pump
Of canine flesh. "The fox is dead!"
I shout aloud, "The fox is dead!"
Next wave his trophy over-head;
"Hurrah for Reynard's Brush!"

For Forest and Stream and Rod and Gun.

EASTERN DOGS AMONG PRAIRIE CHICKENS.

THOSE sportsmen who think of going West to enjoy a season among the chickens, and who intend taking their Eastern dogs with them, before engaging passage would do well to pause and reflect, for, just so sure as they take that fine, high-strung brace of Gordons with them, just so sure will they regret it during the entire stay.

In these modern times it has become a matter of very little trouble to take your dogs with you from Maine to California, and with but few exceptions we find the employees of the different railways, obliging and kind to them, often bringing them a part of their own meals. But it is not of these things I wish to speak, and in order to bring the whole matter to a "focus," let me give you a bit of my experience during last summer and early fall while on a chicken shoot out in Minnesota with my friend Tuff, our man, and two as nicely broken keen-nosed dogs as can be produced anywhere within one hundred miles of New York. Let me preface by saying that my dogs were broken and had always been hunted in the brush. Late in August we started West via the Erie Railway to Buffalo; and just here let me remark that my dogs were never treated better anywhere than by the old baggage-master on our train. The system on the Lake Shore was such as to almost force us to wish we had walked; but as that has nothing to do with our story I will leave that right away. Arriving in Chicago, tired, dirty and hungry, we quartered our man and dogs at the Commercial, where the very best care was taken of them.

On Sunday we had the pleasure of meeting our friend and the most popular of sporting editors, Mr. Hallock, visited our kennel and pronounced our brace fine ones, though he questioned the propriety of our bringing Eastern broken dogs with us, which is a hint I soon was sorry I had not paid more attention to.

That night we left Chicago, via El Roy, for St. Paul. At St. Paul we changed to the Sioux City and St. Paul Railroad, and at midnight reached a town named Worthington, in Nobles County. Here we put upat the Third Avenue Hotel, where rooms had already been prepared for us. Through the kindness of Mr. Simmons (our landlord) and Mr. White (a guest) we were on the afternoon following our arrival furnished with a wagon, team and driver.

Three miles from town the dogs were put down, when commenced trials and tribulations such as we were destined to endure during our entire visit, or rather during that portion of the time which we used these dogs. They ran in, they ran over, they crossed each other's points and chased one old cock bird about five miles. They wouldn't mind, they wouldn't do anything we wanted them to do. Here was a pretty "kettle of fish." Well, we played dog ourselves and, chagrined and chop-fallen, returned at night with twenty-five birds, twenty of which we "pointed" ourselves.

The next day we started out with camp equipments and everything necessary for a trip of several days. Before starting the services of a dog was offered to us and accepted. This dog, Tuff said, was a cross between a bull bitch and a window shutter, but remembering our experience of the day before, we concluded it would do no harm to take him with us. So, placing all three dogs in the wagon, we started on a trip during which our dogs were expected to redeem themselves. We put them down shortly after leaving the town limits, our hopes running high, not half so high nor so fast as those dogs were running in less than a minute after being put down. After a half hour's hard work we thought we had things all right. One dog got a beautiful point and the other saw it, but instead of backing, as I have seen him do a thousand times, he rushes in across the other dog's point, and up fly at least twenty-five chickens, all full grown. The dog caught one by the wing and brought it to us in triumph. This performance so demoralized the other dog that in less than a half hour we were compelled to tie them both in the wagon again, and follow after our old lop-sided-long-tobacco-leaf-eared-borrowed "purp," who knew nothing but to find, point, fetch, and in fact behave himself as a well-broken dog should.

We camped that night near a lake just covered with mallard and teal, with sixty birds bagged. Taking out as many as we needed, the balance were presented to some farmers, whose eyes said they would like them even though their mouths did not. In return they sent us all the milk we could use. Having disposed of a very hearty supper we stretched out before our camp-fire (for the night was cool) and smoked ourselves into dreamland.

Early the next morning we stationed ourselves by some "stubble," and bagged ten fine plump mallard before breakfast. After the grass had become dry enough to walk in we started out, bag and baggage, only to repeat our experience of the day before, except we worked even harder to get our dogs to do their duty, and again failed as before.

After a tramp of three days and nights we reached town again, having bagged 250 birds, about 75 of which we brought in for distribution among our new friends. Next we tried our luck at a new settlement known as Rushmore's, where we got some nice bags and were well treated by Mr. Rushmore, who had found the place only three months before. Our two weeks flew by like the wind, with only a slight improvement in our dogs, when a telegram from home called us to pack up at once, which we did with sad hearts.

And now in conclusion let me ask the intelligent readers of FOREST AND STREAM who, perhaps, have gone through a like experience, why is it that our Eastern dogs, especially those broken in the bush, as mine were, are of so little account out West? There are doubtless many fine blooded dogs out there, but the vast majority of all the dogs we saw used were mongrels, many of whom haven't the slightest trace of the bird dog about them. Shepherd dogs, Newfoundland dogs, collies, hounds of every kind, pointers and setters hunt equally well, and all can find more birds, endure more and give better satisfaction than our dogs upon which we have spent our hundreds and who suit us exactly at home, but who when brought in contact and competition with those curs and mongrels, disgrace us at every turn. I do not write this to begin an argument, but simply to get the opinion of some older and more experienced hunters than I. Therefore to those contemplating doing as I did, let me beg of you to leave your Eastern-brush-broken dog at home and save yourself disgrace in the eyes of your Western friends and $50 of good money. IVANHOE.

For Forest and Stream and Rod and Gun.

DOGS—No. V.

ILLNESS and various other causes have prevented my continuing my contributions to FOREST AND STREAM, but I hope now, D. V., to be enabled to continue my dog stories to the end.

Sentry, a splendid Newfoundland dog, was the property of the writer—who never met with a more intelligent and faithful animal—one who was always considered an important member of the household, and whose memory is still treasured after a lapse of a quarter of a century. He was a pure Newfoundland, whose mother was purchased by the captain of a vessel, and brought to the Island of Jersey—where our hero was born shortly after her arrival. He was ten months old when I purchased him from a shoemaker for a sovereign. Having extensive stores on the pier, I had long wished to have a good dog to watch the premises at night. A short acquaintance with the animal soon convinced me that he was no common dog, and I therefore took a pleasure in training him. He was soon taught to fetch and carry, and being a large and powerful dog it soon struck me that I could easily make him useful. I commenced by teaching him to follow me to market, and having made a purchase of dog's meat he was sent home. On arrival at Nelson House, he would place his basket on the ground, and bark for admittance. Having satisfied myself after a few experiments that he was perfectly trustworthy, either my wife or I could take him to market and send him home with meat, poultry, etc., all of which was duly delivered. He never failed for several years, and no other dog ever attempted to meddle with him. In fact he was the terror of all the dogs in town. My residence was about a mile from my office, and Sentry was soon trained to become a regular messenger. If I required anything, or wished to inform my better half that I had invited some friend to dine or spend the evening a note, was fastened to the dog's collar and he was told to go to his mistress. Off he scampered, and soon returned with the answer or article required. He was a splendid water-dog, but never had an opportunity of saving life, which he undoubtedly would have done. He had a strange trick, which formed no part of my training, and on several occasions he raised the ire of owners of other dogs on whom he practiced it. If I chanced to take a stroll near the shore where other dogs were being exercised, he would sit and watch the proceedings, until a dog swam out and seized the stick his owner had thrown for him. The moment that was done Sentry plunged in, met the other dog and, seizing him by the ear, put his head under water, holding him there until he let go the stick, which was then seized by Sentry and brought to me. I did all I could to break him of this bad habit, but to no purpose—he delighted in it. Most dogs on leaving the water shake themselves *sau ceremonie*. I have seen ladies in light summer dresses thoroughly drenched by the copious showers emanating from the shaggy coat of a Newfoundland or poodle. My dog was taught good manners; he invariably retired to a convenient distance ere he shook himself. He was an excellent watch dog, but quiet and remarkably good-tempered. If a stranger entered the stores he would follow him, and if he chanced to put his hand on anything, a sharp growl would warn him—Touch not! But no stranger was allowed to leave the premises, unless accompanied by myself, clerks or foreman. On one occasion the foreman sent a man on the office floor for a shovel, which was at the further end of the store. He passed the office door without speaking to any one, and the dog meeting him with the shovel seized and replaced it where it had been taken from, but would not allow the man to leave until some one in the office interfered.

Sentry always accompanied me in my rides and drives. One day when riding out to a distant part of the Island, I passed a field where an old man was digging potatoes with a fork. The dog jumped the hedge, and ran toward him with a view of reconnoitering. The old man seeing the huge animal coming towards him, became alarmed, and raised the fork in self-defense. The dog made a spring, seized the fork by the handle, wrenched it from the man's hands, walked off about an acre, laid down the fork, returned to the man, seated himself on his haunches, and grinned at his opponent, as though he would ask him, "Well, old fellow, what think you of it now?" Seeing the old man's alarm I dismounted, and soon convinced him of his error, as the dog had no intention of interfering with him. "Ah!" exclaimed the farmer, to whom I was personally known, "I see it all now, sir, your dog has more sense than I have."

A noble trait in Sentry's character was that he never even growled at a small dog, treating the snarling of every cur with sovereign contempt, or would he ever attack a large dog, but woe to any who attacked him. He was no respecter of persons, and settled his likes or dislikes at first sight. No coaxing or feeding could induce him to be friendly once he had formed an unfavorable opinion. He would growl at persons who often came to the house, without the slightest provocation. He was a general favorite, yet his friendship was only shown to a few.

A widow lady named Rowcliffe, a particular friend, residing a short distance from us, was admiring the dog, during a morning call, she being one of those to whom he had taken a particular fancy. And she proposed to our *cara sposa*, that her cook should save all bones and remnants for Sentry, if they were sent for. On hearing which I stated that the dog could easily be trained to fetch his own provisions. My plan was approved of but its practicability doubted. On the day agreed I requested the servant to give Sentry his own basket, and as we walked along I told him several times, "Now, Sentry, remember Mrs. Rowcliffe," a wag of his huge tail and wink of his keen eyes, giving me to understand, "All right, master!" Arrived at the house I rung the side door bell, which was opened by trusty Margaret, and having duly introduced her to my companion I explained my plan, which was that the dog should go every other day with his basket, and on his barking he was to be admitted to receive her bounty. To this Margaret readily assented, being taken with the idea of witnessing such wonderful sagacity. On the second day I again dispatched the dog, telling him to go to Mrs. Rowcliffe, which he did, put down his basket, barked, was admitted, and shortly returned home with his booty. Though the animal knew that the contents of the basket were for him, he never presumed to touch a morsel on the road. On one occasion when running up the steps he upset the basket, and immediately collected the scattered fragments and replaced them.

The dog was never chained, having the free run of the premises, when at Nelson House, and never so far forgot himself as to run over the flower or other beds in the garden.

The owner of the adjoining lot being about to build a cottage, the masons arrived one fine morning, and were obliged to mount the party wall to place their scaffolding. This did not meet Sentry's approval, and he barked and growled at the men most furiously. I told them not to notice him and he would soon be quiet, but on no account to throw stones or annoy him in any way, as he would be sure to bite the man who did it whenever he met him. On my return to dinner I noticed that the dog's nose was cut, which I felt satisfied had been done by one of the masons. The following day the mason passed the house on his return from dinner. The dog was basking in the sun on the front door porch, and seeing his enemy, he cleared the iron railings of the yard, seized the man by the throat and pinned him against the wall. Fortunately I witnessed the whole affair and rushed to the rescue. The man was not hurt, but dreadfully frightened, and admitted having cut the dog's nose with a sharp stone. After that he used to walk round a quarter of a mile to avoid passing the house going to and from his work.

Percé, Feb 10, 1879. PHILIP VIBERT.

(To be continued.)

THE NEW YORK DOG SHOW.

THE third annual dog show, held under the auspices of the Westminster Kennel Club, will be given at Gilmore's Garden, during the second week in April commencing on Tuesday, the 8th, and continuing until Friday. The premium list is now in the hands of the printers, and will be ready the last of this week. It contains several new features, both as to rules and classification. As to the latter, separate classes are made for red and red and white setters. A uniform set of rules have been adopted by the Westminster and Philadelphia kennel clubs, and three members of the latter club in connection with three of the home club will act as a committee of appeals. The Garden this year will be entirely floored over, thus avoiding the dust of former years, and with the beautiful decorations which will be left after the Arion Ball will present a very beautiful appearance. Mr. Lincoln will act as superintendent.

A PLEA FOR THE NATIVE.

EDITOR FOREST AND STREAM:

There has been so much written about "blue bloods" and "natives" by far abler pens than mine that it is with fear and trembling I approach the subject, and were it not that I feel that great injustice is being done our gallant native I would hold my peace. Now I am not a "native champion" only so far as this: when I see a good dog in the field, with all that this implies, he is the dog for me, and he alone can win my approbation. I care not whether he came from Lord Loftus' kennel or was whelped in Pigtown alley, so he comes up to my standard as a field performer.

It seems to me that the "blue blood" men are claiming too much for their favorites. Let us examine some of their claims to superiority and see how they compare with the much abused native. Their strongest point is "purity of blood," which they are able to trace back for fifty years or more in an unbroken line of illustrious ancestors. Allow me to ask if the dogs for which they are claiming so much are any better in the field than old Pilot, Ponto and Moll, or many of their descendants? I will answer this by stating that the highest praise that some of the famous breeders of the old country can bestow upon a dog of the present day is that he closely resembles some favorite of their early days.

Now I am as great an advocate of "purity of blood" as Llewellin or Laverack, and the longer pedigree my dog has the better am I suited, provided that said pedigree contains the names of those good in the field and none others. I can point with pride to many a breeder in this country whose kennel will compare favorably with any in the world as far as "purity of blood" goes. Not, perhaps, for so many years can they show you in black and white the names of sire and dam of years ago, but they have ever bred from the best and never have used one that was not good in the field.

Where can you find any better dogs for a season's work than the setters bred by old Ethan Allin, of Connecticut, Morford, of New Jersey, or the Campbells of Tennessee? There are many others who have been equally pains-taking and as successful in giving us good working, well-trained dogs that can stand a hard day's tramp the season through without flinching. I mention these gentlemen because their names are household words among sportsmen all over the country. It is an old saying and a true one, verified by the performances of many a generation of our grand native stock that "blood will tell."

Other points that the advocates of blue blood claim are beauty of coat and form. The former I concede; the latter I very much doubt unless you force me to adopt their standard, which I will cheerfully do when you will show me that they can stand up to their work through thick and thin and carry their beautiful forms to the front at the end of an arduous campaign. H.

DEVONSHIRE COCKERS.

EDITOR FOREST AND STREAM:

Dear Sir—As an old lover of spaniels, I was much interested in your article touching that ancient breed of dogs, some weeks back. In the first place, I am in no way surprised to find you refusing the responsibility of defining a Devonshire cocker. I was raised to the gun upon their native hills, and through all the years of my apprenticeship to the sport shot to the tune of their merry music. Nothing came amiss to them—black-game, pheasants, woodcock, rabbits, snipe and hares were all found and brought to bag in succession with these indefatigable workers.

Fifteen years ago almost every one in Devonshire kept

spaniels, and, for aught I know, still do. Many houses had breeds, the foundation of which the oldest member of the family could not remember. Every country vicarage had one or two. The sporting farmer invariably kept one. Yet, as you justly observed, the different varieties of spaniels have become so merged one with another that while the breed generally have ever been highly valued and considered indispensable to woodcock and rabbit shooting, yet such latitude in form, color and size has been allowed that ninety-nine sportsmen out of a hundred who shoot over them could no more tell you than the man in the moon what the points of a cocker were. Every one interested at all in spaniels can roughly define an Irish water, a Clumber, a Sussex, and, of course, a Blenheim and King Charles; but once launch out into the great mixed up, undefined classes that range themselves on the show bench as cockers and field spaniels, and if you try to lay down the law otherwise than to suit your own fancy you will have a difficult task before you.

I cannot doubt but that spaniels have a great future before hem in this country. It has been an increasing wonder to me how sportsmen in the Northern States and Canada have so long neglected to cultivate them. I cannot think it advisable to encourage, as the judges used to do in the English shows, that ultra delicacy of form so prominent among the prize takers in the cocker classes. The King Charles cross used to show most unmistakably on the cocker benches at their meetings, and probably does so still. The Devonshire cocker, though hard to define accurately, may be said, generally speaking, however, to exist as a breed. Everything about them is workmanlike; their color usually liver and white, or black, short-legged and long-bodied, with form well knit and compact. They give one the idea of as perfect a unity of strength and activity as the canine race can show.

The coat is sometimes wavy and sometimes curly, speaking of which, I do not quite follow your objection to the latter. If only because it points to a cross with the water spaniel, why is that any blemish? I should rather have thought that it would have helped to frame a good field dog. We used in Devonshire to shoot partridges over them constantly, breaking them to range within twenty-five yards of the gun; and in a broken country, where the shooting was varied and the bag likely to be mixed, we found them far more useful than pointers or setters.

Cockers used to be kept by the poor people in Scotland not infrequently as watch-dogs, as they bear the reputation of being impossible for strangers to silence, either by strokes or menaces. Finally, they are less expensive to keep than any other sporting dog, and, in my experience, are less prone to lose flesh and condition than either setters or pointers.

STOCK DOGS.

NOW that so much interest is being taken in improving the canine race, it is well to consider on what principle stock dogs should be selected and how they shall be judged at bench shows. I, for one, am a firm believer that at all bench shows the dog that produces the best progeny should receive the prize without any regard to his beauty, for it is often a handsome dog is but a chance himself, and may never produce his equal; yet, having been awarded the prize in a class where the sire and progeny were judged as one, his services are eagerly sought after by those who possibly have never seen either him or his progeny, or know nothing of his formation or physical stamina; they simply know he is a prize winner, and to the novice the progeny of prize winners have great attractions. One very important matter that should be considered in judging stock dogs is the age of progeny shown with them. There should be an age limit beyond which the progeny are not eligible to compete with their sires, for the simple reason that the older sires have a large advantage over their younger competitors, for the reason that they have a much larger progeny to select from, where there is no limit to age of progeny shown. In breeding, one of the most important requisites of a good stock dog is the physical constitution he imparts to his progeny, thereby rendering them strong or weak. Those who have carefully watched the progeny of some of the present sires of the day are well aware they have not sufficient physical stamina to withstand or recover from the many ills to which the canine race is subject, and we see whole litters die before a year old even under the best of care and most skillful treatment. This is a matter worthy not only the consideration of breeders, but of all parties who purchase with expectation of raising whelps.

No matter how beautifully formed and coated a dog may be, if he fails to produce whelps with strong constitutions, such as will enable them to pass through and recover from an ordinary case of distemper, I should consider him worthless, except as a bench show winner, where such matters are not considered. To those who breed for their own use and with a desire to improve their stock, a prize winner will have but little attractions, unless he produces his like in a fair share of his progeny. They should much sooner breed to some dog, though of inferior merit on the bench, if in a majority of litters he has produced whelps that surpass him in all those requirements that go far toward making a perfect dog; but, above all things, do not breed from weak, washy stock if you expect to raise the whelps. I am led to these remarks by the large number of whelps of inbred strains that have died in this locality within the past two years; but experience is a good teacher by which we may all profit. SHAMROCK.

Chicago, Feb. 11, 1879.

PHILADELPHIA DOG SHOW.—The first annual dog show of the Philadelphia Kennel Club will be held from April 20 to 25. Further particulars as to premium lists, etc., will be printed later.

THE FIELD TRIAL MUDDLE.—A number of correspondents who have sent us letters regarding the wretched Minnesota Field Trial business will understand why they do not appear by referring to last week's paper, where we declared our columns closed to a further discussion of the matter.

MAGNET.—To numerous inquiries regarding this bitch we would say that we have sent all communications to her owner, as we cannot find time to reply to them.

—The owner of the dog Tin Tag, which name was claimed last week, should be C. N. Gabb, instead of Gibbs, as printed.

BLUE BELTON POINTERS.—I would like to know if any of your readers ever saw a blue belton pointer. I have a pointer which exactly answers the description given of the blue belton setter by Mr. Burges. His color is "black and white ticked, with slight tanned spots on feet and legs." His head and eyes, black and tan. He is an excellent field dog, staunch, fine nose and a rapid hunter; his pedigree not known. I should like for some of your readers who are adepts in the "dog line" to give their opinion as to how a cross between said dog and pure blue belton setter would do.

Monroe, N. C. J. A. SMITH.

Such a cross would only produce droppers, some of which might look like setters and some like pointers.

NAMES CLAIMED.—J. D. Henderson, of Maytown, Pa., claims the name Mark for his red Irish setter pup, whelped Sept. 28, 1878, out of Floss by Champion York. Presented by G. W. Fairington, Middletown, Pa., the trainer of the dog and bitch.

—Mr. W. H. Pierce, Peekskill, N. Y., claims the name of Maggie May for his pure Gordon bitch pup out of Thomas' Fanny by Thomas' imported Prince, presented to him by A. H. Thomas, of Warrensburgh, N. Y.

—Mr. Nelson J. Parker, of New Brunswick, N. J., bred his Gordon setter Wrag (black and tan, full pedigree), lately owned by Wm. H. Pierce, of Peekskill, N. Y., to Dr. S. Fleet Speir's black and tan Gordon setter Romeo, by Gypsum out of Daisy. Both dogs are 1st prize winners.

—M. P. H. Morris has had the misfortune to lose by death his setter bitch Ida, by Rob Roy out of Mell.

The same gentleman has bred his Llewellin setter bitch Sultana (Leicester–Peeress) to his Czar (Leicester–Petrel).

—Mr. J. H. Whitman's Prairie-Ranger bitch Pearl whelped on 11th inst. 10 puppies by pure Laverack setter Charm—2 lemon and white, 6 black and white, and 2 liver and white.

—Dr. Parson's lemon and white native setter Pelts whelped, Jan. 28, 10 pups by Charm—7 lemon and white, 3 liver and white.

BREEDING FOR SEX.

INDIANAPOLIS, Jan., 1879.

EDITOR FOREST AND STREAM:

The following cases may be of interest to a portion of your readers, as they illustrate some topics that have recently been discussed in your journal.

Case No. 1.—Fannie, a Gordon setter bitch, was bred to my dog Dan, Sept. 1, being in heat two days. I was just on the eve of leaving home to shoot grouse, and was absent for five days, having my dog with me. Fannie was confined in my barn until I returned, and remained there with Dan for a week longer, when the heat passed off. Nov. 10 she dropped four dogs and one bitch pup.

Case No. 2.—Queen, an Irish setter bitch, who bred to Dan, Nov. 1, in full heat. It being the first of the open quail season, I was just ready for a week's country shooting. Queen was kept confined until I returned, and then remained with Dan until her heat passed. Jan. 7 she dropped five bitch and four dog pups.

Remarks—It does not appear from the above cases that copulation during the first half of the period of heat in a bitch is necessary to successful impregnation of the ova. Second, that the period of heat at which impregnation takes place does not determine the sex of the offspring. In both of the foregoing cases copulation was confined to the last half of the heat term, and the results were totally different as to the sex. Embryologists long since reached the conclusion that it was beyond human power to control or to fix the sex in embryo. This ar was lost when Jacob removed from Padanaram. H. G. CAREY.

Woodland, Farm and Garden.

For Forest and Stream and Rod and Gun.

SEMI-TROPICAL CALIFORNIA.

ONE afternoon last July I sat at my window, pipe in mouth, taking my *otium cum dignitate* and admiring the soft warm tints which the setting sun spread over the brown beetling walls of snow-capped San Jacinto and the many other peaks which help to inclose the blooming valley of San Bernardino. As leaning on the casement I dreamily watched the lights and shadows constantly shifting to and fro on the mountain side, my attention was attracted by some degenerate aboriginals engaged in picking fruit in the orchard below. Lazily listening to their rambling jargon, unintelligible to me, and watching their work progress as they slowly filled their baskets with the fuzzy-faced peach and its cousin-german, the apricot, I bethought me of the flight of time and my present do-nothing life. Seizing my pencil and paper, I determined to make a start at once by jotting down some notes upon the country in which I was sojourning.

The termini of the Southern Pacific R. R. are San Francisco and Yuma. Yuma is in Arizona, but at its extreme southwestern corner, and just across the Colorado River close to the Mexican border. Fort Yuma is simply a military post, and is supposed to be the hottest place in this world. At least so would attest, if true, the well-worn story of the wicked soldier there, who, a few days after his death and burial, telegraphed back for his blankets. I have seen the mercury sail up to 120 degrees Fahrenheit without the slightest effort. Taking the train from San Francisco at four o'clock P. M. will bring one the following afternoon to Los Angeles, lying back thirty miles from the sea and on the thirty-fourth parallel. Los Angeles is one of the old mission towns, and is now, owing to the stimulus given it by the completion of the railroad, a thriving and busy city of some fifteen thousand inhabitants, one-half, perhaps, Mexicans or half-breeds. On the road to Los Angeles the train bears the tourist or emigrant through much novel, and some attractive scenery. The topping of Tehachapi summit is a sight by itself, and the engineering skill displayed in the construction of "the loop" is admirable. We pass through a tunnel, make a circuit of the cone-like peak, and cross again our path of a few moments before, more than seventy feet above and directly over it. The Mohave desert, with its interminable growth of cacti, is a striking sight. Here we see growing wild and to enormous proportions, those plants which in the Eastern States are so cherished and guarded from the rigors of the weather. In one place they grow with a thick trunk to the height of twenty feet, when the branches, gaunt and prickly, spread out their bristling arms. Here, too, is seen an instance of nature's perfect adaptation of her creatures to their surroundings, in the cactus woodpecker, a bird which nests in trunks and ekes a subsistence by devouring the insects which live in and about the plant. In Los Angeles lies the famous Wolfskill orange orchard of twenty acres, which yields the proprietors such incredible yearly returns. Near Los Angeles, too, is the old San Gabriel mission, one of the first and richest of these old Spanish settlements. Many of these decaying ruins are found in the Southern country, monuments of the past, whose history of the period when the Franciscan monks were so great a power has been but incompletely written. The San Gabriel mission was the fourth of the Upper California missions, and the crumbling walls are to-day one of the objects of interest to the tourist. These mis sions consisted of a conglomeration of rambling buildings, generally in the form of a square, rarely more than one or two stories high and made from adobe clay. They were sometimes whitened, but often rough and unsightly on the outside. An attempt was generally made at a tower or steeple, sometimes two, in which the mission bell was placed, whose boisterous clanging was wont to summon the brown visaged natives to their morning orisons. Internally the churches were gaudily decorated, pictures representing heaven and hell always occupying a prominent position. These were glaringly colored so as to strike the rude imagination of the Indians. This seems to have been one of the chief factors in the religious education of the natives Péronse says that the picture of hell at the church of San Carlos has done incalculable service in this way.

Three hours by rail still to the southward of Los Angeles will bring one to Colton, a small railroad town in San Bernardino County. Hence coaches convey the few passengers to San Bernardino, three miles to the east, or to the new and flourishing colony of Riverside, seven miles in the other direction. Let us climb up with Robinson and ramble along to the latter place.

Perpetual sunshine and cloudless skies characterize the eight months of summer in semi-tropical California. I well remember with what surprise the inhabitants witnessed a slight shower at Riverside one morning last July. The seasons are reversed. Vegetation is most luxuriant during our Eastern winter months, and the ephemeral showers, scattered through the weeks, turn February into May or June, and the utter absence of rain during the summer and autumn causes the hills to look brown and uninviting, and, except where artificial irrigation is employed, the country presents a parched and unattractive aspect. Since the advent of the railroad the influx of Eastern people has been large and steady, and there exist now many new and flourishing colonies where but a few years since the barren plains yielded nothing but a rich growth of sage brush and cactus. Anaheim, Pasadena, Orange and Riverside are all remarkable examples, of the fertility of the soil where water is at all accessible.

The method generally employed in leading water to the colonies is that now in operation at Riverside. Here the Santa Ana River is the means of irrigation, and human ingenuity has supplied the way of utilizing the same. The stream being higher at a point some miles above the town than the land to be irrigated, wooden flumes were constructed and led by paths, determined by surveying, to the lands of the company in possession. The water turned into these flumes reaches the town and is distributed to landowners by means of gates and side ditches. A moderate water-tax is paid, and the people obtain their water on any day by sending in an order to the company the day previous.

The colony of Riverside numbers fifteen hundred people to-day, and is growing. The soil and climate seem peculiarly adapted to orange culture, and this is immediately made evident to a stranger by the miles and miles of young two-year-old trees set in orchard shape. Other fruits thrive here, among them peaches, apricots, nectarines, lemons, figs, grapes and various other fruits common alike to semi-tropical and temperate North America. Orange culture, however, has attracted most attention in the southern country, and the incipient rancheros are to be numbered by the thousand. That the life is one presenting great inducements to many cannot be questioned. To those in any way affected by bronchial or pulmonary weaknesses, a permanent cure is the result in nine out of ten cases. Enthusiasm in the business has played havoc with the common sense and judgment of many of the new orange growers. The profits to accrue are estimated at much too high a figure, many persons not taking account of the great fall in prices to come when the hundreds of thousands of young trees mature and bear a full crop. The life is one of perfect freedom, outdoor work and healthy habits. The results are a robust and hardy constitution and a good competence. One of the inviting features of ranching in this country is the small outlay of money necessary to commence operations in the fruit-growing line. An enterprising young man can start a ten-acre tract with a capital of but $1,500 to $2,000, or $5,000 for double the amount of land. The principal source of revenue is derived from orange and lemon culture, but there are besides such fruits as raisin grapes and a host of deciduous fruits for which there is a constant home market. Living is cheap. A man alone can live nicely on $500 per annum. For six months of the year the market is incomparable and everything one could wish. During the summer the heat is severe, but one does not, I think, suffer a tithe of the misery that overpowers us here in the East during our "heated terms." There the nights are invariably cool and delightful. The mercury may at midday register 110 deg. F., yet at midnight it will have fallen to 60 deg. or below. The air is dry and seems to breathe vigor into the invalid *instanter*. A few hours away may be enjoyed the grandest of mountain scenery, bracing breezes from the placid Pacific, and, in short, an entire change of surroundings: from the torrid to the temperate in three hours! Up among these mountains one can spend two or three weeks of summer in the most complete *dolce far niente*. Topping the lower peaks we find a succession of open mountain meadows with long luxuriant grass, and on all sides giant pines towering skyward. The beautiful live oaks, too, springing straight and symmetrical from the sward, remind one forcibly of the grand old English parks of Kent and Surrey. No undergrowth is to be seen save the green fringing of the mountain brooks, whose crystal waters flow from many of nature's fountains. How well I remember one night upon the San Jacinto range. We had heaped the resinous fagots upon the flickering fire for the last time, and, having rolled ourselves in our blankets, lay beside the replenished embers. The moon was shining down brightly, but dimmed now by the light of our fire. The breeze soughed through the old trees with a

mournful music, while close at hand the little mountain brook kept up a monotonous murmur as it danced down on its way to the sea. There were other voices of the night—the snort of the grizzly, the hideous howl of the coyote family, borne to us on the night air from the valley far below, and the weird hooting of the great horned owl. I lay there awake and listening for hours, and it was not until rosy fingered Aurora was just touching the eastern heavens with faint streaks of light that sleep came to me beside the paling embers. IXOOG.

NATIONAL COLUMBARIAN SOCIETY.

THE Fourth Annual Exhibition recently closed was one of the most successful ever held by the society. The weather for one or two days was wet and thus once interfered with the daily flight of the two hundred carriers. The collection of pouters, carriers, barbs, tumblers, owls, trumpeters, priests, nuns, runts, archangels, etc., included birds from all sections of the country, while Mr. Reiche exhibited some imported birds, such as Nicobars, green pigeons, etc. The birds were in excellent condition and spoke volumes for their owners. The premiums were awarded as follows:

Class 1.—Best collection, Herman Colell; 2d, Andrew Schell.

Class 2.—Pouters—Best collection, John Yewdall; cock, 1873, C. Becker; hen, 1878, A. Scheid; cock, C. Becker; hen, A. Scheid; black pied cock, Jno. Yewdall; 2d, H. C. Cook; 3d, Ph. Schuchman; 4th, A. Scheid; hen, Jno. Yewdall; 2d, C. Becker; 3d, A. Scheid; 4th, Ph. Schuchman; yellow pied cock, H. Colell; 2d, H. Colell; 3d, Jno. Yewdall; 4th, C. Becker; hen, Jno. Yewdall; 2d, H. Colell; 3d, Ph. Schuchman; 4th, A. Scheid; red pied cock, A. Scheid; 2d, Jno. Yewdall; 3d, H. Colell; 4th, Jno. Yewdall; hen, A. Scheid; 2d, H. Colell; 3d, Jno. Yewdall; 4th, H. Colell; blue pied cock, C. Becker; 2d, Jno. Yewdall; 3d, C. Becker; 4th, C. Becker; hen, A. Scheid; 2d, A. Scheid; 3d, Jno. Yewdall; 4th, C. Becker; white pied cock, A. Scheid; 2d, Jno. Yewdall; 3d, H. Colell; 4th, Jno Yewdall; hen, A. Scheid; 2d, H. Colell; 3d, C. Becker; 4th, Jno. Yewdall; off-color cock, Ph. Schuchman; 2d, A. Scheid; 3d, Jno. Yewdall; 4th, Ph. Schuchman; hen, Jno. Yewdall; 2d H. C. Cook; 3d, C. Becker; 4th, C. Becker; pigmy pouters, H. Reische; cock, H. Reische; 2d, H. Reische; hen, H. Reische; 2d, H. Reische.

Class 3.—Carriers—Best collection, Jno. Yewdall; cock, 1873, Jno. Yewdall; hen, 1878, Jno. Yewdall; cock, any age, Jno. Yewdall; hen, any age, P. C. Biegel; black cock, Jno. Yewdall; 2d, Jno. Yewdall; 3d, Jno. Yewdall; 4th, Jno. Paar; hen, P. C. Biegel; 2d, Jno. Yewdall; 3d, Ph. Schuchman; 4th, Jno. Paar; dun cock, P. C. Biege; 2d, Jno. Yewdall; 3d, Jno. Yewdall; 4th, Ph. Schuchman; hen, Jno. Yewdall; 2d, H. Colell; 3d, P. C. Biegel; 4th, Jno. Yewdall; blue cock, Jno. Paar; 2d, Jno. Paar; hen, Jno. Paar; 2d, Jno. Paar; 3d, white cock, Jno. Paar; 4th, W. A. Hall; red cock, D. E. Newell.

Class 4.—Barbs—Best collection, E. H. Moore; black cock, A. Scheid; 2d, E. H. Moore; 3d, Jno. Paar; 4th, E. H. Moore; hen, E. H. Moore; 2d, E. H. Moore; 3d, Jno. Paar; 4th, H. Colell; 2d, blue cock, H. Colell; 3d, H. Colell; yellow, H. Colell; 2d, H. Colell; 3d, D. E. Newell; 4th, E. H. Moore; hen, H. Colell; 2d, H. Colell; 3d, Jno. Paar; 4th, Jno. Paar; red cock, E. H. Moore; 2d, Jno. Paar; 3d, H. Colell; hen, D. E. Newell; 2d, Jno. Paar; 3d, H. Colell; 4th, Jno. Paar; white cock, D. E. Newell; 2d, Jno. Paar; 3d, E. H. Moore; 4th, A. Colell; hen, D. E. Newell; 2d, D. E. Newell; 3d, Jno. Paar; 4th, H. Colell.

Class 5.—Short-faced Tumblers—Best collection, T. S. Gaddess; cock, T. S. Gaddess; hen, T. S. Gaddess; almond cock, T. S. Gaddess; 2d, A. Scheid; 3d, C. Spiess; hen, T. S. Gaddess; yellow-mottled cock, T. S. Gaddess; 2d, H. Colell; hen, T. S. Gaddess; 2d, H. Colell; agate cock, T. S. Gaddess; 2d, H. Colell; hen, T. S. Gaddess; 2d, H. Colell; splashed cock, T. S. Gaddess; 2d, H. Colell; hen, T. S. Gaddess; 2d, H. Colell; kite cock, T. S. Gaddess; hen, T. S. Gaddess; 2d, red-mottled cock, A. Scheid; 2d, hen, A. Scheid.

Class 6.—Owls—Best collection African owls, H. V. Crawford; white cock, H. V. Crawford; 2d, H. Colell; 3d, H. V. Crawford; hen, H. V. Crawford; 2d, H. V. Crawford; 3d, C. Spiess; blue cock, A. Colell; 2d, hen, H. Colell; black cock, H. V. Crawford; hen, H. V. Crawford; 2d, H. Colell; blue-tailed cock, H. V. Crawford; 2d, H. V. Crawford; hen, H. V. Crawford; 2d, H. V. Crawford; black-tailed hen, H. V. Crawford; Chinese owls, H. Colell; cock, H. Colell; hen, H. Colell; blue cock, Scott Bros.; 2d, H. Colell; 3d, H. Colell; hen, H. Colell; 2d, H. Colell; black cock, H. Colell; 2d, H. Colell; hen, H. Colell; 2d, H. Colell; yellow cock, H. Colell; 2d, H. Colell; hen, H. Colell; 2d, red cock, H. Colell; checkered, H. Colell; hen, H. Colell; silver cock, Scott Bros.; hen, Scott Bros.; 3d, H. Colell; English owls, Williams; hen, 2d, C. Spiess; 3d, M. Stephens; hen, Scott Bros.; 2d, C. Spiess; 3d, Salisbury Co.; 4th, M. Stephens; cock, any variety, H. V. Crawford; hen, H. V. Crawford.

Class 7.—Trumpeters—Best collection Russian, H. Colell; black cock, H. Colell; 2d, H. Colell; mealed cock, A. Scheid; 2d, H. Colell; 3d, H. Colell; 4th, Ph. Williams; hen, A. Scheid; 2d, H. Colell; 3d, Ph. Williams; 4th, Ph. Williams; splashed cock, H. Colell; 2d, H. Colell; 3d, A. Scheid; hen, A. Scheid; 2d, H. Colell; other than Russian, cock, H. Reische; 2d, O. Seifert; 3d, H. Colell; 4th, H. Reische; hen, H. Reiche; 2d, Salisbury Co.; 3d, H. Colell; 4th, O. Seifert.

Class 8.—Fantails—Best collection, Ph. Williams; white cock, Wm. A. Hall; 2d, S. M. Hard; 3d, H. Reiche; hen, S. M. Hard; 2d, Wm. A. Hall; 3d, H. Colell; 4th, Salisbury Co.; cock, other colors, Ph. Williams; 2d, Ph. Williams; 3d, H. Moore; 4th, Ph. Williams; hen, Ph. Williams; 2d, Ph. Williams; 3d, E. H. Moore; 4th, E. H. Moore.

Class 9.—Turbits—Best winged cock, Geo. Meis; 2d, E. H. Moore; 3d, E. H. Moore; hen, H. Miller; 2d, E. H. Moore; 2d, Geo. Meis; 3d, Geo. Meiss; solid, cock, Geo. meis; 2d, Salisbury Co.; 3d, Stephens; hen, E. H. Moore; 2d, Wm. A. Hall; tailed cock, Loewenstein; Loewenstein; 3d, H. Colell; hen, Loewenstein; 2d, Loewenstein; 3d, H. Colell.

Class 10.—Swallows—Best collection, E. H. Moore; cock, E. H. Moore; 2d, A. Scheid; 3d, E. H. Moore; 4th, E. H. Moore; hen, E. H. Moore; 2d, A. Scheid; 3d, E. H. Moore; 4th, E. H. Moore.

Class 11.—Jacobins—Best cock, A. Scheid; 2d, A. Scheid; 3d, Stephens; hen, A. Scheid; 2d, A. Scheid; 3d, A. C. Kelly.

Class 12.—Priests—Best cock, C. Spiess; 2d, E. H. Moore; 3d, E. H. Moore; hen, C. Spiess; 2d, E. H. Moore; 3d, E. H. Moore.

Class 13.—Magpies—Best Cock, G. A. Muenchinger; 2d, E. H. Moore; 3d, E. H. Moore; hen, E. H. Moore; 2d, E. H. Moore; 3d, A. Scheid.

Class 14.—Nuns—Best cock, E. H. Moore; 2d, A. Scheid; hen, E. H. Moore; 2d, A. Scheid; 3d, A. Scheid.

Class 15.—Antwerps—Best collection, L. Waefelaer; cock, L. Waefelaer; 2d, L. Waefelaer; 3d, L. Waefelaer; hen, L. Waefelaer; 2d, L. Waefelaer; 3d, L. Waefelaer.

Class 16.—Bald Heads—Best cock, T. S. Gaddess; 2d, A. Scheid; 3d W. A. Hall; hen, T. S. Gaddess; 2d, A. Scheid; 3d, W. A. Hall.

Class 17.—Beards—Best cock, A. Scheid; 2d, A. Scheid; hen, A. Scheid; 2d, A. Scheid.

Class 18.—Runts—Best cock, B. S. Woodward; 2d, H. Reiche; 3d, B. S. Woodward; hen, B. S. Woodward; 2d, H. Reiche; 3d, B. S. Woodward.

Class 19.—Berlins—Best cock, D. Loewenstein; 2d, H. Colell; 3d, D. Loewenstein; hen, R. Lohmann; 2d, D. Loewenstein; 3d, D. Loewenstein.

Class 20.—Starlings—Best cock, G. A. Muenchinger; 2d, A. Scheid; hen, A. Scheid; 2d, A. Scheid.

Class 23.—Moor Caps—Best cock, A. Scheid; 2d, A. Scheid; hen, A. Scheid; 2d, A. Scheid.

Class 24.—Ices—Best cock, A. Scheid; 2d, A. Scheid; hen, A. Scheid; 2d, A. Scheid.

Class 25.—Frill backs—Best cock, H. Reiche; 2d, H. Reiche; hen, H. Reiche; 2d, H. Reiche.

Class 26.—Archangels—Best cock, E. H. Moore; 2d, C. Spiess; hen, E. H. Moore; 2d, C. Spiess.

Class 27.—Breasters—Best cock, A. Scheid; 2d, H. Reiche; hen, A. Scheid; 2d, H. Reich.

Class 29. Best white Scanderoon hen, H. Reiche; brown shield cock, H. Reiche; hen, H. Reiche; black breasted cock, H. Reiche; hen, H. Reiche; silver African owl cock, Scott Bros; hen, Scott Bros.; 2d, Scott Bros.; red tumbler cock, T. S. Gaddess; hen, T. S. Gaddess; 2d, H. Colell; isabella swallow cock, H. Colell; hen, D. Loewenstein; highflyer cock, R. Lehmann; hen, R. Lohmann; ruffed neck moor cap cock, A. Scheid; hen, A. Scheid; 2d, rosed Jacobin cock, A. Scheid; 2d, hen, A. Scheid; red spot fairy cock, A. Scheid; hen, A. Scheid; 2d, black, cock, A. Scheid; 2d, hen, A. Scheid; yellow Lenz cock and hen, A. Scheid; 2d, brown cock, A. Scheid; dun African owl hen, H. Colell; 2d, H. Colell; silver Russian Trumpter cock, H. Colell; 2d, hen, H. Colell; best silk fantail cock, H. Colell; 2d, H. Colell; hen, H. Colell.

We have left a number of catalogues, which will be mailed free on application to the Secretary, H. V. Crawford, 120 Hudson street.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

X. Y. Z., Jamaica, L. I.—The chances are that your puppies will come all right, although running with the other dog may affect the color of the puppies.

JACKSNIPE No. 2, Victor, Iowa.—We cannot identify your duck. The description is too meagre. The specimen should have been saved. Thanks for photograph.

W. B., Rosedale, Kan.—The ordinary ground trap is not patented. No spring is used in its construction. For information regarding his traps, write to Capt. Bogardus, at Elkhart, Ill.

J. C. M., Cleveland, O.—Change your dog's diet, and give him a tablespoonful of cod-liver oil twice a day for a while. Feed him away from his kennel, and where he cannot get any straw with his food.

E. H. S., Barnstable.—The ruffed grouse is known on Long Island as the wood-pile quawker, and the woodcock as the timber-doodle. See "Sportsman's Gazetteer" for local synonyms.

M. M., Chillicothe, Ohio.—We are as much at a loss to understand the cause of your dog's peculiar trouble as you are, and without seeing him can only attribute it to the unusual amount of exercise.

J. S. L.—Am very fond of walking, but in so doing, to any extent, get a pain in my side. Please give me a remedy? Ans. Your physician could probably advise you better than we can.

INQUIRER.—Dr. J. C. Merrill's "Notes on the Ornithology of Southern Texas" is not on sale, but can perhaps be procured of the author, 5 Ashburton Place, Boston, Mass., or of the Smithsonian Institution, Washington, D. C.

W. C. W., New Haven.—Think two separate canoes preferable to a double canoe. For latter write to Geo. Roahr, foot 135th street Harlem, N. Y., who will get you up a *Shadow* model for two, if desired.

T. J. M., Red Bank.—No special work on running steam launches, published. Van Nostrand, 27 Murray street, N. Y., has an assortment of practical books for engineers from which you can select. Practice, however, will make perfect.

R. W. C., Vineyard Haven, Mass.—In playing cribbage I held in my hand two trays, a four and a five; another tray turned on the deck. Will you please state how it should be counted? Ans. 15-2; 15-4; 15-6; 3-4-5 three times, and 6 for the three trays; total 21.

CANOE, West Troy.—Eighteen to twenty feet is long enough for double canoe. New York Canoe Club has no canoe house, but contemplates building one soon. *Shadow* canoe, complete, will cost about $120. Send to Geo. Roahr, foot 135th street, Harlem.

F. B. G., Stamford.—Will you kindly inform me through the columns of your paper which is the best agricultural paper to subscribe to? Ans. Would recommend the *American Agriculturist*, Orange Judd Co., publishers, 245 Broadway, New York.

E. B., Phila.—What is the cause of my 8-bore breech-loader becoming coated with lead about one inch from the chamber (chilled shot used)? Ans. Probably your shells are a little too short for the chamber.

COUNTRY, Brooklyn, N. Y.—There is great diversity of opinion among poultry fanciers regarding the merits of particular strains, Plymouth Rocks, Cochins, Brahmas and Leghorns are all good layers. Any one of them will furnish you with all the eggs you want.

F. C. B., Pittsfield, Mass.—For recipe of meerschaum pipe coloring compound write to J. Kaldenburg, Fulton street, N. Y. It is probably a trade secret however. The scenting of tobacco is done with the tobacco essences, which may be procured of tobacco dealers.

A. L. N., Salem, Mass.—The pedomotor is a kind of roller skate in which the front wheels are smaller in diameter than those behind. This gives a slope and propels the foot forward. The skate might be made strong enough for common road use. The Reiche Bros. have no wood ducks nor Mandarin ducks on hand at present.

W. H. H., Ellenville, N. Y.—We cannot find the published direction for making Seth Green's barbless hooks from common needles. Heat the needles to a straw-colored heat (a blow pipe will be necessary), and let them cool slowly. Then bend into proper shape, heat again, and plunge into water.

JIM, Indianapolis.—1. I have a Dougall, No. 12 gun; length of barrel, 25in.; total weight, 6¾lbs. I have been using No. 4 Hazard and No. 2 Dupont powder; a charge of 3½ and at times 4 drachms; it does not seem to kill cleanly. 2. Do the Parker Bros. make a No. 6 or 8 single-barrel gun? Ans. 1. The fault is undoubtedly with the gun. 2. No.

C. H. B., Allentown, Pa.—Is there any book published which the names of all registered dogs are in? Please state by whom it is published, and for what price? Ans. A stud book is now being published by the National American Kennel Club. It will probably be announced when ready.

SUBSCRIBER, New York.—Dog one year old; large size; seems ill; somewhat stiff; shakes head and ears violently at times, and when head is pressed will whine. Ans. Dog has canker of the ear. Drop into his ear every night and morning a little of the following mixture. Goncard's extract and wine of opium, of each ½ oz.; sulph. of zinc ½ drachm; distilled water, 8 ozs.; mix.

ORNITHOLOGY, Beloit, Wis.—Can you inform me whether there are any works published relating to South American birds, or any classification? Where can "The Birds of the Colorado Valley" be obtained? Ans. No systematic works on the birds of South America easily obtainable, we think. "Birds of the Colorado Valley" may perhaps be had by applying to the Secretary of the Interior or the author, but it is doubtful whether there are any copies left.

S. B. F., Cedar Rapids, Iowa.—In shooting from rotary ball trap, the shooter calls pull; but the trap having about stopped, the puller did not answer to the call. The shooter said don't pull; puller did pull, and shooter shot at ball and broke it, the trap standing still. Should the ball be scored or is it lost? Ans. From your version we should say the case was somewhat mixed, and, not being present to see how the shoot was conducted, would decide that the shooter must have another ball.

D. D. D., Vincentown.—1. If in shooting a match at glass balls, and a ball is cracked by all appearance with shot, is it called a broken ball? 2. If your gun hangs fire is it called a shot? 3. If your gun snaps is it called a shot? 4. If your gun goes off while putting to the shoulder is it counted a shot? 5. Can I purchase of you Bogardus' rules for glass ball shooting? Ans. 1. If referee so decides. 2. Yes; generally. 3. You get another ball. 4. Yes. 5. Yes.

SUBSCRIBER, Quincy, Mass.—My setter bitch has a thick, whitish discharge from corners of her eyes, which I do not like to see. Her appetite is good, but not ravenous; is in rather fair flesh, and coat glossy. How can I get rid of the discharge from the eyes? 2. Is there any way to determine approach of season, except swelling of parts? Her diet is principally milk, with scraps from table and some cooked meat? Ans. 1. The discharge is probably the result of a cold, and will most likely disappear. In the meantime bathing it with tepid water or weak tea may help. 2. Only by an increased desire to play.

P. H., Bloomsburg, N. J.—1. Please give me a good recipe for tanning dog hides? 2. Date of the oldest American silver dollar? Gold ditto? Ans. 1. Nail the skin on a board or on the barn door, fur side down. Carefully remove all the fat and oily matter, using for the purpose a dull knife. When the skin is dried soak it in water until soft. Then soak it half an hour in a preparation of three quarts of soft water, one-half pint salt and one ounce oil of vitriol. Squeeze skin dry and hang up in the shade. 2. Dollar mint was established by Act of Congress, April 2, 1792. First silver dollar coined in 1794; first gold dollar, 1849.

D. H. L., New York.—1. Would a cross between an Irish water spaniel dog and a cocker bitch make good dogs for field work, and would the pups combine the characteristics of both sire and dam? 2. Can you inform me whether there is any tax on dogs in Morristown, N. J., and if so, what it is? Ans. 1. Very many cockers are so bred. The principal objection we should have to the cross would be in the fact that the Irish water spaniel has not been noted for nose, and that there also impetuous in disposition. The cross, however, would make excellent retrievers for either land or water. 2. There is a county tax on dogs in most of the towns of N. J., and one, we presume, in Morris. It would probably be fifty cents per head.

SUBSCRIBER, Maine.—I have a collie one year old, which last week vomited a live, white, wiry worm, nearly three inches long. He has rheumatism I think; it is in his forelegs; is lively; appetite and bowels all right; what would you do for him? 2. About what age will a collie come in heat first time? 3. Have some brass shells which were loaded some time ago with black powder; will they shoot as well as fresh-loaded ones? Ans. 1. Give him two grains of santonine each day for three days, following the last with a dose of castor oil. 2. They vary; from eight to twelve months. 3. If they have been kept in a dry place, and have not been loaded too long, they probably will.

ROYAL, Belvidere, Ill.—1. Can I procure the parts of a breech-loading double shot-gun? Can I get them all finished ready for stocking, or are they in the rough, and would have to be finished by machinery? If so, where can I buy them? 2. Please give receipt for hard finish on gun stocks? 3. Please give receipt for mending rubber boots? 4. Where can I buy the Roper shot-gun, four-shooter? 5. Is the Roper gun manufactured now? Ans. 1. You can obtain the parts, but they would have to be finished and fitted. 2. Most stocks are polished, and finished in, or varnished. 3. The receipt is too long to print. You can find it in page 616 of Hallock's "Sportsman's Gazetteer." 4. H. C. Squires, No. 1 Cortlandt street, this city; price $15. 5. No.

C. B. L., Augusta, Ga.—1. Is there any rifle or shot-gun made with an automatic shell extractor, as in the old Starr rifle and Smith & Wesson pistols? 2. Is there any dog known as the Siberian greyhound (I don't mean the Russian bloodhound nor the Ulm dog)? If there is such a breed where can they be bought? Also state where the others can be had? 3. Please give me the address of paper canoe builders? Ans. 1. Yes, such extractors are now attached to all rifles and guns of the breech-loading model. 2. We know of no such dog as a breed, although we have seen a dog called a Russian greyhound. Do not know where either can be bought. 3. Waters & Son, Troy, N. Y.

JOHN E. MILLER, Hagerstown, Md.—1. What are the names of the wild ducks that frequent the Antietam, Conocheague, and other streams in this latitude? 2. How can a gander be distinguished from a goose in the common variety of geese? I mean is there anything in the appearance by which they may be told? 3. What breed of dog do you consider best for rabbits, and where to be had? Ans. 1. In the localities named you would be likely to find the mallard (*Anas boschas*), black duck (*A. obscura*), widgeon (*Mareca americana*), green-winged teal (*Querquedula carolinensis*), broadbill (*Fuligula marila*), lesser scaup (*F. affinis*), canvas-back (*F. vallisneria*), redhead (*F. ferina* var. *americana*), two species of the genus *Bucephala*, the "coots" (*Œdemia americana*, *G. fusca* and *Œ. perspicillata*), and, perhaps, a few others. Consult the letters of R. F. B., our Washington correspondent, in back numbers of the paper. 2. The sexes are essentially alike in the Canada goose. 3. The best dog for rabbits is the beagle.

X. Y., Dauphin, Pa.—1. Mention best place, line and route for trout and also sea fishing, in New Brunswick? 2. Is fishing reserved in Restigouche River? How far up is it navigable for a canoe? 3. Mention best guide book or other means of obtaining full information? Ans. Take Intercolonial Railroad from Quebec on the north, McAdam Junction with European and North American Railroad, via Bangor on the south. This road runs by all the trout streams of the north shore of the Gulf of St. Lawrence, including the Mirimichi, Tabusintice, Charlo and Restigouche, as well as all the interior and River St. Lawrence tributaries between Metis and Quebec. From 10th of June to 15th of August is the best time for trout, including the run of sea trout in all the estuaries. The Restigouche River is leased with the exception of six miles of water on the lower river just above tide water, where the $1 per diem rod privilege can be obtained. It is navigable for 127 miles in ordinary stage of water. The best guide book is "Hallock's Fishing Tourist," Harper & Bros., or for sale at this office; price $2.

S. J. K., Boston.—Thames course, Putney to Mortlake, forms an S. Start is made from Aqueduct off the "Bells," and finish, off "the ship" at Mortlake—just 4¾ miles. First bend in the course at the "Crab-tree;" next, after passing through Hammersmith Bridge; another bad bend at the "lower reach;" from there straight to finish. At the bend the tide runs strong, and there are many eddies and counter currents. In the reach it is often quite lumpy. Opposite Putney on the north bank of river, lies Fulham, connected with the south or Surrey side by a bridge. On the north bank, going up, Craven Cottage, ¾ mile up. About 1 1-16 mile above is the suspension bridge leading across to Hammersmith. This is just before the first bend. After rounding the curve, two islands are met with on the Middlesex or north bank, just below Chiswick, the latter town being about 7-8 mile above Hammersmith. Just before reaching finish, and at the beginning of the east bend below Mortlake, the course passes under the railroad bridge crossing over from Barnes on the south side. Widest part of the river off Craven Cottage, where there is about 1-8 mile of water; narrowest part above the railroad bridge, where the river is little over 1-16 mile wide, and from there it spreads out a little till the finish is reached at "the ship."

ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK THURSDAY, FEBRUARY 20, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that must not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if copies emitted to us is lost.

HONEST EXPERTS.

IT would almost seem as if in almost every line of sport superior abilities carry with them overwhelming temptations. A man through long years of hard work and closely-confined energy makes himself the master of some particular line of endeavor. He stands out a marked man, and the ordinary class of the community come to look upon him as the measuring gauge of perfection in that special branch. They take him at his word and at his record, and judge him by them, and they back their judgments with money, and then comes the temptation. It is the old, old snare of trying to get rich suddenly. The exercise of his natural or acquired abilities may insure him a comfortable income and in time a competence, but there is the glittering possibility of a sudden acquisition by just a slight deviation from the true, fair, honest path. Expert as he is in a straightforward way he indeed must be more than expert who can tread a crooked path and yet have the appearance of traveling on directly toward the goal. The failure of exposure is sure to come; it may be late, but more frequently it comes very soon. The press, that very agency which gave him the prominence he so richly deserved when by honest, manly endeavor he successfully strove to do something better than his fellows, now becomes the power which will hurl him from his position of prominence, snatch the laurels from his brow and consign him to a place even lower than that of common mortals where the fallen angels writhe and curse.

For such an one there is but one verdict, "Served him right." It may be mixed with a pitying confession of his remaining skill, but the moral obliquity which induced him to promise one thing when his real intent was to do another cannot be overlooked or condoned. It will not do to plead the temptation, there is no justification in that. The duty to the public is first and pre-eminent, and this duty, faithfully and intelligently performed, material success is sure to follow. But that same public has a long and relentless memory when its confidence has been betrayed, and a lifetime spent in good work may be in a moment turned blank. The favorite becomes a nonentity, ignored, and it may be despised. If he can calmly bear such a revulsion he is at heart devoid of moral feeling and a rogue, and his condemnation comes none too soon.

We would not be so short-sighted as to denounce professionalism indiscriminately, but we do plead for an honest article of the sort. We do object that a man shall spend years of his life in studying a subject in its entirety only the better to hoodwink the public about it; that he shall become nothing more than an expert of trickery and fraud, with the odor of concealed crime about him; or vanishing like a bubble when some honest critic shall burst his bubble of sham. Why is it that every where there is this distrust of professionals? Why are they watched with a keener eye? Why, in short, do people look for some form of evasion and deceit? It need not be. There is nothing inherently dishonest in being an avowed master of an art, of a process, or a special form of manipulation. Properly such an one is to be honored in that he serve as a guideboard and beacon for many others who may be struggling up the same path, not to the dazzling heights of a master, but to the satisfactory level of a proficient. He who plods over a hundred miles in the 24 hours may give valuable lessons to thousands who foot it only through the ins and outs of an ordinary business day. The oarsman, skimming along in a craft as useless for every-day use as his speed would be for an every-day pace, may yet render valuable guidance to those who find in a quiet evening pull one of the most charming of relaxations. He who may make his thousands of unerring snap-shots in a day, as a show, though he may have no higher ambition than a desire for gate-money, may yet settle many disputed questions connected with the use of the gun and teach many a lesson to practical sportsmen in the field.

No one would for a moment suppose that the efforts of the American rifle team were to stop short when the ability to hit a target at 1,000 yards was reached? The effect of their work will never be adequately measured until we can determine exactly how far a well-armed soldiery contribute to the maintenance of peace and the prosperity of a country.

Turn and twist it as much as may be, in matters of professional expertness, the old truth yet stands out the bolder and the clearer, applying here as to the pulpit, to journalism, to every profession and every trade, however humble, that "Honesty is the best policy." Our columns bear testimony to the truth of this in almost every issue. Now, it is a dog show conducted without the guiding star of integrity; anon, a grand shoot turns out to be a trap-shoot in more senses than one. Fish stories receive their *grano of salis*, and rifle scores, which are too good to be true, are given their true weight as pencil productions. The press is not perfect, such a claim would be impious; but it is a sieve through which very few tricksters and swindlers manage to slip. In the "bright sunlight of publicity" of the newspaper columns the clever devices of those who would supplement natural or acquired gifts by chicanery are sure to come to naught. There may be no actual prison cell in which to "jug" the offender, but he is punished as surely as deservedly, and far more effectually by the exposure and the consequent degradation and loss of prestige. He may for a time rest under a cloud which explanation may dissipate, but a smirch once received needs a vast amount of very vigorous scrubbing for its removal, and this can never be applied too soon.

STATE RIFLE ASSOCIATIONS.

A FEW weeks since the FOREST AND STREAM devoted space to a reference to the attempt now making to put the militia of the whole country on a uniform and reliable basis so that it may be a force of men and arms, and not a mere brigade of skeleton laws, with empty ranks and offices.

One of the points strongly urged in that scheme was the establishment in each State of an active and energetic State rifle association. Each commonwealth was to sustain at least one general range, and a method of rifle practice was laid down extending pretty far into particulars. It is quite certain that when the new militia law shall come into effect the important subject of rifle practice will not be left uncovered and that the militia of the future will be able to use their firearms for something more than mere drilling pieces.

But while this new movement is working its slow way through the legislative mill much can be done by the riflemen of the several States and those, too, who do not as yet lay more than a prospective claim to that title by organizing State rifle associations. The time must eventually come when each of the several States will have such an organization recognized by the riflemen and marksmen of the State, and receiving and giving the rights and privileges of fees with the organizations of other States. Some of the States already have such bodies. Massachusetts, Connecticut, New Jersey and California are ones in point and, if the National Rifle Association is regarded as a State body as well, then New York may be added to the list, and our columns to-day tell the story of the inception of the Pennsylvania State Association. These organizations should be so constituted that they can readily act in conjunction with the militia forces when such exist, or in anticipation of them where they do not already exist. They are not, however, to allow their purposes and endeavors to begin and end in military shooting. That class of target practice always will and always should be the bulk of the ball-firing done; but there is a large class of experts with the rifle, or of men who may and would become patrons of the sport who do not belong to the uniformed force, and the militiaman who goes through his routine of class practice, and that only, may pass through the required standard and secure his conventional marksman's badge, but he will fall far short of that familiarity with the rifle which comes of frequent and varied practice.

In other words, the State rifle association, wherever it may exist, is to supplement the regular routine practice of the troops by an intelligent support, and fostering of all-comer's matches, with any as well as military rifles. This will bring to the ranges not only the militiaman out of uniform, but the civilian shooter—as he would be styled on some of the foreign ranges, the small-bore man.

The Rifle Association is to act between the marksman and the general public. It is to prevent the sport of the buts from falling into professional hands and keep the record pure. It is to unite the effort of thousands of men here and there over the country who would gladly escape from the drudgery of the office, from the close confinement of a professional career to spend pleasant hours in the health-giving and mind-relaxing excitement of the rifle lawn. For a personal sport nothing can excel rifle shooting and target practice as a field exercise. Boating, riding, field sports and athletic games all have their advantages and their disadvantages, but it is at the firing points alone that all men step forth equal. It is a clear test of eye and hand, and he of irregular habits, though he be a giant, finds himself beaten on the score list by a puny David who keeps eye and hand in healthy accord and trains them to act in perfect unison. A State rifle association could do much in keeping these facts before the people, and its weight in a State would enable it to aid with effect in the organization of local clubs and organizations. With little ranges scattered here and there over the land the interest will be held, as it takes year after year a deeper root. Grand tournaments are good things in homœpathic doses and International matches are of value if they are sufficiently far apart. But in a State it would be the province of its association to foster in every way the local clubs and keep the merry rattle of the rifle running from one to another, and then when men are wanted, either to fire with telling effect into the ranks of those who would manace the country's liberties, or on more peaceful fields, with only a coaxing endeavor toward the white disk the men and the skill stand ready to be beckoned to the front.

THE PLEASURES OF GUNNING.

PLEASURES are of three kinds, mental, physical and spiritual. He whose nature has a symmetrical development will seek and enjoy pleasures corresponding to his triple nature. Some enjoy the mental alone; the physical and the spiritual are dwarfed in consequence. Give them the latest novel and they will sit down after a hearty meal, or possibly lie down, and allow themselves to be carried away to realms that never existed, forgetful of the physical and entirely ignoring those of the spiritual.

Some persons may be fond of physical exercise and yet may never have shot a gun. Their natures may not run in this particular direction; partly from a natural shrinking it may be, but more likely from a lack of early culture, for it is, to a great extent, like many other things, a matter of education. I feel thankful that my early education in this particular physical pastime was not neglected. If Solomon had lived in the days of Sharps rifles, Damascus steel breech-loading shot-guns and pointer dogs, he would have recorded in the third chapter of Ecclesiastes among the rest, "There is a time to *gun*." This *time* varies according to the locality and the species of game. There are certain seasons called "close," when gunning is prohibited, and then again, the law will be "up," and permission granted. It is not much pleasure to hunt in the close seasons, especially when the people are watchful and will bring the offenders to justice; and paying a fine of several dollars apiece for a few small birds, especially when the times are as stringent as at present, has no pleasure at all connected therewith.

But excusing random preliminaries, what are the pleasures of gunning? Is there anything in it? or is all the cry, expense and time consumed thereupon by a continually increasing number of persons, consumed simply to be in a certain fashion, and is there nothing substantial in it after all? Are people deluded and fit objects for the lunatic asylum who, naturally averse to physical labor and early rising, will rise long before daybreak, take immense jaunts through thickets and swamps and work like a Trojan in rowing a boat, or something of the kind, or are they of sound mind and fully rewarded for their trouble? If you measure their pleasure by the game they sometimes bring home, it will, it is true, be very little. But where there really is shooting to be had, and where the excellent shot has something to reward his skill, then the pleasures of the gunner are of a high physical order. Let him travel if necessary through water and mire a foot in depth, let him be scratched by the briars till he has the appearance of one whose face has come into too close contact with the claws of Sir Thomas; let him shiver with the cold, or swelter with the heat; let him be fairly deluged by the storm, and be made the prey of Jersey mosquitoes; let his hands be blistered with rowing a boat, or his limbs refuse to do duty from being cramped in an uncomfortable position watching for game—all this he will readily endure with the fortitude and patience of a martyr, provided only the whistling snipe; the bold flying canvas-back; the crafty pheasant or the impetuous Bob White be brought to the ground from their rapid flight through the air. If he gets a good bag, whatever toilings and soilings, he is rewarded. To stand in the midst of a bevy of quail or whirring pheasants, as they instantaneously pop up, and a little quicker, if possible, get out of sight a half dozen at a time, each taking a different direction, is a sublime moment for the gunner.

It requires a great amount of coolness, and so far as a man can deliberate in the fraction of a second (and in such moments as these he undoubtedly does) it requires much deliberation, and calculation, too. Then, besides coolness and calculation, there is still requisite the quick eye, the skillful hand, and in long-range, the trusty weapon. To take one of these

opposite flying birds with each barrel, to mark the places in the thick cover where they fell that they may be readily found afterward, to dexterously withdraw the shells and insert another one just in time to take a straggler, which has required a double discharge of one's gun to be flushed from his retreat, to take him almost out of sight for branches of trees or dense undergrowth, to mark the spot where he fell, and then besides to see where or in what direction the rest of the flock have gone,—I say, to do all this, as is frequently done, is a moment of the sublimest physical pleasure to the sportsman.

Not infrequently have I seen some verdant sportsman fairly scared by the sudden uprising of a score of quail, or the thundering whirr of a bevy of grouse from almost beneath his feet! Bang! Bang! would go both charges of his gun, no in the direction of the birds, and having no dead birds to mark or pick up, he would ask his companion if he saw where those quail went, when they may all have alighted within a stone's throw, and in almost open sight. A cool and watchful sportsman will mark a half a dozen dead birds, and the flight afterward of as many live ones.

And then the dog—I humbly beg the dog's pardon for not speaking of him before. If this hurried scribble should ever get into pamphlet form I will make amends for this seeming neglect by having my own or some other dog for a frontis piece: that is the place for him.

He goes behind when no game is at hand, but in the field he is not only the frontispiece, but he's half the volume, too. Without a good dog half the pleasure and two-thirds of the game would be taken away. This is really where a large share of the pleasure lies. It is wonderful, as well as exceedingly interesting and highly pleasurable, to see to what a remarkable degree the delicate sense of smell is possessed by a portion of the canine race. I remember once, after traveling fourteen miles and taking a trout that turned the scales at seventeen ounces, to have said, "There! I am paid for my trouble if I get no more." And I have heard men, after going several miles, and seeing a dog point and afterward retrieve a single bird, say that they had been paid for their trouble.

Some look with great disfavor upon this method of physica exercise. I pity all such from the bottom of my heart. I believe gunning is poor business—well, followed, *i. e.*, by a man who has any other business. But for exercise, recreation, physical strength and open air, there are few things that will compare with it. And, besides, one is with nature then, sees her beauties, appreciates and enjoys to the full all her various moods; becomes in a measure her student. "To be in communion with nature," says Carlyle, "is in a manner to perfect one's-self."

Many think it low and vulgar, but those who think so have a very small appreciation of a very important part of our nature. It contributes to the establishment of that old Latin motto, "*Sana mens in corpore sano*;" and as for its being necessarily a frittering away of time and money, I don't believe it, and to some little extent I speak from experience. I feel better the whole following week if I have a good tramp on Saturday. It clears out the cobwebs, as they say, and makes one feel like a new man, and my only regret is that there is not more in my own vicinity in the way of game to reward the exertions of a willing pair of feet, a good gun, and a moderately good dog. In conclusion, I will quote, as bearing directly upon the kind of amusement, as well as upon other amusements of the mind and body, the following from the celebrated Dr. Bellows. As it expresses my my own ideas exactly, I will let Dr. Belllows blow for me. He says:

"I will not demand of amusement that it should directly instruct, elevate, warn or improve. If it gives genuine pleasure, and if it do not corrupt, deprave or injure, I will bless it, and without a single misgiving invoke the blessing of Heaven on its head." O. J.

GAME PROTECTION.

WHAT A GOOD LAW HAS DONE.

WISE and discriminating protective game laws so seldom find a place in our statute books, that, when such an one is passed, it must itself be carefully watched over and protected.

Last summer we had occasion to speak very warmly in praise of a bill passed by the Connecticut Legislature a short time before, protecting the water-fowl, which, during the winter, collect on the feeding-grounds at the mouth of the Housatonic River. By the provisions of this act geese, ducks and brant are absolutely protected on their feeding-grounds, although they may be shot while flying over the land, between the waters of the Sound and the flats at the river's mouth. The pith of this act is in Section 1, which we quote:

"No person shall shoot, kill, attempt to shoot, or attempt to kill, any wild duck, goose, or brant, in, on, or over the the waters, bays, channels, islands, marshes, mud flats, pond holes, or any part of the bed of the Housatonic River below, or south of, the bridge across said river, known as Washington Bridge, and above, or north of, the beach on which the house of George Smith stands and a line from the middle of the west end of said beach to the middle of the mouth (south side) of Neck Bridge Creek."

In our remarks upon this bill in FOREST AND STREAM of July 4, 1878, we adverted to the great benefit that must inure to sportsmen if its provisions could be enforced, and predicted in that event a great increase in the number of wild-fowl which would make this attractive locality their winter home. Among other things we said:

"As is well known, wild-fowl will bear almost any amount of persecution if only they are left undisturbed while on their feeding-grounds; and with proper care to see this act enforced, there is no reason why there should not be each year hundreds of wild geese and thousands of black ducks, pintails and widgeons on the Housatonic flats throughout the winter. The friends of game protection in Connecticut should feel greatly encouraged by this wise and far-seeing action of their Legislature."

So far, during the past fall and winter, the event has more than justified our prediction. We have reason to know that black ducks have not, within the past ten years, been either so numerous or so tame as they are this winter, and a veteran gunner, who is familiar with the locality and has several times seen the flocks on the wing, estimates their number at several thousands. There are also a few small "bunches" of widgeons now on these grounds, although this species has for some years been quite unknown at this point, having deserted it on account of the indiscriminate warfare which has been waged there against all water-fowl. Besides the birds mentioned, at least one flock of Canada geese has been feeding on these flats all winter, and, no doubt, in spring large numbers will be secured in this neighborhood. We mention these points merely to show what a wise law has done for a single locality, and to point out that, if its provisions are observed in the future, there is scarcely any limit to the number of fowl that may congregate in this place for the winter. The feeding-grounds are very extensive, and so long as the birds are protected while on them, it makes but little difference how much banging there may be outside or on the beach.

As we have already remarked, the law up to this time has been pretty well observed, and there have been, as far as known, no open violations of its provisions. The officers of the neighboring towns, stimulated perhaps by a reward of fifty dollars offered by private individuals for the conviction of any poacher, have kept their eyes open, and frightened off law breakers.

We are sorry to hear rumors of a movement, which, if carried through, will undo all the good effected by the law as it now stands, and will render its provisions essentially inoperative. This movement, as we understand, takes the form of a petition to the Legislature, praying that the protective act may be so amended as to permit shooting on the feeding-grounds on specified days of each week, though not with decoys. This amendment, if passed, will open a loop-hole through which law breakers may escape penalties, and we shall hear of the same indiscriminate shooting on the Housatonic flats that was practiced up to the passage of the original bill. The amendment, though perhaps not so intended, will prove the entering wedge which will break up the shooting at this point.

Shooting on certain days in the week means chasing and harassing each bunch of birds that may alight in these waters during the day; it means lying in wait where the feed is best, and shooting at the birds when they come in at night from the Sound; it means sculling up at night to a "ruck" of ducks and shooting into the thickest of the flock with a mighty gun that kills ten or fifteen, and wounds twice that number which are never recovered;—finally, it means driving off the ducks and geese, for good and all, to some other feeding-ground along the coast, so that some other people may have the shooting of them.

The fact is that the people who desire this change want, to use a homely figure, to eat their cake and have it too. This they cannot do. We have sufficient confidence in Connecticut's legislators to believe that, if such an amendment as the one proposed is presented, they will vote it down.

It is a curious fact that the movement to which we have referred seems to have originated in, and to be confined to, the town of Stratford, and that the people of Milford appear to be unanimous in their approval of the present law and their desire to see it enforced. We earnestly hope that no change will be made. After the law, as it now stands, has been in force for a few years, and the birds have become abundant and have learned to regard these grounds as a refuge where they can be safe from persecution, it may do to permit shooting on the flats one day every two weeks, but at present any relaxation in the stringency of the law will work mischief.

A LEGISLATIVE COMMITTEE FOR THE PROTECTION OF GAME.—The New York State Legislature has a Committee on the Protection of Game. It is composed of prominent sportsmen and naturalists, with Col. Alfred Wagstaff, of the N. Y. City Society for the Protection of Game, as chairman. Of course all proposed amendments or additions to the present game laws will be submitted to this Committee, and we can therefore hope for intelligent legislation hereafter, and simplified laws, if such a thing be possible. It would be well if each State Legislature had a similar Committee. The Connecticut Legislature has a Committee on Fisheries, but not on game; and we think the Virginia Legislature has such a committee on both game and fish.

WHAT IS TO BE DONE?—Alas! alas! what shall we well-meaning, devoted game protectors do? Here we are, proposing to legislate for the protection of wild fowl; and see what the result is in England where such vermin are already protected! We quote a single sentence from London *Land and Water* to show:

There is another great evil which seems as yet to have escaped general notice, viz., the rapidly increasing hosts of wild birds, owing to their protection by Act of Parliament. If allowed to multiply as they are doing they will certainly be the ruin of our salmon fisheries, not only on the Tweed, but on our northern rivers, where their devastations on roe and fry are beginning already to tell a tale.

Nature has decreed that all animals shall prey upon each other. How shall man contrive to preserve all food creatures for his own delectation and use, and in so keeping them alive, prevent their destroying each other? The angler wants good fishing and good fish: the gunner wants goose, duck, and snipe shooting: which interest will finally prevail? By and bye we shall have the gunners and the fishermen all by the ears and then, what will become of the grand scheme of universal protection? Something out to be done about these blarsted wild fowl which are raising such a horrid rumpus with the fish?

THE BEST KIND OF PROTECTION.—Here is mention of a most commendable combination effort on the part of the farmers of Western Pennsylvania. A correspondent, "C. H. B.," writing from Allentown, says:

"We have found that the farmers in this part of the State are following our example in catching quails and keeping them over winter. Two farmers near Bresingsville have at present 200 live quails all caught by the hand in the drifted snow banks. Mr. Harry Stern, of Starnton, has 136, while our club at present have 114. These, together with those which other farmers have, would make about 800, which will all be let go next spring and will afford splendid opportunities for our sportsmen next fall."

If the farmers everywhere would follow suit, we should hear less of the necessity of game laws. These 800 quail ought to multiply and increase to 8,000 or 10,000 birds by next shooting season. Eight thousand are a good many. The number, if divided among the sportsmen of the neighborhood, would give each man all the shooting he could reasonably ask for. All we need is the seed quail for planting. Their product is for consumption.

In conjunction with this measure there should be enforced the most imperative demand to prohibit sales of quail in market after January 15th. This will stop the trapping which is so destructive of stock and supply. We have repeatedly examined large bunches of birds in market—all trapped. At the last meeting of the N. Y. Assoc. for Protection of Game, we, with two or three others, urged this necessity upon the attention of the meeting, but the wise majority preferred to recommend to the Legislature that the period of permission be extended to Feb. 1st. We are sorry for this, but the Legislative Game Protective Committee may nevertheless decide upon the earlier date as the terminal of the season of sale. We hope it will. We would not decry trapping by farmers and farmers' boys, if they would only winter enough birds for seed. We prefer trapped birds for the table—don't have to pick the small shot out of our teeth; besides, the flesh is not discolored and unsightly. These birds are Heaven-sent for food, as well as for sport, and the appeals of the palate and stomach ought to have some weight, as well as the insatiable desire to pursue, shoot, and kill. Quail are the most prolific and toothsome of wild birds. They were supplied to the Israelites for food in quantity, and are vouchsafed to us now. The law should not prescribe that only shot birds shall be eaten. What we want is, that birds shall be neither trapped nor shot after the end of the prescribed season. Sportsmen hang up their guns on the 1st of January, but the fowler still sets his snares for the poor friendless storm beaten birds. He digs the starving creatures out of the snow banks and wrings their necks for a miserable pittance which would scarcely buy grain enough to winter a single bevy through. This business we who have power, and influence, and persuasion, and money, intend to stop. We will shut the markets and keep the quail out of the shambles Let every Legislature now in session amend its game law so as to prohibit the sale of all game birds after Jan. 15th.

NEW YORK, Feb. 12, 1879.

EDITOR FOREST AND STREAM:

In last evening's *Express* I find the following:

"At a meeting of the Society for the Protection of Game, held last night, Mr. Robert B. Roosevelt presiding, a long discussion was had on the advisability of recommending that the close of season for birds and deer be February 1 instead of March 1, as at present. Other States are invited to co-operate with the State of New York in fixing a common time for the close of the game season."

Now, will any kind reader tell me of what practical use a game protecting society is good for that advises the above. The close season for game is not March 1, but January 1, with the idiotic proviso that game killed prior to January 1 may be sold in the State up till March 1. If these gentlemen really mean to protect game I will be one to contribute to send some sensible gentleman to Albany to show our Legislators that the close season, January 1, is correct, but permission to sell ought to cease ten days after. Kill game in January, indeed! when quail are huddled together, almost starving, and rabbits can be caught in the snow with your hand, often, or dug for. What bright lights belong to Game Protection Societies. Better do as the *Express*, in the same issue, says of Cincinnati, as under:

"Cincinnati sportsmen have made a commendable move on the dealers in game, the shooting of which is prohibited at this season of the year, by causing the arrest of some of the marketmen for selling stale and unwholesome game. It is evidently the intention to harass these evaders of the law until they cease to sell. When that is done the pot-hunters will cease to shoot for the market, and it is these pot-hunters and not the amateurs who deplete the country of the choicest game."

Now this shows some common sense. Either the birds sold four or eight weeks dead are stale and unwholesome, or, if not, they have been killed in the close season. Will not all who want to protect game and not have them become extinct in this country do something toward enforcing the law in New York State, that is, "No more killing after January 1, and no having in possession after January 10." I have now some western quail that a reliable farmer can have on March 15, who will guarantee (with exceptions I may name) to keep every man off his farm until the law is up, *i. e.*, Nov. 1, 1879. The Legislature will soon adjourn. Work must be done now!

Yours respectfully, QUAIL.

The point made by our correspondent is well taken in our opinion. The date and period which he urges are advocated by Messrs. James Meyer, Luddington and Hallock (the editor of this paper) at the meeting referred to, and a resolution offered by Mr. Meyer to restrict the period for the sale of bird to January 15, and of venison to February 1 was voted down. A letter sent to Senator Alfred Wagstaff, Chairman on Game Protection, Albany, embodying the suggestions of our correspondent, will receive respectful attention. Let him forward a copy of this issue of FOREST AND STREAM marked.

FISH AND GAME PROTECTION CLUB OF PROVINCE OF QUEBEC.—The officers newly elected are F. J. Brady, Vice-Pres.; W. H. Rintoul, Treas. Thomas White (Montreal *Gazette*) and myself, were in Ottawa last week when we presented to the Minister of Marine and Fisheries a petition (numerously and influentially signed) praying for certain amendments to the fishery laws, said amendments tending in the direction of increased protection. The suggestions of the deputation were most favorably received. W. H. K.

SCHAGHTICOKE FISH AND GAME PROTECTIVE SOCIETY.—This new club has been organized at Schaghticoke, N. Y., with Mr. R. G. Hamilton, Pres., and C. E. Corbin, Sec. They offer a reward of $10 for information leading to the arrest and conviction of parties violating the game laws.

ROD AND GUN CLUB.—*Springfield, Mass., Feb.* 14.—Officers for the ensuing year: Pres., Edward H. Lathrop; 1st Vice-Pres., Elisha Gunn; 2d Vice-Pres., Robt. O. Morris; Sec. and Treas., Chas. P. Lyman; Executive Committee, Messrs. Lathrop, Gunn, Lyman, W. W. Colburn, Geo. Harrington. C. P. L.

SOUTH SIDE SPORTSMEN'S CLUB.—The officers nominated at the Hotel Brunswick a fortnight ago were elected last Monday evening.

PHILADELPHIA GAME PROTECTIVE ASSOCIATION.—The officers for 1879 are: Pres., Benjamin W. Richards; Vice-Pres., W. W. Colket; Sec'y and Treas., Pierce C. Desauque; Ass't Sec'y, John Lloyd, Jr.; Board of Directors—F. C. Jones, John B. Sartori, Frank Furness, John S. Davies, George K. Cragin.

WISCONSIN—*Madison, Feb.* 12.—Several bills have passed the Senate to appropriate moneys to the Fish Commissioners and for the purpose of experimenting in the propagation o fish, and it is not certain that the end sought may not offer such encouragement as justifies the expenditure. On our streets are daily seen hundreds of pounds of fish selling for a few cents per pound, and so near the breeding season as to be scarcely fit for food. Fish are speared and netted in total disregard of the law, and no effort is made to punish these violators of law and common sense. There certainly needs some stringent legislation and the prompt enforcement thereof to prevent this wholesale extermination which is so rapidly going on with some of our oldest varieties. It were well to provide for keeping breeding stock of our native fishes safely during the breeding season, as well as to bring spawn of marine fish into our fresh water. This latter fact does not seem to enter the brain of our law-makers. ROVER.

This is on the principle of the homely old proverb—"Saving at the spiggot and wasting at the bung-hole." More effort should be directed to fostering the native species than to the introduction of fish from other waters.

ILLEGAL KILLING OF QUAIL.—*New York, Feb.* 13.—*Editor Forest and Stream:* Besides netting and shooting out of season, the quail is subjected to another method of destruction, which has, so far as I know, never been noticed in your paper. The deep snow is bad enough, but when man allies himself to the elements in the work of destruction, the outlook is discouraging. I spent several weeks shooting in Ohio last November and December. The sport was excellent, beyond all previous experience, but I was fairly disgueted with the obsolute indifference on the part of gentlemen who are real sportsmen to practices in which they would scorn to indulge themselves. At the end of one fine day's shooting I was waiting for my wagon at a little country grocery. There had been perhaps four inches of snow upon the ground that moring. Various persons of the genus country grocery loafer dropped in occasionally, and finally two men carrying between them a bushel basket, which, on examination, contained quail. I had bagged myself that day just 46 birds, shot fairly and squarely over as "gentleman like" a pair of setters as ever galloped stubble. But these countrymen had 80 odd birds, and they had shot every one of them, and the whole lot didn't represent a dozen shots of the old gun they had between them. "Why, we shoots 'em when they're huddled." "Huddled?" Don't you know what huddlin' is? Why, when the snow's on the ground the quails all gits together in a little holler in the stubble, an' that little dog tracks 'em an' we foller close behind, and when we finds 'em we gives 'em both barrels settin'. We got three hull flocks out o' that stubble down by the track, and not one partridge got away." On inquiry I found that this was the prevalent method of quail hunting among the Ohio rustics. It accounted for the success of one youth who "went out" in the region where I was with a black and tan terrier and always returned with full pockets. Legislation is powerless to remedy a lack of moral tone in the hunting field. Education is the only help. I sincerely hope that you will not omit a weekly lecture on this subject. I find it reaches even those benighted regions where you may at last awaken something like a gentleman sportsmanlike sentiment. SENTIMENTAL SHOOTER.

IMPORTATION OF MIGRATORY QUAIL.—We lately advised our readers that a plan was on foot to combine to import migratory quail to this country in quantity, and can now lay all the details before them. Those wishing to join should make known their intention to Mr. Tobey at once. A better opportunity will never offer. The incidental accounts of the the habits of the quail as given in Mr. Braun's letter will be read with great interest. We in America can scarcely imagine quail in great flights, like grasshoppers, passing across the Mediterrancan from land to land. It was one of these flights which suddenly dropped among the Israclites. Our far-western friends would welcome a flight of this sort in preference to a flight of grasshoppers:

BOSTON, Feb. 15, 1879.

Mr. Chas. Hallock, Editor Forest and Stream, New York:

DEAR SIR—I inclose herewith copy of a letter lately received from Mr. Braun, of Messina, Sicily, which may be interesting to your readers. It gives definite information as to cost of importing migratory quail this season. In connection with some other gentlemen I am ordering some quail, and if any of your readers desire to assist in the introduction of this bird I shall be happy to forward their orders at the same time. As the price depends upon the quantity, I will advise any correspondent what the exact amount required is after hearing from them how many they desire, and thus ascertaining the total number wanted by all. By this means all will secure the wholesale discount.

Yours very truly, HORACE P. TOBEY,
17 Oliver street, Boston, Mass.

[COPY.]

MESSINA, Jan. 6, 1879.

Horace P. Tobey, Esq., Boston:

DEAR SIR—I am in receipt of your valued favor of the 20th ult., in reply to which I beg to say that you can have any quantity of quails the next spring at the following prices—viz.: Up to 2 cages (each cage containing 100 birds) $20 in U. S. gold per cage, f. o. b. Mes.; up to 5 cages, do., $19 do.; up to 10 cages, do., $18 do. These prices include all shipping expenses here and also the food (hempseed) sufficient for the whole voyage. Steamers to your port are only running up to March—say as long as the fruit is shipped from here—consequently the quails must be shipped by the way of New York.

I cannot give you the prices coast freight Boston, as I don't know the trans-shipping expenses and railway expenses from New York to your place; and as I shall load the birds with that steamer which happens to be in port first, it is difficult for me to tell you the right freight from here to New York, as we have four different steamship lines for that place and as they have different rates. For the lots which I shipped last spring $1 freight was paid per cage from here to New York; but I suppose I can perhaps make cheaper arrangements this year. The quail generally arrive here in the middle of April and stay—that is, they don't stay, but keep on passing—until the middle of May. Very rarely a pair of quails stay with us all winter. In autumn they pass our island on their way to Africa, and in spring on their way north, say to Germany, France and Switzerland.

The wind we have about the time the flight commences affects the latter a good deal. If we have *sirocco* (south-east), the flight is generally a very small one, and it seems as if the birds were taking another way then. The quail are generally shipped to the States in the months of April and May; that is when they are passing our island. They are caught in both nets and strings. The latter way is the best, as the birds don't get hurt so much. The hunting of the quail during their flight here is a great pleasure for the sportsmen of this place; and the birds come sometimes in such number that a good shooter can kill fifty and more birds a day.

If you should be so kind as to favor me with your orders I should like to have them sent soon, so that I can make the necessary arrangements for catching the birds. You will please be kind enough to send me remittance for the respective amount of birds you intend to import in a sight bill on a good London banking house.

Any further information you should wish I shall be most happy to give you. Waiting your kindness, I am, dear sir,

Yours very truly, (Signed) CARL F. BRAUN.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT
For the Short-Range Championship of 1879

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

The captains of the several teams, entered before 9 o'clock on the evening of Feb. 22, will meet at Conlin's Gallery at that hour and fix upon the arrangements for carrying out the match, choose referees, and decide in what order the respective teams shall shoot. The assembled captains shall decide upon the date of opening the matches, and the date at which the entries shall close. The referees shall elect an umpire, whose decision in all cases shall be final.

MASSACHUSETTS—*Medford, Feb.* 12.—The second meeting in the winter shed series for the month of February of the Medford Amateur Rifle Association took place to day; shooting at 200 yards; rifle, any within the rules; position, standing. The following are the scores. First class:

H H D Cushing	4	4	5	4	5	5	5—32
Rufus Sawyer	5	5	4	4	4	2	5—29
H Whittington	5	5	4	4	5	5	4—32

Second class:

W G Turner	5	4	5	4	4	4	4—30
John Grady	4	5	4	4	4	5	4—30

Third class:

G W Howe	5	4	5	5	4	4	4—31
G Gill	4	4	4	4	2	2	3—23
G T Sampson	2	4	3	3	2	2	3—20

The range will be open for competition in these class matches on February 22.

MANMOUTH RIFLE GALLERY—*Boston, Feb.* 15.—The regular monthly prize shoot is progressing finely, some very remarkable shooting being done by local as well as out-of-town riflemen, Mr. L. F. Newton, of Salem, Mass., very nearly being successful in getting the extra prize of $2,000 for eight consecutive bull's-eyes, his third shot being a one o'clock nipper. The following is the summary for the week; 150 feet; rounds, eight; possible 40:

L F Newton	5	5	5	5	5	5	5—39	
Geo Lamb	5	4	4	5	4	5	5—32	
H A Pickering	4	4	5	4	5	5	5—37	
E S Tobey, Jr.	5	5	4	5	4	5	5—37	
F H Harlshorn	5	5	4	4	4	5	5	36
W H Restarick	5	5	4	4	4	4	5—36	
E W Archer	4	4	5	4	5	4	5—36	
R J Restarick	4	4	4	4	4	6	5—35	
C O Barrett	4	5	5	4	4	4	5—35	
J J Dunne	4	4	4	4	5	5	5—3	
W Bradford	5	4	4	4	4	5	5—35	
W S Arnaud	4	4	4	4	5	5	5—35	
Robt Thomas	5	5	4	4	4	4	5—35	
J Myers	4	5	5	4	4	4	4—35	
A K Jones	5	4	4	4	4	4	5—31	
Geo B Everett	4	4	5	4	4	4	5—34	
Geo K Rice	5	4	4	3	4	5	4—34	
E O Spofford	4	5	4	4	4	4	5—34	
W H Mabury	4	4	5	5	3	4	4—34	
B H Smith	3	5	4	4	5	5	4—34	

Boston—Walnut Hill, Feb. 15.—Maynard rifle match, seventh competition. Five scores of 47 each out of a possible 50, at 200 yards, deserve to be reckoned as a splendid performance, and probably without equal in regular competitions with an approximate number of contestants. Forty-sixes, fives and fours were also common, and, taking everything into consideration, to-day may well be dubbed a "red letter" day in the annals of the Massachusetts Association. The light was clear, but a trifle bright, and a gentle westerly wind scarcely stirred the flags on the range, the wind dial marking from "9 to 11 o'clock" throughout the shooting. The leading scores stood:

Captain W H Jackson	5	4	4	5	5	4	5	5—47
Capt W H Jackson (re-entry)	5	5	5	5	5	5	4	4—47
H Tyler	4	5	5	5	5	4	5	4—47
H Tyler (re-entry)	5	5	5	4	5	4	5	5—47
E B Souther	6	5	5	5	5	5	4	4—47
E B Souther (re-entry)	4	5	3	4	5	5	6	4—46
William Poland	5	5	5	4	5	4	4	5—46
William Poland (re-entry	4	5	5	4	4	5	5	5—46
D Kirkwood	5	5	4	5	4	4	4	5—46
H Withington	5	4	4	5	4	5	5	4—45
W E Guerrier	4	5	4	5	5	4	5	4—45
C C Meiggs	5	5	4	4	4	4	4	5—44
R Davis	4	5	5	4	4	4	4	5—43
J F Nichols	4	4	5	4	4	5	5	4—43
W Charles	4	5	4	5	5	4	4	4—43
A Artner	4	4	5	4	4	4	4	5—42
J F Nichols	4	4	5	4	4	4	5	4—42
H A Johnson	4	3	5	4	4	5	4	4—42
J F Brown	5	4	4	4	4	5	4	4—42
C Claron	4	4	5	5	4	4	5	3—42
D F Hunt	4	4	4	4	4	4	4	5—41
H Mortimer	4	4	3	4	4	5	4	4—41
W C Thurston	4	3	4	4	4	4	4	5—41
F A Brown	5	4	4	4	4	3	5	4—41
H E Jepson	4	4	5	4	4	4	4	5—41
H H D Davis	4	5	5	4	4	4	4	5—41
E W Archer	4	4	4	3	4	4	5	4—41
E Hardy	4	4	4	4	4	4	3	4—40
E W Emerson	3	4	4	5	4	4	4	4—40
L W Blake	3	4	2	5	4	5	4	4—38
F E Simpson	4	3	5	3	4	0	4	4—36
H Wharton	3	3	3	3	3	3	4	5—36
F S Reignolds	3	4	2	3	3	3	3	3—30

—The "Palma" has been placed on exhibition at the jewelry establishment of Shreve, Crump & Son, Washington street, Boston.

Worcester, Mass., Feb. 13.—The Shrewsbury Rifle Club met at Pine Grove Range, to compete for the Bartlett prizes, the distance being 200 and 400 yards—fifteen shots at each range. The following were some of the best scores: Stedman Clark, 135; Ed. A. Bartlett, 126; Frank Wesson, 123; Curtis Jenkins, 111; C. B. Holden, 113; W. S. Perry 119.

—The Worcester sportsmen are taking regular practice. They expect soon to come out and surprise everybody, and are in the meantime keeping shady.

CONNECTICUT—*Collinsville, Feb.* 13.—At a regular meeting of the Canton Rod and Gun Club, held to-day, the following scores were made off-hand, 200 yards, 10 shots:

	Mass.	Creed.		Mass.	Creed.
O B Hull	108	47	J D Andrews	71	26
J Hamilton	91	41	H M Chapin	69	34
J Laubenstein	82	38			

Mr. Hull's score was 5 5 5 5 5 4 5 3 5 5—47.

ZETTLER VS. NEWARK.—The Zettler club men of this city paid a friendly visit to Newark on St. Valentine's Day to become the guests of the Newark Amateur Rifle Club. The teams of the two clubs met at Berger's Gallery, 120 Market street, and engaged in a remarkable fine display of gallery shooting. The Zettlers won the choice, and sent one of the Newark men to the target, but his opening forty-eight somewhat alarmed them. D. Miller, the first of the Zettlers to shoot, tied on the same total, and it was apparent that it was to be a close push for the first place. The battle was nip and tuck before its close at 1:30 in the morning, and then the defeated Newarkites proved themselves the best of hosts, and the jolliest of good fellows. The score stood:

Zettler Team.		Newark Rifle Club.	
D Miller	48	J Yoblin	48
H Oehl	46	W C Gardner	44
W Klein	48	J Beyer	48
C Judson	47	F Harrison	44
M Dorrler	47	F C Hill	45
M L Riggs	50	V Hesse, Jr	44
B Zettler	45	G Freche	43
P Fleming	50	F Brown	46
C Zettler	44	W McLoud	48
M B Engel	49	Wm Hayes	47
Total	475	Total	461
Average, 47½.		Average, 46 1-10.	

BERGEN POINT VS. NEW YORK.—*Saturday, Feb.* 15.—This match was hardly a fair one, as the Bergen Point Team was short one man:

New York Club.		Bergen Point Club.	
Howlett	44	Conroy	45
Blydenberg	43	Collins	45
Davis	42	Rathyen	44
O'Donnell	42	Dunne	44
Dunlop	41	Schling	43
Donaldson	40	Dart	42
Palmer	40	Meigs	42
Conlin	39	Simmonds	41
Sone	38	Vredenburgh	37
Fitz	36		
Total	465	Total	382
Average, 40⅚; bull, 1; outers, 9; inners, 72; bull's-eyes, 18		Average, 43 5-9; bull, 1; outers, 2; inners, 53; bull's-eyes, 29.	

—The following score was made on a German ring target at 200 yards actual distance, at Hartung's Park, Morrisania, on the 12th inst., by Dr. S. T. G. Dudley: Three shots, total, 62; three shots, 66; three shots, 69; one shot, 24; total, ten shots 221; average, per shot, 22 1-10. This is his first shooting since his accident, last autumn. This score was made not with a hair trigger, but a 3-pound pull, and I believe is the best on record. SNOR.

—The Helvetia Rifle Club has published its shooting programme for 1879, providing for precision shooting and time shooting. The breech-loaders and muzzle-loaders shoot in separate divisions. The shooting festival will occur in October.

OHIO—*Cincinnati, Feb.* 12.—The following is the score of the rifle team of the Cincinnati Shooting and Fishing Club, made in the regular weekly practice shoot to-day; 200 yards; off-haud:

L Fender	4	4	3	5	5	4	4	5	4	4	4	5	4	4	4	5	4	4	4	—63
D T Disney	4	4	4	5	4	4	4	4	4	4	5	4	4	4	5	4	—	—	—	—62
W Hall	4	4	5	4	4	4	4	4	4	5	4	4	4	4	5	4	3	4	4	—62
W Caldwell	5	4	5	5	4	3	5	4	4	4	4	5	5	4	4	4	4	4	4	—61
A Koehler	4	3	4	5	4	4	5	4	4	4	4	4	5	5	4	4	3	4	4	—59
T A Baum	4	4	4	4	4	4	4	4	5	3	4	4	4	4	4	4	2	3	3	—58
G Henson	4	4	4	4	4	4	4	4	5	3	4	4	3	4	4	4	3	3	3	—58
M Gindelin	5	4	2	5	4	5	4	4	4	4	5	3	4	5	4	4	3	3	3	—58
Jos Bates	4	4	4	5	4	4	4	3	5	4	4	0	4	4	5	4	3	3	3	—57
T A Jones	4	4	4	4	4	3	3	5	4	4	4	3	3	3	3	5	—	—	—	—55

C.

—A series of rifle-shooting contests have been arranged to come off at the Chico Driving Park, Col., Feb. 22.

—A rifle club was organized in Petaluma, California, Jan. 25, with W. F. Shattuck as President, J. P. Stinson, Secretary, P. J. Steiger, Treasurer, and Fred Kubnle, Captain of the first team. The club will confine its efforts to off-hand shooting.

—We call attention to the advertisement of Capt. Messiter's rifle. Many of our readers know him as an English gentleman sportsman. Last year in the Rocky Mountains the captain killed six grizzlies, besides elk, deer, etc., in large numbers. In two cases a single shot killed a bear. Two of his bear-skin trophies can he seen at 768 Broadway, this city.

ACCURACY OF EXPRESS RIFLES.—*Dauphin, Pa., Feb.* 10.—*Mr. Editor:* In answer to the letter of "G. J. U.," in your issue of the 6th of this month, I would say, in the first place, that hollow bullets are of no use, and are not intended to be used beyond 200 yards. Within that distance they are very accurate, and no other kind of a bullet can approach them in their effect on big, dangerous game. A match rifle, too, cannot be a genuine Express, as the rifling which suits the one will not suit the other, and it has to be modified. I mentioned in the FOREST AND STREAM of the 6th, that I had just had the diagram sent me of the shooting of a double 50-bore Express, by Turner (not Mener, as printed), and that the bullets at 200 yards are all in a space of six inches by eight inches. Now this is sufficiently accurate for any kind of game, and the charge is much larger than the one mentioned by "G. J. U." In conclusion, I would say that no one who tries a genuine Express rifle on large game, from the grizzly bear downward, as I did in Montana last autumn, will regret having bought it, but there are only about five makers who can turn them out as they should be. C. MESSITER.

INTERNATIONAL PROSPECTS FOR 1879.—In a conversation recently had with a prominent member of the Board of Directors of the National Rifle Association on the chances of the big matches for the coming season, he said:

The prospects for rifle shooting during the coming season are brighter than in any past year. From the report received from American gentlemen who have recently returned from Europe, it appears to be understood that an attempt will be made by either an English or Irish team to wrest the "Palma" from American control. It is to be hoped that this will be the case, as the expectation of such an attempt will give long-range rifle shooting a fresh impulse, and again bring into competition the riflemen of the different States. The great event of the year in all probability will be the "International Military Match." In the convention of National Guardsmen, recently held in New York, the opinion was freely expressed by the delegates that the number of States who would send teams to participate in this match during 1879 would be very large. If the bill prepared by the convention now pending in Congress becomes a law, scarcely any State will fail to be represented. In any event there can be no doubt but that most of the Eastern and many of the Western and Southern States will enter teams. The regular army have already taken the initiative, and instead of selecting their representatives in the scoop-net manner in which it was done last year, will have a team from each of the three departments which need not fear comparison with anything which the National Guard can produce. Canada has under discussion the selection of a team, although finding the enforcement of the off-hand position at 200 yards considerable of an objection. An invitation to the German troops has been favorably received by the German Minister, and transmitted by him to Germany. In England the expressions of the *Volunteer Service Gazette* have been frequent and cordial in regard to their desire to measure their strength with military rifles against the Americans. The international trophy presented by Judge Hilton is now completed, and is a magnificent specimen of American art, which will well repay the exertions of any team which may win it. In addition, it is understood that the directors of the National Rifle Association are seeking to provide funds to enable them to offer prizes to the highest teams of such an amount as to make it worth their while to incur the expense of contending in a match of this character.

HOW DO YOU AIM?

MR. EDITOR:

In shooting at a target at different distances with the rifle, and in reporting the result through the press, we should always, if we wish to be fully understood, be very particular to mention how we aimed it in the trial.

That is, we should state whether our aim was without variation, and all the time on the centre of the target, or whether we varied it by aiming higher or lower on its face, while still using the same uniform fine sight (standard), or what amounts to the same thing, by changing the aim from a fine to a finer or coarser sight. I refer to open sights the more especially.

The importance of defining our aim is made strikingly apparent when we assert that of the two ways of aiming, in general practice—the one constant and on the centre of the target, and the other variable over the face of it—there exists a difference of 100 per cent. in the result.

For an illustration of this let us suppose the target used to have a four-inch bull's-eye, and that our aim is fine, and on its centre at 100 yards, and that we hit the centre. Now, at about fifty-five yards this same shot, with the same aim, will strike very nearly two inches, above the centre, or just in the upper edge of the bull's-eye. Thus, a four-inch bull's-eye is as small as can be hit, at and within 100 yards, while aiming uniformly on the centre. Now, suppose we reduce this bull's-eye to a two-inch one, and use it in place of the other. At 100 yards, aiming as before on the centre, we will hit it. Now, if at fifty-five yards we vary the aim to the lower edge, we will hit the upper edge, which is two inches above. Thus, in this case of varying the aim, the rifle will hit a two-inch bull's-eye throughout the range (and even farther), whilst by aiming on the centre, this same gun requires a four-inch bull's-eye in order not to miss it. The difference of 100 per cent. in the results is, therefore, made evident. Hence, not to report the mode of aiming, with the result of the shooting, as is generally the case in sending in scores for publication, and sometimes as a blind "to crack up" this or that rifle, is simply to leave the gist of the matter out of the report.

My point is—please state your aim if you expect us to come within 100 per cent. of a true estimate of your score, or the accuracy of your rifle?

I hope no one will consider my point in any sense caustic. It is not so intended, but only as a kind of reminder how we may often inadvertently be a little out of the way without ever having once thought of it. Besides, I hope this article may prove of interest to the amateur with the rifle. These I always have in my mind when writing about the gun. I am sure they will appreciate my motives, even though but little benefited by my exertions. I would observe that it is always permissible to vary the aim on the object, and it is by so doing we are enabled to shoot repeatedly within so small a circle along a given distance, as a two or three inch for 100 yards, and an eight or ten inch for 200 yards.

I see that Mr. F. J. Rabbeth has presented in your columns a very important point about the Express hollow bullet, and that one writer in your last issue has already confirmed by practice his views. I hope this matter will be followed up until Mr. Rabbeth's well-taken point is fully settled.

MAJ. H. W. MERRILL.

New Rochelle, N. Y., Feb. 11.

—The Winchester Arms Company have presented one of their new model Express rifles as a prize in the FOREST AND STREAM Tournament.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

WHEREABOUTS OF THE WILD PIGEONS.—Many persons will be interested in the information contained in the following letter. We are much indebted to our correspondent who writes us:

SEDALIA, MO., Feb. 13, 1879.

The wild pigeons have been in immense numbers in the Indian Territory near Atoka. They are now moving North slowly. At this writing they are on the South Canadian. Any further information you may desire of a more definite nature will be gladly furnished by our stock agent for the Territory, Mr. T. D. Miller, care M. K. & T. R. R.

Yours truly, JOHN W. TRADER.

PERCE—*Dist. of Gaspe, Canada, Feb.* 10.—We have had a flying visit from the versatile author of the "Chronicles of the St. Lawrence," and we sincerely regret that his stay at Bella Une was so short. Mr. Lemoine is about adding an appendix to his chronicles, which will contain interesting and valuable matter. Read that appendix, ladies and gentlemen, by all means, and send your criticisms to FOREST AND STREAM.

PHILIP VIBERT.

NEW HAMPSHIRE—*Dover, Feb.* 11.—Mr. Mark Foss, of Strafford, some dozen miles from here, while out hunting partridges, shot and killed a large Canada lynx. Trail of another was found, but it being near dark he could not be followed that night. The next morning a party with dogs started him and followed him all day without getting a shot at him, although he was seen a number of times. When the two were first started they were making a supper from a sheep they had just killed belonging to a man near by.

W. A. G.

PENNSYLVANIA—*Allentown, Feb.* 11.—Mr. A. Richard, of Albertis, shot at 103 glass balls, Bogardus rules and Huber trap, 18 yards rise, on Saturday, Feb. 8, breaking 98 of them in 7¼ minutes. He is, without doubt, one of the best shots in this part of Pennsylvania. C. H. B.

TENNESSEE—*Nashville, Feb.* 11.—A few days ago a number of gentlemen went out shooting near this place, and after hunting all day, while on their return home at a place where no game was supposed to be, one of the dogs, Rip, came to a point, and was at once backed by Lark. Thus they stood until the guns were loaded. One of the party moved forward to flush the birds, when, to his surprise, a gray fox started. Bang, bang, went the guns, and it was only on the fifth shot that Reynard was badly wounded in the hind leg. He ran off and hid, but soon Lark found him, gave chase and caught him; a fight ensued, but the wiley fox got away again. This time he was so closely pursued by the hunters that he attempted to climb a tree, when he was captured and killed. About the same time that Rip came to a point on the fox, Lize, who had deserted the party some time before, came to a point on a covey of birds, and through all the noise and shooting which took place during the fox chase, stood there staunch until two of the gentlemen came up and flushed and bagged several birds. Last Monday and Tuesday, Mr. Clark Putihitt and R. Gettings made a fine bag at Dixon Station. Mr. Higgins joined the party with his splendid brace of setters, Jet and Belle, on Saturday, and killed 28 quail and one woodcock. At Prospect, a place near the Alabama line, game is reported very abundant. J. D. H.

INDIANA—*Indianapolis, Feb.* 19.—From indications since the snow disappeared we think that there are still enough quail for breeding the coming season. I. F.

NEBRASKA—*Omaha, Feb.* 10.—We have had an unusually open, pleasant winter, and most favorable to all kinds of game, especially wild turkeys, grouse and quail. Quail shooting was exceedingly good during the open season, namely, October, November and December. The two open winters have aided largely this result, and now the probabilities are another open winter to further give them increase. Our State Legislature has under consideration an amendment to the law limiting the open season to the months of October and November as to quail, and I think it a good move, also grouse shooting to commence August 15, instead of the 1st as heretofore. Our legislature is also moving in the direction of fish culture, and indications are strongly in favor of success. So mote it be! B. E. B. K.

THE TIGERS OF INDIA.—In our poets' corner we print another of Isaac McLellan's characteristic hunting poems. In favoring us with this sketch, he has taken occasion to supply the following interesting notes concerning the tigers of India, which constitute the subject of the poem:

"In my MSS. vol. of hunting poems I had written a poem on the hunting of the Hill tiger, but I wish to add a poem on the Bengal tiger, the subject of the present poem. As there are two distinct varieties of the wild pig in India, so there seems to be little doubt that there are two distinct kinds of tigers. As a rule, the stripes of a royal Bengal are single and dark. The skull is widely different from that of his brother, the Hill tiger, being low in the crown and wide in the jaws. The Hill tiger is much more massively built, heavier in weight and larger in bulk, with shorter tail and larger head, neck and shoulders. The Bengal variety are not, as a rule, as ferocious as the Hill tiger. Being more supple and cunning, they can easier evade their pursuers by flight; but the Hill tigers trust more to their strength and courage, anticipating victory as certain.

"'Maori,' an excellent writer on the sports of Nepaul, says that a tiger over ten feet long is an exceptionally long one, and that tigers are not got nearly so large as in former days, and that tigers much longer and heavier were shot some twenty years ago than now. He accounts for this by the fact that there is less land left waste and uncultivated. There are now more roads; population has increased; firearms are more numerous, and sport is more generally followed; and so tigers have not the same chances as they had formerly of attaining a ripe old age and reaching the extreme limit of their growth. The largest tigers are only found now in the remotest recesses of jungles, where the crack of the European rifle is seldom or never heard. 'Maori' seems to prefer to use the solid conical bullet for large game to the Jacob shell. He says that he once fired no less than six Jacob's shells into a tiger—all behind the shoulder—before he could stop him. The shells seemed to explode on the surface the moment they came in contact with the body. There was a tremendous surface wound, but little internal hurt. On another occasion he fired twelve shells into a buffalo bull before he killed him. He could hear as every shell hit him the sharp detonation and see the tiny curl of smoke from the ghastly wound; and the brute would drop on his knees, stagger again to his feet and attempt to charge the hunter's elephant. From that day he never fired a Jacob's shell."

STANDARD RULES FOR TRAP SHOOTING.—*Mr. Editor:* My attention has been called to an important point which I do not remember ever having seen mentioned, viz., the necessity for some standard work for the traps. There seems to be a great difference in those I have seen, some throwing the ball twenty yards and some fifty. Now, some one of authority should fix the maximum and minimum for all match shooting so there can be some regularity. We find scores reported all the way down from full to nothing, but unless we know the traps used the score is no gauge of the ability of the shooters. The regulation of the trap is a simple matter, and all that is needed is to know what is right, and I think it would be generally adopted; and if a shooter could make a full score on one set of traps he could feel confidence in his ability to do it anywhere. If you think this matter worthy of your attention please give distance that a ball should strike the ground from the trap. Yours, R.

Rise, 18 yards, is maximum 32 yards, minimum 28.

DITTMAR POWDER.

WOOD VS. BLACK POWDER.

IT is now many years since the introduction of the Shultz wood powder into Europe, and although it has been much experimented with and largely used, it has not yet superseded black powder, or become a substitute for it; nor do we know that it ever will. Several years ago Mr. Dittmar invented his smokeless powder (which is made of paper,) and has labored hard to introduce it and popularize it in America. It has many decided advantages over black powder, but although it has been very faithfully tried, it has not yet superseded black powder; nor do we know that it ever will. One thing we do know, which is, that it requires greater care in its use, because its explosive power is greater; and it is also less reliable, because it absorbs moisture more readily from the nature of its ingredients. Whatever else we can learn through crucial tests, we desire to know, and shall be pleased to print any testimony, *pro* or *con*, from those who have used it. The Dittmar powder is now on its trial, and there are many men besides the patentees and the manufacturers of black powder who are watching the test with interest. We do not think information on this topic encumbers our space.

We append some additional letters herewith:

EDITOR FOREST AND STREAM:

In the last number of F. and S. "J. P. G.," of Cambridge, Mass., asks whether the Dittmar powder is liable to injure the interior of a gun barrel. He says that his own gun and one owned by a friend, after using Dittmar, had the appearance of having been eaten by an acid. My experience with the powder is as follows:

In July last I obtained a supply of Dittmar (which was marked as the same as used by Bogardus at Gilmore's Garden) and used it through August and the first part of September for woodcock and ruffed grouse. I was very much pleased with it, particularly in thick cover, as owing to the absence of smoke I could use the second barrel more effectively than with black powder, but for open shooting at long distances, for such birds as upland plover, I did not like it as well, for I never could get as good pattern, or penetration as with Hazard's or Deadshot. For instance, at a target consisting of a very thick sheet of cardboard, 19 inches by 23 at 75 yards, with 4 drs. Dittmar and 1¼ oz. No. 8 shot, the result was a pattern of 44 shot, with penetration of 19; while with 4½ drs. Hazard and same charge of shot the pattern was 66, with penetration of 41. Still I should have used it altogether for cover shooting had I not found, after using some 200 shells, that the inside of my gun barrels were very much spotted and kept growing worse, until at length I took them to a gunsmith and had them rebored. The gunsmith said that it did not look like common rust, and asked whether I had used any sort of acid to clean the barrels. The gun I use has fine Damascus barrels and was made to order by Schaefer, of Boston, and it was always cleaned thoroughly after having been used. C. M. STARK.

Dunbarton, N. H., Feb. 13, 1879.

DITTMAR POWDER.—*Montgomery, Ala., Feb.* 6.—*Editor Forest and Stream:* Noticing the article over the signature of "Canvas Back," in reference to Dittmar Powder, he desires to know if any of your readers have had the same experience. Having used more Dittmar than any one here and tested it thoroughly, I think, I would respectfully state that the experience of "Canvas Back" and myself is the same. I have shot shells that have been loaded for a year and it is a fact that Dittmar will not stick shot thirty steps where car-

tridges have been loaded for any length of time. I have seen a duck killed at ninety yards with it, but this is an exception. On the contrary, I have tried to kill doves at twenty steps in a peach tree, taking rest at that, so that no fault should be with my aim, and have stripped them of feathers without hurting them in the least. My shells were kept in a place where dampness could not reach them. You are at liberty to publish this over the signature of,

Very respectfully, AD. VANCE.

THE CHARGES AGAINST BOGARDUS.

ALMOST damaging series of charges have been made against Capt. A. H. Bogardus in connection with his recent shooting exhibition at Gilmore's Garden, where he was advertised to break on a wager of $1,000 even 6,000 glass balls out of 6,200; or, at odds of $500 against $1,000 6,000 out of 6,100; or, at odds of $100 to $1,000, 6,000 glass balls without a miss, the balls to be sprung from the Bogardus screen trap at 15 yds. rise.

Instead of 15 yds. rise it is charged that the rise was but 11 yds. 2 feet, from an unscreened trap, and that the glass balls, which were manufactured in Brooklyn, were broken at the factory before being sent to the garden, the workmen being instructed to crack off the necks of the balls with pincers before packing them in the barrels, and that over 6,000 were thus broken, and that the barrels so packed were marked so as to be readily distinguished from the ordinary ball which had not been tampered with. When a ball was missed, it is alleged, it was picked up and handed to the referee, who a once detected the clipping of the neck, which he construct into shot marks. It is estimated by those making the charges against the fairness of Capt. Bogardus' record, that about 4 per hundred, or 240 in the total 6,000, were properly lost balls. Such are the charges shorn of all rhetoric and immaterial trimming. The accuser puts the sting to his remarks on the alleged fraud by saying:

"Captain Adam H. Bogardus is a remarkable man, and has proved his superiority as a wing shot in many contests on either side of the Atlantic. He can always make money honestly and easily by genuine matches or exhibitions, and it is wonderful that he should stoop to sell himself for a very few dollars. If he is not at heart honest and manly, he should at least have sufficient professional pride to keep the records of his favorite game free from fraud."

Dr. B. Talbot, who was the puller at the match, put in a prompt letter denying any knowledge of anything wrong, and Miles L. Johnson, the referee, in a letter on the matter, says:

"Why didn't some of those men who know so much come to the front then and there? As for the manner in which the balls were made, I know nothing. As to the distance, I did not measure, but I do know that it was more than they said. As for the statement that more than 240 balls were missed out of 6,000, that is a lie. There were not more than 75 balls that were challenged, and the greater part or all of them were laid on the table for inspection. Had there been parties there who challenged the balls, it might have made some difference. As there was but little it any objection, I was not as particular as I would have been had there been any one to challenge. I took but little interest in the matter at the time, and think that no one lost a dollar on it but the Captain."

Bogardus himself writes from Chicago:

Have read remarks on my late shoot at Gilmore's Garden. I will shoot the same match in or out of doors, the balls to be my rough balls, and bought at any gun store. The match to be shot any time within three months. I wish the close watchers would either put up or shut up. All I have to say in the matter is that I will shoot the same and let my accusers send a referee and have sawdust put on the ground or floor so as to be sure that no ball will break. Then let them buy my rough balls from the factory or any store and have them trapped themselves, and let the exhibition be a free one, or let the admission fees go to some charitable institution.

A. H. BOGARDUS.

CHARGES FOR SHOT-GUNS.

CHICAGO, Feb. 10, 1879.

EDITOR FOREST AND STREAM:

I have frequently noticed inquiries in your columns about the proper charges of powder and shot for breech-loading guns; and have quite as frequently noticed advice to use 1¾ to 1¼ ozs. of shot for a No. 12 gun. Having used a 12 gun and nothing else for nearly twenty years, I feel quite competent to say that, as a rule, anything over one ounce of shot is too much for a gun of this bore, and experience will prove that there will be less recoil, better penetration and pattern with the lighter load of shot than with the heavier. For quail, grouse and woodcock I use three drachms powder and one ounce of shot; for ducks, four drachms of powder and a short ounce of shot (about seven-eighths). Let your correspondents try it, and see if it does not remedy all this recoil business.

GEO. A. SHUFELDT.

The weight of a gun has much to do with the charge of shot as affecting the recoil. With the charge of shot our correspondent uses for ducks, unless his gun is very much choked, we should imagine the pattern would be a bad one.

PIGEON MATCHES.

[FROM OUR SPECIAL CORRESPONDENT.]

Monaco.

MONACO, France, Jan. 26, 1879.

EDITOR FOREST AND STREAM:

The pigeon shooting at Monaco has this year passed off with more success than has ever attended it in previous years. The weather has been more variable, but the extreme cold, in more northerly latitudes, has driven many to seek, like the swallow, the warmer shores of the Mediterranean. All nationalities jostle each other in the pavilion from, which the shooters step forth to the trap. English, American, French-Italian, Belgian, Austrian, Spanish, Russian, Turk, appear at this meeting, to enter the lists in the "tournament of the gun."

The liberality of the authorities and the admirable arrangements which surround the whole, are unequaled at any other similar gathering. The shooting ground is on the face of the cliff, and as the boundary is necessarily extremely short, birds killed out of bounds fall dead on the rocks below. Shooting, therefore, facing the sea, the whole scene, with the hills rising abruptly in the rear, is one of unusual interest.

The *Grande Poule d'Essai* (trial pool) opened the Grand Concours on Wednesday, January 22, when Captain Tart came forth first by killing thirteen running at 24 metres, or about 26 yards.

But on Saturday, January 25, the ball was opened by the more important event of *Prix d'Ouverture*, when seventy shooters competed while the wind was blowing almost a gale, and the birds, consequently, taking to flight with a speed at times incredible. The utmost skill was, therefore, necessary, and the finest shooting indispensable. It may be remarked the first three winners shot with guns by Dougall, of St. James' street, London, there being no makers in Europe to equal those of England.

Prix d'Ouverture.—A work of art of the value of $300, and $400 added to $20 entry, four prizes, five birds at 25 metres, nearly 27½ yards, two birds out.:

M Drugman, work of art and $750	1 1 1 1 1 1 1
Mr A Rush, $450	1 1 1 1 1 1 0
M Ophoven, $240	1 1 1 1 1 0 0 1

M Pinson	0 0 0 0
Count de Chateaubriand	0 0 0 0

On Monday and Tuesday, January 27 and 28, took place the great event, the *Grand Prix du Casino*, or the great prize of Monaco. The weather on Monday was stormy, and at the end of the fifth round, which closed the shooting for the first day, ten had killed five, viz., four English and one French, one Belgian and one Italian. These were endangered for the next day's continuation of the contest by twenty who had killed four out of the five. The weather on the Tuesday had resumed its usual brightness, and under a bright sun with a pleasant breeze the fight was renewed. As on the previous occasion, the winner also shot with one of Dougall's Express smoke-bore guns, without once using his second barrel, except on the occasion of the one bird he missed. The shooting was considered the best on record, as the birds were not only thorough blue rocks, brought specially from New England, but were assisted by the breeze that blew toward the sea. Mr. Barnes of the Narragansett Club shot well up.

Grand Prix du Casino.—A work of art of the value of $900, and $4,000 added to $20 entry; four prizes; twelve birds (five the first day at 26 metres, about 28½ yards; seven the second day at 27 metres, about 29½ yards), four birds out:

Mr E R G Hopwood, work of art and $3,608	1 1 1 1 1 1 1 1 1 1 0—11
Captain Saclier, $1,520	1 1 1 1 1 1 1 1 1 1 0—11
Marquis de Croix, $1,139	1 1 1 1 1 1 1 1 0 1 1—11

PIGEON SHOOTING IN MASSACHUSETTS.—It is possible that Massachusetts may follow the example of Connecticut, and pass a law making pigeon shooting at the trap illegal. A bill is to come up soon in the Legislature for the suppression of the practice.

CONNECTICUT—*Waterford, Feb.* 13.—Practice shoot of the newly-organized glass ball club at Wallingford, Connecticut, Feb. 12. The wind was blowing very strong. The shooting was from three traps, 18 yards rise, under Bogardus rules; Paine's feathered balls were used:

James Brogden	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—23
A B Pixley	1 0 1 1 0 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—17
J A Hall	0 1 1 0 1 1 1 0 1 0 1 1 1 1 1 1 0 0 1 1 1 0 1 0—17
W F Lane	0 1 0 0 0 1 1 1 0 0 1 1 1 0 1 1 0 0 0 1 1—14
S T Whitney	0 1 0 0 1 0 1 1 1 0 1 0 1 0 0 1 0 1 1 0 0 1 1 0—13
Amos Ives	0 1 0 1 1 0 0 1 0 0 0 1 0 1 1 0 1 1 0 0 0 1 1—11

Second match, ten balls, with the following score:

Brogden	0 0 1 1 1 1 1 1 1—8
Lane	0 1 1 1 1 1 0 1 1—8
Hall	1 1 1 1 0 1 1 0 0—7
Pixley	1 0 0 0 1 1 1 1 1—6
Ives	0 0 1 0 1 1 1 0 0—5
Whitney	1 0 1 1 0 0 0 1 0—4

Brogden and Lane tied on eight, and shot off, miss and out:

Lane	1 1 1—4
Brogden	1 1 1 0—3

NEW YORK—*Buffalo, Jan.* 29.—A few shooters here had a match a some very hard birds at Joan Cook's place, at East Buffalo; five bird each, 21 yards rise; sweepstakes, divided as follows: $50, $30, $20—$100

Chas A Kolb	1 0 1 1 1—4
Wm Schiebert	0 0 0 1 1—3
Chas Weis	1 1 1 1 1—5
Phil Voltz	1 0 0 1 1—3
Chas Gerber, jr	1 1 0 1 1—4
Jas Rafferty	1 1 1 1 1—5
Chris. Warner	0 1 1 1 1—4

LEXINGTON GUN CLUB.—*Brooklyn, Feb.* 17.—The Lexington Gun Club had their annual shoot and banquet, Mr. Gertlennez having carried off the champion badge for 1878. The club were presented with a fine Silver and gold pitcher to be shot for this year. Speeches were made by Messrs. Blinn, Booth, Goldwin, Gutierrez and others. The club intend next fall to take a trip to Colorado to try their hand on large game. J. L.

EXCELSIOR SHOOTING CLUB.—*Brooklyn, E. D., Feb.* 13.—Monthly club shoot for the Club Badge, at Montevero's Grand St. Park, Coin Quasqueville. Very strong birds; weather cold and windy for shooting. The club was visited by members of the Fountain Gun Club, Furman Island Club and Greenpoint Club. 21 yds. rise; 30 yds. boundary:

LETTER FROM IRA PAINE.

NEW YORK, Feb. 18, 1879.

EDITOR FOREST AND STREAM:

Seeing a challenge in the last issue of Chicago *Field* from Mr. Abe Kleinman I hasten to reply. My time at present is so much occupied with the production of my feather-filled ball and shooting at the theatres that I have little time to do any pigeon shooting; and as I am engaged with Mr. Tony Pastor for his coming season, I have paid all my attention to stage and exhibition shooting. Furthermore, I am quite content to rest on my laurels of having defeated Mr. Kleinman in the best contested match ever shot west of New York. I refer to the 30-bird match in 1873, when we both shot at imported blue rocks, 30 each, when I killed 23 to his 26. This score has never been equaled at this class of birds. No one respects Mr. Kleiman's skill or has publicly acknowledged it more than myself; but so long as he contents himself with holding left-handed championships, and barring men whom I have repeatedly beaten, hats at pigeons and glass balls, I fail to see what possible honor it could be to me to beat him. As the matter now stands, I advise Mr. Kleinman to pull out for himself, play second fiddle to no one, bar no one, tired or retired; do what I have done—beat every known champion—and I promise him a race as soon as we may agree upon equal terms. IRA A. PAINE.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*	Grouper, *Epinephelpus nigritus.*
Drum (two species). Family *Sciænidæ.*	Trout (black bass), *Centrorpristis atrarius.*
Kingfish, *Menticirrus nebulosus.*	Striped bass, or Rockfish, *Roccus lineatus.*
Sea Bass, *Sciænops ocellatus.*	Tallorish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.*	Black Bass, *Micropterus salmoides*
Snapper, *Lutjanus blackfordii.*	*M. pallidus.*

FISH IN MARKET—RETAIL PRICES.—Bass, 25 cents; smelts, 12; bluefish, 12½; salmon, 35; mackerel, 20; shad, 75; white perch, 12½; green turtle, 15; terrapin, $24 per doz.; frostfish, 8; halibut, 18; haddock, 8; kingfish, 15; codfish, 6; herring, 6; flounders, 10; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 15; scallops, 25 per quart; soft clams, 30 to 75 per 100; whitefish, 16; pickerel, 15; salmon trout, 15; muscalonge, 15; red snapper, 12½; smoked haddock, 12½; smoked salmon, 15; dry cod, 7; hard crabs, 30 cents per doz., soft crabs, $1.25 per doz.

Two fresh caught salmon from Nova Scotia were received by E. G. Blackford, Fulton Market, on Tuesday of this week. They were the first catch of the season.

THE SALMON RIVERS OF CANADA.—We publish in our advertising columns a list of the salmon rivers which remain unleased by the Dominion Government. Inasmuch as it may be interesting to anglers we publish herewith a list of all salmon fishing rivers in the Province of Quebec, the tributaries of which are fishing grounds. There are quite a number in the Provinces of New Brunswick and Nova Scotia, and in the island of Anticosti (P. Q.) which are not enumerated here

The River Metasimi, discharging itself into the River St. Lawrence on the north side, Betsiac, Trinite, Pointe Trinite, Calumet, Trinite, Shallrake, Magpie, Petite Watchecheboo, Nabesippi, Agwanus, Kegnistka, Musquarro, Washecootai, La Romaine (*la beau*) on the north side, Seccomeche, Etamaru, Moating, St. Augustine, Esquimaux; Onelle, south side, Metis, St. Anne des Monts, Mont Louis, Magdalude, Grand Patos, Bai des Chaleurs, Bonaventure, Petit Cascapedine, Grand Cascapedine, Nouvelle, Maredine, Restigouche, Mistouche.

CANADA—*St. Martins, N. B., Feb.* 7.—Some of our sportsmen were out to the lakes yesterday above here and got a very good string of large trout through the ice. Game of all kinds is scarce. H. V. S.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported the past week has been 22, viz.; 8 from the Banks, with 225,000 lbs. fresh halibut; 9 from Georges, with 300 000 lbs. codfish and 28,000 bbls. halibut; 4 from Grand Menan, with 800,000 frozen herring, and one from Newfoundland, with 700 lbs. salt herring.—*Cape Ann Advertiser, Feb.* 14.

FLY-CASTING AT THE STATE CONVENTION.—At a meeting of the Monroe County Sportsman's Club, held at Rochester last week, Seth Green stated that he should not enter the fly-casting tournament at the coming State Convention. This obviates a cause of frequent complaint heretofore. There are to be some fine prizes offered for the contest, and amateurs will have a chance to secure them.

TENNESSEE—*Nashville, Feb.* 11.—Saw some fine striped bass caught at Redfoot Lake. Large quantities of drum and buffalo are being taken in the Cumberland at present. No shad have yet made their appearance, though many who have watched the experiment of propagating them in our waters are confident that this year they will return in large numbers. J. D. H.

SIR HUMPHREY DAVY ON THE TROUT QUESTION.—As confirming Mr. Prime's statement of the manner in which a trout sometimes takes the fly, I inclose an extract from Sir Humphrey Davy's Salmonia, where speaking of a salmon he says: "He has risen, but he is a dark fish that has been some time in the water, and he tries to drown the fly with a blow of his tail." Salmonia, Fourth day: page 104. Fourth edition. London, 1851. J. G. WILDMAN.

Boston, Feb. 17, 1879.

TROUT AND GRAYLING FISHERIES IN AUSTRIA.—The stocking with trout and grayling fry of the rivers and streams of Austria, which had been effected in the spring of 1878, seems to have been quite successful; numerous masses of young trout and grayling can be seen in all the rivers, and an abundant harvest is expected in future. Many thousands of young trout of about one-quarter of a pound weight have been caught lately in the fishing nets, used for fishing the Vockla River in Upper Austria, but these were returned again into the water without delay. As a rather extraordinary circumstance it is also mentioned, that during a fortnight's fishing in the Vockla River, besides the trout and grayling, not a single kind of any other fish had been caught.

In Europe the question whether trout and grayling can occupy a stream together seems not to have been raised; neither does it apply here in America. Fully one-half of the grayling streams of Michigan contain trout, while in Montana the two fishes are invariably found together, as well as in company with a species of white fish which takes the fly.

RAPID GROWTH OF THE CALIFORNIAN SALMON.—A fresh instance of the extraordinary rapid growth of the Californian salmon is reported in a recent issue of the German *Fishing Gazette*. The report states that twenty-nine young salmon which Herr von dem Borne received last spring from Director Haak, of the Imperial Fish Hatching Establishment at Huningen, in Alsace, had been deposited by the former into a pond, about 550 square yards in extent, and already containing murina and trout fry. Upon the pond being let off a few days ago, it was found to contain twenty-six salmon, which to all appearance had been thriving wonderfully. Although not yet twelve months old, they had already reached the length of a hand, being also very fleshy. Their bodies were already colored silver white, the back dark-brown, dotted with the black points—a process which does not take place among the common salmon until they are eighteen months to three years old.

BAMBOO OR WOOD?

HARTFORD, CONN., Feb. 15, 1879.

EDITOR FOREST AND STREAM:

I read in your last an interesting article entitled "Weight and Structure of Rods," in which a good deal of useful knowledge is communicated. Such articles are needed, because by drawing out the opinions of others we are enabled to reach a just conclusion. Speaking from a somewhat extended experience in the piscatorial art, I must say that in my opinion there is no rod like that made of bamboo not merely for beauty and for use, but, in the long run, for cheapness. In this opinion I am not alone; but having been for some time counselor of a trout protective association, I have often compared notes with my clients at their monthly meetings, and have always found that every one who had tried both kinds of rods gave the palm to the bamboo. There is, as you say, an apparent difference in cost in favor of the wooden rod; still I am confident that all who have given both kinds a fair trial will agree with me in averring that the bamboo is really the cheaper, taking into view the two leading points of durability and serviceability; and such I imagine, Mr. Editor, is your own opinion, although your article might, on a cursory perusal, give or suggest a contrary impression.

65 FULTON STREET, N. Y., Feb. 17, 1879.

EDITOR FOREST AND STREAM:

We have just read in your issue of Feb. 13 a long and elaborate article condemning the split bamboo and praising the wooden rod. It seems to us, before passing judgment, the makers of split bamboo rods should have had a chance to be heard, then perhaps the split bamboo would have had an opportunity to have given the wooden rod the "black eye" you speak of.

We think that the makers of wooden rods had matters all their own way in your article, and we would therefore like to put in an answer in defense of the split bamboo. In the first place every sportsman knows that split bamboo rods are lighter than wooden ones of the same length and strength; and you overlook entirely the well-known fact that a split bamboo will strike a fish much surer and kill it quicker than a wooden one. You say, "that in the imperviousness to water, sensitiveness to temperature, etc.," the wooden rod has the advantage. This, we think, will be news to anglers who have used both. The very nature of the enamel on the split bamboo renders it impervious to water, to say nothing of the coats of coach varnish, which enables it to resist any amount of exposure to dampness. The joints in our rods are so close as to be hardly visible. Mr. Ward, a celebrated artist and sportsman, and the writer of the recent article in Scribner's on moose hunting, showed the writer a split bamboo that he had used for eight years without injuring it. Another good angler, who read your article in our office, stated that he had left his split bamboo out of doors, day after day, without harming it in the least. In short, the split bamboo will stand much harder work and more careless handling than the wooden one. This fact is proven by the few split bamboo rods that come back for repairs.

Anglers find no necessity now for taking a second rod, or even an extra second joint, and, therefore, really the expense is less, either for salmon or trout fishing. We firmly believe that split bamboo rods will take the place of fine wooden ones as sure as breech-loading guns have taken the place of muzzle-loaders.

CONROY, BISSETT & MALLESON.

We regret if any one has misconstrued the object of the editorial referred to. We did not hope or intend to uphold the wooden rod as superior to the bamboo. We have used bamboo rods in preference to wooden ones for ten years at least, and wish to use no other, though other persons may choose differently.

Our editorial article simply attempted to give some sketch of the origin and history of bamboo rods, and to extol the praiseworthy efforts of an indefatigable artificer who had succeeded in making of wood what appears without a working test, to be the counterpart of a first-class bamboo salmon rod of equal dimensions.

In comparing the qualities of wooden and bamboo rods, and especially their relative cost, we made the *chef d'œuvre* of Mr. Mitchell a standard of estimate for wooden rods. We do not believe that rods can be made for the trade with profit or advantage so exceptionally fine as the one in question. Wooden rods are of baser material than bamboo, and their workmanship is not of that character which consists of parts sawed, beveled, and adjusted together with the utmost nicety and precision. But this very construction of parts glued together renders the bamboo rods more liable to get out of order. Therefore when we claim that the better article requires the better care we but follow the logic of cor-relative facts.

It is a marvellous quality of the bamboo rod that it will stand hard work for many years, if properly cared for. Our own bamboo trout and salmon rods attest that fact. But because it is created with a good constitution we do not admit that it should be allowed to "stand out of doors, exposed to rain and dews day after day," as brother Conroy's friend's rod was permitted to do. We have always maintained that a good gun or a good rod should not be placed in the hands of an awkward, ignorant or careless man, and while we have ever been unqualifiedly in favor of giving bamboo rods to experts, we still think wooden rods the best and cheapest for those who will not use them properly. Any effort on the part of manufacturers, either of wooden or bamboo rods, to make their respective implements as perfect as possible are most commendable. We would encourage both alike, and take pride in the honorable emulations of the two branches of the craft.

MOONLIGHT ON SEA AND LAND.

SPOILED FISH AND INFECTED MEN.

THE following batch of facts and superstitions we give to our readers just as we receive them, merely leaving it to them to separate the facts from the body of the material furnished, and to decide for themselves which are the facts and which the superstitions. So far as our own research extends, we are positive that what is related is based upon the most trustworthy tradition. As long ago as we can remember, we traced the evidences of substantiation in those lines where the ancient poet refers to the "scorching sun" and the "sickly moon." If the Ancient Mariner has not included them in his recital, it is because inexorable time cut short the peroration. The discussion is likely to become as interesting as the flop-fly question:

ROCK ISLAND, Ill., Feb. 6, 1879.

EDITOR FOREST AND STREAM:

With your gracious permission I would like to dip my oar into the moonlit waters of the moonshine controversy, partly because I am fond of dispute and partly because I have an idea. Let me premise, however, that I have never myself had any experience with such mysterious influences. I am one of those skeptical spirits who somehow lose all the most wonderful things in life. I have often been to spiritualistic circles in hope of seeing some wonderful manifestations, but the confounded spirits always refused to work as soon as I entered the room. I have been where ghosts were said to congregate, but, though I watched long and faithfully, no supernatural visitor ever rewarded my vigils. All such wonderful things seem to have a wholesome dread of skeptical inquirers, and keep at a respectable distance. But I have been, and am still, acquainted with persons who have seen and felt these moonshiney influences—persons on whose word I can confidently rely, and who are willing to testify with all the solemnity of an oath that the facts they relate are "the truths, the whole truths, and nothing but the truths."

One of these persons is my own father. Like your correspondent "W. K.," he is an old whaleman, having spent eighteen years on salt water, eleven of them being devoted to the pursuit of the mighty leviathan. Naturally, in this long period he acquired a vast amount of knowledge relating to the sea and seafaring experience, and, along with this knowledge, a great many of those fanciful notions and superstitions for which sailors are so noted. He is not an educated man, but he has a great admiration for scientific methods, and he declares that all the scientific men in the world could not shake his belief in the power of moonlight to spoil fish. I have often heard him tell and retell the story of how, when "on Japan," they caught a number of small fish—that is, small to whalemen, who compare all fish with whales, though many of the specimens weighed from fifty to one hundred pounds—and after dressing them hung them up on the deck over night to dry. They did not catch these fish altogether for their own use, but partly for the purpose of trading off to the natives of the various islands for fruits and vegetables. The fish were generally of three kinds, known to sailors as the skip-jack, alvicore and the goney. The day after these fish had been exposed to the moonlight two of the sailors eating of some of them were taken violently sick, and it was at once attributed to the influence of the moon. My father declares that he was skeptical then, and argued with the other sailors that the fish had not been properly cleaned, or that an intestine had been accidentally broken on the flesh; but not long after he himself took a few morsels of clean fish, and was at once seized with the same sickly sensations as had attacked the others. He then doubted no more. He relates, also, the case of a sailor he once saw, who had carelessly slept on deck where his face was exposed to the rays of the moon, and the muscles of the face were so drawn and twisted around thereby that the man's mouth opened sideways instead of downwards, giving him a horrible though ludicrous appearance.

A similar case to this last was related to me by another man, also a man whose word I have no reason to doubt. It happened to a cook or steward on one of the Mississippi steamers. He slept one night exposed to the moon's rays, and in the morning the entire face was found drawn sideways until the nose was where the cheek should be, and the physicians pronounced it to be the effect of the moon's attraction. I do not detail these cases at length, because the bare facts are sufficient, on what I consider good testimony, to corroborate the story of the "moonshiners," so far as facts alone can do so, that is, the story that fish were exposed to the moonlight, and that men eating of those fish were taken sick. The inference that the moonshine poisoned the fish no amount of detail can establish with any certainty until subjected to the test of experiment. The mere opinion of "everybody" ascribing the poisoning to the moonlight is of no weight whatever. The men who held this opinion are not, or were not, men who were capable of always tracing effects to their legitimate causes, unless the connection was self-evident. They were not, or are not, men whose mental habits have been trained by that scientific method which refuses assent to all theories until the evidence is all in. They are mostly men of limited education, especially in those branches which bear upon logical reasoning, and are of that nature or disposition which must have an opinion on all subjects, and, in lieu of the true one, are satisfied with any. Then, too, not having any interest in finding the true cause of the phenomena at the time, they necessarily fail to note many little circumstances which may have an important bearing on the subject, and the subject passes from their minds, and when it is recalled afterward everything is forgotten except the principal facts, and the opinion that the moon was the cause of all the mischief.

Let us note two circumstances bearing upon this question. Your correspondent, "W. K.," states that he never heard of such things occurring on land, thus implying that the sea had something to do with the matter; but it is the same moon, I believe, that shines on water as on land, and goes through the same phases in both places, and if her light spoiled fish at sea it would certainly spoil the same fish on land. My father's opinion is different. He thinks it is only fish taken "off soundings" that are affected this way. This, of course, relieves the moon of the blame and places it upon the species of the fish exposed. But there is one very significant circumstance. I have stated that the skipjacks were partly caught for the purpose of trading off to the islanders. They were so traded off on many occasions, but my father states that he does not remember of any of those islanders being made sick by the moonstruck fish. This would seem to show that only white men were susceptible to moonlight poison. But wait. He also states that before this he had eaten of the same mess of fish and had not been affected by it; and that the same fish were eaten more or less afterward on the ship, with no sickness resulting. This would seem to imply that—well, that the moon had nothing whatever to do with the poisoning.

So much on one side of the question; now for an "idea" for the other side. I have said that I am naturally skeptical—too much so, my religious friends assure me, for my own future welfare; but I cannot help it. I instinctively regard with suspicion everything which seems to be based on the mysterious or wonderful, and among such I place this belief in the moon's influence. But the more I think of it the more I begin to think there may perhaps be something in it. I will explain why as briefly as possible:

Some years ago I dabbled in photographic chemistry—not enough to become a chemist, nor even a good photographer, but enough to gain some idea of the general principles of the art. Among other things I remember my text-books asserted, was that the sun's rays were divided into three classes, and to each class was ascribed functions peculiar to itself. These classes were—1st, the yellow, or illuminating rays; 2d, the red, or heating rays; and 3d, the white (more scientifically called *actinic*), or chemical rays. It is the last class that is depended upon for decomposing the silver salts on the sensitive plate and forming the lights and shadows of the picture. Red and yellow light, as all know, have very little chemical effect; probably if perfectly pure they have no effect at all, while the chemical effect of white light forms one of the wonders of modern science. To apply this fact to the present subject, let it be remembered that moonlight is excessively white. In reflecting the sun's rays the moon absorbs most or all of the yellow and red ones, throwing off for the benefit of the earth only the white or chemical class. Now, is it not possible that these chemical rays, when unobstructed by the red and yellow rays, may have their chemical power increased or at least have more freedom to act, until they can chemically affect certain substances which are by their peculiar composition uncommonly sensitive to such influence? I do not assert that it is so, but is it not possible! I trust that some "moonshiner" will follow up this suggestion, though I admit that I prefer to believe that in all the cases mentioned, something besides the moon was the cause of the mischievous effects produced.

The belief that the moon has a mysterious influence over the things of earth is a very old one, and is doubtless accepted by most of those who believe in it solely because it is old. It seems to be a characteristic of the human mind to reverence the antique. We look back through the space of a century and regard the Revolutionary Fathers as greater and better men than ourselves, when, if the truth were all known, it would probably be found that many men now extolled as patriots would have turned traitor at half Arnold's temptation, and that the soldiers who endured the miseries of Valley Forge contemplated desertion more than once. We look back through two centuries and almost worship the old Puritan Fathers and praise their liberty-loving and honest principles, when in reality they were the most unmitigated tyrants that ever trod the earth and amused themselves by hanging Quakers and burning witches, and inaugurated an Indian war

of two hundred years' duration by stealing Indian corn. We look further back and see that the ancients ascribed wonderful things to the moon. We follow it up and see that the belief has obtained in the succeeding ages; we come down still further and find that the old men and the old women still cling to the belief, and as we cannot disprove it we accept it, and either directly or indirectly instill it into the minds of our children. This is doubtless the secret of the belief in this and similar superstitions, and had not the present age fortunately developed a spirit of inquiry, whose first principle is that nothing is too sacred or too well established to be doubted, we would still be so encumbered with such beliefs that we would see hobgoblins in every bush and ghosts in every dead tree.

I do not, of course, deny that the moon has an influence on the earth, but that influence is as fixed and certain as all other laws of nature. As an attracting body it may cause the tides; its light waves may be the bearers of a subtle form of electricity; as a temptation to lovers to waste their time wooing and cooing it may even effect the destinies of men; it may be true, as Byron says, that "the devil's in the moon for mischief," but the mere coincidence of the moon shining when fish are exposed on the deck of a vessel is not sufficient proof that the pale-faced Luna is the cause of those fish spoiling, even though all the old sailors in the merchant marine should swear to it, and all the "oldest inhabitants" should substantiate the assertion. Carlyle says that we may go from "mystery to mystery, and from God to God," but to go from mystery to moonlight is not a satisfactory process.

GUY RIVERS.

EAGLE NEST, Feb. 15, 1879.

EDITOR FOREST AND STREAM:

The communication of "L. A. B." and your comments thereon regarding the effects of the moon, brings back memories thereof connected with my campaigning in Florida in 1838, '39, '40 and up to '42. We had among our men, who slept carelessly in the open moonlight, many cases of "moonblindness," as it was termed, affecting the men so badly and so long that such were either invalided to hospital or discharged at their own request from the service. I think Admiral Rogers and General Sherman, who were both there when I was, will distinctly remember this. I never knew this to occur in the far West, but, as you know, every hunter sleeping out gets his head under his blanket, if he is not in a tent or under shelter. I almost always slept face down, with my arms crossed under my forchead to keep my head up for breathing room. I have known game badly tainted by hanging a single night out, but never before thought the moon had anything to do with it. Now I think it might have had the effect.

I remember one funny case. A well-known skulker in the command, always shirking from duty, tried to sham moonblindness, so as to get his discharge. One day, seeing him trying apparently to feel his way along the side of the barracks, I stepped behind a corner, and as he turned it, raised a cocked pistol full in his face, without noise or speaking. "For God's sake, don't shoot, Lieutenant!" he yelled. He was cured, and went to duty; but there were many genuine cases of the disease. NED BUNTLINE.

ROCKPORT, Mass., Feb. 3, 1879.

EDITOR FOREST AND STREAM:

In your issue of January 16 your correspondent, "Sea," asserts "that any seafaring man will tell you that fish left in the moonshine is not fit to eat." Now, sir, allow me to inform "Sea" that the seafaring men of Cape Ann are born fishermen, and I give you herewith the testimony of over one hundred of them, with whom I have conversed on the subject. First, they have eaten mackerel and other fish that were dressed and laid on the cuddy all night exposed to the moonshine without any difference between them and any other fish; second, some of them say that their grandfathers told them that their grandfathers said that he had heard his father say that old folks along the shore believed this nonsense, but he had tried them all ways without any bad results; third, our haddock fishermen carry deck-loads of haddock to Boston that are exposed one, two, and occasionally three nights to the rays of the moon. According to "Sea's" testimony these "cold moonshiny nights" must poison our haddock, and why in the world don't the Boston Board of Health quarantine the haddockers, and investigate. Cod, hake and pollock are left to the poisonous influence of the moon's rays. I don't care to investigate any further on the subject, and would seriously advise "Sea" to put his pet theory of moonstruck fish into the pot of "shrinking beef," and let the dead sailor at ebb tide watch the pot. "L. A. B.'s" statement in the last issue of FOREST AND STREAM, if intended for a conundrum, is an easy one. His trout were placed in a tin pan, probably, and one half our sheet tin is adulterated with lead. The fish would absorb enough lead in one night to seriously affect them. Finally, before accepting, or believing such nonsense, I want "more light," but no moonlight in mine, if you please, until the "pizen" is extracted. Yours truly, G. P. W.

DETROIT, Feb. 8, 1879.

Mr. Editor: About moonstruck fish, all I can say is that as far back as 1834 whitefish were caught on Detroit River. The weather was very warm, both day and night, all through October. At that time all the fish were put up at the fisheries in barrels. One morning the man cleaning fish reported some fish spoiled (I wish it understood that fish were cleaned and salted every day, so that none were left lying on the beach to spoil). The boss looked at them and said: "Pick out the soft ones; have them carefully put up in salt, and try to keep them for spring markets." Orders were attended to. Fish were sent to Cleveland, and on inspection were found to be in bad order. As the fish were caught at night, I certainly think they were spoiled by the moon shining on them.

The months of July and August, 1834, were very warm, and I remember of hearing parties speak of putting a piece of meat in the rays of moon, and having it spoiled in one hour. If such is the case, I see no reason why the moon's rays would not spoil meats, fish, etc. I think the party who cleaned them for salting is now living at East Saginaw, Mich. I am, sir, yours, etc., E. B. P.

[Let the East Saginaw man speak out.—ED.]

PENSACOLA, Fla., Feb. 8, 1879.

EDITOR FOREST AND STREAM:

I have been much interested by the statements in your paper concerning the effects of moonlight on fish, and have only withheld my own experience until I could make a more positive test. Sailors and fishermen in general believe the moon has power to spoil any fish or disfigure any person's face that may be exposed to its light, and I was no exception to this rule for a long time after I became interested in fish and fishing. While engaged in fishing as a business I have carried fish on the deck of a fishing vessel and in open boats unprotected from the moonlight many times, and always found that they fared quite as well as those that happened to be covered, and am not aware of bad effects from eating them, as would be the case if they were poisoned.

Last night, the moon being full, I brought home eight fresh mullet, four of which I put on the roof of a shed in the moonlight, and four just under the eaves in the shade, and on comparing them this morning could see no difference in their condition. Their eyes were still black and full, gills red, flesh firm, and with no perceivable taint.

Whether a fish is spoiled or not is a point that requires considerable experience to really decide, unless the fish is fairly rotten. The skin, gills and entrails will often sour, and the fish be condemned by an inexperienced person, while the flesh is as sound and sweet as ever. I know that the contents of the stomach has much to do with the keeping sweet of an uncleaned fish, as one kind of food produces different effects from another. A bluefish, for instance, with its stomach filled with small fishes partly digested, will not keep in ice half as long as a snapper whose stomach is filled with crustaceans.

That the moonlight affects sleeping men is an absurd idea I think, and is a belief that should never come aft from the forecastle or galley. In camping and boating I have slept often in the moonlight uncovered, except perhaps by a mosquito bar, and never experienced unpleasant or disfiguring results, nor have those with me. SILAS STEARNS.

YACHTING NEWS.

NEW YORK YACHT CLUB.—The election of officers for the year took place Feb. 6, with the following result: Commodore, S. Nicholson Kane, *Restless* schooner; Vice-Com., W. H. Thomas, *Rambler* schooner; Rear-Com., J. R. Waller, *Gracie* sloop; Secretary, Chas. A. Minton; Treasurer, Sheppard Homans; Fleet Surgeon, G. S. Winston, M. D.; Measurer, A. Carey Smith; Regatta Committee, G. H. Stebbins, A. Taylor, Jr., and G. L. Haight. The annual club matches were set down for Thursday, June 19, and the ocean match for the Brenton's Reef Cup for June 23, and that for the Cape May Cup, Sept. 4.

ATLANTIC YACHT CLUB.—At the last meeting of this club, held at their headquarters in Brooklyn, Feb. 10, the treasurer reported a very satisfactory condition of the club funds and an increased roll of membership. This latter fact is to be ascribed to the praiseworthy characteristic of the club, which places active sailing ahead of social entertainment. The club is consequently very popular among all who have the best interests of the sport at heart, and bids fair to surpass some of the older organizations in many respects. The sloops *Pirate* and *Intrepid* will probably be added to the fleet, and a number of other craft are expected to hoist the "white with the red bars" at their mastheads.

BUFFALO YACHT CLUB.—This club is prospering and rapidly increasing in membership and sail. Twenty-nine gentlemen were added to the list at the last meeting. Dues have been fixed at the rate of $3 per year. The following officers have been elected: Com., J. H. Provost; Vice-Com., Capt. John E. Bowen; Pres., P. G. Cook; Vice-Pres., Frank Netleton; Sec'y, F. N. Vedder; Treas., Morton A. Robinson; Measurer, Capt. E. W. Craig; Regatta Committee—Wm. E. Riggs, E. E. Benedict, J. C. White; House Committee—C. M. Cordell, W. A. Robinson, E. L. Stoddard. The following honorary members were elected: Hon. Ray V. Pierce, M. C.; Peter C. Doyle, ex-Supt. of Fire; Wm. H. Abell, Pres. Board of Trade; Thos. Kean, City Editor Buffalo *Courier*; A. W. Austin, City Editor *Commercial Advertiser*; Geo. Ferris, City Editor Buffalo *Express*. Club burgee—a blue pennant with white star in centre. The circular from the Seawanhaka Y. C., relating to changes in the yacht laws, was read, and received the signatures of the flag officers and Hon. Ray V. Pierce, M. C. Four new yachts are now building, and it is probable that five more will be laid down during spring. With the energy recently displayed, the club appears likely to take the lead of all on the lakes.

WARWICK YACHT CLUB.—The Warwick Yacht Club, of Providence, R. I., was organized in 1873 and incorporated 1876. The officers for the present year have been given in a previous number. The club has about sixty members and owns four schooners, among them the *Viking*, 154 tons, and *Cornelia*, 56 tons; twelve sloops and eleven cat-boats. The *Lizzie L.*, formerly of the Atlantic Y. C., has been bought by Vice-Com. Sands, and will hereafter fly the Warwick burgee. The cat *Louise*, Mr. F. H. Brown, has also been added recently to the club. Regattas are held over three courses, known as the Newport, Rocky Point and Bristol courses. Herreshoff's time tables are adhered to, the basis being length. Club burgee, blue field, red circle, with white star in red. The club book is worthy of commendation, and is very complete in the specifications of the yachts enrolled.

BAY OF QUINTE YACHT CLUB.—The second class yachts of Belleville, Ont., have virtually swept Lake Ontario from Hamilton, at its head, to Kingston, at its foot. No new craft have yet been commenced, but the Tisdall Bros. will shortly start up on two small two-tonners for parties in Lachine, near Montreal. At Trenton, twelve miles distant, an ice boat club has been formed last year, comprising six boats. The *Beach Prince*, *Pioneer* and *Great Eastern* had a race for the champion flag, which was won by the first named. On the 8th inst., a second race was sailed between the *Prince* and *Great Eastern*, in which the *Prince* again won. These boats are built after the most approved Hudson River models.

PORT TACK.

SEAWANHAKA YACHT CLUB.—The regular annual dinner of the Seawanhaka took place at Delmonico's, on Wednesday evening. About forty members of the club and guests were present. Among the latter were Commodore Kane, of the N. Y. Club; Commodore Boardman and Mr. Cunningham, of the Eastern Yacht Club; Commodore Dickerson, of the Brooklyn Yacht Club; Capt. Thomas, of the *Rambler*, and others. The dinner was a most enjoyable affair, as indeed are all the reunions of this popular club. The *pièce de resistance* of the evening was, perhaps, Vice-Commodore Cromwell's statistical speech.

THE SEAWANHAKA LECTURES.—The second lecture of the course of five will be delivered Feb. 20 at Delmonico's, New York. The whole series will be published in full in these columns for the benefit of those unable to attend.

EAST BOSTON YACHT CLUB.—The following regatta committee has been elected for the year: S. S. Goodwin, Thos. Stone, F. T. Clayton, Ed. Lincoln and Geo. McCausland. A union match will be sailed in June under their auspices.

MADISON YACHT CLUB.—The election of the Madison, Wis., Yacht Club has resulted in the following officers for the year: Com., A. H. West; Vice-Com., E. H. Freeman; Rec. Sec'y, J. Zehnter; Cor. Sec'y, W. P. Jones; Treas., H. Turnvill; Measurer, J. Gallagher.

A NEW YACHT CLUB.—A new yacht club is about being formed, with headquarters at West Meriden, Conn. We bespeak for it the aid and sympathy of all yacht owners in that neighborhood.

YACHT BUILDING AT BUFFALO.—Three new yachts are now in frame at Buffalo, N. Y. One is a sloop, 40ft. long, 13½ft. beam and very heavily timbered. Hull, without spars or joiner-work, for sale at $600—apparently a good bargain for somebody. Chilcot & Son are putting up a steam yacht 40ft. long and 9ft. beam "on spec." They are also at work on a schooner 40ft. by 10ft. She is to have a shifting cabin, and is said to be of fine model, with both keel and centre-board. Most of the Buffalo yachts are built in that way. It gives them the advantages of draft and board alike.

THE AMBASSADRESS.—This schooner has had a new mainmast stepped at Corlear's Hook, in the place of the one sprung on her recent run up from Florida. She will be now laid up at City Island till further orders. She left Jacksonville, Fla., Jan. 23, and ran into a gale on the 26th. Report says that she was "suddenly struck by a squall, carrying away main-topmast, springing masthead and splitting maintopmast staysail." Rather a queer performance this; looks too much as though all hands had got on a bender.

THE REAL ORIGINAL SHARPIE.—From numerous sources the claims to the first discovery of the sharpie come in. We are now informed by a gentleman "who remembers all about it" that the first sharpie was built by a New London carpenter to carry him across the river to his daily work. He told our informant that "that 'ere boat was nothin' to what he could build if he was a mind to," and when the spirit finally did move him he set about and brought forth the "fastest sharpie ever built since her first day." And so on. We are inclined to think that the want felt along the coast for some cheap and handy as well as safe boat led to the building of something like the sharpie by different parties at or about the same time, and the name of the first man who "invented" the sharpie will probably forever remain shrouded in mystery along with the great minds that brought forth the chair and the cradle. But so far as records go, the Messrs. Goodsell, of Baltimore, have first claim to the honors.

A FARMER CORINTHIAN.—This is what a farmer, living near the shores of Lake Ontario, writes us concerning the results of the Corinthian spirit that seized him upon reading FOREST AND STREAM: A neighbor and myself built a boat for instruction and amusement, both of us were farmers. She was 16ft. long, 26in. deep, and 6ft. 5in. beam, with deck forward. Lap streak, oak keel, stem and sternpost, etc., cedar planking and deck and chestnut beams. She made a dry, comfortable and buoyant craft, but in rough water wants to "broach-to" when running free. We gave her a fair sized centre-board and manufactured the whole of her; sails, oar-locks, anchor and all. The anchor was a faithful servant, but now lies peacefully at the bottom of Oswego harbor. This year we want a bigger boat, and will build as soon as we obtain the plans or model to suit.

THE SMALL FRY ABROAD.—Upon turning to our list of winning yachts, we find only two boats credited with twenty races sailed and but three more with ten entries and over; in all, but five small craft which hoisted racing colors ten times or more anywhere along our coast. With what zeal our cousins across the water carry on match sailing among the little fellows from five tons down may be gathered from the following figures which we take from *Land and Water: Gael*, 25 starts; *Mayflower*, 24; *Vulture*, 18; *Vanguard*, 18; *Pearl*, 17; *Seaman*, 16, and so on down a long list of a dozen or two, all hailing from within a few miles of each other.

THE NATURAL TENDENCY.—From an unprejudiced source we receive the following: The remarks made in your last as to the practical illustration of the superiority of reasonable depth over enormous beam for racing as well as cruising, as exemplified in the Itchen boats, apply with equal force to the Clyde boats. Being rated simply by length, without any penalty upon beam, the draught and depth increased every year. Though originally 19ft.x6ft., the Clyde boat is now built 29ft.x5ft. 4in. She carries more lead and is found a faster and more weatherly craft.

"CHINA TO THE RESCUE."—A correspondent takes to task the style of rig which "Fusil" recommends in a recent article, in the following:

In FOREST AND STREAM of Dec. 19, 1878, "Fusil," of Boston, gives directions for rigging a 30ft. boat, with a very small mainsail and very large headsails. His rig would do on a wind or with the wind forward of the beam; but running right dead before it all the sail he could use would be the very small mainsail that he speaks of, and that would be all on one side, and she would steer with her helm hard up.

G. W. S.

The trouble can be partially remedied by the use of a spinnaker or by carrying aft and booming out the tack of the jib, but either would complicate the rig, and the objections of "G. W. S." would therefore have some force.

MODEL FOR A SCHOONER.—Mr. Alonzo E. Smith, of Islip, L. I., has sent us an able-looking model for a cruising schooner, 60ft. keel, 19ft. 6in. beam, 6ft. 4in. depth, and it now forms part of our yachting collection, open to the inspection of all interested.

OAR AND PADDLE.

UNION BOAT CLUB.—The Union B. C., of Boston, was organized in 1851 and is one of the oldest and strongest in the country. It is exclusively an amateur association, formed for the purpose of fostering good feeling among its members, encouraging boating and promoting physical culture. The number of members is limited to 200, there being now 134,

excluding 32 honorary members. The list of officers for 1879 is as follows: Pres., Henry B. Rice; Vice-Pres., Albert G. Baxter; Capt., Charles H. Williams; Lieut., John O. Shaw, Jr.; Treas., Edw. D. Blake; Sec'y, Ed. B. Robins; Directors—Frank Seabury, A. B. Ellis and Wm. S. Hall. Their navy consists of twenty-three boats, from eight-oared barge down to single shells. Auent some rumored dissatisfaction in the club, the following resolution, adopted Feb. 10 with but one dissenting voice, will explain itself: *Resolved*, That recently printed articles misrepresent both the parties and the feelings of the members of the club, and that the relations between the club and the association have always been of the most friendly nature socially, and of the most satisfactory nature financially.

P. A. R. A.—The Pacific Amateur Rowing Association includes at present the St. George Boat Club, of Oakland, with 22 members and 12 boats; the Neptune Swimming and Boating Club, of San Francisco, with 37 members and 3 boats; the Pioneer Rowing Club, of San Francisco, 25 members, 15 boats and 3 canoes; Ariel Rowing Club, of San Francisco, 15 members with 3 boats; Undine Boat Club, of Sacramento, with 20 members, 3 boats and 1 canoe; California Theatre Boat Club, of San Francisco, 23 members and 4 boats; Alert Boat Club, of Vallejo, 21 members, 4 boats and 2 canoes; Columbia Rowing Club, of Oakland, 21 members and 2 boats; and the Farragut Boat Club, of South Vallejo, with 13 members and five boats. The organization will do much to harmonize all rowing interests on the Pacific, and we look for a rapid increase in the membership of the individual clubs.

Columbia College Boat Club.—The following are the officers of this club for the year: Pres., J. T. Goodwin; Vice-Pres., Cyrus Edson; Sec'y, G. P. Erhard; Capt., C. Eldredge; Directors—R. C. Cornell, F. Rees, Holbrook and Bangs.

THE LACHINE SLANDER.

Manchester, Eng., Jan. 26, 1879.

Editor Forest and Stream:

The onslaught upon Mr. Hanlan (and the Hanlan Club) is one unworthy of notice, except so far as to brand the whole as a contemptible and malignant falsehood. The facts are that the Lachine race was as honest a victory for Mr. Hanlan as any oarsman ever won. All the criticisms based upon the belief that this was not the case are idle and worthless. The Hanlan Club unfortunately has several members who "squealed" because their share of the gross earnings was not larger. A contemporary of yours has shown a weakness hardly creditable in its comments on this whole matter. Mr. Hanlan refused to have one of its editors for referee in the Plaisted-Hanlan race at Toronto last year, and this may explain the venom that flowed from his pen lately. At any rate I know all the facts from first to last, and can assure you—1st, that Mr. Hanlan honorably and honestly won the Lachine race; 2d, that the Hanlan Club has been worthy of every confidence in all its acts, and that it includes in its membership some of the best men in Toronto.

One Who Knows.

The above letter from a gentleman who knows more of the Lachine race and the Hanlan Club than all the would-be slanderers and scandal-mongers put together will explain itself, and we are ready to add to it our fullest indorsement. If there ever was an utterly unfounded and basely concocted scheme to ruin the reputation of two great oarsmen and their backers, out of petty spite and temper soured by financial loss, the attempt made in the gratification of vicious spleen to smirch the fair names of Hanlan and Courtney and to drag them down to the low level of thieves in the public's estimation, is certainly one of the most barefaced libels we have had to record for a long time. Concerning the quality of manhood and that sense of honor which seeks to stamp the best oarsmen of America fit subjects for State's prison in preference to accepting an honest defeat, we have nothing to say.

ROUGH WATER YACHTS.

East Boston, Jan. 31, 1879.

Editor Forest and Stream:

We should be pleased through your columns to answer the article written by "Kedge" in your number of Jan 23, 1879. "Kedge" says that *Gael* might outrun *Sunbeam*, "as she is four feet longer on waterline." We have yet to learn that the difference between 24 feet 6 inches and 27 feet 7½ inches is not 3 feet 1½ inch, instead of 4 feet. In our race with *Sunbeam* we did not sail on waterline measurement, but according to the rules of the Boston Yacht Club, wherein it is stated that one-third of the overhang shall be added to the length on the waterline. Of the thirteen clubs in and about Boston only three sail races by this rule. When the race was first proposed it was understood by us that we should sail allowing *Sunbeam* difference in length on waterline, but when we came together to make arrangements for the race we found that *Sunbeam* would sail under no other rules than those of the B. Y. C., thereby giving her the advantage by one minute and some seconds, making in all seven minutes thirty seconds allowance; when in reality we should both have sailed on our own merits, as we were the smaller boat—*Sunbeam* measuring 5.43 tons and *Gael* 5.33 tons; but of course this point admits of considerable diversity of opinion. Then came the point in regard to starting to windward first; this was just what we wanted, but when we came to consider it and found that if the wind was off shore we should be obliged to go over the course twice in order to get home, thought it unreasonable, consequently our opposition to starting to windward first, providing the wind was off shore. *Sunbeam* was as stiff on this point as on the allowance question. The reason was that by going to windward first she would have an advantage (she calculated to beat us that way and get such a lead that we could never catch her running back), but how she was to get it is beyond the comprehension of myself, the judges and some of the most competent yachtsmen we have among us. Consequently the judges started the race ten miles off shore and the result was that their moorings in Boston were not reached until nearly midnight. "Kedge" questions our ability to stand up in a breeze, but the Boston *Globe*, in regard to the Dorchester race that took place August 20, of last year, says: "One of the most remarkable events of the regatta was the fine race which was sailed by the *Gael*, Capt. MacCormick, of East Boston. She is a keel sloop, and yesterday was classed in the first class. During the sharp squall she stood up nobly to her work and throughout the race showed fine sailing qualities. So well did she sail that she not only won the race for her class, but she beat the winner in the centreboards by nearly two minutes actual time." "Kedge" asks why we put *Sunbeam's* folks to the expense of losing time and money. They had no expense whatever, other than getting the boat ready. For at the first race James Alexander, Esq., tendered his steam yacht *Dolphin* to Capt. MacCormick for the use of the judges; and for the second race that was to be, the expense of the steam yacht *Psyche* was to be equally divided—*Sunbeam* to pay one-half and *Gael* one-half—which she did do, but the *Sunbeam's* part was paid by the referee, F. E. Peabody, Esq., consequently our surprise that "Kedge" should mention such a thing.

Now, for the first trial outside the light. On arriving at Boston light at 9:30 A. M. we found *Sunbeam* lying to the pilot's buoy so we rounded to and dropped anchor. In the meantime the judges had steamed alongside of *Sunbeam* to find out whether or not they would waive the right to start to windward first, the wind being off shore; but finding that they would not, we were ordered to run dead to leeward, and they, after going to Point Allerton buoy, would run out, catch us and give us the distance. Before we had got under weigh it was a quarter before ten, the wind was W. by S., and being very light we calculated that unless the wind freshened it would be all of half past twelve before we could run off the ten miles. On leaving the light *Gael* was leading *Sunbeam* by a couple of lengths, but gradually crept away from her. We were now some distance ahead, when one of the crew said that *Sunbeam* was rounding to. Supposing they had lost something overboard, or parted something, we kept on, but in a few minutes were hailed by some gentlemen from the yacht *Enterprise*, who had come up with *Sunbeam* about the time she rounded to and was fast over hauling us. We hove to and when she came up we asked what was the matter with *Sunbeam*, to which they answered, "They judge themselves ten miles off, as they got the bearings of the lights." We then looked at our clock and the hands pointed to 11:05 A. M., so we said it was impossible for us to run ten miles in one hour and twenty minutes. There was not as much wind at this time as there was an hour and a half later, the time "Kedge" refers to when he says: "As the wind was not over four knots, we were in a quandary about starting." We ran over to the *Dolphin* (judges' boat) and asked how far we had run, and they told us five and a half miles. We kept on, and the *Enterprise* went back and told *Sunbeam*, and they started after us again. "Some little delay was caused in getting the flag buoy in position," says "Kedge." Ten minutes before *Sunbeam* arrived the buoy was in position and the judges waiting. "We had beaten our opponent in three fair trials, and were to lose all or gain another triumph," continues "Kedge." The first was at the Isle of Shoals, the first season of *Gael*; the second was Capt. Weston's outside race, under the auspices of the Dorchester Yacht Club, in the fall of 1877, wherein we had calms and three or four shifts of wind, and the third we cannot find, unless we refer to the race at Strawberry Hill the latter part of last season, where the *Gael* beat *Sunbeam* some two minutes over the allowance. After the whistles had been sounded from the *Dolphin*, *Sunbeam* crossed the line, standing "up to her work in splendid style," with a four-knot breeze! Two minutes and a half later we crossed. *Sunbeam* went to the northward and westward, as the wind was west, and not south west as "Kedge" states. *Gael* went to the southward and westward. After standing for some time on this tack, *Sunbeam* went about, and a few minutes later *Gael* did. After tacking we had sailed not more than five minutes when, to our disgust, we were headed off one point by the compass. This of course favored *Sunbeam* (as one of her crew acknowledged to me that it was a lucky thing for them) so much that she was over a half-mile dead to windward of us, but *Sunbeam* tacked, after standing on a little further, coming out on our weather beam. We were now both on the port tack, and had sailed but a few minutes when we saw that we were outwinding our opponents, so immediately tacked to the southward and westward again. *Sunbeam* kept on until we were almost in her wake, then she tacked, placing herself on our weather beam. We were now both heading southwest, half west, with our starboard tacks aboard, and about four to five miles from the buoy. Here let me quote from "Kedge" again: "We outpointed and outsailed her for nine of the ten miles to windward, and but for a favored slant that *Gael* got from the southward, the result would have been different." We find it rather hard to agree with "Kedge" in this respect especially, as we sailed right out from under *Sunbeam's* lee and up across her bow. As for his saying that *Gael* got a slant to the southward, it is simply one of the poor excuses the defeated yachtsman almost always has to fall back upon. Now, every man knows, who sails any kind of craft, that it is not at all probable, even if possible, that with the wind from the westward, both boats heading southwest, and of course on our starboard tack, we could get a slant to the southward that would not head us off rather than favor us; and as *Sunbeam* was to windward, would not she be just as likely to get the benefit of any change in the wind that would favor us? However, the wind did not change at that time, as we both had to beat clean up to Point Allerton buoy, and when we rounded boomed out our spinnaker, and steered east by west, allowing for the ebb tide. But when one-third the way back to the judges' boat the wind hauled a little to the southward; not enough, however, to cause us to take in from the weather side our spinnaker-boom; but the wind was gradually increasing, and we were perceptibly running away from *Sunbeam*, and the result was as "Kedge" stated—*Gael* beat *Sunbeam* one minute and thirteen seconds over the unjust allowance. "Kedge" argues that we had to sail more than twenty-five miles; also, that there was not a five-knot breeze; still we went over the course in five hours and fifty-five seconds. We must also not forget that had the race been any shorter *Gael* would have been declared the winner and the money hers, as the race would have been sailed within the stipulated time, five hours. Immediately on the arrival of *Sunbeam* both captains went on board the judges' boat. The judges then stated in just what time the race had been sailed, and would be willing to call it a race, providing both boats were agreeable, as it had been sailed so near the required time; but *Sunbeam* not being agreeable to the arrangement the judges decided it "no race." "We argued that the day was not what was called for, and would like the stipulations six knots or more, so on agreement the articles were altered." They were never altered, for when it was proposed to us we knew that to get six knots out of either boat there would have to be a strong breeze, consequently a few miles outside the light the water would be quite rough, and it would be next to impossible for either of us to go ten miles to windward and return in four hours, and ten minutes. It is certainly amusing to see how inconsistent "Kedge" is: "Under some circumstances we are willing to admit that she can outrun us, but going to windward she cannot touch one side of the *Sunbeam*." Shortly after 12 M. *Sunbeam* crossed the line; "two and a half minutes later *Gael* crossed." "In that one hitch we had made over double the distance we had on the start"—2½ plus 2½=5 minutes. "Three minutes later we rounded Point Allerton buoy and hoisted kites." Five plus three equals eight minutes in going to windward alone; deduct the two and a half minutes that we were not allowed to count (two and a half from eight leaves five and a half minutes actual time, and on the run back to the judges' boat we beat him the difference between 5m. 30s. and 8m. 43s., which is 3m. 13s. added to the 8m. that we beat him going to windward, making in all 11m. 13s. Still he says that *Gael* cannot touch one side of *Sunbeam* to windward, but might under some circumstances outrun her, when we really beat her more than twice as much going to windward than we did off the wind.

Tuesday, Oct. 14.—No wind and a flood tide. How did *Sunbeam* expect us to get anywhere? We waited at our moorings at East Boston until nine o'clock, and, seeing no prospect of a breeze, got on board the steam yacht *Psyche* and ran over off South Boston Point to find out what was going to be done. The judges came on board and proposed waiting awhile to see if anything would turn up to warrant our starting. After waiting an hour or so and getting no signs of any wind, the judges went on board the *Sunbeam* to talk it over. In a short time, however, they returned and said that *Sunbeam* was willing to call the race off and asked the sailing master of *Gael* if he was willing, to which he replied that he could do nothing of the kind, as he was not an interested party financially and had no authority to do so; they would be obliged to see Capt. MacCormick. So the judges indefinitely postponed the race until they could see him, and were then to notify *Sunbeam* of the result, which notice they received with their stakes. *Sunbeam* finding there was no wind offered to sail *Gael* for a box of cigars, but they had something better to do than drift around all day, because if there is anything a yachting man abhors it is certainly a calm. But had the judges but said the wd we should have immediately taken *Sunbeam* in tow, run over for *Gael* and taken both to the light. If "Kedge" considers *Gael* showed plain signs of backing out by not being at the light at 9 A. M., where was the *Sunbeam*? "Why was *Gael* so reluctant to put in an appearance?" Because there was not wind enough to give her steerage way, so we took a steam yacht, hunted up *Sunbeam* and judges to find out what could be done so we could be in readiness. She was not and never will be afraid of being beaten by *Sunbeam* as long as *Gael* is owned by the present owners. And as to the rough water, there was a dead calm, so I was not aware there was any. "Why did she challenge us and put us to the expense and loss of time?" The challenge was issued because it was publicly stated through the daily papers that *Sunbeam* had never been beaten and that until she was she should be considered the fastest boat in Boston in going ten miles to windward and return outside Boston light. "She never made an appearance the day appointed by the judges." Did not the judges also appoint an hour of meeting? Was either of us there? No! because there was not wind enough to get us there? "Under the circumstances who was entitled to the prize?" No one! as there was no race. The consolation prize the *Gael* received was simply a congratulatory shake of the hand and an expression of sympathy at our misfortune in not getting in within the prescribed time when we were only so few seconds behind it, or "too slow," as "Kedge" expresses it. "Our race will never come off, because they decided (from former trials) that our claim to being the fastest boat to windward is just and they backed out at last." We are inclined to think that "Kedge" is the judge who decided that question, consequently do not consider it worthy an answer. He is right, however, in stating that the race will never come off; not for the reason he gives, though, but because *Sunbeam* is owned by the present owner. The *Gael* will sail the *Sunbeam* as soon as the latter changes hands, for pleasure, simply to test the speed of both boats by appointing three days during the season, and let the weather be what it will and the boat that wins two of the three be declared the fastest. Or if it would be more agreeable will deposit $100 to be covered by *Sunbeam*. With this article we end all communications with "Kedge," or the present owner of *Sunbeam*, and as the public have now seen both sides of the question we leave it entirely in their hands to decide which is the faster boat.

John. F. Lovejoy.

OUR CORINTHIAN CUTTER.

Lynn, Mass., Feb. 10, 1879.

Editor Forest and Stream:

As "Martin Gale" has published his drawings of a cutter according to his own ideas, I suppose it is open for criticism by those who may differ from him. In the first place he gives only 9ft. beam for a boat 36ft. over all, or 30 in the water, and hangs 4 tons of lead on the keel. Now every man who has had actual experience for any length of time, and handled a yacht in heavy seas or a nasty chop, knows that a yacht of such dimensions, with such a weight hung on her, cannot help burying herself every time she gets into a heavy sea. There is not displacement enough to carry such a weight in such a place. In the first place she is not a deep boat, although she is narrow. It is about time that yachtsmen began to appreciate the fact that the keel is not boat. According to the drawing in the paper, the keel amidships is something 1½ ft. deep outside the garboards, leaving less than 4ft. for the body of the boat, and this body made practically still so much shoaler by the depth of the curve given to her timbers, that her bottom is only a little over 3ft. wide at two feet below her water-line. If you will stop and consider this fact—how much deeper is she than a flat boat whose body draws only 2ft. of water and has 3½ft. of keel, and with the same beam? Suppose the latter has 4 tons of lead hung on her keel, why won't she be as able as the one illustrated? And again as to room: He gives his yacht 2½ft. of freeboard; can he give any valid reason why a wider boat should not have as much or more? My experience is that a narrow boat requires less freeboard than a wide one, as she has to heel at a much

greater angle to immerse the same amount. The floor of his cabin cannot be more than 2ft. below the water-line and have any floor at all. This would not give any better height than the centreboard boat (given in his cross section) would with a 12in. house, and not near so much crown to the deck. Every one knows that a cabin under a house would be much pleasanter, better lighted and ventilated, than one under a flush deck, and does not need a skylight, to be forever out of order, getting broken, or leaking; while the top of the house is as much deck-room as the deck itself. Then consider the width. A centreboard boat of the same dimensions, of say 11ft. 6in. beam, and whose body amidships has 3ft. draught (actually more than the draught of the lines given), would have, each side of the centreboard, as much or more room than his boat would have between her berths. As to weatherliness and ability, she would not compare at all with the deep centreboard. The abilities of the two kinds of boats are so well known in this section that each kind is sailed in a separate class in all our races, or if in one class the centreboard has to give the keel yacht of the same size an allowance, and the centreboard almost invariably makes shorter time than the keel. The fastest and ablest boat on this coast in a breeze is a centreboard yacht about 33ft. on waterline, about 5½ft. draught, and (give "Podgers" his due) 13ft. or more beam; but (tell "Podgers" this, too) she has a very large amount of deadrise, and a cabin that is hard to boat in a boat of her size. My own idea is that she would be a little better if she were a little narrower; for my own belief is in a boat of medium beam, with a deep body; but if I were driven to a choice between a very narrow or a very wide boat, I think I should side with "Podgers," and take a wide one. There seems to be an idea extant among yachtsmen that the cutter rig is not adapted to any yacht but the "English model," so called. The fact is that the rig can be adapted to any of our sloop or schooner yachts, and they will be abler vessels for so doing. I doubt if they would sail as fast in smooth water with a light breeze as they do now, but when there is any wind and sea, they would beat yachts that had beaten them under the old rig. GRAMPUS.

Our correspondent makes several points in favor of the sloop through an oversight which is all but too common and to which we have had occasion to refer before. There is neither justice nor logic in drawing comparisons of performances between boats of different size. To argue that a beamy sloop of the same length as the cutter is roomier and more powerful is simply saying that she is a larger boat. Make the cutter of equal tonnage by her length, or adding to other dimensions, and the aspect of affairs will materially change. Thus a sloop 30x12x4½ cannot logically be compared to a cutter 30x9x4½. Taking the circumscribed parallelopipedons as representing the ratio of the yacht's sizes, it follows that since 30x12x4½=1,620, the cutter, compared to this sloop, must be taken say at 33x9x5½=1,633. With these figures before him we doubt whether "Grampus" would not see reason to modify his opinions in favor of the cutter. We must take exception to other matters which "Grampus" brings forward against the cutter and what he assumes to be to the credit of the sloop. These differences will be discussed at length as opportunity offers in our future issues.

Rational Pastimes.

THE BICYCLE TOURNAMENT.—A National Bicycle Tournament is to be held in the American Institute building, this city, next April. The prizes will be awarded as follows:

First prize, $250 and the champion cup; second, $150; third, $100. The prizes will be awarded to the contestants covering the greatest number of miles in 72 and 24 hours, and the one making the quickest 100 miles. Any bicycle, with a wheel of any diameter can be used, the track to be twelve feet wide, eight laps to the mile. The contest is open to any bicycle rider in the United States. The race is to be started by report of a pistol. None of the contestants will be allowed to reverse, but will be required to ride left hand to the pole. The entries will close on the 1st of April, and should be sent with $20 entrance fee, to William De Noielle, Institute building. The following described entries have already been received: James A. McLeod, Buffalo, N. Y.; W. J. Britto, Pittsburg, Pa.; Robert H. Courtney, Roxbury, Mass.; Wm. E. Harding and Wm. McClellan, New York; A. P. Messenger, Albany, N. Y., long-distance champion of the United States; A. S. Conley, Bennington, and Charles A. Waring, Worcester, Mass.

INTERNATIONAL CURLING.—In the international curling match at Toronto, Canada, Feb. 14, played by the United States against Canada for eight rinks aside, the Americans won, 144 to 135 for their opponents. First Rink—Belleville, 11; St. Andrews, of New York, 25. Second Rink—Scarboro, 25; New York Club, 18. Third Rink—Granites, of Toronto, 12; Caledonians, of New York, 10. Fourth Rink—Scarboro, 28; Paterson, N. J., 15. Fifth Rink—Scarboro, 16; Jersey City, 22. Sixth Rink—Boumanville, 8; Milwaukee, 29. Seventh Rink—Scarboro, 22; Buffalo, 16. Eighth Rink—Dufferins, of Toronto, 13; Burns Club, of Cleveland, 9. The weather was cold and the ice keen. The last rink was also for the McCready medal, which was won by the Dufferins. The Red Jackets, of Toronto, played the St. Andrews, of New York, the latter winning by 20 to 18. The Scottish Counties match for the *Scottish-American Journal* medal, two rinks a side, was won by Lanarkshire against Ayrshire by 43 to 23.

THE CRUSADERS.—The noble army of pedestrians is still on the limp. As one pair of swollen legs and blistered feet drops out another fresh pair fills the void and the ranks are undiminished. Just what there is fascinating about a particularly homely woman walking stolidly around a sawdust track might puzzle a philosopher, yet the attraction is strong enough to draw a gaping throng. The newsboys have caught the fever, and the epidemic rages among the small fry with all the virulence of the measles. When it comes to a point when we cannot have our morning paper because our carrier is trying to do one hundred miles in twenty-four hours, it is high time for the magistrates to interfere. The Children's Crusade is nice enough to read about, but its repetition at the present day would be attended with some slight inconveniences.

COACHMEN'S WALK.—Perhaps no phase of this walking mania is so alarming as that to be presented at Clymer's Riding Academy, Brooklyn, on the evenings of Feb. 27 and 28, when the coachmen of New York and Brooklyn will contest in a series of pedestrian contests. Well, if it has come to this, that the coachmen have taken to their legs, and darkey coachmen at that (they walk the second night), we may well be filled with apprehension of what the next development will be.

ANOTHER TWENTY-SEVEN HUNDRED.—Miss May Marshall who has been walking at Washington, D. C., last Monday evening, completed 2,700 quarter miles in 2,700 quarter hours.

NEW YORK ATHLETIC CLUB. The annual assault-at-arms which will be held at Booth's Theatre to-morrow and Saturday evenings promises to be a fine exhibition. The contests are in sparring, wrestling and fencing.

—The Newark Bicycle Club have a meet on Washington's Birthday.

The Game of Chess.

NOTES.

(a) P-Q B3 may also be played here, but we greatly prefer the text move, inasmuch as we believe that its defensive resources are more easily comprehended in over-the-board play, and require less of the almost invisible kind of *finesse* in play in order to properly continue the game to that point where Greek is to meet Greek—the middle game.

(b) We do not now recall a game in which Black's preceding moves and this continuation on the part of White occurs. The text move, although of a quiet and slow character in the present position, we are inclined to favor in preference to moving either Kt. Our predilection, however, for the early advance of the Q B P one square, as in the *Ginoco Piano*, may have misled us in the present instance.

(c) An unfortunate move which Mr. C. at once takes advantage of, and speedily opens a path into the enemy's jungle. The game from this point on is highly interesting, and the combinations brilliant. The play of Mr. Cohn is excellent, and of a character that invariably pleases the reader. Further notes on play of this character are entirely unnecessary and ill-timed, unless it is the annotater's intention to vex the reader.

Game No. 102.—SCOTCH GAMBIT.

Subjoined is a consultation game played Feb. 8, 1879, at Manhattan Chess Club, between W. M. De Visser and Chas. Saulson and J. W. Baird and J. Ward:

White. W M De V & C S	Black. J W B & J W	White. W M De V & C S	Black. J W B & J W

10—P-Kt	10—Kt-K B3	23—Q tks Q	23—P tks Q
11—B-K2	11—Kt-K4	24—K tks R	24—K tks Kt
12—R-Kt3	12—Q-B4	25—R-K	25—P-Kt3
13—Kt-Q4	13—B tks Kt ch	26—R for K-K8	26—Resigns

NOTES.

(a) Merely a transposition of the moves in this variation.

(b) The more usual move here is Castle, which we regard as more within the spirit of the attack in this form of the opening than the text move.

(c) The Black allies no doubt wished to satisfy themselves experimentally that in this and similar positions this capture is fatal.

CURSORY JOTTINGS.

CLEVELAND, O., Feb. 7, 1879.

CHESS EDITOR FOREST AND STREAM:

Dear Sir—My attention has just been called to an article in a recent number of your chess columns wherein you say substantially that Mr. McKim disgraced himself by delaying to publish the names of the competitors in the American Chess Association Problem Tourney. Permit me to say that in refusing to make public those names at an earlier day, Mr. McKim acted under advice given by me as an officer of that association. The prizes had not all been adjudicated, some of the problems to which prizes had been adjudged were alleged to be faulty, improprieties were claimed to have occurred in the progress of the tourney, which, if proved, might make a re-adjudication proper, I therefore thought, and now think, that Mr. McKim would have committed an impropriety by making known the names of the competitors. As soon as all the prizes, general and special, were adjudged, and it was ascertained that a re-adjudication or investigation could not be had, the names were published by Mr. McKim. You will oblige by making this as public as your accusation.

Yours respectfully, JOHN G. WHITE.

We cheerfully accede to Mr. White's request, and publish his communication in behalf of the disgraced McKim. The disgraced Secretary is indeed fortunate in having so well-known and respected a defender (Shall we also infer that Mr. White sustains all the acts, official or otherwise, of Mr. McKim during the pendency of the association problem tourney, many of which we, in common with others, regard as disgraceful?) We have heretofore alluded to the Secretary of the A. C. and P. Association, J. B. McKim, of Cleveland, O., as in disgrace in consequence of acts done, things left undone, and officially sanctioning that which he should not have tolerated. We do not recant, and should Mr. McKim request that we make public, in this column, the facts, etc., which lead us to this conclusion, we shall not decline to do so. We do not think that we "*substantially* said that McKim disgraced himself, etc." However, we should have so stated, in view of the fact that the disgraced Secretary failed to acquaint the public that he withheld the publication of the list of competitors upon the advice of J. G. White, Esq., but falsely assigned as a reason for the delay *want of space* in the *Voice*, which he evidently intended should be the organ of the association—a spaceless, voiceless organ! But we have already wasted too much "space" on this subject—the game is not worth the powder.

—Through the kindness of Secretaries Cohn and Logeling, we are able to entertain our readers with several tourney games and information concerning the Manhattan Chess Club. The headquarters of this flourishing club are at Cafe Logeling, 49 Bowery, the enterprising proprietor of which intends enlarging the chess rooms soon. "The tournament is nearing its termination, and some interesting games are yet to be played. In order that players who have a chance to win a prize might play all their games, the Executive Committee have prepared a list, and have requested the players to make appointments with one another, and register their names, date and hour of play to the list. Special interest is taken in the games between Mohle and Bloch, Mohle and Graham, Mohle and N. Gedalia, Bloch and Graham, Graham and N. Gedalia, and Baird and Graham. Mr. Mohle still leads the score, and stands the best show for first prize." The termination of the tourney, distribution of the prizes, grand banquet, etc., we again remind our local readers, occurs on Saturday evening, Feb. 22, at Cafe Logeling, Bowery.

—A correspondence match consisting of two games has been begun between the Edinburgh (Scotland) and Copenhagen (Denmark) chess clubs. The Glasgow representatives are Sheriff Spens and Messrs. Jenkins and Crum, while Copenhagen is represented by Herron Hertzsprung, Nielsen and Sorensen—all players of high repute. His Excellency Heyderbrant der Lasa, German Ambassador at the court of Denmark, the great chess author, will act as umpire in case of any dispute. This match will attract universal attention, and each move will no doubt be anxiously awaited by American players. We shall give the moves made as soon as received here. The moves thus far made are:

New Publications.

THE OOLOGIST.—We are glad to see that this interesting little journal, after a "dormant period of several months," has once more resumed publication. As its name implies, this magazine is devoted to the encouragement of the study of oology in this country, and we think that it deserves a better support than it seems to get. The terms on which it can be had are certainly not exorbitant, for sixty cents is the price of a year's subscription. It is published by S. L. Willard, of Utica, N. Y.

THE AMERICAN ANTIQUARIAN.—We have received No. 3 of Vol. I, of the *Antiquarian*, to which we are glad to call attention. This really valuable magazine has now reached its third number, and begins the year much enlarged and improved. It is devoted to special studies in American history, archæology and ethnology, but it contains many things which cannot fail to interest any intelligent person. The field of study which it occupies is very important, and one which has never been thoroughly explored, and for this reason we are glad that the magazine has been started. The antiquities of America are very interesting, and these, with the various races which have existed here, are certainly worthy of the attention of scholars. The *Antiquarian* seems to have taken rank among the first scientific journals of the country, and already numbers among its associate editors and contributors some of the most prominent of our scholars and authors. The department of Correspondence also has drawn out a number of new writers, and will probably be an important feature of the magazine, as by it the free interchange of views among archæologists will be secured. The following is the table of contents for this number: "The Prehistoric Architecture of America," by E. A. Barber; "The Phonetic Elements in American Languages," by Dr. R. J. Farquharson; "The Original Text of a Klamath Myth," with comments, by A. S. Gatschet; "The Engraved Stone found at Grave Creek Mound," by Prof. M. C. Read; "The Traces of Bible Facts found in the Traditions of all Lands," by Rev. Stephen D. Peet; Correspondence, Editorial, Notes and Book Reviews. The magazine is well printed and amply illustrated, and we take pleasure in commending it to our readers. We shall be pleased to receive future numbers of this magazine for review. The *Antiquarian* is published by Brooks, Schinkel & Co., Cleveland, Ohio, and edited by Rev. Stephen D. Peet, Unionville, Ohio. Terms $3 per annum, in advance.

CROCKETT IN A BEAR'S DEN.—"I never but once," said Colonel Crockett, "was in what I call a genuine quandary. It was during my electioneering for Congress, at which time I strolled about in the woods so particularly pestered by politics that I forgot my rifle. Any man may forget his rifle, you know, but it isn't every man who can make amends for forgetfulness by his faculties, I guess. It chanced that I was strolling along, considerable deep in congressionals; the first thing that took my fancy was the snarling of some bears, which proceeded from the hollow of a tree; but I soon found that I could not reach the cubs with my hands, so I went feet foremost to see if I could draw them up by the toes. I hung on the top of the hole straining with all my might to reach them until at last my hands slipped and down I went more than twenty feet to the bottom of that hole, and there I found myself almost hip deep in a family of young bears. I soon found that I might as well undertake to climb up the gressiest part of a rainbow as to get back—the hole in the tree being so large and its sides so smooth and slippery from the rain. Now, this was a real genuine, regular quandary. If so be I was to shout, it would have been doubtful whether they would hear me at the settlement, and if they did hear me the story would ruin my election; for a man that ventured into a place that he couldn't get him-self out of, would forfeit the respect of the settlers. Well, now, while I was calculating whether it was best to shout for help or wait in the hole until after election, I heard a kind of grumbling and growling overhead; and looking I saw the old bear coming down stern foremost upon me. My motto is always 'go ahead!' and as soon as she lowered herself within my reach I got a tight grip of her tail on my left hand, and with my little buck-hafted pen-knife in in the other, I commenced spurring her forward. I'll be shot if ever a member of Congress rose quicker in the world than I did! She took me out in the shake of a lamb's tail.

WANDERINGS OF A POSTAL CARD.—An English postal card arrived in this city yesterday and will be returned to its native country by the steamer City of Berlin to-day. When it arrives at its destination in London this little bit of pasteboard will have made the circuit of of the globe on a wager that the tour could be made in one hundred days or less. It was posted in London to the British consul at Singapore, where, however, there is no such official; Yokohama, San Francisco and New York, with a request to each official to forward it on its journey. On the face and back of the card appears the following postmarks:—London, October 18, 1878; Alexandra, October 24, 1878; Singapore, November 17, 1878; Yokohama, December 22, 1878; San Francisco, January 30, 1879; New York, February 7, 1879. The wager has been lost; for 116 days will have elapsed when the wanderer re-enters No. 60 Ferntown road

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition, including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

UNION SQUARE.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER.

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrel, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instances, Mr. E. B. Sumner, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

OLD JUDGE SMOKING OBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

Cartridges for Target Practice.

Send for Illustrated Catalogue.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot in 6,000 ball match, Jan. 8 and 9 with it. In that match I used two sets of double barrels, one of 10 and th other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which cou so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any he which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

THE LEROY SHOT AND LEAD M'F'G CO., NEW YORK.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives **greater penetration** and **better pattern** than ordinary shot. Equally well adapted to choke-bores, modified chokes and cylinders.

Our chilled shot will be found **free from shrinkage**, more **spherical**, more **uniform in size**, **harder, heavier** and of **brighter** and **cleaner** finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also, manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COMPRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

SEND FOR CIRCULARS AND PRICE LISTS.

Volume 12—No. 4.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

A MEMORY OF TOCOA (1866).

WITH limbs at rest and half-shut eyes,
Watching the sunset burn away,
A picture, now the archer lies,
Flushed with the dying day.

On a low bough that sweeps across,
His quiver, filled with shafts, is hung;
Beside him, on the scented moss,
His great bow lies unstrung.

The last song of the valley bird
Rings by the brook's sweet runaway;
But vale and wilderness are stirred
With more than song can say.

A sleepy passion, rich and sweet,
Pervades the heavy-fruited vine,
That stands, blood-stained from veil to feet,
In wasting veins of vine.

The shrunken river, feeble-voiced,
Complains along the rainless land,
And where of old the floods rejoiced
Loll the red tongues of sand.

Half glorified and half subdued,
Transformed by autumn's Midian hand,
The old green temples of the wood
In golden ruin stand.

A low, delicious sound of leaves,
Clasping and kissing in the breeze—
A vagrant breeze, that softly grieves
And fondles in the trees.

Smoky and gray the mountains stand,
Like solemn sentinels who guard
The frontiers of the archer's land
In everlasting ward.

And down yon great gorge comes a flood
Of music. From her falling cloud
The One Voice of the solitude,
Tocoa calls aloud!

BOWMAN.

For Forest and Stream and Rod and Gun.

A Trip to Dacotah.

THE Anchor Line of steamers run from Buffalo to Duluth. One leaves Buffalo daily, or did last season, except Saturday and Sunday, and will probably run the same way next year. The trip from Buffalo to Duluth, upon one of these boats, is one of the finest which can be taken in this country. The passage is about five days. The boats are as well officered, manned and disciplined as any ocean-going steamer. The living and accommodations are fine. They touch at all the principal points along the lakes, and stop long enough to give passengers a chance to see the places, and, if they happen to be hunters, to allow them to stretch the dogs and give them exercise. If any of your readers take the trip next season, allow me to suggest to them to find out which boat Captain Ben Wilkins is in charge of, and go with him if possible. I have made the trip twice with him, and have become used to and like his way very much. The round trip from Buffalo to Duluth costs fifty dollars, with the privilege of stopping anywhere along. It is much better to take dogs upon the boat than to travel with them by cars, and very less expensive.

From Duluth west the route is, of course, by the Northern Pacific Railroad. My companion and I left Duluth at 1:30 P. M. and arrived in Fargo the next morning at 8:30. We had for our traveling companion from Duluth an old friend and acquaintance—formerly of Pennsylvania—Mr. Oliver Dalrymple, known as the Wheat King of the West. He rode in the car of the railroad officials, which was being sent West to bring President Hayes and his party upon their intended trip over the Northern Pacific. We paid two dollars each for occupying it through the night. It was cheap enough; we had it all to ourselves, and we passed a very pleasant night, rolling over the country toward our destination.

We were about to visit Dacotah at the invitation of the Grandin Brothers—Messrs. J. L. and E. B.—for the purpose of taking with them their annual hunt. The Grandins are small farmers up there; they are only going to put in six thousand acres of wheat this year. Every fall after they get the crops in, the pumpkins, and turnips all threshed, the wood up for the winter, and the chores done generally, they like to take an old shot-gun, go out upon the plains and spend two or three weeks hunting. We arrived at Fargo—the headquarters of the Grandins, the Dalrymples, and the Grangers, generally, of Dacotah Territory. Thursday, September 5th, was spent in making ready for the trip. No North Pole expedition ever had a fuller outfit. We were stocked with all kinds of canned meats, canned fruits and jellies, Boston baked beans, clam chowder, soups, fish, and everything in the canned line that could be fried, roasted or stewed, or had been. We left the Headquarters Hotel, Fargo, Friday, September 6. Our party consisted of Messrs. J. L. and E. B. Grandin, Capt. H. H. Cumings, Tidioute, Pa.; Master Frank Grandin, Henry Souther, Erie, Pa.; Mr. S. S. Blanchard, of Boston. The attachments to the party were H. S. Back, Esq., attorney at law, member of the Dacotah Legislature and large farmer in the territory, a good sportsman, and full of frontier information; his son, Master Frank Back; Tom Bush, assistant guide and handy at anything out of doors; John Walker, cook and taxidermist, and Mr. Joseph Hickey, of Fargo, wagon master. The transportation department consisted of three wagons and a saddle pony for general use in chasing antelope, etc.

That pony was a genius. He could do more mean things than any pony I ever saw. The boys used to quarrel to see who shouldn't ride him. We had dogs of several kinds and breeds—Ponto, Duke, Bruce and Frank. They were not proud dogs; they would sleep in the tent, eat out of the frying pans, take biscuits out of the tin ovens, and drink out of the water pails. The only thing they would not eat was what we had the most of—fried chickens.

We filed out of Fargo south of the railroad, and struck for the Cheyenne River and the sand hills. The first night we camped seventeen miles from town, and called it Camp Jack Rabbit in honor of the first jack rabbit killed by Captain Cumings. The next day we made Owego—a post office on the Cheyenne River—and camped for the night, fifty miles from Fargo. Had fine grouse shooting all day from the wagons. When the dogs came to a point all the hunters got out and made for the game. Generally the first bird up would get about six barrels fired at him, and the weight of shot in his body would bring him to the ground in no time. If the covey was large it would soon scatter, the birds would be "marked down," and generally few of the covey were left. This afternoon we got among the sand hills. The scenery here and along the river is as delightful as I ever saw. Timber skirts all the river, the trees in full leaf, rich and green. In many places it presents the appearance of an old settled country, with the lawns mowed down, well kept and tended; but one looks in vain among the trees in the grove beside the rich green grass-plot to discover the palatial residence of gentlemen who can afford to live in such style, with such rich surroundings of wide-spreading elm and cotton-wood, excelling in beauty and magnificence the estates of men who have expended fortunes upon their acres.

We made camp late this evening in a small grove near the barn-yard of one Schultz, a German settler, got good water from his well in the house, purchased watermelons from his patch, milk from his wife, fed his flies on our horse flesh, his mosquitoes from our veins, passed the night amid a variety of smells, and made ourselves quite at home generally. We had agreed not to travel on Sunday, but we did in this instance so as to get out of Camp Schultz. We struck out for the open plains about 11 A. M., arrived at Bonners (again upon the Cheyenne), at 4 P. M., and made camp. Traveled all the way along and among the sand hills and the same magnificent scenery of the day before. Each view of the river from the high bluffs above gives us a new picture in our never ending panorama. The air upon these plains is strengthening and invigorating; it fills one up full. Mr. Peter Bonner and his son-in-law supplied us bountifully with watermelons, mushmelons and fresh milk. It is strange how much milk two boys will hold when they do not like water. Startling stories were told us about the amount of game ahead of us. Monday, September 9, we hunted all day, went to a lake called Wood Island Lake, about ten miles from camp, to hunt ducks. The water in the lake is strongly impregnated with alkali. The dogs were thirsty, and although we carry water for them in the wagons and give them freely, of course they had to drink the water from the lake, and the next day they knew something ailed them, but could not tell what. We came into camp in the evening loaded down with ducks and chickens. We distributed a portion among our neighbors—the settlers upon the other side of the river—keeping such as we needed for our own use. Our principal meat during the trip consisted of grouse fried in the fattest lard I ever saw. The cook one day did roast some in the oven, but frying was the easiest way of cooking them, and so fried they were. I got so I could not bear the sight of one either dead or alive, and would always try to shoot one as soon as I saw it.

Our party to-day saw two droves of antelope, the first we had seen. We are about twenty-five miles from Wheatland upon the N. P. Railroad. On both Wednesday and Thursday nights (11th and 12th) we had severe frosts. Ice formed over the water in the pails and dishes about the camp. Up to Friday morning we spent the days diligently and industriously in slaughtering grouse and ducks. Each party in the morning would take its respective team and go roaming over the prairie in any direction. The road is anywhere you want it. A short tramp out of the course is not fatiguing; the wagon comes along and picks up its passengers. Friday at 9:30 we bade good-bye to Camp Bonner and its hospitable inhabitants, crossed the Cheyenne twice, traveling eighteen miles, and camped for the night at Sibley's Crossing in sight of Mourning Mound. This mound is made memorable by a battle once fought there between the Sioux and Cheyenne Indians. It is said that two hundred Cheyennes were surrounded upon the mound by the Sioux, and not one Cheyenne escaped. We left the next morning at 8:30—Back, E. B. Grandin, Capt. Cumings and myself, with Hickey for driver—and speeded out for the day. The others of the party were to go together with the grub wagon, and all to camp at night at Fort Ransom. We hunted till noon, when the dishing of a wagon wheel gave us notice that we must hunt a settlement. We struck a road and followed it till we brought up at Jack Harris', where we fixed the wheel, got dinner, and started upon our journey. Harris is the last settler but one in this direction and upon this part of the river. He gave us directions where to find a lake full of ducks and geese, and we started for it. Back's experienced eye detected it by the timber—a very small clump of trees at least eight or ten miles away over the prairies. When we came to it we found it all Harris had said—it was full of ducks—and the song of the wild goose was heard loud and trumpet-like over the land. We concluded to surround that body of water, fill our wagon with what ducks and geese we could pile in conveniently, and return at once to our comrades. After crawling upon all-fours through the grass we got to the bank of the lake, and, as is usual upon such occasions, found we were about two gunshots off from where we ought to be. The first shot set the whole pond in motion, and the air was alive with waterfowl. We fired at them till we got seventeen single birds, when time was called and we headed toward Fort Ransom. It was further off than we supposed. We tried some time along the river before we could find the military road, which we did at last near the house and upon the farm of a settler named Smith. It was after 8 o'clock when we reached the party, and found them somewhat concerned about our absence and greatly relieved at our appearance. The next morning, while breakfast was being prepared, we went to look at the ruins of the fort, for a ruin it is, hardly one stone or timber being left upon the other. Back said the fort was built about '70 or '71. The works are in a low depression as you approach from the south. In front of the works, and about fifty rods off, is a large spring of cold, delicious water. Opposite the fort, and upon the other side of the ravine, is a very high hill; a battery planted upon the top would have the fort at its mercy, and rifles could easily reach it from the same position. Capt. Cumings, who is an old campaigner, thought that in case of a battle there those outside the fort would be in the safest position.

We now held a council concerning our own condition. The oats were getting scarce, only enough for two nights more, the indications foreboded a storm, so we decided to move homeward. Accordingly we took the back track, and, after driving four miles, reached the crossing of the river. Here we found one settler—Smith. The name struck some of the party as one they had heard before, and perhaps some of us might know him; but, come to see him close to, none of us did. He had pushed on so far that he was located upon the Fort Ransom reservation, where he had no business to be, as the land was not open for settlement. He thought, however, he would not be troubled by the Government, and he ought not to be. He had drawn timber from the buildings at the fort, and built himself a good comfortable block house. We had to unload our grub wagon to cross the river, the banks were so abrupt; but eight men made short work of it. We soon reloaded and climbed a high hill, skirted along the river and over the prairie all day toward the lake where we were to camp that night. The scenery throughout was delightful; Central Park in all its glory was never arrayed like this. The flowers and plants one finds upon these prairies are as beautiful and variegated as the florist can possibly produce. Circular plots are common, filled with plants and leaves, with as many shades and varieties of color as a highly cultivated and well selected begonia bed. We arrived at our lake early in the afternoon. It was actually alive with geese and brant, but no gun was allowed to be fired. We pitched our tent, cooked supper and retired to rest to make it warm for the wild fowl early in the morning. The morning came with a dull, cold and leaden colored sky. The preliminaries were arranged and we surrounded the lake. At a given signal the trouble began. At the first round the geese rose, made a few circles about the lake and left for some more quiet resting place. We got no shot at them. Our bag of ducks amounted to over sixty. After getting them all wild we left them, took breakfast and resumed our journey homeward. The water in this lake was very poor for drinking and culinary purposes. It was very shallow for twenty or thirty rods all about the shores. We could only

get decent water by wading in that distance. The excrement from the wild fowl polluted it near the shores. Jamaica ginger did not help it. We had a large supply of ginger along, and always used it when obliged to use slough water for drinking. I can bear testimony to its usefulness, as we had no sickness during our whole trip. Another pleasant day's ride over the prairies brought us to our last camp upon the Maple River. Immediately opposite our camp we found a new beaver dam, and had a fine opportunity to examine the work of these animals. They had been working there that day. The cuttings were all new, the dam was eighteen or twenty inches high at the breast, and set back the water about ten rods. After a long day's drive and good shooting through the day, as usual, we arrived about dark at Wheatland upon the N. P. road. This is the farm of Mr. Back, our guide. He has several hundred acres under cultivation. Supper was prepared for the party in the house. After thirteen days' angling it seemed very convenient to sit once more at a well-spread table. Packed tent and the other traps in morning, for the last time, and sent them to Fargo. Wheatland is a thrifty little town within sight of the Cass and Cheney Farms, two of the largest in the Territory. Back is going to build a hotel next season. It will be a good post for sportsmen to stop at. Wheatland is about twenty-seven miles west of Fargo, and lies upon the edge of the Red River Valley, with a view for miles in every direction. We left after breakfast, with our teams, for the Cass and Cheney Farms. They lie side by side along the railroad, and are, as I before remarked, two of the largest farms in the country. The Cass had under cultivation this year in wheat 3,850 acres. It raised from 75,000 to 80,000 bushels of wheat—about 22 bushels to the acre—besides 5,500 bushels of oats and 6,500 bushels of barley for fall. They intend to sow 6,000 acres in 1879. The Cheney Farm produced in 1878 about 42,000 bushels of wheat, 3,000 of barley, and 6,000 of oats. They sowed 2,240 acres, and have broken 3,200 for 1879.

The afternoon train landed us in Fargo. The whole trip was most pleasant and enjoyable. We got no large game. We shot all the grouse and ducks we wished for, and could have killed more by hunting them up. But there was no use of hunting, even in a land of plenty. Dacotah offers fine sport for the hunter, it is easy of access, easy to travel over, and game is abundant, large and small. A trip to the territory for hunting, information, pleasure, or all combined, is one of the most satisfactory journeys one can take. When you consider that within the present decade the ground we traveled over was inhabited only by the red man, the transformation seems wonderful. As we passed over the plains we had evidence that the buffalo once lived there, by his bleached bones lying scattered over the ground. But man, the former occupant, had left no trace.

Traveling over this rich and fertile country in the latter part of August, one sees the powerful and ingenious reaping machine, controlled by a pair of horses and driver, with its strong arms doing the work of twenty men—reaping, binding and throwing off a ripened sheaf at every turn of its driving wheel. A little later comes the steam thesher, calling with its shrill whistle its attendants to aid. The smoke of its burning can be seen wherever the land has been cultured. Its work done, it is put aside, the gangs of plowmen take the fields with two or three horses to each plow, in gangs of twenty-five or thirty, raising a cloud of dust as they plod day after day along their miles of furrows, and the blackened loam is upturned again, to lie through the frosts and cold of winter till the seed time comes again, when the seeder with its long fingers lays the seed under the surface. The summer sun comes upon it, and in a few days rich and green lines show themselves. In time there are waving fields, and, after a few weeks more, ripened grain. The statements made by Jay Cooke & Co., concerning the line of the Northern Pacific Railroad when they were "shoving the bonds" of the company, we used to consider fabulous. In my opinion, not one line of the picture they painted was overdrawn or too highly colored. The Red River Valley is one of the largest and richest valleys which the sun shines upon. It is the best possible location for a man in moderate circumstances having, say from $800 to $1,000 or a little more to start with. The Grandin farm shows what has been, what is being done and can be done in that country. In September, 1873, when Jay Cooke & Co. suspended, the banking house of Grandin Bros., Tidioute, Pa., had $83,000 on deposit with them. The first dividend from the Cooke estate was declared in Nothern Pacific bonds. The creditor could take all in those or wait the final winding up. The Grandins took their whole dividend in bonds, changed them into stock of the road, took land for the stocks, and in 1876 raised their first crop from the land. Their farm is situated thirty-five miles below Fargo upon the Red River in Traill County. In 1878 there were cultivated 4,000 acres, and raised: wheat, 70,000 bushels; oats, 13,250 bushels; barley, 5,750 bushels; potatoes, 2,000 bushels; turnips, 3,000 bushels; hay, 1,200 tons. They use 55 plows, 60 harrows, 24 seeders, 28 self-binders, 6 steam threshers 40 wagons, 108 horses and mules. The buildings are: four graneries, with a capacity of 125,000 bushels; three large barns, three dwelling houses for superintendent and foremen; two boarding houses, one lodging house, one steam mill for grinding feed, office, blacksmith shop, harness shop, machinery hall, 60x63 feet; stores, wagon sheds, two wind-mills for raising water from the Red River, pipe lines for conducting it over the farm, and telephones all over the premises; one steamboat 120 horse power; three large barges and one elevator at Fargo. They employ while plowing 75 men during harvesting about 250 men. The wonderful and perfected machine in use dispenses with man labor, and the horse and mule give way to the steam engine. This farm and the Cass and Cheney farms are all under the superintendence of Oliver Dalrymple. He is the commander-in-chief and manages his business generally and in detail with all the care and economy which should be utilized in managing a great work like this. The amount of land in the Grandin farm is 39,000 acres. About twenty-five miles north of the wheat farm, in the spring of 1878, they started a cattle farm consisting of 37,700 acres. They have it stocked with 175 head of fine blooded cattle, which they brought from Kentucky and Missouri, and sheep from Canada. They put up for use this winter 750 tons of hay. Stock-raising is a new enterprise in that locality. Of course, in the winter, the cattle have to be well stabbled and cared for, and the barns are built in a spot well protected by timber and ravine. If during the sporting season any of your readers visit Dacotah, I will say to them, you will be satiated if you will stay long enough, and return so built up in health, so improved in appearance, that the dogs you left at home will not know you, and the doctors will look at you and complain of hard times.

Pierson Isle.

THE CAPTIVE OWL.

A Waif from Trinity Church Yard.

"Save that from yonder ivy-mantled tower,
The moping owl does to the moon complain,
Of such as, wandering near her secret bower,
Molest her ancient solitary reign."

Gray's Elegy.

"Now the hermit owlet peeps
From the barn or twisted brake,
And the blue mist slowly creeps
Curling on the silver lake."

Cunningham's Pastoral.

In the old castles of England and Ireland, whose very turrets are covered with ivy, the accumulation of ages, the owl holds his hermitage pre-eminent, fearless of legendary spirits which have for centuries made the schoolboy's heart to quake, especially those situated within the confines of church-yards or burying places. No doubt but that the poet was seized with inspiration when, in the churchyard where the ivy twined around the crumbling tombs as the moon peered above the neighboring hills, nought else heard he save the owl's complaint disturbing the breathless quictude of the soft, dewy, silvery evening.

In this country where as yet everything is new, the owl seems content with such accommodations as may be found in the trunks of decayed trees, in out-of-the-way places, under the eaves of old barns, and in the crevices of rocks. Many have I seen fluttering in the fast waning sunlight, and many nights have I listened with attentive ear to the long, quivering hoot of at least a half dozen in chorus. Just as the shades of twilight begin to obscure the surrounding woods, and as the heedless entreaties of the whip-poor-will have died away, then you may listen for him, and, if there be a swamp near by, there will he most assuredly be.

As the owl is a nocturnal feeder I have long wished to satisfy my curiosity in witnessing the open attack of this bird upon its prey; and only too eagerly did I embrace an opportunity which offered a short time since to become the possessor of a live specimen. It was captured, or, as Tom says, "I ketched him beyond there in Thrinity church yeard," and was brought to me by the above-named worthy, as a present of what he called a "braud faced burd."

Upon examination it proved to be the Acadian owl (*Strix acadia*, Nutt), and evidently a young bird, having indulged excessively in one of its peculiar habits, *i. e.*, of coming into the very midst of civilization. After the lapse of three or four days he became quite tame and reconciled to his confinement, but refused every kind of provender except mice. Having ample scope (a large hall-room) in which to exercise his wings, his peculiar faculties for catching his victim struck me with no little amazement. With a slow, descending flight he would leave his perch, pounce upon his victim, seize it in one claw, fly to his perch again, and at once begin to tear away the back of the neck, killing his prey instantly. So noiseless were his wings while in motion that a tiger or a cat could not possibly have sprung upon their prey more stealthily.

Twice I heard him hoot, both times just as the dawn began to break; his note corresponds exactly with that described by the inimitable Audubon. It consists of two notes, one louder than the other, from which he is known in the Eastern States as the "saw-whet." When approached within nearer than a respectful distance he becomes very much excited, and would set up a series of knockings not unlike that of the yellow-billed cuckoo.

I am inclined to the belief that the digestion of this bird is very weak, for the reason that after picking off all the fleshy part of a mouse he would swallow the entire remains, but only to spew (?) them up again in the form of a large black lump. At the sight of a gas jet or the flare of a lamp he swooned through fright, and twice I picked him up for dead, but he revived shortly again. When the mice were dead, I almost always laid them on the top of the half window, or in the crotch of his perch, which he would leave upon my entering the room, for no other reason than to give me an opportunity to leave him a mouse.

The little prisoner possessed such an amount of reason that when he thought he had given me sufficient time to leave the mouse in the usual place, he would fly back to the perch, look in the crotch, then turn his little round eyes down to the window top, and if no mouse was to be seen, I was the next thing to be stared at, never failing to receive my full share of scowls. But, alas! our fond attachment was soon severed. For two months had we two enjoyed the most intimate friendship—

"We knew each other well."

Mice became so scarce that five and ten cents per head failed to supply the market demand. For three days did he fast, though I tempted his appetite with nearly everything which I thought would entice him to eat. But everything proved fruitless. Fearing he would die, as he began to pine, and thinking he might forage up something on his own hook had he his freedom, I let him go, after showing him to a friend.

Never so sorry was I to part with anything as I was with my little "braud-faced burd." On moonlight nights the owl is in his glory, and in the aggregate I think the farmer owes him a little; and should he unintentionally carry his moonlight frolics into the "wee sma' hours" of the morning, sunlight overtakes him, and you find him sitting bewildered on the top of a snake fence, do not shoot him. Ere the melancholy days come he will watch the corn stack and the buckwheat heap, and woe betide the shrew or field mouse that attempts the removal of one grain or one triangular seed.

Harry Penwood.

DUCK SHOOTING IN CALIFORNIA.

San Francisco, Cal., Jan. 13, 1879.

Editor Forest and Stream:

It has been my good fortune, at various times in my shooting career, to meet with many pleasant adventures, genial sportsmen and excellent shooting, and my recollections of such are bright spots in my memory; but on a recent occasion, when duck shooting in the Suisno marshes, my lines fell in more pleasant places, and were connected with associations of a more than usually pleasing character.

During the month of December last I received a very kind invitation for a day's shooting from a friend who resides in Benicia, about thirty miles from this city. Willie is one of three brothers, and all are as genial, pleasant gentlemen as it has been my good luck to come in as genial, pleasant gentlemen as it has been my good luck to come in contact with. They are passionately fond of shooting, excellent shots, and know every portion of the country they reside in where game is to be found. Their specialty, however, is duck shooting, and within a very short distance of Benicia is to be had such shooting at all the variety of birds found in California inland waters, as I believe no other portion of the State affords. Such was the locality in which I was invited to spend my holiday, and I eagerly accepted the invitation. I spent a couple of nights at my home loading shells for my No. 12, 7 lb. 2 oz. gun, my favorite for every kind of shooting, although no doubt many of your readers fond of duck shooting will smile at the idea of attempting to shoot ducks with a 7 lb. 2 oz. 12 gun. I loaded about 200 shells; charges used, 1 oz. No. 6 chilled shot, a portion with No. 5 do., 3¼ drachms FG Hazard's sea-shooting brand of powder. The 3 P. M. train for Martinez, a little town lying opposite Benicia, and separated from it by the Straits of Carquinez, found me on board, and taking a seat in the smoking car, with a good cigar and a copy of the Forest and Stream received that morning, I managed to spend very pleasantly the couple of hours required to make the trip. Arriving at Martinez, an express wagon conveyed my traps on board the ferry-boat *Carquinez;* and a run—by the way a very slow one—of half an hour, found me at the Benicia wharf, and my kind friends awaiting my arrival with a covered wagon, in which I was conveyed to the Solano Hotel, kept and managed by Fred, one of the brothers. After a very excellent dinner, which I enjoyed right well after my ride, for the air was very chilly and appetizing, I retired to the sitting-room of the hotel, where a bright coal fire was burning cheerfully, and around it the brothers and myself discussed the prospects for the morrow. Everything pointed favorably for a successful day; the bulk of the ducks were in the sloughs and creeks, driven there by the very cold weather—cold for California I can certainly state; and then to looking up my companion's guns, loading shells, getting gum boots thoroughly tried, etc. It was agreed that Willie should scull me on the creeks next day, and Louis, who would go with us in the wagon to where the ducking boat was located, would go after snipe, which were quite numerous in the locality, taking his chances also at the ducks which would occasionally come over him, started from the creek by our shooting. All being in readiness for an early departure next morning, we retired at 10:30 P. M., and at 5 A. M., sharp, I was awakened by the rattling and bizzing of an alarm clock in the adjoining room, and presently Willie tapped at my door, to find me up and partially dressed. My inquiries as to state of the weather were satisfactory, it being clear, very cold, with heavy frost, and, as Willie stated with much elation, "just the day for sculling!"

Fifteen minutes later found me on my way down stairs, "armed and equipped as the law (sportsman's law) directs," to find a bright fire blazing in the grate, and a grateful odor coming from the direction of the kitchen announced the cooking of an early breakfast. Louis soon made his appearance, also prepared for his day's tramp among the snipe, and in five minutes more four of us, including a friend, and a right jolly fellow, too, who was to pilot us in the wagon to our point of debarkation, were seated around a table, supplied with such an array of good things to tempt a shooter as to surprise me, considering the earliness of the hour and the time taken to prepare the food in—thanks to Charley, however, the efficient steward of the hotel, who is always on hand when wanted. It does not take long for duck shooters to dispatch a meal when the prospect of good shooting is ahead and the necessity exists to be on hand as early as possible in your duck ground, and 5:45 A. M. found us "all aboard," and Jeff, a first-class retriever used by Louis, snugly stowed away under the back seat of the wagon, and away we go!

We were soon at the boat, but only half warmed, and arranging guns, cartridges and luncheon in their places, we (Willie and I) step in, shove off, and commence the sport of the day. Louis moves off in an opposite direction toward the snipe ground, and, before we proceed a hundred yards or get a shot, we hear a double report, and make pretty sure that, bar accident, a couple of snipe have taken their last flight. As we progress, a small bunch of teal jump out of range, but alight again about a hundred yards away; and, as we make our first abrupt turn in the creek, up springs two more teal, and attempt to join their companions ahead, but I drop them both with a quick bang! bang! before they have gone twenty yards. At reports of my gun up spring, on every side of us, large bunches of teal, quite a number of mallards and pin-tails, and several flocks of widgeon, all, however, out of shot, and after flying around for a few minutes settle again—some ahead of us in the creek, and others in the by places. At almost every turn in the creek up would get a couple or flock of teal or pair of mallard or pin-tails, and the shooting becomes quite lively; and as I am quite at home at this kind of shooting, I begin to make a respectable bag of the different varieties of ducks named. When we had sculled about two miles we counted up about forty birds, and, as our feet had become quite benumbed, we went ashore near a shallow pond to stretch our legs and warm up. A snipe, much to my surprise, got up close to my feet, and after flying around a short distance dropped within thirty yards. Although having but No. 5 or 6 shot, Willie and myself started after the bird, thinking there might be more of its kind; and although the ground was frozen hard, the snipe jumped up all around us, and as they laid well we bagged about twenty with our large shot in half an hour.

We then returned to the boat thoroughly warmed up, and proceeded with the sculling, adding duck after duck to our score. The day passed away only too rapidly, and about 4 P. M. we observed the pin-tail ducks were leading into a pond in the direction we were going. So, landing, we took each a stand in a bunch of tule, and wound up the day by killing about twenty pintails and four or five mallards. We then took to our boat, and, by a bright and early moon, pulled to our place of departure, where Louis and Good met us and assisted to get the ducks and traps to the wagon. Our total bag was 103 ducks, all kinds, the largest proportion being teal, all in excellent condition, and twenty Wilson's snipe; not jacksnipe, as many of our American sportsmen persist in calling *Scolopax wilsonii*, as to my knowledge no such bird as the jacksnipe is to be found on the American continent. We are soon at the wagon with ducks, guns, etc., and then in ourselves, anxious to be home, with the prospect of a good warm dinner awaiting us; and a rapid ride of three-fourths of an hour found us at the hotel, with Fred and our mutual friends, H. in particular, standing at the door to welcome the hunters back, with such inquiries as, "Well, what luck, boys; left any to breed for next season, etc." We find the big fire still burning, and are glad to be seated around it for a few minutes to bring the warmth back to our hands and feet. The toilets are soon made, and we find ourselves, as in the morning, four in number, around the dinner table, discussing the events and shots of the day, and myself hoping to have just such another before the season closed.

I can sincerely state that this day's duck shooting was the most delightful in all its surroundings I have ever experienced—plenty of birds, pleasant companionship, and, barring the intense cold in the morning, the weather was all that could be wished for. It was truly a "red letter" day in my career as a sportsman. After spending an agreeable evening with my companions, I retired to enjoy a good night's rest, and next morning I took the 7:30 train for this city arriving here at 9 o'clock, in plenty of time for business, feeling thoroughly refreshed in mind and body, and hoping for a repetition of my day's sport at no distant time.

Anglo Californian.

—H. P. Hubbard, of New Haven, Conn., has published a second list of leading newspapers. Mr. Hubbard's system o conducting his advertising agency gives great satisfaction to both advertisers and publishers.

Fish Culture.

AMERICAN FISH CULTURIST'S ASSOCIATION.

THE eighth annual meeting of the Fish Cultural Association met at the Directors' room of the Fulton Market Fishmongers' Association at 11 o'clock on Thursday, the President, Hon. Robt. B. Roosevelt, in the chair; Barnet Phillips, Secretary. Mr. Roosevelt, in his opening address, referred to the progress made in the cultivation of fish and the spread of information acquired on the general subject of ichthyology; referred to the desirability of a uniform nomenclature, and to what has been accomplished by the U. S. Fish Commission, the new species discovered within the past and previous years, and what the State Fish Commissioners have accomplished in their special capacities. His review of these interesting questions showed his full comprehension of the subject and his intelligent appreciation of the necessities of the future.

The minutes of the meeting of last year and the treasurer's report were then read. About thirty-five new members were elected. The reading of the following interesting papers followed:

A. B. Sproule—Cultivation of trout in streams and rapid water.

M. A. Clapham—Salt water food for trout.

A. F. Clapp—Fishways.

H. D. McGovern—Parasites. This subject elicited much discussion and information, Messrs. Mather, Fuller and Green participating. The meeting adjourned until the afternoon.

In the interval Mr. S. M. Johnson, of Boston, exhibited lobster spawners. His opinion, obtained from close observation, was that the spawning of lobsters was distributed throughout the greater part of the year. The period which an individual carries her spawn is about three months.

Mr. F. Latasa, of 35 Broadway, exhibited some beautiful specimens of silk worm gut obtained from the moth.

Mr. Blackford suggested that some measure be devised to effectually protect trout and yet not expose the innocent dealer. The market men refuse shipments of fish.

In the afternoon Mr. Hallock read his scheme for Uniform Game Laws, which the association resolved went far to simplify the present heterogeneous and complicated laws of the various States.

On motion of Mr. Blackford a committee of three was appointed to secure protection to innocent fish sellers as well as protection to fish. Under the present confusion of many game laws for different States, dealers were often liable to penalties for having fish in possession out of season without knowing that they were violating the law.

Mr. Blackford also read a very interesting paper on White-bait, which was followed by a paper by J. Annin on "Hard and Soft Water for Hatching Purposes;" one by Seth Green on "Food Fish," and one by L. M. Johnson on "Lobsters: Their Supply, and the Necessity for Their Protection." Wednesday was occupied by additional papers, all of which, with those of Tuesday, will appear in our columns in due course of time as fast as we can find space for them.

The Association is in a very healthy state, and growing rapidly in membership and usefulness.

The fish dinner last evening was as unique in its way as the procession coming out of the dolphin's mouth at the Arian ball the other night. Judging from the variety and extent of the *menu*, how fishified the association must be, and what a brain power in the land!

Annual Report of the Fish Commissioners of the State of Virginia, for the Year 1878.

SOME conception of the magnitude of Virginia's revived fishing interests may be gained from the estimate of Col. McDonald as presented in his annual report now before us, that the annual value of the products of the James River and its tributaries, above tide, would, at present prices, have amounted to many times the entire annual receipt for tolls of the present investment of over twelve millions of dollars in the James River and Kanawha Canal. The value of the depleted fisheries of the entire State assumes great magnitude when we consider the extent of the river and tidal systems; and the securing of efficient legislation with enforcement of the laws become of proportionate importance.

The present report shows an encouraging degree of progress in the work of restocking the waters. The breeding of the California salmon has been continued, there being, at the time of writing, 300,000 fry in the Lexington hatching house, ready for distribution in the headwaters of the Shenandoah, Rappahannock and James Rivers; 90,000 having been already deposited in the last. The results of this work will be shown in 1880 when its success, which there is every reason to expect, will be made manifest and the salmon industry assumes importance.

Readers of the FOREST AND STREAM are familiar with the rapid decrease of shad in the Potomac and Susquehanna Rivers. The attention of the Commissioners has been especially devoted to replenishing this supply, and the State joined with Maryland and North Carolina in the erection of an extensive breeding establishment at the head of Albemarle sound. The result of the operations there was the deposit in Virginia waters of 1,120,000 young shad. But the capacity of the Avoca breeding house was insufficient to meet the demand and a second establishment was erected at Tobago Bay, where 1,960,000 fry were turned into the Rappahannock. An additional 500,000 from the Susquehanna station were placed in the Shenandoah and Rivanna Rivers.

The New River has been stocked with black bass; many other streams of the State which have been stocked in past years already yield good returns and prove an attraction for anglers from distant States. Col. McDonald proposes to introduce the red-eye perch and the Southern chub so soon as the proposed central hatching house and ponds afford the necessary facilities. The European carp will also receive a large share of deserved attention, as its fecundity and merits as a food fish specially commend its culture. The report wisely recommends that a law be passed prohibiting from sunset Friday evening until sunrise Monday morning during the fishing season all nets and other appliances for capturing fish. An appropriation is asked for the construction and operation of a central hatching house at some point to be selected by the commissioners. Virginia has not yet taken efficient measures for overcoming the obstacles in her streams to the free passage of fish. The adoption of the McDonald fishway, which we have already described at length, is the solution of this difficulty. When the dams, canals and falls are equipped with these the fish will have unobstructed passage to the spawning grounds of the upper waters.

How Fresh Fish are Supplied for the Interior Lakes of Michigan.

A VISIT TO THE STATE HATCHERY IN DETROIT.

Lovers of piscatorial pleasures can no longer wait for the slow process by which the thousand lakes and streams of our fertile State are stocked with the finny tribes, and the men who, when they were boys, fished in the crystal streams of New England, catching the wary brook trout and spearing the salmon of the Northern lakes, find but sorry sport in angling for the slow and stupid "bullheads," and the small specimens of fish that are indigenous to Michigan waters. An improved stock is wanted. The increased demand for fish in the great markets of the West can but poorly be supplied from the East, one necessary qualification of this article of food being its freshness. From all these causes there has come about a wonderful demand for trout and salmon and whitefish and grayling, with which to stock our own numerous lakes and rivers—a demand which nothing but artificial assistance could supply.

One of the best conducted and most successful of the fish hatcheries in the United States is in Michigan, with its headquarters in this city. This is under the immediate supervision of Mr. O. M. Chase, a former pupil of Seth Green, and for many years a practical enthusiast on the subject. An unpretentious frame one-story building on Atwater street, with blue curtains, with no outward indication of the millions of lives within, is the scene of operations. The room is filled with a series of tanks, into and out from which the water runs incessantly. In these tanks are set crates, or boxes, containing tier upon tier of eggs in trays. The water, cold as when it left the river, runs continually in at the bottom and out at the top, and thus the eggs are kept cool, and are in a condition as nearly as possible like that they would occupy at the bottom of the river, with the additional advantage of having no hungry fish to prey upon them. Each day the trays are placed in a long shallow trough, and those eggs which show that the embryo occupant has given up the ghost are picked out by experienced hands.

The incipient fish—whitefish alone are hatched here—is not large. Five hundred and twelve of them can occupy a cubic inch, without treading on each others' toes or elbowing each other with their fins. Without going into elaborate statistics, there are about 16 bushels of eggs at the Detroit hatchery, representing 16,000,000 eggs, each one of which contains the germ of a fish that may some day weigh 12 pounds. These eggs are obtained in November at the Belle Isle fisheries, being taken from the captured fish, which spawn in that month. They are then taken directly to the hatchery, and there they remain till March, where the eggs hatch, nothing being done except to keep them in the cool running water, the defunct ones being picked out daily. The live egg is transparent; at this stage, in December, the fish being plainly visible, lying curled up in the egg, its eyes being the most prominent portions, looking almost as large as all the rest of the fish taken together, and being jet black. The least trace of a milky-white color in the egg shows that its occupant is doomed, and out it comes from the rest, the faintest touch of discoloration being seen immediately by the trained eyes of the "pickers." If not taken out, in a day or two a fungus growth of hairs covers the "dead" egg, and it fastens to those around it, killing them. Thus one left in the center, of a tray of live healthy eggs, would in time, destroy them all. Only a few thousand out of the 16,000,000 are daily picked out, and the percentage which ultimately hatches is about 90.

This year's lot Mr. Chase considers better than ever before. In February, the beating of the heart can be distinctly seen. In March the fish hatch, coming up by thousands through the wire screen tops of the trays, and swimming over into large tanks provided for the purpose. They are then about the size of a cambric needle, and five-eighths of an inch long. They eat nothing for some time, a sac of nourishment being attached to each one, which is not absorbed for some days. As soon as they begin to hatch, they are placed in cans, and delivered at the lakes where they are to be "planted." They require deep water, and a gravel bottom.

An improvement in the way of an automatic "picker" has been invented by Mr. Chase. It consists of a glass jar, into which the eggs, to the number of 140,000, are placed. A pipe descending to the bottom keeps a small stream of water constantly flowing in from below, and the eggs are by the current kept moving, the dead ones rising to the top and floating off. By these jars the labor of attending to the eggs is much reduced, and Mr. Chase is introducing more of them each year.

The other hatchery is at Pokagon, Cass County, and various kinds of fish are hatched there. The time required to hatch whitefish is longer than that required for most other kinds, many fish spawning in the spring and their eggs hatching in a few days. The great length of time the whitefish eggs remain in the water of the rivers makes it possible for only a small percentage to hatch, as other fish feed upon the eggs. Their multiplication would be extremely slow, if it were not for this means of hatching them.

Four persons can easily attend to all the eggs, constant watching and patience and long experience being, however, required to bring a lot of eggs successfully through the season.—*Detroit Free Press.*

TO STATE FISH COMMISSIONERS.—The Kirtland Society of Natural Sciences, of Cleveland, Ohio, would be glad to receive the reports of the fish commissioners of the various States. They have already in their library all of the reports up to 1877.

TENNESSEE.—Fish Commissioner George F. Ackers, has introduced into the Tennessee Legislature a bill prohibiting, for a term of six years, the capture or killing of any fish in waters above navigation by any means other than angling. Provisions are also made for suitable fishways.

MICHIGAN.—Thirty thousand salmon fry have been deposited in the River Raisin, and an equal number in the Saginaw.

WISCONSIN—*Madison.*—The following gentlemen were nominated and confirmed as State Fish Commissioners for the ensuing year: James V. Jones, of Winnebago County; Wm. Welch, of Daivs County; John E. Antisdale, of Millwaukee County. $8,000 was voted by the Legislature, now in session, for the propagation of fish. ROVER.

—We judge of the amount of natural food in a stream, and consequently of its ability to sustain trout by examining the bottom and the water-plants. If plenty of caddis worms, snails, crustaceans and larvæ are found, we know that the stream will afford food according as these are more or less abundant. The mud from the bottom will often show small red worms which are larvæ of the small fly known as *Chironomus*, and which, in the mature state, hover over the water, and at which the trout often jump.

Natural History.

LIST OF THE BIRDS OF NOVA SCOTIA —Land Birds.

BY J. MATTHEW JONES.

PRESUMING that the subject of the geographical distribution of birds over the North American continent is considered interesting at the present time, I am induced to offer this list of the birds of Nova Scotia for insertion in FOREST AND STREAM.

Our maritime province, as the atlas will show, stands boldly out into the North Atlantic, on the extreme north-east of the continent, and is only joined by a very narrow isthmus to it, being bounded on every side—save that of the connecting link—by the waters of the briny deep. It lies in the track of those aquatic migrants which pass annually from the northern breeding haunts in Newfoundland and the distant Labrador, to their winter resorts amidst the savannahs and swamps of Guiana and Cayenne, via Bermuda, and the West India Islands. These make Nova Scotia their transient resting-place, and afford our sportsmen, during the months of September and October, pastime in every marsh and on every part of our coast. But, as appears to be the case on the shores of the Northeastern States, these migrants are becoming less numerous every year, and the "migratory hosts," which even satiated the murderous propensities of our sporting forefathers, are things of the past. The fat and tasty wild pigeon with which Nova Scotia housewives used formerly to make the most toothsome of pasties is now quite a rarity; and even the golden plover, which within the last fifteen years came each August, and for a fortnight or more literally swarmed on every open common throughout the land, is now represented by a few flocks of stragglers. And so it is with the many species of sea-duck, not a tithe of which, compared with the numbers that visited us even ten years ago, frequent our bays and harbors during the winter months.

Can any kind reader of FOREST AND STREAM throw light upon this extraordinary change in the habits of North American migratory birds, or give a clue to the new route by which they proceed to the more temperate regions of the south?

In the preparation of this list I have received the kind assistance of Dr. Bernard Gilpin, late President of the Nova Scotia Institute of Natural Sciences; also of Mr. Andrew Downs, the veteran ornithologist of Nova Scotia, whose love for the feathered denizens of his adopted country is always pleasingly manifested toward any one seeking information on this the chosen study of his lifetime. To Mr. Thomas Egan, taxidermist, of this city, I am also indebted for valuable information in respect of some rare species which have passed through his hands.

1. *Turdus migratorius*, L., Migratory Thrush, Robin.—This bird, which is extremely common everywhere throughout the Province from April to October, does not wholly forsake it in winter, a few remaining and occasionally to be seen about the settlements at that season. In forward springs, when the weather is mild, flocks of robins are observed about Halifax as early as the first week in March; but sometimes one or more snow storms occur about the close of the month, accompanied by great reduction of temperature, when numbers of these birds are found dead. In the winter of 1864-5, which was unusually mild, numbers remained in the province, and as early as February were heard singing, and on March 1 hundreds of these birds were congregated together in the swamp thickets, singing loudly, as in May or June. In ordinary seasons, however, they generally appear on our fields during the last days of March, when the genial warmth of the sun's rays lays bare patches of green, about which they hop and search for the earliest insect and still more welcome earthworm. They usually begin to sing about the first week in April, and every one knows how pleasant it is after a long and tedious winter to hear their well-known notes. Toward evening on some warm day, as the sun declines in the west and gilds the summit of each lofty tree, these harbingers of fruitful summer time, elevated on the topmost sprays, pour forth their welcome lays, gladdening the hearts of old and young. Their breeding time usually commences about the second week in May, and they almost always choose the cleft of a tree or branch, where they build their substantial nests of small twigs and grass, lined with mud. These birds appear to dislike cold, damp weather, and present a forlorn appearance indeed on a foggy, drizzling morning in spring. At such times they may be observed in flocks together, perched upon the upper branches of the leafless maple trees in a crouched position and with plumage ruffled out, giving vent to an occasional attempt at song.

2. *T. pallasii*, Cab., Hermit Thrush.—Very common on our

Atlantic seaboard, and usually appearing on their vernal migration about the last week of April.

3. *T. swainsoni*, Cab., Olive-backed Thrush.—Not common.

4. *T. mustelinus*, Gm., Wood Thrush.—Rather rare on the coast, but met with occasionally in the interior, especially in the wild forest. At Stewiacke, Colchester Co., Mr. William Winton has procured nest and eggs.

5. *Mimus carolinensis* (L.), Gr., Cat Bird.—More common in the interior than on the sea coast. Arrives from the South about the end of May.

6. *Sialia sialis*, (L.) Hald., Blue Bird.—Rare.

7. *Regulus calendula* (L.), Licht., Ruby-crowned Kinglet—Not uncommon.

8. *R. satrapa*, Licht., Gold-crested Kinglet.—Common throughout the year.

9. *Parus atricapillus* L., Black-capped Chickadee.—Very common, especially in the spruce woods in winter, where they may be always seen in small flocks, and sometimes accompanied by a few gold-crests, busily searching among the trunks and branches for insects. This is truly a bird of winter, and, small though it be, the coldest blast which blows or the heaviest storm which rages through the forest fails to stay its daily progress in search of food. Often and often, when traversing the deep woods in midwinter, overtaken by a blinding snowstorm, have I encountered a flock of these busy little birds and stayed awhile to watch their motions. How they managed to hold on to the branches and carefully reach every nook and cranny while the fury of the gale bent the stalwart stems like willow wands, was always a mystery to me. Yet they never flinched from their posts, but held their ground and flitted from tree to tree, sounding their wild and plaintive notes in perfect harmony with the wind dirge that Nature sang.

10. *P. hudsonius*, Forst., Hudson's Bay Tit.—Rather common, and frequently observed with the gold-crests and common chickadees.

11. *Sitta carolinensis*, Gm., White-bellied Nuthatch.—Common during some winters, but rare in others.

12. *S. Canadensis*, L., Red-bellied Nuthatch.—Common, especially during the winter months.

13. *S. pusilla*, Latb., Brown-headed Nuthatch.—Very rare.

14. *Certhia familiaris*, L., Brown Creeper.—Common throughout the year.

15. *Anorthura troglodytes* (L.), Cs., Winter Wren.—Although a rare bird, it is known to breed in the province.

16. *Eremophila alpestris* (Forst.), Boie, Shore Lark.—Very common in winter, more particularly on the coast. They generally arrive from the north about the beginning of November, and frequent the low grass lands contiguous to the shore in flocks, where they love to search among the half-rotted kelp for food. In the month of February, which is our coldest and most inclement month, I have shot specimens and found them to be very fat, so that they must find plenty of food of some kind to keep them in such good condition.

17. *Anthus ludovicianus* (Gm.), Licht., Titlark.—Common.

18. *Mniotilta varia* (L.), V., Black and White Creeper—This interesting little bird is often met with in company with some of the early warblers in the groves of young hardwoods by the side of lake or stream. It is a perfect creeper in habit, surveying the holes of the trees for insects in the way peculiar to the race.

19. *Parula americana* (L.), Bp., Blue Yellow-backed Warbler.—This cannot be considered a common species, although in inland districts where the country is clothed with a vigorous growth of rock maple and beech, its pleasant note is often heard in early summer.

20. *Helminthophaga rufficapilla* (Wils.), Bd., Nashville Warbler.—Rarely seen.

21. *Dendroica æstiva* (Gm.), Bd., Summer Warbler.—This familiar little bird is extremely common everywhere, coming to our very doors to search among the leaves of the trees and shrubs for insects, of which it must consume immense quantities while feeding its young.

22. *D. virens* (Gm.), Bd., Black-throated Green Warbler.—Common; usually found in groves of spruce and pine.

23. *D. cærulescens* (L.), Bd., Black-throated Blue Warbler.—Very rare.

24. (?) *D. cærulea* (Wils.), Bd., Cerulean Warbler.—Coues gives "N. S." as a habitat of this species, but I have never heard of its capture in the province.

25. *D. coronata* (L.), Gr., Yellow-rumped Warbler.—One of our commonest summer visitants. It is the first of its race to visit us in spring, and the sound of its well-known notes, from the depths of the spruce grove, is pleasant indeed to him who looks forward anxiously for the first sure sign of coming summer.

26. *D. blackburniæ* (Gm.), Bd., Blackburnian Warbler.—This bird must be considered rare in the province, especially on the sea coast. Mr. Andrew Downs has observed it in the hardwood hills about Grand Lake.

27. *D. striata* (Forst.), Bd., Black-poll Warbler.—The only specimen I have had an opportunity of examining was one (male) shot by Mr. Thomas Egan, taxidermist, Halifax, the last week of May, 1876.

28. *D. castanea* (Wils.), Bd., Bay-breasted Warbler.—Not common.

29. *D. pennsylvanica* (L.), Bd., Chestnut-sided Warbler.—Very common.

30. *D. maculosa* (Gm.), Bd., Black-and-yellow Warbler.—Abundant.

31. *D. tigrina* (Gm.), Bd., Cape May Warbler.—Very rare; only a few specimens have been obtained.

32. *D. palmarum* (Gm.), Bd., Yellow Red-poll Warbler.—Not common.

33. *Seiurus aurocapillus* (L.), Sw., Gold-crowned Thrush.—To observe the habits of this shy and solitary bird the recesses of the forest must be visited, where, seated for awhile on some mossy bank which overhangs a purling brook o'ershadowed by the sombre foliage of the hemlock spruce, its plaintive note will soon fall upon the ear, and the modest plumage of the bird itself will be observed as it flits slowly among the lower branches of the neighboring trees. Its curious oven-shaped nest, always built upon the ground, is rarely found; but one in the collection of Mr. Downs, which he procured on the shores of Bedford Basin some years ago, formed externally of dead leaves, is an extremely pretty object.

34. *S. noveboracensis* (Gm.), Nutt., Water Thrush.—Common.

35. *S. ludovicianus* (V.), Bp., Large-billed Water Thrush.—Common. More frequently seen at the close of summer when on its migration South.

36. *Geothlypis trichas* (L.), Cab., Maryland Yellow-throat.—Very common.

37. *G. philadelphia* (Wils.), Bd., Mourning Warbler.—Rare.

38. *Myiodioctes pusillus* (Wils.), B.p, Green Black-capped Fly-catching Warbler.—Not uncommon.

39. *M. Canadensis* (L.), Aud., Canadian Fly-catching Warbler.—Common.

40. *Setophaga ruticilla* (L.), Sw., Redstart.—About the first week in May this gaily plumaged little bird is observed flitting from tree to tree in the spruce and birch copses. It seems to prefer the vicinity of the settlements, and frequently builds its nest near dwellings.

41. *Pyranga rubra* (L.), V., Scarlet Tanager.—Very rare, but Mr. Egan has received both male and female for preservation.

[*To be continued.*]

THE HABITS AND BREEDING OF THE SEA LION IN CAPTIVITY.

IN the early part of June, 1877, I went, sent by the Zoological Society of Cincinnati, to Chicago to receive some black sea lions (*Zalophus gillespiei*) which had arrived there from the southern coast of California. On my arrival I found that the female had calved on the previous night, therefore thought it best to lie over for a day in order that the young might acquire a little extra strength to bear the fatigue of the railway journey to Cincinnati. They all arrived in the Garden in fine condition, but had to be kept in their shipping crates for the first few days, until an old beaver pond could be arranged as temporary quarters for them, while the large basin intended for their permanent home could be built. During this time, on account of a heavy freshet in the Ohio River, the water in the pond became quite muddy, which affected them so much that they were unable to retain their food, invariably vomiting up their fish some one or two hours after feeding. By giving small doses of Rochelle salts for a few days, all recovered, but the calf died from a violent attack of *cholera infantum*, caused no doubt by its mother's milk being affected by the muddy water.

A short time before the calf was taken sick my attention was attracted to the peculiar appearance of the mother on emerging from the water after taking her customary bath. She was completely covered with a whitish oleagenous substance, about the consistency of semi-fluid lard, which seemed to ooze out all over her. As soon as she got into the crate with the young one, she commenced rolling, so that in a short time the young one and the inside of the crate were completely covered with it. The calf seemed to enjoy it hugely, and rolled about until his coat glistened as if he had just left the hands of a first-class tonsorial artist. It instantly struck me that his mother had been preparing him for the water, and I immediately tested the matter by taking him out and placing him on the edge of the pond, when in a few moments he began to paddle about in the water, something he had never before attempted, although he had been almost daily placed in the same position.

As soon as the large basin was completed, and they were transfered to it, I had a fine opportunity of observing the tyrannical attentions of the male toward the female during rutting season. He constantly swam back and forth along the partition, which separated him from another male, frequently endeavoring to get through, splintering and tearing the rails with his powerful canine teeth. If the female attempted to approach the division she was immediately forcibly driven back, when he would redouble his efforts to get through, barking and roaring as if beside himself with rage. This would be kept up until late at night, when the female was allowed to go into the house situated in the centre of the basin, when he would follow and place himself immediately in the doorway so as to prevent her egress. He never seemed to sleep soundly, as he invariably kept up a series of grunts and muffled roars, as if he were fighting his battles over again in his sleep. I would frequently annoy him by stealing up softly and then suddenly scraping the gravel with my foot, when he would instantly start up, plunge into the basin, swim rapidly back and forth, barking with all his might, until he was satisfied there was no interloper about, when he would sullenly return to his post and gradually drop off again into his troubled sleep. Frequently at night the two males would climb to the roof of the house, and in their efforts to get at each other through the partition, would raise such a din that persons living at quite a distance from the Garden would frequently ask me the cause of the uproar.

At the end of some two months there was a change, when the female commenced playing and coquetting with the male, frequently pinching him so sharply as to make him snarl with pain, and if he seemed to be much out of humor she would soothe him by swimming up and giving him a good old-fashioned conjugal kiss. Finally they quieted down to the humdrum of regular wedded life, and early in October I noticed that the female was suffering from a violent catarrh, which gradually disappeared, followed by a dry cough, particularly at night. It was in March when I first thought she showed signs of pregnancy, and in May, from her appearance when out of the water, I became convinced of it. On June 25 the young one was born, making the period of gestation as nearly as I could judge about ten months, and it was some days before the mother would allow me to handle it, and when I did succeed in so doing it was always at the risk of getting a nip, as he was certainly the most ill-tempered, snarling little brute with which a dry nurse could be vexed. I soon found out that there was but one way of handling him with impunity, and that was by suddenly catching him just back of the flippers and quickly lifting him clear of the floor, when he would snap and struggle for a few moments and then quietly give up. I frequently took him out of the house for the purpose of showing him to friends, and for the first three or four weeks he never made the slightest attempt to get into the water, although I invariably placed him on the lip outside of the door and loosed my hold in order that he could be fully seen. During this period the mother was let out for a bath twice daily, and after she had played about as long as she wished she would swim up to the closed door, rear up on the sill and bellow until she was allowed to get in to her calf. Invariably in the morning, so soon as I would start across the bridge in order to turn her out, the male would swim up to the door and await her appearance, always exacting his morning kiss before he would allow her to plunge into the water. After playing with her for a few minutes he would commence sentry duty, back and forth along the partition, occasionally making fierce rushes if the other approached too near to it.

In the meanwhile, as the young one never showed the slightest inclination to go into the water, in spite of frequent opportunities to do so, I began to watch for a second appearance of the oleaginous matter. During the fifth week after birth, on going into the house one morning, I found marks of grease in every direction, and the youngster shone as if he had just emerged from an oil tank. Taking a bucket, I filled it with water, placed it in his way, and he immediately stuck his head to the bottom of it. Fearing an accident, as the water in the basin only reached within about a foot of the top of the lip surrounding the house, I had the carpenter construct a small, shallow, wooden tank inside the larger one, with a sloping platform leading into it. So soon as the door was opened connecting with it he followed his mother, and in a short time was having high jinks swimming and diving to his full bent. When he tired he would quietly rest in the water with his head lying across his mother's neck, or he would scramble up on the platform, stretch himself, have a short nap, and then commence his play again. So soon as I thought he had gained sufficient strength the small tank was removed, and he was allowed the run of the larger one, when his wonderful swimming powers came into full play. I have frequently seen him dash off with such velocity that the water would part and fly from each side of his neck with a fairly hissing sound. Again he would dive, and then suddenly make a succession of salmon-like leaps with such rapidity that I could easily imagine with what little difficulty he would be able to capture the swiftest of fish. One of the favorite ways of amusing himself was by taking a chip—several of which were always kept in the basin—out on the lip, lying on his back, and playing with it with front flippers and mouth, almost precisely as an infant would act with a common rattle. At first he was rather shy of the old male, but gradually took the greatest delight in swimming about with, and trying to induce him to join in a game of romps; but the old fellow was proof against all his wiles, and always good naturedly endeavored to get rid of him.

I noticed that the female's cough disappeared immediately after the birth of the young one; but about the middle of August both her appetite and actions became variable, some days feeding and seeming lively as usual, on others she would either take but little or entirely refuse her food. She gradually grew worse until September 8, when, on going to the basin in the morning, I missed her, and found the male busily engaged in diving just at one particular spot. He finally succeeded in bringing the body to the surface, and when the keeper attempted to remove it he repeatedly charged, and it was only by great care and watchfulness that they avoided being bitten. On dissection it was found that *tuberculosis*, that scourge of all zoological collections, was the cause of her death.

The young one did not seem to notice the loss of his mother until about twenty-four hours after her death, when he commenced to sulk, and obstinately refused to eat, in spite of every effort and stratagem to induce him to do so. He gradually wasted away, and finally died of starvation on October 16, having viciously attempted to bite me a few hours before his death. The old male grieved so over the loss of his mate that for some time I was afraid we would lose him also, and at the end of about six weeks he became so thin that I thought it best to remove him to a small tank in-doors. Since, he has been improving slowly up to within ten days, since when he shows a marked improvement. FRANK J. THOMPSON.

Zoological Garden, Cincinnati, Ohio.

LATEST FROM THE SEAT OF WAR IN SPARROWLAND.

EDITOR FOREST AND STREAM:

Arma virumque cano! Tired as your readers doubtless are of carnage, I would not harrow their feelings needlessly; but as long as the dreadful din of arms and the shouting go on, they cannot be indifferent spectators of the gory drama. The latest from the seat of war in Sparrowland is an ambushed attack made on the innocent undersigned in a Bostonese paper, and I am currently supposed to have been knocked down, dragged out, and left a prey to the vultures and all the dogs, while the will of the Beacon street Jove was being accomplished. The article to which I allude was so temperate and so nearly courteous—so slightly Breweresque, in fact—and wore such a specious air of fair argument, that I doubted when I heard it attributed to Dr. Brewer. So I wrote to him, begging to be informed whether or not he was the author of "Conclusive Testimony," that being the title of the screed in question. His curt reply was that he had "no response to make." The points are these: The name of the English sparrow appears in a list of sixty species of birds observed to occur in the grounds of the Naval Hospital in Brooklyn; an article contributed to the *Nuttall Bulletin* by my nephew, Mr. G. H. Coues, for the general accuracy of which, as well as for the ability of observation of my nephew, I made myself witness. Hence these tears! For it is "conclusive testimony" that the English sparrow does not molest native birds. So my anonymous logician reasons. With a burst of syllogistic joy, and a hop, skip and jump, he is in the columns of a newspaper; he has me on the hip, and I may now "take a back seat." But did he stop to reflect how many more species, more numerously represented, might have been found on the spot; that those occurring were there in spite of the obnoxious sparrows? Did it not occur to him that by parity of reason he might triumphantly declare that hawks and owls never molest small birds? There are a number of these birds of prey in the list.

The fact is, Mr. Coues had omitted the English sparrow from the list, as not being a native bird, simply referring to its presence at the end of his communication, and I, in looking over his press-proofs, inserted it in the list with the rest.

Let us beg further space to propose a conundrum. It came to me while I was lately examining the noble elms of my native New England, and has haunted me ever since. It may be grouped with the standing questions: "Do quail withhold their scent?" "Do snakes swallow their young?" "Do trout, flop," etc. It is this: Whereas, English sparrows were imported to save our trees from insect pests; and, whereas, the birds, according to pyrgitomaniacal testimony, do this work thoroughly; why, then, do the deluded Bostonese girdle the trunks of their elms with circular tar-tureens? It is expensive, troublesome, useless and nasty. Let the tarry tins be removed; give the sparrows a fair chance to do their duty; let the worms crawl up to be instantly devoured, for otherwise these innocent birds, which, having imported, we are bound to protect, might perish of hunger. Never mind the ill conditioned croakers and obstinate fossils who say that coal-tar is the only efficacious preventive. Do not let the city foresters any more go at large with scrapers, and other infernal engines of destruction, to kill the worms we need to feed our dear little sparrows with. Bostonese confidence in sparrows is refreshing—it is truly Napoleonic!

ELLIOTT COUES.

QUESTION AND ANSWER.

SOMERSET, O., Jan. 13, 1879.

EDITOR FOREST AND STREAM:

I send to-day by mail two of the parasites taken from the ruffed grouse. The smaller of the two I have had in alcohol three years, the other only a few weeks.

"Straight-Bore" gives an excellent description of the fly, especially its disposition to get into the hair and beard of the sportsman after he has killed its natural protector.

But I am a little skeptical as to his assertion that the fly takes wing when the bird does, keeps up with it, and then again enters the feathers when the grouse alights. How does he know this? Surely the wildness of the grouse and its swiftness of flight would make it impossible to see the fly while in motion, and is it not more reasonable to suppose that the insect remains in the feathers of the bird during its flight, and thus makes the same trip in the same time? I am inclined to think that an old grouse darting through the thickets and brushwood would be apt to leave Mr. Bug behind.

C. H. HOPE.

"Left Shoulder" inquires how I know the partridge fly rides with the bird or leaves the bird and flies by the side of it? For myself, I am free to confess I have never seen this, but I was informed of it by Messrs. Mayland Smith, J. Helms, and others, whom I believe to be credible witnesses, that they had on several occasions seen them accompany the birds in their flight, and also that they had seen the flies on the fresh excrement of the bird on which they appeared to be feeding. It is not claimed that the fly leaves the bird in its flight and follows it, but that the flies that are detached from the bird, buzzing around, perhaps, follow it. With the sixteen or eighteen birds dressed in my family this fall, my attention was not called to any unusual marks on them, though flies attended most of them when shot. The gentlemen named live in the mountains, twelve hundred feet or more above the level of the sea, in a rarified atmosphere, where partridges are around them summer and winter, and Mr. Smith is remarkable for acuteness of vision and observation.

STRAIGHT-BORE.

We have received the specimens of the fly forwarded by Mr. Hope, and beg leave to thank him for them. They are similar to the one recently described in these columns.

AN OWL'S FOOD.—*Sunnuit, Union Co., N. J., Jan. 25.—Editor Forest and Stream:* To-day, while hunting in a pine wood near this town, I obtained an Acadian owl. Upon dissecting it I found that its stomach contained a flying squirrel which had been swallowed whole and but slightly digested. Is it not remarkable that so small a bird should swallow an animal of this size? GEO. LAWRENCE NICHOLAS.

A large prey for so small a bird to capture. We have had many captive owls which treated their victims in several different ways. Usually they would seize the rat or mouse by the back of the neck, kill it and then tear it to pieces, bu sometimes, when hungry, they would swallow it whole and then go to sleep, often with the tail of the animal sticking out of the side of the mouth.

MELANISM.—*St. Johnsville, Me., Feb. 7.—Editor Forest and Stream:* While out rabbit hunting recently in the wilds north of this village I shot and killed two black rabbits. Since it is the first known ever to have been seen in this vicinity I desire to know if there are any other instances where wild black rabbits—black as a coal—have been captured. They are the same as the common white rabbit except their color. They are regarded as quite a curiosity here.

JAMES SNECK.

An instance of melanism we presume. Such cases are rare, however, and we do not remember to have heard of one in this particular species. Black tame rabbits are common enough, but black wild ones are "sceee," *nigroque similllim cygno.*

NEW QUESTIONS IN NATURAL HISTORY.—Here are some subjects for the consideration of our Southern readers, which have been suggested by an Ohio correspondent:

Mr. Editor: Now that the scent of the quail, and what he can do with it, and how the partridge drums are both settled, and inasmuch as we are all satisfied that the trout takes his food by the mouth instead of by the tail, would it not be well to start on some new investigation in natural history? For instance, will some of the many correspondents and readers of FOREST AND STREAM please inform us in what way the muskrat opens the shell of the fresh water clam, or how the 'coon makes a good meal in the same way off the raccoon oyster? The discussion on the former subjects have given us much new and interesting information regarding the history of the animals concerned. Now suppose we try our hand on the muskrat and 'coon. Respectfully,

Cleveland, O., Feb. 17. DR. E. STERLING.

MORE MONGREL GEESE.—*Nashville, Jan.* 6.—Mr. Phelmer M'Green, of Jefferson Co., Miss., had a wild goose, whose wing he had broken, in his yard, which associated with his flock of domestic geese for years. She was never supposed to be mated. After a number of years, however, she laid a nest of eggs and sat upon them, but did not succeed in hatching out any young ones. The following year she was watched, and when found to be laying again, her own eggs were substituted for others from a tame goose. Of this lot she hatched out one, which proved to be a gander, with which she subsequently mated, and from this alliance she laid and hatched out several broods of young, which had the marks of the two distinct breeds. The offspring did not breed, but showed more characteristics of the wild than of the tame goose.

J. D. H.

ANIMALS RECEIVED AT THE ZOOLOGICAL GARDENS, PHILADELPHIA, FOR THE WEEK ENDING FEB. 22.—One pig-tailed monkey, *Macacus nemestrinus;* one Canada goose, *Branta canadensis;* one common seal, *Phoca vitulina*—all purchased. Two opossums, *Didelphys virginiana,* presented by A. K. Pyle, Phila.; seven dingos, *Canis dingo,* born in Gardens; one broad-winged hawk, *Buteo pennsylvanicus,* presented; one amphisma, *Amphisma mexana,* presented by Dr. G. E. Manigault, Charleston, S. C.; one bald eagle, *Haliœtus leucocephalus,* presented by Harry Whiteside, Philadelphia; one mink, *Mustela vison,* presented by Miss Cora Amadower, Glassboro, N. J.; one brown lizard, *Rumeces fasciatus,* presented by R. A. Rosenbaum, Georgetown, Del.

ARTHUR E. BROWN, Gen'l Supt.

Woodland, Farm and Garden.

TEXAS, THE POOR MAN'S REFUGE.

PAINTED POST RANCH, February 10, 1879.

EDITOR FOREST AND STREAM:

Texas utters a welcome call to those who will come and seek refuge in her wide-spreading arms, and are willing to earn and eat their bread by the sweat of their brows. She never fails to pay the debt of toil, nor does she reward her hirelings with stinting fingers. For the poor and needy of the land there have been eighty million acres of land reserved, and under the Homestead act any married man who owns no land in the State can gain possession of 320 acres with but the cost of surveying and paying the patent fees, which are prohibited by law to exceed $20. Single men half the quantity, and, considering the productive qualities of the land, one can readily see that it is within the power of every man who is willing to work to gain a living for himself and family, and that without groveling in the dust of humiliation, or hovering round like a flock of starving animals to catch the scrapings from the board of plenty, as men have to do earning a living in or around money centres. The laws are made in Texas for the people and by the people, disregarding as much as possible capitalists and moneyed corporations, placing the poor man on a stand where he has his rights, and can demand them. Fifty million acres of public domain have been set aside for the maintenance of public schools, each county being allowed four leagues of land which cannot be rented, sold or in any way disposed of except for that purpose, showing that ample provision has been made for a permanent and perpetual common-school system, which will be ample for every child in the State without any direct taxation for that purpose. No man can say, "'Tis not the place for me!" for though in consideration of the fact that it is a comparatively new State, and all branches of trade are not represented as in some older and more thickly settled ones, yet the spirit of enterprise and the desire to get along ought to give rise to a willingness to change the tenor of his way, and if needs be to take up a new branch of industry.

Texas might be called a small world in itself, for indeed it possesses all varieties of climate, soil and production, and any man, no matter how poor, can come here armed with the determination to win, and in time gain possession, and have the advantage of any or all of them. As a matter of course all the advantages and varieties do not confine themselves in any one spot, nor do I ever expect to find such a combination outside of Paradise. In the choice of a home in Texas a man should decide distinctly what sort of business or occupation he wishes to pursue, and endeavor to choose the section of country most suitable, and one promising the greatest amount of success to his choice. If farming be the desired object, the northern, eastern, or middle portion of the State will be found most acceptable, high rolling prairie with no obstacle save the expenditure of labor to guarantee crops of all descriptions. The southern part of the State is also capable of producing fine crops, but owing to the dry seasons prevailing in that locality, it is deemed advisable to irrigate, which requires more capital than otherwise. The chief productions of the above-mentioned divisions are: Cotton, corn, wheat, potatoes, sweet and common oats, rye, millet, beans, and in fact all varieties of vegetables, grains and fruits of northern climes; while in the southern portion nearly all kinds of tropical fruits and vegetables may be grown with comparative success. It is said the average sugar production of Fort Bend County is ten hogsheads per acre, and that is only one of the many counties capable of doing likewise. In conjunction with farming, it may be found a source of great profit to invest a small sum in breeding cattle. Institute an individual brand, and turn them out on the vast and almost boundless prairie to increase and enrich the owner, with no trouble attached but the yearly breeding of calves. The annual increase of a herd of cattle is 33⅓ per cent., allowing for ordinary casualties, so that in three years the original has doubled, after which the young ones begin to bring forth their increase, when compound interest is realized. In the North the hard winters render it necessary to feed cattle six months in the year, while here they find a bountiful supply of food throughout the year on the prairie, and from the time of their birth never see the inside of an inclosure except in breeding season. Cattle in Texas, as in all parts of the world, are transformable into cash at any and all times, hence it is equal to a bank account, and can be drawn upon at will. The average yield of wheat is from 15 to 25 bushels per acre, making a fine sample of flour, and being superior to northern wheat, from the fact of its being of a drier nature, and will, when converted into flour, keep sweet a much longer time than any other wheat. Of late years the export of Texas wheat to South America has assumed enormous proportions, thus making a constant and live market for that grain. Corn ranges from 25 to 40 bushels per acre, and sometimes as high as 50 or 60, and is sold from 35 to 50 cents per bushel. Potatoes, oats and all other productions yield well, especially those of a semi-tropical nature, all of which find a ready market. Of cotton, it will be useless to say more than that the quantity varies according to soil and location, but from half a bale to a bale is the common yield. In regard to its value and demand, suffice to say that it is a staple article, consequently always saleable, and the price controlled by the market. If cattle raising be the main object, there is but little choice in location, as the rich and luxuriant grasses that everywhere abound, sufficient for countless myriads of cattle or horses, make the State a vast pasture, and leaves but one obstacle in selection of a ranch, that being to avoid proximity to farming districts. The most suitable locality for the culture of sheep and wool is in the southwest portion of the State, where the country is hilly, the soil of a dry gravelly nature, grasses short and nutricious, and shrubbery of a low growth on which the sheep feed and also gain protection from the keen winds of winter. Sheep, alike with cattle, are never housed or fed in Texas. The climate is truly salubrious, being neither insufferably hot in summer nor intensely cold in winter. The entire summer is made comparatively pleasant by a never-ceasing Gulf breeze, relieving the extreme heat that might otherwise be felt, and there is not a night in summer that sleep cannot be made enjoyable if there is a south door or window in the room. As a test of its healthful properties, it is but necessary to look at the natives, and decide that as it is said graveyards are mockeries, as people dry up and blow away rather than give the undertaker the satisfaction of saying they died. It is needless for me to linger longer on the advantages offered by Texas, as the above will serve to intimate her willingness and capabilities in offering homes and fortunes to the public. This, then, I would respectfully tender as an answer to the perplexing question, "What can be done for a suffering people?" J. G.

EFFECT OF COLD ON ORANGES.—*Mr. Editor:* Not long since I noticed an inquiry in FOREST AND STREAM as to how much cold orange trees can endure. I inclose an excerpt from the Charleston *News,* showing that we have had real hard winter weather in South Carolina this winter. Nevertheless my orange trees have not suffered a cent's worth, young or old. The same temperature back from the salt water, where the air is fresh, would kill the trees at once. It seems noteworthy that they should have colder weather along the Gulf and in Florida than we have had here. In Mobile, 6 deg. above zero; in Florida, 20 deg. to 24 deg. reported all about, while in this place the lowest noted was 26 deg. at 8 o'clock A. M. C. G. KENDALL.

Port Royal, S. C., Feb. 18, 1879.

The thermometer, Feb. 3, indicated 16 deg. above zero at six o'clock in Charleston. The following is a record of the minimum range of the thermometer there for seven years, taken at 8 A. M. each day:

	Deg.		Deg
1873. January 19	22	1876. December 2	26
1873. December 31	28	1875. December 19	25
1874. January 16	29	1877. January 2	28
1876. December 18	24	1878. January 6	30
1876. January 14	24	1879. January 4	23

THE LARGEST LEMON.—*Editor Forest and Stream:* I notice in the FOREST AND STREAM of December 12 that your special correspondent from Texas, who signed himself "N. A. T.," thinks that Texas has grown the largest lemon. Now I think Florida carries off the palm for the largest lemon. When I came from there in 1876 I brought a Sicily lemon which measured fifteen by fifteen and one-half inches in circumference and weighed twenty-nine and a quarter ounces. It was grown by Mr. John G. Webb in Manatee County, on the shore of Little Sarsota Bay. J. G. BRONSON.

Vernon Centre, N. Y., Feb. 10, 1879.

The Kennel.

A NEW METHOD FOR PREVENTING BARKING.

PHILADELPHIA, February 10, 1879.

EDITOR FOREST AND STREAM:

You gave in a former issue your remedy for stopping dogs from barking at night, stating the whip as your preference. A correspondent in last issue, in objecting to such a prevention, presents a point that to me appears well taken; for who wishes, when the thermometer indicates zero, to several times in the night jump out of a snug depression in a warm bed, seek the kennel, and pour out one's wrath most unmercifully on poor Touser, for one, at 3 o'clock in the morning, would not be likely to use that discretion which I will call justice tempered with mercy. This plan, however, at first thought, would seem at least to have this efficacy; it would give the dog's master a most refreshing airing, as he would sniff the morning breeze, and taste that sweet ambrosia that is supposed to lurk thereon. Our professor, however, used to call it malaria, of which the atoms, molecules and other inorganic matter were only dispelled by the sunlight. All scientists agree that it is the heavy atmosphere at break of morn that carries in suspension the most miasma. You will therefore observe that your plan, with its many other defects, has the important one of being unwholesome. Dr. Hall, in his valuable work entitled "How to Live," is very emphatic in his condemnation of disturbed and irregular rest. I have no doubt every one of your adult readers can call to mind the sudden pain caused by sudden waking, and the sleepless hours caused by rising and merely walking two or three paces for a drink of water. This exercise, however slight, immediately stimulates the mental organs to action. Now, the remedy which I will present further on does not avoid waking, but I do claim that it is an amelioration.

Your correspondent in last number, while condemning your suggestions, offers one of his own. Although it is an improvement, it also has many defects. For convenience of comparison I will designate it the "elevator plan"—a sort of hoisting apparatus, with lever attachment, by which he proposes to take man's most faithful, forgiving and obedient friend and servant, lift him up by a "choke and spike," suspend him in mid-air indefinitely, which would surely be the result if the line should become accidentally fastened. I therefore protest against his system on the ground of cruelty, and any reader who has sufficient wisdom and humanity to fill the shell of a filbert will coincide with this view.

Now, Mr. Editor, prompted by a humane impulse, I invented a plan of my own, which is superior, I think, to either of those mentioned above. I refer to my "ELECTRIC METHOD." The main points of superiority are briefly these: Infallibility, as it never fails; instantaneous action, as it has the speed of the electric spark; harmlessness and non-limitation as to distance. The kennel may be placed at the trout pond, down in the back field, or miles away, and be as effective as though the kennel was at one's door. Of course if miles away, the telephonic attachment must be used in order to convey the dog's bark to the sleeper, and the automatic alarm to insure his waking. The tones of the alarm are quite low and indistinct at first, but they gradually increase to the requisite volume. This arrangement was introduced to prevent that sudden waking referred to in the hygienic paragraph in the forepart of this treatise.

Directions.—Place on your dog a steel collar; on the inside should be several platinum nobbels, or bosses, with blunt points penetrating through the coat to insure connection. Fasten to the collar a copper wire, which you convey to the chamber window. With a two-inch auger you bore a hole through the window casing; then take an ordinary long-necked black bottle, which can be found in any sportsman's trunk, and they are always empty when at home. If there should be a miraculous absence of such vessels in the baggage, I would recommend looking under the denser part of the arbor vitæ, on the front lawn; then, with your seven karat diamond ring (which every sportsman wears) you cut off the bottle neck and insert it in the auger hole. Thus you obtain perfect insulation. Pass the wire through this to a battery, which should be a powerful one—say, one mule power. This might be placed under the bed to be out of the way. Con-

nect this with an ordinary telegraphic key, which screw to the headboard, not too high, but within easy reach. Beside this key drive a nail upon which to hang your telephone. The automatic alarm should be suspended directly under the pinnacle of the canopy. This alarm is shaped not so conically as a bell, nor is it the flat disk of the Chinese gong, but is a happy medium between the two, while it preserves all the sonorous tones of both instruments. Its diameter should be about 2 feet 9 inches measured on the transverse, and but 1 foot 3 inches on the vertical axis. This instrument is called the Lar-mo-gong. Primary accent on second syllable (mo), secondary accent on first syllable, while last syllable should be almost silent. It is from the classic Greek.

Now, Mr. Editor, let Towser's master retire to his gentle couch for sweet repose. He adjusts his night-cap and snuffs out the candle by inverting it in the candle-stick, when he smoothly glides into fairy land, dreaming of spring, gentle spring—ethereal mildness! When, lo! the dog barks! The gong sounds. He awakes. Without rising, he places the telephone to his lips, giving in harsh tones the command, "Stop!"—transfers telephone to the ear, then works the key vigorously, which transmits to Towser a series of electric shocks, while he listens through the telephone for the clawing, pawing, and ground and lofty tumbling that is going on in front of his dog coop *manibus pedibusque*. He repeats this "magnetic treatment;" for two applications in one night are deemed sufficient. As mentioned before, it is perfectly harmless, while the reaction is delightfully refreshing and is much safer than the automatic, dinamio-injector, a contrivance fastened on the kennel for the purpose of injecting powerful anesthetics, dynamite being the propelling power. I am now experimenting with a view to a division of the electric current, in order that one set of instruments may suffice for an unlimited number of dogs. All my endeavors to apply the method to cats have thus far been a failure, owing to their migratory habits, so that, as regards them, the old-fashioned "Lay plan" will continue in vogue.

I have not filed in the Patent Office at Washington my "I forbid," or *caveat*, as it is called, and do not intend so doing, for the reason that I am only actuated by a desire to afford relief to the largest mass of suffering humanity, which the machine would not reach were it patented. *Valeat quantum, valere potest.* Respectfully, BALMY SLEEP.

A FOX HUNT.

WOODSVILLE, N. H., Feb. 9, 1879.

EDITOR FOREST AND STREAM:

Having read in your issue of Jan 23 an account of a Pennsylvania fox hunt, I will give you an account of a New Hampshire fox hunt, the parties to which, though not so gaudily uniformed, were more successful. Last Friday afternoon, after the storm had ceased, Rev. J. N. Rich and Deacon Hunter, of Gilford Village, and Capt. F. L. Gilman, of Charlestown, Mass., temporarily sojourning at the Village, went down to their fishing-grounds on Lake Winnipesaukee, and began bobbing for trout. They had been there but a short time when they saw a fox making his way from Welch toward Davis Island, across the ice between Lock's and Timber Island. The fishing-grounds were off from, and a little east of, Thompson's shore, and the fox was about half a mile from the fishermen when they first saw him. The Captain had with him his breech-loading gun and four shells loaded with fine partridge shot, and he and the parson started in chase of the fox with the parson's horse and sleigh. The parson plied the whip like a jockey, and the horse struck out like a racer. The distance was rapidly lessened, and they were within twenty rods of the fox before he saw them. Then he changed his course and made for Timber Island, about two miles distant, at the same time increasing his speed. The parson's horse just spread himself in the wake of that fox, and to do the parson himself justice, it can be safely stated that he did not spare his whip, nor forget his text. He did forget his mittens, though, and came very near freezing his hands. It was an exciting race, and it was evident that the horse was gaining, as the ten inches of snow seriously impeded the progress of the fox, although having but little effect upon the speed of the horse. The Deacon, from the fishing grounds, was watching the progress of the campaign with great anxiety. Most of the time he was bobbing for trout about ten feet from any hole, and being a good musician, his reel beat perfect time for "Old Hundred." On they sped and when within about sixty yards of the fox the Captain rose up, took careful aim as he could, and sent a charge of shot after the fox. Then the parson's horse, not having been trained to that sort of sport, rose in rebellion, down went the Captain, with the small of his back balancing on the back of the sleigh, and it was doubtful for some time whether his centre of gravity would be determined outside or in; but the parson lent a helping hand, and landed the Captain finally in the bottom of the sleigh. The three remaining charges were fired, the fur flew, and one of the fox's legs was crippled so as to be useless, and his tail swung off a few points to the north. The excited Captain leaped from the sleigh, and engaged in a foot-race after the crippled animal. It was a pretty even race, and after running a quarter of a mile he concluded he was too fat for that kind of exercise. But the fox was so badly discouraged that they could drive him before the horse in any direction they wished, so they headed him toward the fishing-grounds to give the Deacon a chance for his share of the fun. But when about half way back a dog came in sight, and they directed his attention to the fox. A short fight followed, in which the dog came off second best; and to save the life of the dog the Captain knocked the fox on the head with the butt of his gun. It was a beautiful male fox, and weighed nine and a half pounds. ELCHO.

THE PITTSBURGH DOG SHOW.

PITTSBURGH, Pa., Feb. 15, 1879.

EDITOR FOREST AND STREAM:

To your correspondent who so effectually disguises himself as "Fair Play," in issue of 13th inst., I am indebted for certain corrections and criticisms, some of which I beg leave to acknowledge and explain—others to refute. As regards the St. Bernard dog Bruno's weight: He is right, and the report was wrong; whether the error was mine or the compositor's, I cannot say. A memorandum before me now gives the weight as 125 pounds, which was Bruno's weight as placarded.

For the dog referred to (entered by Mr. Givens), together with some others, I could find no name exhibited, either upon the books of the society or on his kennel; therefore I left it blank in my written report. The printed one differs from the original in that the word puppy is inserted in the blank space, and for which I am not responsible.

I know so little about dogs (on the show bench) that what I said about Mr. Gregg's Nellie should not be worthy the acrimonious mention he bestows upon it were it not that for saying what I did, I had better authority than my own ignorance, and perhaps as good as "Fair Play's." I refer to Mr. John Davidson, of Monroe, Mich.

I agree with him in thinking that dogs from imported sire and dam should be classed as imported; so does the owner of Thunder; but that under the regulations of the Pittsburgh Dog Show they are not so classed is evident by the fact that one of them, Thunder, won as a native. Consequently, there was nothing queer about it. And furthermore, the management are not noted for being connected with queer transactions. I and others whom I have talked with upon the subject entirely agree with "F. P." in the reforms he recommends.

Very respectfully, GEO. K. ANDREWS

P. S. The fact that I have signed my proper name coupled with another one, that I am rather timid and withal not very large, may explain to "Fair Play" one reason why I have tried to abstain from using the regulation ordnance of pen nghts of this ilk. A.

A REQUEST.

ST. LOUIS, Feb. 17, 1879.

EDITOR FOREST AND STREAM:

Will you kindly let me, through your columns, ask the secretaries of bench shows to be held during the year 1879 to favor me with a copy of their respective prize lists and catalogues, the latter marked officially with the winners. I want the information for Vol. II. of the Kennel Club Stud Book, which will be issued early in 1880, and which will contain records of all the shows and trials of the year 1879.

Respectfully, JNO. W. MUNSON, Sec'y.

POINTS FOR JUDGING DOGS.—We would say in reply to many inquiries that the price of the pamphlet containing "'Stonehenge's' Points for Judging Dogs" is 50 cents.

CANINE CONSCIENCE.—A correspondent of the London *Spectator* relates the following anecdote, which causes one to wonder whether dogs have consciences. In fact at times such remarkable instances of what is more than either sagacity or instinct occur that we are almost tempted to acknowledge that there may be something of truth in the Buddhist doctrine of transmigration:

A young fox terrier, about eight months old, took a great fancy to a small brush, of Indian workmanship, lying on the drawing-room table. It had been punished more than once for jumping on the table and taking it. On one occasion the little dog was left alone in the room accidentally. On my return it jumpted to greet me as usual, and I said, "Have you been a good little dog while you have been left alone?" Immediately it put its tail between its legs and slunk off into an adjoining room and brought back the little brush in its mouth from where it had hidden it. I was much struck with what appeared to me a remarkable instance of a dog possessing a conscience, and a few months afterward finding it again alone in the room I asked the same question, while patting it. At once I saw it had been up to some mischief, for with the same look of shame it walked slowly to one of the windows, where it lay down with its nose pointing to a letter bitten and torn into shreds. On a third occasion it showed me where it had strewn a number of little tickets about the floor, for doing which it had been reproved previously. I cannot account for these facts except by supposing the dog must have a conscience.

DOGS AND DOG SHOWS.—Dog shows have existed in this country for a few years, but at first they were either on a limited or qualified scale, or adjuncts of other exhibitions, as at the late Centennial, where the dog show was a side issue of a general live stock show arranged under open sheds, with acres of mud or dust to traverse in order to see them. Consequently, though this show was fair in some regards, the conditions were a drawback to any enthusiasm. It remained for the Westminster Kennel Club, of New York, to develop and concentrate the interest in these exhibitions. Rather it was the enterprise of Mr. Tileston, of FOREST AND STREAM, under the auspices of this club and backed by the substantial aid of Mr. Lincoln as Superintendent, who has since acted in that position at nearly every successful exhibition in this country. Their first show, in the Spring of 1877, was a hazardous experiment involving a ruinous outlay, but the gentleman had pluck, with a confidence that if a strong representation of the best types of "everybody's friend" were gathered together, everybody would go to see them. So, dogs of all breeds were gathered by the hundreds and well arranged for inspection in the spacious Gilmore's Garden. Their judgment was justified by the result. The garden was crowded by thousands, and no opera or ball ever attracted a more distinguished gathering of fashion and wealth than this dog show. The exhibition proved a substantial financial success and established dog shows among the permanent institutions, besides encouraging the management for a more comprehensive show, with an enlarged premium list for 1878. Their next show, which is appointed to open at Gilmore's Garden April 8, will be still more comprehensive. A very valuable premium list is being arranged, and an unusually large entry list is expected. Many representative dogs have been imported expressly for it. The Westminster Kennel Club Show will be followed by large shows in Boston, Philadelphia and Baltimore. The influence of dog shows is the same as that of stock and poultry associations. It stimulates an interest in improving breeds and keeping them pure. As it costs no more to provide for a well-bred horse or cow, so the mongrel of low degree costs as much to keep as the well-bred dog, without giving nearly the equivalent in companionship and intelligence.—*Easton Express.*

RETRIEVING GREYHOUNDS.—*Brookville, Kan., Feb. 17.—Editor Forest and Stream:* Seeing in your issue of January 30 a letter from "C. B.," headed "A New Retriever," I thought I would give your readers my experience with greyhounds. I have a pack of twenty-five at present, and among the number I have two that will retrieve jack rabbits as well as any dog I ever saw. In chicken shooting season I have had them sneak out behind me out of sight until the first shot, and then they would dash past the setter and go straight to the dead bird and bring it in as well as could be done by a retriever. I have had them carry a jack rabbit fully two miles from where they caught it back to me. I was out with them one day, and they started a wolf, and ran it about a mile before they caught it close to the edge of a stream, and in the fight that always follows the capture of a wolf they had broken the ice with which the stream was lightly crusted, so that when the dogs left him he was forty yards from the shore, lodged against the ice. How to get him out without getting wet was the next question. Some one asked if the dogs would not go in and get him, so I pointed to the wolf, and told the dogs to go get it; and to my surprise and satisfaction one of the greyhounds went into the water and brought the wolf to shore, but he could not lift it from the shallow water at the bank. Considering that the day was cold and the water freezing I think this good; for I have seen setters refuse water when crusted with ice. I have raised and always keep a number of greyhounds, and I find they have more intelligence than they are given credit for. I could give some amusing incidents illustrating this, but I have already taxed your valuable space too much. At some other time I may give you an account of my wolf, antelope and jack rabbit hunts, which may prove interesting to some of your many readers. J. F. G.

We shall be most pleased to hear further from our correspondent as to his experience with his greyhounds.

ACCIDENT TO A PACK OF FOX HOUNDS.—It was a sad accident that befell the Roscommon staghounds while lately hunting a red hind specially procured from Yorkshire. The meet took place at Boyle, and the run led in the direction of Cavetown. Roscommon abounds in small lakes, upon which, at the time of the grievous disaster, the ice still remained. At Cavetown the hind was sorely pressed, and, following her natural instincts, betook herself to the large lake in the vicinity of this town, and slipped forward till she reached the middle of the lake, and then turned round to give battle to her pursuers. The hounds were soon upon the poor beast, and, attacking her on all sides, pulled her down on to the ice, which, unable to bear the weight, gave way, and precipitated both pursuers and pursued into the freezing waters. Every possible effort was made by the spectators of the catastrophe to extricate the floundering pack, but, owning to the thinness of the ice, with poor result. Only eight of the thirty hounds constituting the pack were rescued.—*London Truth.*

ABSURDITIES.—Our contemporary, the Chicago *Field*, characterizes as absurd some remarks lately published in the *Turf, Field and Farm* upon the breeding of setters. The only absurd thing in this regard is the fact of the *Field* asserting itself as a critic upon dog breeding or dog matters.—*Turf, Field and Farm.*

—Mr. Chas. A. Reed, of this city, claims the name Mallard for his retrieving spaniel by Andrews' Sport out of Adrich's Nellie.

—Mr. J. Otis Fellows, of Hornellsville, N. Y., claims the name of Kittie O'Neil for his red and white Irish setter puppy by Horace Smith's Buck out of Edward Lohman's Quail II., whelped Nov. 20, 1878.

—Mr. William Vie, of St. Louis, Mo., claims the name of "United States Kennel" for his breeding kennel. The same gentleman desires us to announce that he has sold his puppies by France out of Zita as follows: One each to G. R. Craig, Baltimore; E. L. Israie, New Orleans, La.; J. McWorth, Canton, Mo.; and W. Hughtsbury, St. Louis, Mo. Also two to G. S. Thrall, New Harmony, Ind.

—It was Mr. H. K. McCoy, of Baltimore, who claimed the name of Chance for his dog in a recent issue, instead of McLane as printed.

—Mr. J. V. D. Walker, of Jamaica, L. I., claims the name Shooter for his black-and-tan setter one year old, by Dr. Atin's Glen out of Pettit's Nelly; she by Jerome's Shot out of Capt. Bennett's Bonny.

—Mr. Geo. H. Thomson, of Philadelphia, in claiming the name of Diogenes recently for his setter, should have stated that he was by Mr. Fassitt's Dash out of Mr. Furness' Psyche.

—Mr. G. Langran, of Yonkers, N. Y., claims the name Marquis of Lorne for red Irish setter pup, with white feet and breast, whelped November 23, 1878, out of Nell II., by Elcho.

—Mr. J. Otis Fellows' cocker bitch Fannie (No. 302 F. & S. Register) whelped five puppies—three dogs and two gyps—Feb. 8. They are said to be the finest ever seen in this part of the State (Hornellsville).

—Mr. W. S. Timberlake's (of St. Paul) bitch, Lady Cypress (Carlowitz-Lucy), winner at last St. Paul show, whelped on the 8th instant twelve puppies, by Druid. Three have since died, leaving nine; six black and white, two lemon and white, and one liver and white. Six dogs and three bitches.

—Mr. A. Fuller's native setter bitch Fannie, bred to C. S. Boutcher's Bismarck Don of Easton, on Feb. 13 whelped six dogs and four gyp puppies.

Mr. E. F. Mercilliott, of this city, has sold his setter dog Ned, by Morford's Quail out of champion Grace, to Mr. Jas. Lewey, Esq., Rochester, N. Y.

—Mr. J. J. Snellenburg, of New Brighton, Pa., has purchased from L. H. Smith, Strathroy, Canada, his Laverack setter bitch Peeress and will breed her to Thunder.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

HUGO, Colorado.—See answer to another inquirer about wild rice.

MAC, Mercer, Penna.—The cause of your dog's death was undoubtedly a severe fit.

J. W. H., Mexico, Mo.—Address the *American Bicycling Journal*, Devonshire st., Boston.

Canvas Back, Cleveland.—For plans or model of sharpie address Thos. Clapham, Roslyn, L. I.

B. and P., Utica, N. Y.—For Hyde Clip address Brainerd & Steele, jewelers, 9 Maiden Lane, New York.

C. C. R., Cleveland.—Use inside ballast for wide centreboard model. See lecture of A. Carey Smith, Esq., this issue.

JIM, Indianapolis.—Send your address to Mr. H. W. St. John, Mtna Life Insurance Co., Hartford, Conn.

H. S.—Can a pistol-grip gun stock be bent to drop more successfully? Ans. Yes; but do not let it get wet afterwards.

A. C. R., San Jose, Cal.—*Les bottes sauvage* in English means savage boots, or savage's boots. See advertisement in another column.

A. S., Windsor.—We can only suggest that you give your dog a total change of diet, and for a week give her every day two capsules of tar.

H. E. L., Hannibal, Mo.—From your description we doubt if your dog is a well-bred setter and question whether he can be cured of his gun shyness.

COLUMBUS.—Will you kindly inform me in your next issue the best place to buy fancy pigeons? Ans. Address H. V. Crawford, 120 Hudson st., N. Y.

G. H. K., Hummelstown.—If a wounded bird flies to a fence out of bounds and returns thence within bounds, it may not be gathered as a dead bird. Once out, always out.

J. D., Milwaukee.—Please give the name of some party or parties who own, breed, or deal in King Charles or Blenheim spaniels? Ans. No person dealing in these dogs to our knowledge.

DOG R. L., Baltimore.—E. S. Wanmaker, of Statesville, N. C., will break your dog for you for $100, or sell you a broken dog for $75. You can procure a broken dog, but not a retriever, for $50.

WHIST, New Haven, Conn.—Please inform me by what system is whist played among the leading whist clubs of the country? Ans. The system now is to lead trumps and follow with short suit.

FREDERIC, Sing Sing.—Woodruff Scientific Expedition starts May 8, James O. Woodruff, Director. Headquarters, St. Nicholas Hotel, New York. Send to him for pamphlet and further information.

H. M., Guilford, Conn.—My cocker spaniel bitch was in heat Nov. 21, 1878. When will she be in season again? Ans. She comes in again in June or July; the period varies from six to eight months.

N. M. S., Bridgeton.—Can send you 14 back numbers containing articles on boat building on receipt of $1.40. For sharpies see last numbers containing letters on same. For canoes address our advertisers.

H. H., New Haven.—Will you please give me the dimensions for a regulation Creedmoor target, 100 ft. range? Ans. The N. R. A. rules provide only the target with 8in. bull's-eye for all distances at or below 300 yds.

W. S., Newark, N. J.—Where can I get some of Mr. Green's barbless hooks; also where Hall & Sons fish lines are sold? Ans. Fish hooks, apply to Seth Green, 15 Mortimer st., Rochester; for lines apply to any tackle shop.

G. C. A., St. Paul, Minn.—At what price can I purchase a fine thoroughbred Irish spaniel pup—a dog—and where? Ans. We do not know of any for sale, but you might write to J. H. Whitman, Chicago, who breeds them.

F. N. B., Newton Centre, Mass.—Where can I get a good English mastiff puppy to bring up with young children, and what do they cost? There are none in the market here. Ans. We doubt if you can find one without advertising.

T. T. S., Rochester, N. Y.—I want a few nice specimens of "Canada" or "Spruce grouse"—dead birds for mounting. Where can I get them? Ans. Seldom seen in our markets. Might get them in Montreal, Quebec, or St. Johns, P. Q.

C. A. R., New York.—1. I have a spaniel that I wish to enter in the bench show in this city in April; what are the conditions of entering? 2. What is the price of your book on "Bench Show Points of Dogs?" Ans. 1. The premium list, containing rules, can be had on application at this office. 2. 50 cents.

J. M. S., Bridgeport.—Can you tell me where I can get a complete treatise on dog breaking, the book for judging dogs referred to in last week's F. & S., and a guide to trout and fly fishing; also the prices? Ans. The first and last you can find in Hallock's "Sportsman's Gazetteer;" price $3. The price for the "Points for Judging" is 50 cents. Both are sent from this office.

N. H. P., Chicago, Ill.—In your issue of Feb. 13 I notice that your Kennel Editor has compiled from "Stonehenge's" latest edition of "Dogs of the British Islands" the scales of points for judging all varieties of dogs at bench shows. If you had mentioned the price of the pamphlet I should have sent it, as I would like to have one. Ans. The price of the pamphlet is 50 cents.

INQUIRER, Rockwood, Canada.—1. Can you give me a recipe for waterproof pants made with socks on for wading? 2. Also for a canvas canoe. 3. Are brass shells as good as paper for breech-loading shotguns? Ans. 1. See rubber cement, "Sportsman's Gazetteer." 2. See "Sportsman's Gazetteer." 3. Yes; we would recommend them. If you are going beyond reach of dealers in ammunition.

SUBSCRIBER, Birmingham, Conn.—Please inform me as to some of the fine points which characterize a full blooded pointer, and also recommend some book on the training and raising of pointers? Ans. No book devoted to the training and raising of pointers. Hallock's "Sportsman's Gazetteer" and the "Bench Show Points" will give you the information you desire. Both can be had at this office.

FROST, Lynn.—I have an old model Ballard cal. 44 straight shell, 80 grs. powder 220 grs. lead. Can I have it chambered for a 44 Winchester, model 73, and have good results in shooting? The gun shoots well, but I would like to increase the range and flatten the trajectory which I think can be done by the use of this cartridge. Please give your judgment in next paper. Ans. The change would not be advisable.

T. A. S., Macon, Mo.—For wild rice culture see our issues of Dec. 26, 1878, and Jan. 30, 1879. The seed may be sown in the spring or fall. It will grow in water one inch in depth and in water much deeper. The maximum depth is not yet determined. If the seed does not sink soak it until it does. Send to A. M. Valentine, Janesville, Wis., and secure your supply in advance. The experiments with rice have been very successful.

MINE, Baltimore.—1. Is there any medicine which will not injure a a setter bitch that will make her go in heat? 2. Can you tell me a cure for a wart on the end of my dog's tail? 3. Does the white on the breast of a setter ruin him for a bench show? 4. What is the price of Hallock's "Gazetteer?" Ans. 1. Tincture of cantharides in doses of 5 drops is recommended by "Dinks," but we do not approve of its use. 2. Remove it carefully with a knife, and touch the place with nitrate of silver. 3. No. 4. $3.

W. H. W., Philadelphia.—A and B agree to shoot a pigeon match at five birds, Rhode Island rules governing. B putting a bird in trap for A to shoot at, permitted it to escape; A killed it, but not counted of course. On coming to the score a second time to shoot, he called "Pull," and his gun snapped. Upon examination it was found not to be loaded. B claims it should be scored a miss; A claims he should have another bird to shoot at. Ans. It is a lost bird for A, and he is not entitled to another.

S. Y. H., Chestnut Hill.—1. What are the points of a thoroughbred St. Bernard, especially the color? 2. Where can one be purchased at a reasonable price near Philadelphia? Ans. 1. The colors of St. Bernards vary greatly; red and white, fawn and white, brindled and white, orange tawny, and sometimes all white. We have not space for the points, but you will find them all in "Stonehenge's" Scale of Points, which will be sent from this office on receipt of 50 cents. 2. You may get a puppy by addressing Le Roy Z. Collins, Lancaster, Mass., or Burdett Loomis, Hartford, Conn.

N. E. W., Newark, N. J.—To make bird-lime: Boil linseed oil of the best quality until it becomes thick and glutinous. Should be boiled in an earthen pot in the open air for two or three hours. If boiled in an iron vessel it takes fire, and is useless for this purpose. The pot must also have a tight fitting cover. Then set away the oil thus prepared in a tin box or cup, with a tight fitting cover. To use it, select dry sticks eight inches long, and as thick as a straw. Drive a stake into the ground, and fasten these small sticks into it by inserting them into cuts in the side. Then place a "call bird" to attract the other birds.

W. J., Fort Scott, Kan.—In your next issue state where Gen. Jubal A. Early lives. A and B play a game of Cassino; there is a four on the table and one deuce; A plays an ace on the deuce, and builds it three; B plays an ace on the tray that A built and calls it a four, and lays the four that was on the table with the one that he built, and calls it a pair of fours—all at the same time; and when he plays next time he takes it in, and B claims that it cannot be done. Ans. Gen. Early's home is in Lynchburg. B can, we think, build on A's built up tray, making it a four, and add thereto the four spot on the table. Rules prevailing in localities, however, usually govern in this game at cards.

J. F. M., Lewistown.—1. Is it customary to crop the tails of setters; if so, how? 2. I have given my pup (nine months old) santonine (one grain each day for three days, and ½ oz. castor oil the fourth day) as you recommended in a January number. As it does not seem to do him any good should I give him areca nut? How much at a time, and how often; and should I give him oil after taking it? Ans. 1. It is generally better to wait before docking a setter's tail until he has attained his growth, then if it is too long it can be taken off to the proper length. 2. Give him 2 grs. for each pound of his weight, following it in four hours with the castor oil.

H. K. J., Frankford, Pa.—Can you give me any information in regard to a book called "The Trout Fisher's Guide," by T. W. Danson, Pittsburg, Pa., 1850? It is noticed in T. Westwood's general catalogue of angling books, and in R. Blakey's "Historical Sketches of Angling Literature," London, 1856, and he quotes a poem from it on the "Salmon Fly," page 286. This poem F. Francis, in his book, "By Lake and River," London, 1874, page 131, quotes also, and attributes it to a well-known Tweedside angler. 2. Is the edition of J. Cypress, Jr.'s, works, advertised in your columns, a new one, or the edition, in two volumes, of 1842, with a preface by H. W. Herbert? Ans. 1. The book is very scarce—a great rarity. The only way to procure it would be to leave an order with some dealer in New York, who might pick it up at an auction sale. J. Sabin & Sons, 84 Nassau st., might find it for you. 2. We can secure a J. Cypress, Jr., edition of 1842, for $3. The original edition is very scarce.

T. M. P., New York.—As an engineer you are probably aware that action and reaction are always equal. Water being a yielding medium any pressure brought to bear against it will cause the column affected to flow in the direction of the pressure. The greater the pressure the more rapid will be the flow. With the screw or paddle the same holds good. The speed with which the water is driven astern is an exact measure of the efficiency of the propeller, and is the same for any and every type of propeller that is exerting the same amount of pressure. You might have known that "slip in line of the keel" referred to slip sent aft, or away from the vessel, not forward, consequently your citation of a wheel wholly immersed with slip in all directions and no motion to the vessel does not apply. You must not confound theoretical slip with practical slip. The latter should more practically be called "loss of power" and is due not to the yielding of the water, but to "churning," "friction," ineffectiveness of the hub, etc. The loss of this latter kind is often lumped by practical men under the term "slip," but is very different in its nature from the slip we had reference to in our article. For authority see Scott Russell, Froude and London *Engineering*. Before showing such anxiety to find fault be sure you have a good head of steam, or you may get caught on the centre at the first turn.

L. W. A., Portland.—The Seawanhaka Y. C. has legalized spinnakers, and you may see them on some of the club's yachts the coming season. The following will serve as a description. The spinnaker consists of a large triangular sail of light material, and is used in going free on the side opposite to the mainsail, or on the weather side, if wind not dead aft. The head is hoisted by halliards to the masthead, or to the topmast head if a large one be used. The sheet is trimmed down to the deck at the mast, and the third clew is hauled out by an out haul traveling on a light spar known as the spinnaker, or lower boom. This boom is shipped amidships by a goose-neck to a band around the waste in smaller vessels, but in larger ones often to a strap in the chains. It is "topped" as desired by a topping lift from masthead to eye in band near end of boom, and "guyed" fore and aft by the "forward guy," leading from same iron strap as topping lift to snatch-block on rail forward, or at bowsprit end when standing bowsprits are in use, as in schooners. "After guy" leads aft to the quarter, or to the waist on schooners. When not in use the spinnaker boom is hauled alongside and secured, or is topped "up and down" the mast. The sails are used only with the wind aft or quartering, are easily handled, and very effective. All cruising or racing cutters abroad carry them, and most schooners have spinnakers for both fore and main. We believe they will rapidly come into use with us. The tack or out-haul of the spinnaker is often carried forward out to bowsprit end, when the sail, if set to leeward, will make a substitute for balloon-jib or jibtopsail.

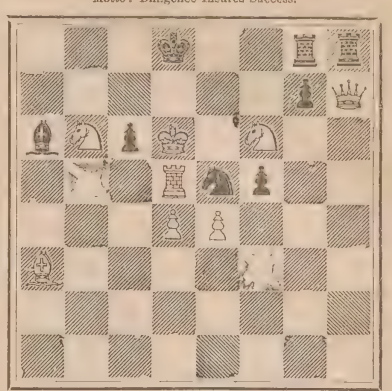
BIG TOPMAST, Buffalo.—For a racing rig of a 23ft. jib and mainsail boat use the following proportions, though it must be said that with shifting ballast, it is next to impossible to give any standard data, as all depends upon the number of sand bags carried and the distance and readiness a smart crew can "rig out." We hope to see shifting ballast abolished before long. This pernicious custom only holds in New York waters, in other places it has about been given up. Our advice to Lake yachtsmen is not to fall into the folly of shifting ballast and thereby destroy all value of model, making races a mere question of brute force and foolhardiness. The New York racer of the sand-bag type will carry as follows: Hoist, 55 per cent. of water line; boom, 125 per cent.; gaff, 52 per cent. of boom and luff of jib, 150 per cent. of water line. Use 6oz. duck, double bighted. Cruising rig, 25 per cent. less area. See back numbers of FOREST AND STREAM for more information. When going on a cruise, take provisions according to pallate and facilities, not forgetting laxatives in the way of fruit. Fishing gear is always useful. In boatswain's department, scrubbing gear, spare blocks and gear, sister hooks, leaders, bolt canvas, needles and twine, slush, marlingspike, seizing stuff, swabs, hatchet, nails and such other material as local experience demands, especially relating to ground tackle. In navigator's department take lead and line, deck lantern, wick and oil, sidelights, anchor light, charts, spy glass, log book, binnacle, matches in close metal case, life preservers, and patent log for long cruising; also fog-horn and colors. Library according to taste, including sailing directions, and, as a matter of course, all the latest copies of FOREST AND STREAM, shift of clothes, long togs for the girls ashore, oil skins and pea jacket. Finally, we have a prior claim to your *nom de plume*, being the "only original." B. T.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 45.

Motto: Diligence Insures Success.



White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 42.

1—Q-Q B7	1—Kt—B, R, P or
2—Mates	Q moves

Game No. 103.—DANISH GAMBIT.

The following game, which we extract from the *Nordisk Skaktidende*, apart from its intrinsic merits, is interesting, as having been played by Godthaab in Greenland, and as being the first from that distant country which has appeared in print:

White. B. Sorensen.	Black. C. J. S.	White. B. Sorensen.	Black. C. J. S.
1—P-K4	1—P-K4	13—K R-K	13—P-K B3 (f)
2—P-Q4	2—P tks P	14—Kt-Q4	14—K-B2
3—P-Q B3	3—P tks P	15—P-K Kt4 (g)	15—P-R Kt4
4—B-Q Kt4	4—P tks P (a)	16—Kt-K4	16—B P tks R
5—Q B tks P	5—B-Kt5 ch	17—Kt-K6	17—Q-Q2
6—Kt-B3	6—Kt-Q B3	18—P-K B4	18—P tks P (h)
7—Kt-B3	7—P-Q3 (b)	19—R-B	19—Kt tks Q P (j)
8—Q-Kt3	8—B-K3 (c)	20—Kt tks K B P	20—Q R-K B
9—B-Q6 (d)	9—K Kt-K2	21—Kt tks Kt ch	21—K-K
10—Castles Q R	10—B tks Kt	22—R-K sq	22—K-Q
11—B tks B	11—B tks B (e)	23—Q tks P	23—R-B2
12—P tks B	12—Kt-K4	24—Kt-Kt4 and wins (k)	

NOTES.

(a) The most prudent course here is to play 4—Kt-K B3, for if these 5—Kt tks P, 6—Kt-Q B3; 6—Kt-K B3, 6—B-Kt5; 7—P-K5, 7—P-Q4, with a good game. And if 5—P-K5, 5—P-Q4; 6—B-Kt5 ch, 6—B-Q2; 7—B tks B ch; 7—K Kt tks B; 8—Kt or Q tks P, 8—P-Q B3, and Black has a Pawn ahead with a safe game.

(b) Mr. Sorensen justly remarks that "Kt-K B3 is here a necessary link in the chain of the defence." The text move is decidedly inferior

(c) Q-K2 would have been answered by Castles, but if followed by B tks Kt and Kt-K B3, it appears to us to be the correct play.

(d) Much stronger than winning the proffered Pawn.

(e) We should have preferred Castling at once. This capture leaves the Q Kt no good square to go to, and makes him speedily a mark for attack.

(f) Weak. Castles is again, perhaps, the best move, though in any case Black would not have an enviable position.

(g) With the intention, apparently, of playing the P-R5, and thus still further cramping his adversary's movements.

(h) White's play from this point—and indeed throughout the game—is of a very superior order.

(i) It is a question whether Kt-B4 would have been any better. Black cannot prevent the opening of the B's file to the Rook.

(j) This costs a piece, but there was no move to prevent some loss.

(k) Better than B-R5, to which Black could reply by Q-B; whereas if he now makes that move, there follows Kt-B6 ch and Q-Kt5, etc.—*Chess Players' Chronicle.*

CURSORY JOTTINGS.

MANHATTAN CHESS CLUB—*New York, Feb.* 22.—Second annual banquet at Cafe Logeling, 49 Bowery. Distribution of the club tournament prizes:

	Games Played.	Games Won.	Percentage.
Chas Mohle.....1st prize.....	43	35	81.4
L Bloch.....2d "	46	36½	79.35
D Graham Baird 3d "	44	34	77.27
J W Baird.....4th "	44	33	75

The fifth prize, for best game, not yet awarded. Toasts—"Manhattan Chess Club," L. G. Hellwitz, President; "The Day We Celebrate," Rev. Mr. Bingham, U. S. N.; "The Present Chess Champion of America," Capt. McKenzie; and others, responded to by Adolph Mohle, Esq., Limbeck, J. Trumbull Smith, De Visser, L. Cohn; "The Press," Mr. Kunkel; Allen, Delmar, Lemb. Mr. Baird (Graham) challenged Mr. Mohle, the first prize winner, to play a match of seven games for $25, draws to count one-half. Mr. Mohle has accepted this challenge, and the match will be played within three months.

—In the Lowenthal Problem Tourney No. 1, conducted by the *Westminster Papers*, the prize winners are: 1, Mr. H. J. C. Andrews, London; 2, J. W. Abbott, London; 3, James Menzies, London; best two-mover, H. J. C. Andrews; best three-mover, J. W. Abbott, of London. Among the competitors we notice the name of Mr. A. P. Barnes, of N. Y.—the only American. Two of the competing sets were entered by ladies—Mademoiselle Clem, of France, and Sophie Schelt, of Germany. The foreigners, including the three above mentioned, numbered only five. We have not found time to weigh the value of each set, and cannot therefore express an opinion as to the judgment of the judges and the umpire, the latter of which was called upon to decide only as to the second and third prize sets. The mere fact that London carried off all the prizes should not excite suspicion, or impugn the honesty of the judges and umpire. Had this, however, been the case in an American tourney, our European friends might have looked upon the award differently. In this connection we beg leave to inquire whose set was superior to that contributed by Mr. Loyd to the late A. C. and P. Association Tourney? Mr. H. J. C. Andrews is awarded the *Papers'* prize for solutions and reviews. We do not for a moment doubt but what this prominent and recondite critic and solver is entitled thereto nevertheless his criticisms (if our recollection does not mislead us) on his own problems may have influenced the judges of the tourney, who were ignorant of the names of the competitors.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 27, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that must not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

EDITORIAL REPRISALS.—The editor of the Chicago *Field* has mailed us in advance three printed columns of flat denial or controversion of nearly every statement contained in Mr. Hallock's published account of the origin of the Minnesota Field Trials controversy, accompanied by an autograph letter, in which he assumes that our sense of justice and fair play will induce us to publish it. Now, we do not feel justified in imposing Dr. Rowe's stuff and twaddle upon our readers. Those who have interested themselves sufficiently in the wrangle to be inquisitive will find it in the next Chicago *Field* as we are promised. We have always endeavored to publish a clean paper, and do not care to smirch it now. Besides, the two papers have nothing in common, either as to character or contents, and we will not burden our patient constituency with what would prove distasteful and unprofitable to them.

PREVENTION OF CRUELTY TO CHILDREN.—The Fourth Annual Report of the New York Society for the Prevention of Cruelty to Children, shows that during the year 351 cases have been prosecuted, and 304 convictions secured. The Society has placed 619 children in various homes and institutions, and temporary relief has been given to 286 children. An important branch of this work is the rescuing of Italian children, who are held in virtual slavery by the padrones, and the efforts of the Society are directed towards abolishing their traffic in the child slaves. The Report states that the cause of fully two-thirds of the suffering and abuse of children is intemperance. Five new societies have been organized in other states, and the influence of the New York Society is felt abroad. We take pleasure in commending its objects and work.

SPORTSMAN'S PHILOSOPHY.—The editor of a Western paper being threatened with assassination if he published an article put in the objectionable matter the next morning with the explanation that he would "just as lief die now, when fishing was out of season, as at any other time of the year." The San Francisco *News Letter* has discovered an impecunious fellow considerably out of pocket and at elbows, who carries a gun case stuffed with wood—a sort of dummy—and he explains: "You see, they think a fellow is going hunting, so my seedy clothes pass muster."

☞ FOREST AND STREAM will be sent for six months for $2, or for three months for $1. To clubs of five or more, $3 per year.

AN OFF-HAND LEAGUE.

THERE are now a dozen or more rifle clubs about New York City, each of them either nominally or actually organized for the promotion of off-hand practice, and during the season a large amount of work is gone through with. In addition to the private club matches, the formal competitions between one and another of the clubs would fill a liberal report, and those friendly rivalries are productive of no end of genuine sport. To systematize the season's enjoyment, to give a certain degree of order and completion to the working out of that indefinite problem—who are the best team? we would suggest the formation of a short-range club league or confederation. Precisely how broad or how restricted its platform of agreements should be in our opinion, we are not now prepared to indicate; but the principal idea should be to arrange such a scheme of matches for out-door work during the season, that each club should meet each other club under precisely the same conditions, and then by a survival-of-the-fittest process the best men would have amply shown their superiority before the year closed. The merits of this plan would be that each team would set about accomplishing precisely the same task, that the gauge for judging each would be the same, and that the final winners would have shown their excellency beyond all cavil or hint of fluke. The number of men per team, the number of rounds per man, questions of rifles, sighting shots, and the order of shooting, with the ranges, could be settled after it had been determined to try such a league. Now is the time for such formation, and there would seem to be no better opportunity than at the gathering of off-hand shooters which the FOREST AND STREAM Tournament will bring together.

The subject is at least worth a fair and careful consideration, for in its successful carrying out is the surety of a great fund of profitable contention. The league need be an organization of no expense; markers and range costs would be no more in the case of a match than at ordinary practice; and in such a series of contests, where the control is in the hands of the shooters and not of outside non-shooting "Directors," there could hardly fail to be an entire absence of wrangle and protest. Such leagues have worked well in other field sports, and, if kept clear of the taints of professionalism and the other disturbing elements which our amateur shoulder-shooters recognize, as well as the honor of coming out victorious in so severe a contest as the league matches would be, could not but attract the very best effort of all our marksmen.

ARCHERY'S DISAPPOINTMENTS AND FREAKS.

IT would be base presumption for us to undertake to treat of archery from any other standpoint than that of a tyro; but it does not require very long practice to find out that its "witchery" is that of a coquette who retains her admirers in her toils by alternate smiles and frowns; whose attractions are unequalled but whose moods are rather uncertain.

One of the commonest causes of disappointment is too much anticipation. If there is one thing that seems easier than another to one who has never tried, it is to hit a four-foot target at any moderate range, and the first time one witnesses any bow-shooting he is apt to be more or less sarcastic, and to think, and perhaps to say, that he could do a great deal better than that himself, and not half try. When he does try he is somewhat dismayed at the number of things he finds out in the first five minutes; but unless he is different from the average human being, he will still retain his first impression, only admitting that he has not quite got the knack of it yet.

The idea is deeply rooted in the human breast that skill in archery is a trick which may be caught in a moment by a favorite of fortune, such as most of us are. No beginner would be surprised at equalling the score of a Fisher or a Palairet, and the more of a beginner he was the less astonished he would be. Hovering ever close to him is the phantom of a discovery which in one supreme moment shall turn his dreams to realities. He expects to catch it every day, to blunder on some trick of holding, drawing, aiming, loosing; a talisman hid through the ages awaiting him, and which shall turn all things to gold—and he will find it too. Ever and anon as he tries some new plan his heart will bound high with the hope that he has struck it at last, but when he next puts his finger on it, behold! it is not there.

But this state of things is one to which there are many apparent exceptions. Archery, again like a coquette, has a way of often bestowing her brightest smiles on new acquaintances The beginner who makes an astonishing score is not an uncommon phenomenon, and it is mortifying to one who has by patience reached a somewhat satisfactory score to see it nearly or quite equalled by one who "had never taken a bow in his hand before"—but let him be patient. The big scores of beginners have a way of not holding out, and the old simile of the rocket and the stick thereof will be wanted pretty soon. It is a thing which we do not profess to understand, but which we have often seen—a most marked falling off in achievment after the first few days or perhaps weeks; a period of discouragement which we fear has lost to the world many a real archer. But this point safely passed, the aspirant becomes an archer. Whether good or bad, he is still an archer, one who has taken to himself his art for better or worse, and is not to be separated from it. It would be hard to picture to one who has not felt it the utter absorption of such a one while practicing. All human cares and hopes, loves and hates fade from memory, save only those of the hour. For the time the target's circumference incloses his world of things hoped for—though his world of things reached is apt to be far more extensive. A succession of bad shots leaves existence a hollow mockery, and only by a centre hit or two can he be reassured that life is not an empty dream.

Remembering this, and remembering too that at fifty or sixty yards distance it is often, perhaps generally, difficult to see just where an arrow hits, try to realize the feelings of Aspirant when his arrows have flown, one by one, apparently straight and true; when regularly after each has come to his ears that most musical of all sounds, the thud of the arrow on the plaited straw; when he springs forward doing all kinds of sums in nines and sevens in his head the while, and sees ominous spots appear on the outside of the target. Maybe they are strains or rents! Not so; at each step sickening doubt grows into dreadful certainty that his sums must all be done in ones and threes.

Aggravating, too, is the willful spirit that sometimes seems to possess a bow that will not hold steady and arrows that will not go straight; when neither wrath nor prayer will avail to coax or drive a single arrow anywhere near the centre. The first goes to the right, the second to the left, a third falls short, a fourth sails over. With an effort to which the taking of a city were a light matter, Aspirant bites off short the "winged words" that spring to his lips, and succeeds in shooting a fifth carefully and calmly, only to see it glance a rueful wreck from the target stand, while the broad face of target seems to wrinkle in scoffing smiles. This kind of thing generally happens either just after one has made an especially good score or when there is an unusual number of spectators; and the utter exasperation it causes can best be expressed in words of Trojan Pandarus spoken four thousand years ago, after failing in a couple of fair shots: "Now, if I return home safely may some enemy strike off my head if I, having broken this bow, do not with these hands cast it into the fire." Humanity is indeed alike in all the ages.

Once, not long ago, there was an archer. He had made enough progress to practice at forty yards with some little success. He encountered a few friends who, just beginning, were practicing at twenty paces at a two-foot target. They courteously invited him to join them and show them how. Loftily he accepted, wondering whether he should be able to bear their admiration modestly enough, and, not knowing enough to change his range, readily shot every individual arrow too high—made the poorest score of the lot—and retired feeling about eighteen inches high. We know all about his feelings; we decline to state why.

We could give the author of the delightful essay on the "Total Depravity of Inanimate Things" some new points; for never was there anything, animate or inanimate, more given over to original sin than an arrow. The manner in which they will succeed in hiding themselves when that seems impossible would be admirable if it was not so aggravating. We have known them to deliberately turn off on the ground at a right angle, to seek a loose but apparently inaccessible board, and even turn once more to be sure to get completely under it. We have known them to glide smoothly through holes barely big enough to pass them to get into a hen house. The trick of seeking any particularly thick tuft of grass in the neighborhood of the target is getting rather stale now; we always look first for them there. Good arrows were not to be lightly lost last season, when they were so scarce; but when time was precious, as it generally was, the necessity of the whole body of archers suspending operations to pace and re-pace over all the regions round about was very, very exasperating, all the more so as no one dared grumble, knowing well that his own arrow might be the missing one next round; and to find the lost arrow in a spot already searched twenty times would have been mortifying had we not generally been in too much of a hurry to recommence shooting to have any feelings at all. Sometimes, however, it could not be found until some one stepped on it.

This last sentence naturally leads to the thought of breaking bows. But this is too solemn a subject to be spoken of lightly. It is not a disappointment; it is a disaster. O, reader! in the day when such a misfortune is yours, as you ruefully gaze on the two tips and one string, which is all that remains to you of your pet bow that lay so caressingly in your hand—that sprung so joyfully at your touch;—in that day may you have kind archer friends near you who have themselves known trouble and with whom you may mourn your loss, and who will not deride when you speak of the lost bow as of a lost baby; and let us wish all success to those whose ingenuity and deftness promise well that the sad, sad tales of last season shall be repeated less often in the future.

But too long have we spoken of disappointments. Let none be discouraged thereby, for it is only when pleasure is high that sorrow is deep. Let those who would here write of the pleasures of archery take good heed to be worthy of their subject; for even Thompson can scarcely truly paint (and he would be the first to own it) the delight of seeing arrow after arrow fly swift and straight as materialized thoughts to the centre of the target—the delight of the time when the arrows seem to obey your will rather than your aim. To the archer of the right spirit, such moments should not be few nor far between; and as kind Providence has ordained that the remembrance of pleasant things is easiest and most vivid, the memories of your true archer shall be all rosy and golden.

TYRO.

CO-OPERATIVE GAME LAWS.

A SIMPLIFIED PLAN FOR UNIFORMITY OF CLOSE SEASONS.—LEGISLATION MADE EASY.

HEREWITH is given a comparative table of existing Close Seasons for the principal kinds of Game and Fish in those States of the Union east of the Rocky Mountains where protective laws exist, so that the reader can determine at a glance just what particular bird, animal, or fish is excepted, or prohibited from being caught or killed, at any given month in the year. He who examines carefully cannot fail to see how strangely the laws conflict, even in States which are contiguous and homogeneous in their flora and fauna. The times and seasons often vary several weeks in localities lying within the same geographical zone and between the same parallels of latitude:

STATE.	DEER.	RUFFED GROUSE.	QUAIL.	PRAIRIE FOWL.	WOODCOCK.	WILD TURKEY.	TROUT.	BLACK BASS.

Take the season for red deer (*C. virginianus*), which is the most widely distributed game animal we have, and we find in twenty-six States no less than nineteen different limitations; in six States there are no restrictions whatever; in Massachusetts there is a temporary total prohibition; and in Michigan there are two distinct sets of laws with a variation of six weeks between the close times which they prescribe! In no more than three States are the seasons uniform. The earliest open season begins July 15th, in West Virginia; the latest expires April 15th, in Alabama. Virtually there are but three close months in the year, if one wishes to hunt persistently, although no single State asks more than six months privilege for itself. As respects quail, matters are very little better. Quail are found in almost every State in the Union. In twenty-nine States there are seventeen different limitations. The seasons correspond in five States, from November 1st to January 1st. In three other States the season is from October 1st to January 1st; in three from October 15th to January 1st; and in two (Alabama and North Carolina) from October 1st to April 1st. In Florida there is no prohibitory law, while little Delaware is protected by two sets of laws, with a variation of six weeks in their limits! The earliest open season begins August 1st and the latest closes April 1st. Virtually there are but four close months for Quail. Ruffed grouse is a bird also very widely distributed. Of twenty-two States there are only four in which the laws are uniform, and there are seventeen different limitations. In six States where they are found, there are no restrictions, and in one (Kansas) there is total temporary prohibition. The earliest open season begins August 1st and the latest closes March 1st. Virtually there are but seven months close season for Ruffed Grouse. In the case of Pinnated Grouse there are only two States in which the seasons correspond; there are fourteen different limitations, and one temporary total prohibition. In twenty-three States where there are close seasons for Woodcock, there are seventeen different limitations, and no more than three States in which the seasons are uniform. The earliest open date is June 15th and the latest April 1st, thus leaving but two months and a half of strictly close season. In sixteen States where there are close seasons for Wild Turkey, there are fourteen different limitations, and only two States in which the season is uniform. The earliest open date is September 1st and the latest May 1st, leaving only four months of strictly close season.

It is apparent enough what opportunity these discrepancies give to those who desire to evade the laws, either in the killing or selling of game, while to the well-disposed and most earnest advocates of protection the jumble of heterogeneous and interminable legislation renders it almost impossible to keep in mind, or even determine, when and where any particular kind of game is in season or out of season. More than this, within the general law of individual States are hundreds of special provisions, excepting this pond and that stream, and this county and that township, so that there are prohibited districts, and close seasons within close seasons, which render the confusion worse confounded. Too much legislation and too much "protection" are likely to render nugatory the efforts of all who seek the general welfare. Obviously the only remedy lies in co-operative legislation and a simplified code. Nature makes the way plain. She has singularly defined her geographical zones and designated the animal and organic life dwelling within them. She has distributed the red deer throughout the length and breadth of our land from its northern to its southern boundary, and from the shores of New England on the east to the great plains of the west. The habitat of the ruffed grouse falls within he same limits, except that it is curtailed on the south by a line drawn along the 34th parallel of latitude. The same boundaries define the habitat of the quail, except that it is cut off on the north by a line drawn through the 44th parallel. The zones occupied by the wild turkey and pinnated grouse are more restricted, and by so much the more easy to legislate for. The range of the woodcock is identical with that of the red deer: it covers the entire country.

These six varieties, so ennumerated, constitute the chief and choicest game creatures of the country, and when we have provided proper close seasons for them, the heft of necessary legislation is accomplished. What we require is one general uniform enactment to govern them all. By a singular coincidence of natural laws, the breeding season of each variety occurs in April and May; by the 1st of September the fawns are able to care for themselves, and the birds are for the most part in full plumage and strong of wing. Then the legitimate shooting season begins. It is true that between the extremes of latitude there is great diversity of climate and length of season. In Florida spring begins in February, while at the far north winter is prolonged until May. Singularly enough, however, these climatic differences do not greatly affect the breeding seasons, except that in the south, under the semi-tropical warmth, nature is more prolific, and two broods are common.

If we refer to the Table of Close Seasons as they now exist on the statutes of the respective States, we will perceive that in six Southern States and in six Northern States the open season for deer begins on or near the 1st of September; in four Southern States and two Northern, it begins earlier; in seven Northern States it begins later. There seems to be no fixed rule of guidance, as if the laws were based strictly upon climatic conditions. The preponderance of opinion is in favor of September. Again, in four Southern States, and eleven Northern States, the season ends on or near the 1st of January; in four Southern and one Northern, it ends later; in three Northern States it ends earlier. The preponderance of opinion is largely in favor of January 1st. By a recorded vote of the legislatures, therefore, the proper limits of deer shooting are included between the dates of 1st September and 1st January. Why not, then, make the season uniform throughout the country, and the law a unit?

As to Ruffed Grouse: The open season begins on or near Sept. 1st in nine Northern and four Southern States; in five Northern and two Southern States it is later. The vote is largely in favor of Sept. 1st. In fourteen States the season ends on or near the 1st of January. The limits of the close season for ruffed grouse are therefore defined to be from Sept. 1st to Jan. 1st. Then why not make the season uniform throughout?

For Quail: The open season begins on or near Sept. 1st in seven States; in nineteen States it begins on Oct. 1st or later. The season ends on or near the 1st of January in fifteen States; in eleven States it ends later, and in one, earlier. The opinion is in favor of October 1st and January 1st as the limits. Why not make the law a unit?

For Pinnated Grouse: The open season begins on or near Sept. 1st in ten States; in four States it is later. The season ends on or near January 1st in five States; in three States it ends earlier, and in six later. The average opinion places the limits at Sept. 1st and Jan. 1st. Then why not make the season uniform throughout?

For Wild Turkeys: The open season begins on or near Sept. 1st in eight States; in seven States it is later. The season ends on or near Jan. 1st in four States; in eleven States it is later. The preponderance of opinion would place the limits between Sept. 1st and Feb. 1st. The season should be made uniform throughout?

As to Woodcock: Ten States favor July shooting, and eleven oppose all shooting until about the first of September. Evidently there is a debatable question here. Thirteen States restrict the season to January 1st; in two the season ends sooner, and in six it ends later. The opinion is in favor of January 1st.

In summary, we learn that, as respects the kinds of game enumerated, public opinion, conveyed through the Legislatures of thirty-two States, favors the period included between Sept. 1st and Jan. 1st as the close season for deer, ruffed and pinnated grouse, and woodcock, with a proviso for July shooting on woodcock; the period included between Oct. 1st and Jan. 1st as the close season for quail; and the period included between Sept. 1st and Feb. 1st as the close season for turkeys. So far so good. We have now succeeded in circumscribing the widely diverse limitations shown in the Table of Close Seasons within a very narrow compass. If we can secure complete uniformity, so as to restrict the shooting season to the four months ending Jan. 1st, the code will be sufficiently simple. To do so, however, some compromise is necessary. If it be objected that in the northernmost States the quail have not all fully matured by the 1st of September, while at the South they are well grown; or that, when they and the deer are snowed under in Minnesota in January, they still afford uninterrupted sport in Florida and the Southern tier of States; we must bear in mind that we are laboring for the common good, and that some concessions are expedient and imperative. Let the season for quail open uniformly on the 1st of September so as to correspond with the open season for deer and ruffed grouse? What if the birds be not full grown in the northernmost part of the country? A legal restriction on September shooting will not save them, because the gunners who are after grouse will not withstand the temptation to shoot when the quail rise. We are at work for the common good of the grea test number—and therefore, to secure the required uniformity on *all* kinds of game, we must make concessions as to the quail, and place the beginning of the open season on Sept. 1st. In the southern and middle tiers of States the birds are all full grown at that date. And for wild turkeys; why not close it on January 1st instead of on February 1st, albeit Turkeys are in good condition until the later date. Our object is to unify the seasons, and if a man is permitted to range the woods with a gun after turkeys when the season on all other game is closed, who will guarantee that he will not shoot ruffed grouse or deer should they come in his way? Nothing is gained by keeping the season open during February. The argument in favor of separate close seasons for the two extremes of latitude should not be permitted to obtain. We must consider that any exception in favor of any locality or kind of game leaves a wide loop-hole of escape for any man who wishes to evade the laws. Make the close season uniform throughout the country and let it apply to all kinds of game, and the man who is found abroad in the interval with dog, gun, and hunting paraphernalia, will have a hard job to acquit himself of deliberate intent to break the law.

With regard to Fishes, the discrepancies in the laws are just as striking, but the way to uniform legislation is even more clear. Fortunately there are but two leading varieties of fish which require consideration, viz., the speckled trout and the black bass. Upon investigation we find that the habitat of the trout is identical with that of ruffed grouse, while the habitat of the black bass corresponds with that of the red deer. The range of the trout is from New England west to the Mississippi River, and between the 34th and 44th parallels of latitude; the range of the black bass is as wide as the bounda of our territory. The trout spawns in the fall and the bl a

bass in the spring. The close season for trout is naturally between the dates of April 1st and Sept. 1st; the close season for bass is included in the months of May and June. There is no reason why the laws to govern should not be made uniform throughout all the States.

Rabbits and squirrels do not legitimately belong to game to be protected. On the contrary, they are quite difficult to exterminate. Wild fowl and migratory birds need no general protective law. It would come within the prerogative of States to enact a temporary total prohibition when such a measure became necessary; to make local laws to protect wild fowl on their feeding-grounds; to prescribe the methods by which game and fish shall be taken, etc. To the Pacific coast the law of the East could not apply, for the seasons and climates are different. Local laws would obtain for moose, caribou, buffalo, rail, pigeons, and several varieties of fish like the true salmon, grayling, and land-locked salmon, which are found only in circumscribed districts. Nevertheless, with a general uniform law on deer, grouse, quail, woodcock, and turkey, the great object of complete protection to game would be secured. Different laws for contiguous States are irrational, and as at present constituted are actually aiding to drive out and exterminate the game instead of preserving it, because by discriminating in favor of one State as against another, slaughter is not only stimulated in the exempted State, but clandestine shooting is encouraged in the closed State by the open market permitted therein after the expiration of the open season. To render prohibitory laws efficacious, game should not be permitted on sale for more than two weeks after the season ends. All game killed within the legitimate term can be easily marketed within the time specified.

In accordance with the foregoing scheme of co-operation, we recommend to the Legislatures of the respective States the passage of the following amendment to existing laws:

1. No person shall kill any wild deer, ruffed grouse (known as partridge and pheasant), pinnated grouse (known as prairie chicken), quail (known at the South as partridge), wild turkeys, or woodcock, within the limits of this State at any time except during the months of September, October, November, and December.

2. No person shall kill any fish known as speckled trout, brook trout, and mountain trout within the limits of this State between the 1st day of September and the 1st day of April, nor any black bass during the months of May and June.

3. No wild deer, ruffed grouse, pinnated grouse, quail, wild turkeys, or woodcock, shall be permitted on sale in market or elsewhere after Jan. 15th, under penalty of $25 for each individual creature so sold or exposed for sale.

4. No trout shall be permitted to be sold between March and September, or black bass during May and June, under penalty of $25 for each fish so sold or exposed for sale.

5. Trapping shall be permitted in open season.

These conditions being satisfied, enforcement of the laws will be much facilitated, especially as regards those provisions which apply to the sale and transportation of game, trespass, and the rights of land owners and fluvial proprietors. If sportsmen do not shoot out of season the farmers will not endeavor to anticipate their visits by killing the game before the law is up, and if the sale of game is prohibited after Jan. 15th a stop will be put to both trapping and shooting in ample time to save enough seed for the game crop of the following year.

By a singular coincidence we have received from H. H. Thompson, Cashier of the Erie Railroad, a batch of suggestions which he will see have been anticipated by the comprehensive scheme of co-operative game laws which was brought before the American Fishcultural Association on Tuesday by the editor of this paper, and is reproduced in our columns this week. With all due respect to the value of his communication and to his sagacity and foresight, he will perceive that its publication would be unnecessary.

HALF A LOAF—*Boston, Mass., Feb. 15.—Editor Forest and Stream:* There is an old saying to the effect that "half a loaf is better than no bread," of which I have been reminded by two editorial articles of yours on the subject of a proposed alteration of the game laws of Massachusetts, the animus of which I at first could not understand. That the game laws of this State, as they now stand, are defective, and that even such as they are they cannot be enforced is a truth patent to everybody, but how to correct the evil is not so clear. There is something required in drawing up a draft of a law, besides framing it, so as to accomplish what you desire, and that is to have it of such a nature that there shall be some remote possibility of the law-makers adopting it. In New York you may be lucky enough to have the land-owners, farmers, game dealers, etc., such noble and honorable men as to be anxious to have the laws just such as the sportsmen wish them to be, without any regard to their own interest. I am, of course, aware that their interests and ours are identical, viz., the increase of game, but they cannot be made to see it; but in this State we are not so lucky, and the only objection which I would raise against the law advocated by the Fish and Game Association, which you indorse, is the rather important one, that there is no more chance of getting such a law as that through the Massachusetts Legislature than there would be to make shooting a bird, otherwise than on the wing, a States Prison offense.

The changes proposed, which you criticize so severely, were the result of a very hard and earnest work, chiefly by a gentleman who is thoroughly conversant with the matter, who has been several times before the House on this subject, who has in the past had palpable proof of the influence of the large game dealers as a body, and who, after having gone through much labor, called a meeting of all persons interested in the matter, the result being a large meeting of prominent sportsmen. The various clauses were talked over and ventilated, and a committee was appointed to bring the matter before the House. Nobody had an idea that the result was a perfect one, but we did think that it was the best possible one under the circumstances, and had it not been for the, to me, unaccountable opposition there was good reason to hope that it would pass. Under it, at least, we could convict violators, which at present cannot be done. We made a close season for woodcock and partridges, the possession of these birds out of season being sufficient to convict. The dealers were allowed to sell frozen grouse and quail out of season, which must have come from the West. I, individually, do not approve of this, but I am convinced that it cannot be prevented.

It will also be a long time before any law can be passed which will make it criminal for a farmer's boy to snare partridges in the old man's wood lot. However, it is all over now practically, opposition from where one would least expect it and a rush of other proposed changes of law in order to have a finger in the pie has had such an effect that nothing will be done, and we shall go on for some time longer under the good old law, by which if a man shoots out of season, and by any miracle any body takes it up, he may "forfeit" a few dollars, if he happens to have them in his pocket, but as he generally does not, why of course he can't "forfeit" what he has not got, so he gets off scot free.

I have scribbled much more than I meant to, as I only wanted to show that the law proposed, which meets your disfavor, was not drawn up in a hurry without reflection, and that its proposers did not have in view the depopulating of the neighboring States of their quail, nor did they wish to encourage the snaring of partridges as your article would lead one to infer. MIC MAC.

We have already so fully given our reasons for supporting the bill proposed by the Massachusetts Fish and Game Protective Association that a repetition of them is needless; and if, as is urged, the passage of that bill be an impossibility, further discussion of it is out of place. We agree with "Mic Mac" that the half loaf is better than no bread, and having lost the whole loaf, it is now in order for our Massachusetts friends to clamor for the fragments. It is a deplorable picture here presented: an inefficient and unjust law is urged because citizens cannot be compelled to respect a law which is proper. The short-sighted policy of game dealers may carry the day now, but it is a policy which must eventually prove suicidal. It may be suggested also that the sportsmen of Massachusetts, who represent no mean part of the intelligence and capital of the Commonwealth, have some rights which are as much to be respected as those of other people. We have not believed that these proposed measures are simply the unreflecting efforts of enthusiasts. If they are such, as a matter of course, they will be summarily frowned down at the State House, and the trapping of birds and the sale of game illegally captured in other States will go on.

PENNSYLVANIA STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—The officers for 1878-9 are: Pres., B. F. Dorrance, Wilkes-Barre; First Vice-Pres., B. W. Richards, Philadelphia; Second Vice-Pres., D. W. Seller, Harrisburg; Third Vice-Pres., J. B. Reed, New Brighton; Fourth Vice-Pres., R. M. Linsey, Scranton; Rec. Sec'y, W. W. Dorris, Huntingdon; Cor. Sec'y, J. Ross Thompson, Erie; Treas., W. C. McCrum, Pittsburgh. Com. on Rules, Regulations and Game Laws—J. Ross Thompson, Erie; B. W. Richards, Philadelphia; Jno. C. Brown, Pittsburgh. Com. on Fish Laws—Jno. E. Reyburn, Philadelphia; M. Hargden Brooks, Greenville; Dr. W. E. Fundenburg, Pittsburgh.

TEXAS STATE SPORTSMEN'S ASSOCIATION.—The second annual convention will be held at Waco, May 7. It is especially desired by the friends of game protection that all who are interested in the cause should communicate with the secretary of the association, Mr. P. B. Watson, Houston, or a game law will be proposed at that meeting. A four days' shooting will be held under the auspices of the Waco and Tatham clubs.

ILLINOIS STATE SPORTSMAN'S ASSOCIATION—*Editor Forest and Stream:* At a meeting of the above association held at Springfield, February 12, upward of twenty well-known sportsmen were in attendance. The meeting was presided over by M. V. Lincoln, of Peoria. The matter brought before the association was of importance, and the session a harmonious one. Amendments to the game law were considered and discussed. It was the sense of the meeting that the shooting of quail should begin on Sept. 1, instead of August 15, and continue until October 15, instead of November, as now. The shooting of prairie chickens, it is proposed, shall begin on August 15, and cease on December 1, instead of January 1, as now. A committee was appointed to draft amendments to the law, and at a late session the committee reported in favor of Mr. Crooker's bills in the House for the preservation of fish. Resolutions were also adopted, asking the earnest co-operation of all farmers and sportsmen to advance by influence and legislation the protection of game and song birds and food fishes, and requesting members of the Legislature to favor all just legislation to the end that the fine fields and streams of Illinois may be in the future preserved and stocked. The meeting adjourned to meet at Peoria, June 17. ROVER.

Chicago, Ill., Feb. 20, 1879.

LEASING AND STOCKING STREAMS—*Editor Forest and Stream:* In your issue of Feb. 13, certain of Mr. Seth Green's correspondents complain in relation to the game and fish laws, notably of the action of land owners on streams that have been stocked with fishes. A suggestion upon this matter of stocking streams may not be out of place. That is for one or more persons to lease the right to stock and take fishes from a given stream for a term of years of the land-owners, and, if they please, reserve the right to the land-owners to take fishes for their family use, and no other; then obtain a special law applicable thereto. The lessee or lessees then can control the streams and allow fishing at such times as is deemed proper. I have a stream leased as above which is protected by special law. Thus far the plan works well. NATHANIEL HOBBS.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship of 1879

First prize to be ten monogram medals, presented by the FOREST AND STREAM AND ROD AND GUN. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

In accordance with the conditions previously announced, the captains of the several teams met at Conlin's gallery on the evening of the 22d and proceeded to carry out the minor details of the match. Dr. Dudley was chosen chairman and Mr. Donaldson, of the New York Club, secretary. There were representatives from the Seppenfeldt, Hellwig, Empire, South Brooklyn, Newark Amateur, Catholic Institute of Newark, New York Club (two teams), Zettler Club (two teams). Some considerable surprise was manifested at the absence of the Yorkville men, the Irish-Americans, the Centennial Club, the Scotch Americans, the several regimental clubs, and Col. Gilon ought certainly, it was thought by all, put in an appearance with his crack shooters from the 9th Assembly District of the 5th Senatorial District. On the matter of referees, it was agreed that each club should select a member—not a shooter on the team—to act as referee, and that the two referees of each evening should select an umpire, not of either club. This will relieve anybody of the task of acting as referee through the entire session.

It was voted that the entry list be closed finally at 9 o'clock on the evening of March 6th, when the captains are to meet to draw for the order of shooting the strings. The match to open on March 10th.

The small medals now in process of manufacture promise to be choice bits of artistic work, and their motto—"Vede Vidi Vici"—is very appropriate. The Winchester Arms Company will place a novelty on the prize list in their new Express rifle.

THE MASSACHUSETTS RIFLE ASSOCIATION.—If the foreign riflemen who think of coming across the border or across the sea to make a trial for the possession of the "Palma" wish to know precisely what they may expect to meet in the way of scores, there is no better guide than the report first issued by the Massachusetts Rifle Association of the work accomplished at Walnut Hill during the past year. In shooting over the Elcho ranges, a score below 200 does not appear as a winning one. In off-hand work averages run above centres, while in mid-range perfection is again and again shown, and even where carton targets are employed the average runs above the bull's-eye line. The report throughout shows not only a most flattering progress, but puts the present condition of the association in a more satisfactory light. The matches are as various as can be, and the results are presented in a compact and perspicuous form.

MASSACHUSETTS.—*Medford, Feb. 22.*—There was a special attraction at the Bellevue Range to-day in the fact that two matches were in progress. The competing teams were each on their own range, and on Bellevue the effort of the riflemen was for scores to be used in the matches lately made with the Bergen Point Rifle Club, of Bayonne, N. J., and the Lake View Rifle Club, of Chicago, Ill. The conditions of the match with the Chicago club are as follows: Teams to consist of eight men each; rounds, ten; position, off-hand; distance, 200 yards; rifle, any within the regulation rules; one sighting shot allowed previous to firing on the score. Each association to shoot on their own grounds and the result to be forwarded to the other by mail. The following are the scores made by the members of the Medford Club:

R. Sawyer, 44; H. K. Richardson, 43; C. H. Russell, 43; H. S. Harris, 43; H. H. D. Cushing, 41; J. R. Teele, 39; H. Withington, 38; J. H. Eames, 35; Total, 324.

At the conclusion of the above match the club began its score to be used in the match with the New Jersey club. The conditions are the same as those of the above named, except teams consisted of ten men and two sighting shot were allowed previous to scoring. Appended is the score:

H. K. Richardson, 46; H. S. Harris, 43; R. Sawyer, 43; J. H. Eames, 43; H. H. D. Cushing, 43; H. Withington, 42; C. H. Russel, 42; W. G. Tousey, 40; J. R. Teele, 39; W. P. Metcalf, 36; total, 416. The Bergen Point men telegraphed a total of 423. During the day at the renewed competition in the Winter Shed match, there were 78 entries. The following are some of the best scores made: First class—H. K. Richardson, 33; H. K. Richardson, re-entry, 33; C. H. Russell, 32; C. H. Russel, re-entry, 31; J. H. Eames, 31; J. H. Eames, re-entry, 31; R. Sawyer, 31. Second class—J. R. Teele, 32; J. R. Teele, re-entry, 31; J. Barker, 31; W. G. Tousey, 31. Third class—E. F. Kendricks, 29; E. F. Kendricks, re-entry, 27.

Boston, Mammoth Rifle Gallery, Feb. 22.—The regular monthly prize shoot is progressing finely, and as the month is drawing to a close some excellent shooting is shown. The standing of the several competitors is as follows (150 feet, rounds 5, possible 40):

L F Newton	5	5	4	5	5	5	5	5	5	39	Wm S Arnaud	4	4	4	4	4	5	5	5	35
E W Archer	5	4	4	5	5	5	5	5	5	38	D S Hickey	4	2	4	5	5	5	5	5	35

S B Edwards	5	4	4	4	5	5	4	5	4—44
D G Durgin	4	4	5	5	5	4	4	5	4—44
J T R Scheefer	5	5	4	4	4	4	4	4	4—43
L W Blake	5	5	4	5	4	5	4	4	4—42
E W Archer	5	4	4	4	4	5	4	4	4—40

MEDFORD AMATEURS.—The third of the winter-shed class meetings of the Medford Amateur Rifle Team occurred Wednesday, Feb. 19, at Bellevue Range, at which time, notwithstanding there was a severe snow storm prevailing, the following scores were made:

First Class.

H Withington	4	4	5	4	5	5	5—32
H Withington (re-entry)	4	5	4	5	5	4	4—31
H H D Cushing	4	5	5	4	4	5	5—32
H H D Cushing (re-entry)	4	5	4	4	5	5	4—31
R Sawyer	4	4	5	5	4	5	4—31
R Sawyer (re-entry)	4	5	4	4	4	5	4—30
J H Eames	4	4	5	5	5	4	4—31
J H Eames (re-entry)	4	5	4	4	4	4	4—29
H H Davis	4	5	4	4	4	4	5—30
H H Davis (re-entry)	4	4	5	4	5	4	4—30

Second Class.

J Barker	4	4	5	5	4	5	5—30
J Thomas	5	4	5	4	5	4	3—30

Third Class.

G B Gill	5	5	5	5	5	3	4—32
G H Howe	4	5	4	4	4	4	4—30

The fourth meeting took place Saturday, Feb. 22:

First Class.

H K Richardson	4	5	5	5	5	4	5—33
H K Richardson (re-entry)	5	3	4	5	5	4	5—32
C H Russell	5	5	5	5	4	4	4—32
C H Russell (re-entry)	4	4	4	5	5	5	4—31
J H Eames	4	5	4	4	5	4	4—31
J H Eames (re-entry)	5	4	5	4	4	4	5—31
R Sawyer	4	4	4	4	5	5	5—31

Second Class.

J R Teele	5	4	5	5	4	4	5—32
J R Teele (re-entry)	4	5	5	5	5	5	4—31
J Barker	5	4	4	5	5	5	4—31
W G Tousey	4	4	5	5	5	4	4—31

Third Class.

E F Kendrick	4	5	5	3	4	4	4—29
E F Kendrick (re-entry)	4	4	3	4	4	3	5—27

At 10 o'clock, Feb. 22, the shooting in the Bergen Point match came off with the following score:

Bergen Point Rifle Association.

J T B Collins	5	5	4	4	4	4	5—44
J F Rathyen	4	5	4	4	5	5	4—44
Thos Conroy	4	5	4	4	4	5	4—43
H J Stilson	4	5	4	5	5	4	4—43
Dr Dart	5	5	4	4	5	3	4—43
A Vredenburg	4	4	4	4	5	4	4—42
H Meigs, Jr	5	4	4	4	5	4	4—42
Fred Schilling	4	4	4	4	4	4	4—41
J O Simmonds	4	3	4	4	4	4	5—41
A Duane	4	4	4	4	3	4	4—40—423

Medford Team Bergen Point Match.

H K Richardson	4	4	5	4	5	5	5—46
H S Harris	4	4	4	4	5	4	5—43
R Sawyer	5	4	4	5	4	4	4—43
J H Eames	4	4	5	5	3	4	4—43
H H D Cushing	4	5	4	4	5	4	4—42
H Withington	4	4	5	5	3	4	4—42
C H Russell	5	5	4	4	4	5	4—42
W G Tousey	4	4	4	5	4	4	4—40
J R Teele	4	4	5	4	3	3	4—39
W P Metcalf	4	4	5	4	3	4	4—38—416

At 2 P. M. occurred the shooting in match with Chicago team with the following results:

Medford Team—Chicago Match.

H K Richardson	4	4	5	4	5	4	4—43
R Sawyer	5	4	5	4	4	3	5—44
C H Russell	4	4	5	3	4	4	5—42

H H D Cushing	4	4	4	5	3	4	4—41
J R Teele	5	4	4	4	4	3	4—40
H Withington	3	4	4	5	3	4	4—38
J H Eames	4	5	4	3	4	0	4—34—324

—The annual meeting of the Riverside Rifle and Gun Club, Pittsfield, Mass., was held February 21, and the following officers elected for the ensuing year: Pres., Dr. Wentworth; First Vice-Pres., R. P. Burbank; Second Vice-Pres., H. R. Pierson; Third Vice-Pres., F. P. Farrington; Sec'y, F. H. Leonard; Treas., W. W. Tracy; Capt., J. H. Wood.

CONNECTICUT—*Bridgeport.*—The officers of the Fourth Regiment, C. N. G., resolved in January last to present to Capt. S. C. Kingman, Inspector of Target Practice, some token of their appreciation of his efforts to improve and encourage marksmanship in the regiment. At the ball of the Sedgewick Guards, held here on the evening of the 21st, Col. Crofutt presented the badge made for the committee by Hayes of Newark. It is a suspended telescope, from which hangs by links a long-range rifle. From this two crossed swords are suspended by a heavy chain, immediately under which is a medal of the Roman style, in the centre of which is a target on an onyx. At the top is the inscription, "4th Regiment," and at the bottom the letters "C. N. G." On the back is the following inscription: "Presented to Captain S. C. Kingman, I. T. P., by the officers of the 4th Regiment, Feb. 22, 1879." The badge is a beauty and the recipient may justly be proud of it. Capt. Kingman has been making a tour of the companies of the regiment scattered through the southwestern portion of the State, and has been giving instruction in aiming and position drill. He reports that he has been well received and that good attention is paid by the members and officers of the command.

NEW YORK—*Morrisania, Feb.* 22.—Match at 200 yards; Creedmoor target:

Alder	4	5	4	4	4	5	5	5—46
Donaldson	4	5	4	4	5	4	5	4—45
Fenling	5	4	4	4	5	5	4	4—45
Todd	4	5	4	5	4	4	5	5—45
Howlett	4	4	5	5	5	4	5	4—45
Davids	5	4	4	5	5	4	4	4—44
Dunlap	4	4	4	4	5	5	4	5—44
Davis	4	4	5	5	4	4	4	4—44
Horton	4	5	5	4	5	4	4	4—44
Fisher	3	5	5	4	5	5	4	4—44
O'Donnell	4	4	4	4	4	4	6	5—44
Joiner	4	5	4	3	4	4	5	5—44
V Daly	4	2	4	3	4	4	4	4—41
Gourlay	3	5	4	5	4	4	4	4—39
Case	3	5	3	4	4	4	4	4—39
Robinson	3	4	5	3	3	3	5	4—38
Frank	2	0	4	3	4	4	5	4—35

The average of the seven New York Club men who took part in the contest was 43 6-7ths; the average of the six men of the Empire Rifle Club was 42⅔ds.

NEW YORK RIFLE CLUB.—A valuable gold badge, presented by E. T. Davis, was finally won February 20, 1879, by A. J. Howlett. The trophy was shot for at the club's weekly shoots, held at Conlin's Gallery, Thursday evening. The competitions were open to the members of the N. Y. R. A., to be handicapped according to the club's adopted system of handicapping. The trophy to be won three times, not necessarily consecutively, before becoming the winner's property. Shooting to be done with .22-cal. rifle. Position, off-hand; targets, 200 and 300 yards; targets proportionately reduced for the range; rounds, ten shots per target; rules of the N. R. A. to govern. Highest possible score 100. The winners' scores throughout the entire series of competitions are evidences of skill for a rifleman to feel proud of, while the record of a large percentage of the contestants indicate but little difference in the degree of proficiency between the winners and the losers. The following is a list of the names and scores of the winners of the different competitions for the trophy:

		200 yards	300 yards.	Tl.
Nov.	21, 1878	A J Howlett	49	46	95
"	28	W H Dunlap	48	46	94
Dec.	5	Fredk Conlin	48	46	94

N D Ward	47	F Farbarus	40
J Regles	46		

C. VOLLERS, Sec.

RIFLE CLUB ELECTION.—At a general meeting of the New York City Schuetzen Corps, held on the 13th inst., at Germania Assembly Rooms, an election of officers took place with the following result: Captain, John F. Gerdes; Secretary, F. W. Schumacker; Financial Secretary, W. Brueckmann; Treasurer, H. W. Cordts; Custodian, Arch. Watts; Ord. Sergeant, J. E. Meyer; Quartermaster, Gust. Hy. Gerdes; Shooting Masters, John W. Schneider, Wm. Raub; Fin. Committee, Hy. Bischoff, G. F. Wahrenberger, John Schacht; Collector, A. Siebert. The shooting festival of the above Corps will be held July 14 and 15 at Jones' Wood.

THE GALLERY RECORD.—The best recorded short range gallery score has just been made by Mr. Fred. Alder, of this city, who, at Hillwig's gallery, last Monday evening, out of forty consecutive shots made thirty-nine bull's-eyes. The position was off-hand; the rifle a Ballard, and the ammunition that of the Winchester Arms Company, where the two targets are now on exhibition.

TROJAN RIFLE CLUB.—*Editor Forest and Stream:* The Trojan Rifle Club have established headquarters and a 75-foot gallery at 88 Congress street, where visiting marksmen will be always welcome. Excellent scores have been made at the gallery, the best of which we give in detail: 4 5 5 5 5 5 5 5 5—49. We use a Ballard rifle .22 cal.; 1-inch bull's-eye. On Thursday, Feb. 6, at the Vail Avenue Range, 200 yards, German ring target, with a muzzle-loading rifle, Mr. N. W. Irving made the following remarkable score, which we give in the order it was shot: 25 24 23 23 25 24 24 18 20 25—233. On Feb. 13 occurred our monthly competition with the following results: Geo. Grammell, 198; T. H. Dutcher, 195; H. Durfee, 192; O. Dexter, 190; P. Tobin, 189; Geo. Polock, 189; Dr. Bousted, 186. T. H.

Troy, N. Y., Feb. 18, 1879.

Washington, Feb. 22.—The Columbia Rifle Association shot a series of all-comers' matches to-day over the range at Benning's Station. The first of the series was a contest at the 200 and 300 yards targets, which resulted in a tie of 49 between Mr. James B. Burnside and Mr. J. M. Partello, the former making 23 and 26 and the latter 28 and 21 at the two targets respectively. The medal was awarded to Mr. Burnside, as his score was the greater at the further target. Mr. Partello easily won the medal for shooting at the 500 and 600 yards targets, his score being 34 and 33, a total of 67 out of a possible 70. The record at the long-range targets, as far as made, was as follows:

	800 yds.	900 yds.	Total.
J M T Partello	73	69	142
Col J O P Burnside	72	64	136
J P Lauritzen	64	61	125
Dr Scott	63	61	124

Complete darkness interrupted the shooting here, and prevented the firing at the 1,000 yards range, which will be taken up next week. The day was gloomy and cloudy, and during the firing at long-range hail and snow fell. At the close of this last contest Mr. Partello was six points ahead of his nearest competitor for the long-range prize.

ILLINOIS—*Chicago, Feb.* 15.—Rifle club of the George H. Thomas Post, G. A. R.; regular weekly shoot at the 200-yard range. A new supremacy badge was presented to be shot for, the winner to hold it until the next weekly competition. The wind was strong and gusty at 2 o'clock; the score was as follows:

Frank Hyde	5	4	4	4	4	5	4	4—43
S M Tyrrell	4	5	4	4	5	5	4	4—43
J A Shafer	5	4	5	3	4	5	4	4—42
W H Chenoweth	4	4	4	4	4	5	4	5—42
D H Freeman	4	4	5	3	4	4	5	5—41
J A Freeman	3	4	5	4	4	5	4	4—40
J M Ordway	4	4	3	3	4	4	4	5—39
J C Borcherdt	4	4	5	4	4	3	4	3—39
J C Morse	4	4	5	4	4	4	3	3—38
L H Drew	4	3	4	4	3	2	4	5—35

As Mr. Hyde did not belong to the club, comrade Tyrrell wears the badge during the coming week. LU.

CHICAGO VS. MEDFORD.—*Chicago, Feb.* 22.—The Lake View Rifle Club in its match with the Medford, Mass., Club to-day made the following score at 200 yards:

James A Colehour	4	4	5	4	4	4	4	5—42
W H Chenoweth	4	4	5	4	4	5	4	4—42
L. Drury	4	4	4	4	5	5	4	4—5—42
H C Bradley	4	4	4	4	4	5	4	4—41
J E Tice	4	4	4	4	4	4	4	4—40
J Macauley	4	4	3	4	4	3	5	5—40
C Cutts	4	4	4	3	4	4	4	4—39
J W Foster	3	4	4	4	4	4	3	3—39

—George H. Thomas Rifle Club, Northwestern Rifle Range, second competition for supremacy badge; 200 yds.; wind strong at 6:30; score:

Tyrrell	4	5	5	4	5	5	4	5—46
D B Freeman	4	4	5	4	5	4	4	4—44
Kellogg	4	4	4	4	4	3	4	4—5—40
J A Freeman	4	5	3	5	5	4	4	3—4—40
Birchardt	5	3	6	4	3	4	4	3—4—38
Clark	4	4	5	2	4	4	0	4—4—35

LU.

MICHIGAN—*East Saginaw, Feb.* 15.—Fifteenth weekly practice of the East Saginaw Amateur Rifle Club; 200-yard target reduced, possible 50:

Capt W J Shaw	4	5	5	5	5	4	5	4—4—46
C C Yawkey	4	4	4	4	4	5	4	5—4—42
R F Corbyn	3	5	4	4	5	3	4	4—4—39
J H Houry	4	4	5	4	4	4	3	3—4—39

J. H. H., Sec.

—Mr. A. H. Weston, Assistant Secretary of the National Rifle Association, has prepared a work which is now in the hands of Harper Bros. for publication. It is not a rifle manual, but it treats fully of a subject which Mr. Weston, from his experience of a number of years as the conductor of matches and meetings at Creedmoor, is fully able to give authoritative information upon. It will treat of the organization of rifle clubs and the laying out of ranges; the varieties of targets and their construction, and the management of matches. It is to be very full in detail, and from the thousands of letters which have poured into the National Rifle Association, the author has had a very clear idea of the sort of information needed.

GUN SIGHTS.—In reply to "A. J. H." in issue of Jan. 30, 1879, I would say that William Malcolm & Co., Syracuse, N. Y., formerly manufactured the best rifle telescopes in the world, adapted to either breech-loader or muzzle-loader. The prices range between $30 and $55, according to finish. I have used them both for hunting and target practice, and they leave nothing to be desired. DE FORREST.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

WILD RICE.—We call the attention of numerous corres pondents to the advertisement of wild rice seed for sale. No time should be lost in securing a supply for spring planting.

DUCK DECOYS.—As the duck season is close at hand, decoys come into request. Those who wish to provide themselves will find an excellent article advertised in our paper by H. A. Stevens, of Westboro, New York.

A NEW BALL FOR TRAP SHOOTING.—To the making of new inventions there is no end; the best in use are destined to be superseded by something better. This is in accordance with the law of progress. In the great struggle for precedence and ascendency men cannot long remain stationary or idle. Success can only be reached and secured by constant watchfulness and work. The improvements that have been made in balls and traps since the introduction of the first patterns, are very great, but none are so marked and ingenious as that which we bring before our readers in our advertising columns this week. The features of this ball are such positive indications when hit; as make disputes unnecessary; tampering with the balls, and consequent fraud, impossible; no objectionable debris of glass or other material. We have simply a wooden globe which is covered with a chemical paper or fulminate. The slightest concussion upon the paper releases a most conspicuous smoke, which indicates the hit. The paper takes fire and is consumed during its fall to the ground, leaving the bare wooden globe ready for another covering of chemical paper. Of course the ball can be used until it is shot to pieces, when it must be replaced by another. We cannot imagine anything more perfect for open air shooting. It will have to be proved whether the large volumes of smoke emitted from the balls will not make their use objectionable for indoor practice. We copy from a circular placed in our hands by the inventor, Mr. C. V. Boughton, of Titusville, Pa.:

1. It is unmistakable in its results, even though hit with a single shot, as it throws from it a puff of smoke about the size of a man's body, and dividing itself into three parts, viz.: The wooden ball and two burning paper caps, which are entirely consumed by the time they reach the ground.

2. They leave no broken glass upon the ground to injure cattle, horses, etc., but can be used upon your lawns without leaving any marks when your shooting is done.

3. It only requires about twenty wooden balls to shoot a match of 1,000 or more, as they are thrown back to the traps and recapped; thereby saving carriage.

4. One thousand of these balls—that is, covers—are packed in a box about 15 inches square, instead of taking four barrels as in the case of glass balls, thereby saving trouble, breakage and freight.

5. These balls require no judge or umpire in the closest contests, as they will not ignite by falling upon the grass, but if hit in the air, with even a single No. 10 shot, will show signs that no gentleman can dispute, as the smoke is so vivid to all (the shooter included) that it leaves no chance for a dispute as to the result.

These balls have been tested upon long distances with the following result:

The longest distance that "Paine's thin feather-filled ball" was broken was 70 yards. At 90 yards it was cracked, but not broken. The explosive ball worked perfectly at a distance of 100 yards. These balls were all placed on the top of a stake. Tests show that about one-fourth of the glass balls are really hit but not broken.

Each ball is made of two colors, and the effect in the air is very pleasing.

These balls will be ready for shipment the coming season,

and the prices will range about the same as glass balls. They will be packed in boxes of two sizes; small size 500, large size 1,000.

Sample boxes containing enough balls for practice, $1, with full directions and prices; 500 balls, $3.25; 1,000 balls, $6.

NEW YORK—*Buffalo, Feb.* 15.—Ducks, such as whistlers, old squaws and mergansers, popularly known in this city as flying fish, are plenty in the river, but the hunters say they are hard to approach. UNCAS.

SOUTH BROOKLYN.—At a meeting of the S. B. Sportsmen's Club, held on Wednesday evening, Feb. 5, 1879, the following members were elected as officers: Fr. Schecker, Pres.; John Morony, Vice-Pres.; Paul A. Bassinger, Sec.; Gus. Boysen, Treas.

SENECA GUN CLUB.—The Seneca Gun Club, of Seneca Falls, N. Y., propose if possible to secure the next New York State Sportsmen's Convention for their town. The officers of the club are: Horace Silsby, President; James F. Lawrence, Vice-President; C. H. Williams, Secretary; M. Hoag, Treasurer; J. G. Story, R. P. Lathrop and W. P. Elwell, Executive Committee.

Chatham Village, Feb. 20.—Myself and a neighbor have seventeen fox skins as trophies of the chase this season, and one wild cat's skin. We have excellent hounds. W. G. S.

NORTH CAROLINA—*Lilesville, Feb.* 18.—The winter with us has been a severe one, with several sleets and snows, and the mercury away down in the units now and then. But none of the "spells" have been of sufficient duration to be hurtful to game. Twenty-two years ago snow lay on the ground for three weeks, and many of the furred and feathered tribes perished. We are now awaiting the Northern migration of snipe and woodcock. E. R. L.

Monroe, Feb. 18.—The prospects for our next fall shooting are most excellent. The Legislature now in session has passed a law making it a fine of $10 to kill a partridge (quail) or break up a nest of the same. The close season begins the 18th of April, and expires 15th October of each year. Heretofore hundreds of birds have been annually destroyed by boys and negroes robbing their nests. In an afternoon's hunt the dog found six large covies, which I think would average thirty birds. Glass ball shooting with rifle has been somewhat popular here. A Mr. Smith at a recent shoot broke 35 out of 50 shot at, using a .22-cal. rifle. A few wild turkeys have been noticed in the neighborhood, but hunting them is rather poor sport, as the fun is generally in the hunting and not in finding or killing. We, down here, use black powder, and find it very efficient. AVERY.

HARRISON COUNTY GUN CLUB.—The Secretary of the Harrison County Gun Club, of Marshall, Texas, is Mr. J. N. Goodey.

OHIO—*Carrollton, Feb.* 17.—The farmers throughout our county generally are feeding the quail, and from what I gather from them we will have an abundance here next year.
M. S.

ILLINOIS.—Captain Bogardus reports the prospects for quail shooting in Southern Illinois very good, as the birds in that section were not killed by the severe snows.

Lacon, Ill., Feb. 16—*Editor Forest and Stream:* Our quails are not all frozen. I saved all mine, except what the hawks got. Our hedges are a first class protection for them, and if they are not disturbed when there is snow on the ground and cattle run in the fields, they generally get through. Our laws should say that there should be no shooting of quail when there is snow on the ground, or in any way disturbing them, except it be to feed them. Such a law would here be ample protection. There is no sport in tracking up a covey of quail in the snow and murdering them. It is simply murder. One charge kills all, for those that are not killed or wounded are scattered, and freeze or starve. I started a covey to-day of eleven that six weeks ago, at the beginning of our fifteen inches of snow, had fourteen, and this covey had, I think, the poorest show of any one on my 800 acres. In the meantime we have had 26 deg. and 20 deg. often. So you see that if left alone they can live in snow and cold. Yours truly, O. B. WIER.

CALIFORNIA—*Santa Barbara, Feb.* 1.—We have for our game here, hidden back well in the mountains, the grizzly bear; but that animal is seldom troubled by our hunters. Deer is the principal large game, and many is the one that is killed. There seems to be two kinds of them here, one the mule deer. They are very scarce and are seldom killed. The other kind is the common deer, and they seldom weigh over 100lbs. They abound in great numbers in the Coast Range Mountains that run down the coast behind our town. During the fall and winter months nearly every kind of water fowl visits a large lagoon and the surrounding marsh that is situated some eight miles from town. We have splendid sport among them at times. Wild pigeons visit us in the spring. They differ from the pigeon of the Eastern States, being much larger, and they have bright yellow legs and bill. (If I am rightly informed, they differ in this.) We also have two varieties of quail, the mountain and valley quail. The mountain quail are much larger, and differ in color from the Eastern bird. They are a bluish slate color on the back and white mottled brown underneath, and have a large plume of black feathers falling down the back. The valley quail are smaller than the others, though nearly the same color, but their tuft is shorter and bends forward. Both varieties are very handsome birds. Wilson snipe are killed here during the rainy season, but not in large numbers. E. C. T.

PENETRATION.—*Editor Forest and Stream:* In regard to the question of J. S. in your issue of Jan. 9, I think that both your correspondent and yourself misunderstand the sentence in Parkers' circular, by "better distribution." Parkers mean closer and more regular pattern, which is of course attained by decreasing the powder or increasing the shot. You are right, and Parkers are also right, for two such eminent authorities could hardly differ on so plain a question.
C. H. Hope.

SHOTGUN WADS—*Editor Forest and Stream:* I have read with great pleasure the *Field* report of a series of experiments tending to show the best mode of loading B. L. shotguns. It appears that there is no standard for the length of cone, this varying from ⅛ to 3-16 of an inch. Now, the *Field* endeavors to prove that in order to insure good shooting the wad or wads over the powder must fit tight and be a trifle thicker than the length of cone, and if this is not carried out, erratic pattern and bad penetration are the result. To get at the inside form of my gun barrels, I drove in tight wads to about five inches from the break-off, filled them with melted tallow, and I find that the cones of my four barrels are each 3-16 long. I can therefore use ordinary thick felt wads over powder. Had I found the cones of my gun ¾ or even ½ inch long, I should have been annoyed; ammunition is expensive enough without resorting to an inch of wadding. Again, the cartridge should fit the chamber and yet be exactly of the gauge of the barrel. I have some cartridges on my table that are very thick; still they fit the chamber of my gun and are of a gauge somewhat smaller, owing to the great thickness of paper. I cannot make a good pattern with these, and I firmly believe that the wads used in the cartridges do not fill out the barrel sufficiently to keep the gas generated on firing separate and apart from the shot. Both guns and cartridges are by eminent makers. Perhaps you may think I am splitting straws; but I would like to know why a good gun should at times make such bad pattern and worse penetration when the cartridges used are, or are supposed to be, of the same quality, and it seems probable that the thickness of the wad has all to do with this. Should my remarks lead to any inquiry I shall be pleased. Yours truly, TANTRAMAR.
Sackville, N. B., Feb. 13, 1879.

GUN PATTERNS—*Editor Forest and Stream:* I read in your issue of last week of a man putting 300 pellets in a 30-inch circle at 40 yards, 1¼ oz. No. 8 shot, heaping measure, so I thought I could beat it. I have a Clabrough gun 7¼lbs. weight, 12-gauge, choke-bore, that with the same amount of No. 8 shot, I put 324 pellets in a 30-inch circle, 40 yards, and put three shot inside a 2-inch circle; and with same gun, distance and circle, put 456 No. 9 shot, and five in 2-inch centre, and only used 1oz. at that. E. L. SEELEY.

COSMOLINE AS A RUST PREVENTIVE—*Mr. Editor:* I can fully indorse the article known to the drug trade as Cosmoline as a rust preventive and lubricator for guns. Something over a year ago I noticed a jar of it in a drug store, and out of curiosity I read of its claimed origin and uses over the name of a well-known, reliable wholesale drug house. They warranted it to be free from water and acids and free from any affinity for oxygen, a mineral fat produced by the distillation of petroleum. These, if true, were the qualities that should be possessed by a rust preventive. I have tried it thoroughly in competition with Eaton's Rust Preventative, as he names it, and blue mercurial ointment, and am more than satisfied with it. It has no smell or bad odor, and is but little changed by ordinary heat and cold; is cheap and agreeable to use; its wax renders joints impervious to water, and it is good for all parts of the gun. Especially is it desirable as an application to darken the wood and render it waterproof. Now, if the mercury adds any to the rust-preventing qualities of suet as a rust preventive, why would not it, made into an unguent with this cosmoline, be the best thing of all?
Lacon, Ill. BYRNE.

RUST PREVENTIVE.—A Texas correspondent, "T. C. D." of Houston, writes that he has found cosmoline, or vasiline, a very effective rust preventive for use where the guns are affected by the damp salt air of the sea.

DITTMAR POWDER.—*Conshohocken, Pa., Feb.* 17.—*Editor Forest and Stream:* At a trap shoot on Saturday a muzzle-loading gun loaded with Dittmar powder was blown entirely to pieces, severely injuring both the shooter and trap puller. The arm so badly demolished was a comparatively cheap American gun, purchased for genuine twist barrels. It has been in constant use for five years, with a charge of 4 drs. black powder; and what lays the blame most conclusively to the Dittmar's score is the fact that this was the only charge ever fired from it. No blame can be attached to overcharging, as only 3½ drs. by measure were used. Why this powder in some localities should answer all purposes so admirably and in others prove both dangerous on the one hand and worthless from exposure to slight dampness on the other, we are at a loss to understand. If Mr. Dittmar can succeed in remedying these difficulties his powder will prove a valuable adjunct to the sportsman's outfit, as all will admit its superiority in the slight recoil and almost entire absence of smoke. H. G. J. H.

A CHASE FOR THE ANTELOPE—*Editor Forest and Stream:* I have been a constant reader of your paper since we (F. and S. and myself) were youngsters together. It has been my familiar friend and visitor through all the varying phases of a wandering life, and has been equally welcome at my house in old Michigan, in the lonely cabin in the Black Hills of Dakota, or by the camp fire amid the cotton woods of the Big Cheyenne and its tributaries; and I have often thought that I would take an old friend's privilege and write you some account of the glorious sport we used to have on the frontier. I now inclose a letter I have just received from a friend at Brule Agency. It is the plain, straightforward story of one of the best fellows and most conscientious sportsmen that I have ever met. My friend writes as follows from Lower Brule Agency under date of Jan. 19. J. W. M.
Ypsilante, Mich., Feb. 1, 1879.

I am having all the sport that I can stand. We have a stable full of horses, and I have only to say that I want one and he is always saddled and at the door before I am ready. I have been hunting antelope considerably lately. When I get tired of making out papers, I take rifle and horse and go up the river about five miles, cross and get upon the high prairie, and then the fun begins.

There is no still hunting with us; it is horseflesh against antelope speed. There is just a spice of danger in it too, for the prairie, as you know, is in places completely honeycombed with badger holes, dog towns, etc., and with horses going at a dead run and mad with excitement, a fellow may reasonably expect to get his "blarsted neck broke, you know." One plan of hunting, when we discover the game on the open prairie, is to make a surround: that is, there are usually four of us, and as soon as game is sighted, one dismounts and hobbles his horse. The others make a wide detour and fill up the other three points. Then some one shows himself, and the antelope are off like the wind. Now is the time for the dash. The game is making for a certain point, and if your horse is fleet enough you may get there in time for a shot, or at least turn them back for some of the others. I killed my first one this way about a week ago. I ran my horse about half a mile. Don't know whether the horse was running away or not. Dog towns, gopher holes, snowdrifts and wash-outs were passed in safety, and I don't think that horse touched the ground but once after he started, and I rode him from his ears to his crouper and back again. The brute stopped finally (from want of breath, I think), and I dismounted and ran to a little ridge and saw a band of ten coming like the wind. They passed within 200 yards, and at the second shot from the "Model" (the officers' Model Springfield Rifle), one of the band gave a convulsive leap, ran about 100 yards and fell. I left an Indian to butcher the one I had killed and started for the rest, but at the first run an Indian's horse put his foot in a badger hole and went down, and the poor red man made at the rate of 9,000 revolutions to the minute and went down also and tore up the ground for about a rod after he struck. I asked him if that was the way he usually dismounted, but he said he was "heap sick" and didn't want to talk, and I don't think he lied about it. * * * Fraternally yours, DIX.

MORE ODD FREAKS.—One incident calls up another, and t stories go round. Here are two letters from attentive readers:
BOSTON, Jan. 15, 1879.

EDITOR FOREST AND STREAM:

Upon reading in your paper the account of a gentleman's shooting two partridges by waiting for one to fly in the line of another sitting on a tree, I thought I would relate a little experience of my own, as follows: I was out hunting in the Umbagog Lake Region two years ago, in the fall, and going along in an old wood road I put up a partridge. I fired and brought him down, took him and tied a string to one of his legs, and hung him on a tree by the side of the road perfectly dead, as I supposed, and went along in search of more. After I had been gone about an hour or so, I came back to the place where I had hung the bird. I laid my gun and three or four other birds that I had gathered down on the ground and went for that bird; but he was not there. This rather astonished me. I first thought I had made a mistake in the place, but in looking around I discovered the bird in the brakes about three rods from the tree. I immediately went for him, but he got up and went off as strong as any bird that I ever saw fly, and, for aught I know, is going yet with the piece of white string streaming out behind.

One other little affair I will relate: Last fall I was hunting in the same country, and, hearing some crows call, I returned the call, and on their coming over my head in the woods I shot one and saw him fall in some brakes; but, after hunting for him some time, I gave it up. A week after, as I was on the shore of the lake, I saw a crow moving around on the shore with a broken wing. He made a big noise and put for the woods, and I after him. His noise brought another crow to see what the trouble was, and I shot him, breaking his wing; and he also put for the woods, and to do my best I could not get sight of either of them to get another shot, although I could hear them calling to each other, but, owing to the thickness of the underbrush and fallen trees, I could not see them, and, much to my regret, I had to leave them to get out of the scrape that I had got them into as best they could.
B. L. F.

HARRISBURG, Pa., Feb. 17, 1879.

EDITOR FOREST AND STREAM:

I noticed in your last issue a short article entitled, "An Odd Freak," in which our friend "Hix" seems to have some doubt as to its occurrence. He inquired through curiosity of each reader of the incident whether anything of the kind has happened in their experience. I doubt whether that happened precisely as he states—not on the part of the bird, but on the part of the shooter—for I have hunted quail and pheasants a great deal, but have never arrived at that state of perfection which requires one to sight along a gun barrel with one eye and around the field with the other to see if there is another bird approaching in line with the one he first sighted. Birds often cross each other in flight, and I have often seen one bird of some kind alight on a tree or bush and another follow and endeavor to alight on the exact spot, and in so doing compel the first to shift its quarters. They often follow each other's example, and this may have been the case in "Odd Freaks."

I will here relate an incident which occurred to me while hunting with a party of friends, four in number. We had driven a covey of quail on their first flight, and one of our party, not accustomed to hunting, was seated on a large stump for the purpose of resting. The birds settled close by him somewhat scattered. He gave us the signal to come up, which we did. We got a nice point on the part of the dogs, and it was agreed that I should take the first bird that arose. It proved to be a single one, which flew at an elevation of three feet from the ground. While in the act of pulling trigger it passed directly over another, which also arose and attained the same height just as the gun was discharged. The consequence was, I bagged both birds through no extra good management on my part. On another occasion I was hunting with a friend. We marked two birds down close together, and, thinking they would lie, we concluded as it was on our line of march not to disturb them until we had got through with the rest of the covey, and on approaching the spot my dog stood, and, knowing there were two birds, my friend being on the right, I told him to take the right bird. On flushing the birds my bird drove straight away, while his started more to the right. Although it had flown in a more circuitous route, its flight must have been more rapid, as it succeeded in joining in behind my bird just as my gun was discharged, which proved fatal to both, one striking the other when they reached the ground. It was not by quick perception or steadiness of nerve that I accomplished the feat, for I don't claim any great amount of either, but simply because his bird flew right where I was going to shoot. SNIPE.

For Forest and Stream and Rod and Gun.

HOW PERKINS HUNTED THE TURKEY.

PERKINS recently became inspired with a great desire to kill a wild turkey. Last fall the negroes reported a large flock near his house; so he determined to watch the flock late in the evening, while they were seeking their roost, and then sneak down by the trees before dawn and shoot them as soon as 'twas light. After many fruitless searches, he discovered the chosen resting-place of a noble gobbler, and returned home in a very excited frame of mind. Perkins is not an expert shot, though "some" on ducks and squirrels. To make perfectly sure of his game, he decided to take both shotgun and rifle—to try a sitting shot with the rifle, and if that failed, a flying shot with the shotgun. Accordingly, the first faint blush of dawn found him doubly armed and in proper position near the tree. The outlines of the turkey were faintly discerned. First he raised his rifle, sighted carefully, and almost drew the trigger; then changed his mind, laid it down and took up the shotgun. This was discarded in its turn, and by the time he had reached a final decision the turkey was wide awake and sidling along the limb, uneasily craning its long neck to ascertain the cause of the trouble. At last Perkins made up his mind; he seized the rifle and taking a hasty aim, fired. The noise of a rapid flight followed the crack, and before he had time to think of his shot-

gun, the frightened turkey had sailed over his head and buried itself in the friendly recesses of the forest.

Perkins returned home cast down but not discouraged. The next evening found him again peering around after turkeys. Several more evenings passed, when finally in a quarter of the woods with which he was not familiar, he again succeeded in locating the roost of a turkey. As he turned toward home, he had some misgivings as to his ability to recognize the place next morning; but nevertheless he sallied out early with his trusty shotgun, and, sure enough, missed the place—how, we cannot tell. He thought he had gone all right, for he found a turkey unsuspicious and roosting low. Presently he fired. At the sound of the gun the heavy bird fell fluttering to the ground. Perkins was rushing up to wring his neck with the but end of the gun, when he was suddenly brought to a stand by an injured voice exclaiming: "Golly, boss! what make you shoot de ole woman's Christmas turkey? I tell you what, she'll be powerful mad—you better b'lieve she will!"

It is charity to drop the curtain on the scene which followed. Perkins returned home *sans* turkey, a wiser, sadder and a poorer man. A nature less hopeful than his would have been utterly crushed by this second failure; not so. No, Perkins had too much of the blood of '76. One foggy, muggy, lowering morning last November, he slung his old double-barrel over his shoulder, and resolutely strode into the mist. Behold him under the fateful tree! Far up above, by the dim light we can faintly discern the outlines of some large, dark bird. He raises the deadly tube and fires. At the report the bird moved uneasily; then he raised his large wings and flapped. Perkins was too much excited to discriminate. His knowledge of natural history went back on him; or the light was too dim for him to notice the disproportion between the wings and the body, or to see the broad band of dusky white extending from the body all along the under edge of each wing. He sent a second charge after the first; the bird fell heavily to the ground, and he hastily seized it to find—alas! why is it our painful task to chronicle another failure? The bird that Perkins had so foully murdered there in the early dawn of that cold, comfortless November morning was indeed known by the name of turkey; but turkey was only his front or Christian name, so to speak. The family name of that unhappy bird was "Buzzard!"

Perkins has now given up the pursuit of turkeys, and when he goes to town no longer visits his accustomed haunts, where the lovers of sport are wont to congregate. WILL.

FLORIDA DOVE SHOOTING.

TALLAHASSEE, Fla., Feb. 11, 1879.

EDITOR FOREST AND STREAM:

The lakes in the vicinity are numerous and well-filled with wild ducks, so last Monday a party of five started out for a shooting bout among them, prepared to kill every "quack, quack," that showed his eye-ball. On approaching a lake we would scatter and hide in the thickets along the shore. One of us generally obtained a shot at the ducks in the water, and when they rose and circled about we all managed to get a pop at them. As there were men in the party who could hit anything within range, we did not return to our one o'clock dinner with an empty bag. Those who have never sat down to a similar meal cannot understand the allurement in a hunting entertainment, with one's shooting companions, tired by a long walk. After three o'clock we shouldered our guns, and went to a pond near by for a whack at the ducks as the sun went down. On the way a covey of partridges was flushed, and three birds were bagged. A few doves flew across our path, and several of them were added to the bag. When we reached the destined lake the brush had been burned about its borders, so before we got within gun shot the ducks flew up, one flock after the other, and they passed away without our getting a bang at them. One stray fellow that came nearer was brought down in a handsome manner. When a man makes a big bag he boasts of it—he never speaks of the many times he failed to get a feather. I will be more candid, and confess that one duck was all we carried home that evening. Instead of going to bed early, as weary men should, we went to a party and danced until I thought I knew exactly how O'Leary feels after one of his pedestrian contests. Tuesday morning we were to accompany a friend to his shooting box ten miles from town, but as none of us had recovered from the previous day's fatigue, we postponed the journey for the afternoon. It was four o'clock when we climbed into the wagon, and dark on arriving at our destination. We shot from the vehicle on the way enough doves for breakfast the next morning. Our cook, who had been sent down the day before to make things comfortable, soon gave us a smoking hot supper. A friend who lives on a plantation a mile distant dropped in after supper, and we had such a jolly time that it was one o'clock before he bade us good night. The next morning, after getting up but one covey of partridges on a mile of ground, we came to a large cotton field edged with pine trees. I never saw so many doves before as I did in that field. The party spread out, each took a stand, and we spent the whole morning shooting as fast as we loaded. On leaving in the afternoon the birds were still flying around, tempting a fellow to try a long shot at them. They are a shy bird, and it takes considerable shooting to make a large bag. We did the necessary firing, and the bag was filled accordingly. Our neighbor, hearing "the Fourth of July" which we had kept up all morning, arrived on the field of slaughter, and later took us to his house for dinner. When four o'clock struck we were putting away the turkey, venison and bird pie in the most sportsmanlike manner possible. In the evening we got into our wagon, which was driven by one of the party, whom we consider "the most reckless driver in Florida." As we swept up to our house the driver, true to his reputation, made a sharp turn, tumbled us all on the bottom of the conveyance, broke one of the seats, and as we first supposed, mashed a little darkey whom we had on the floor: he was dug out of the debris. The history of the next day is but a repetition of the previous one, excepting that for fear of exterminating the doves we turned our attention to partridges, and when we left the following day the coveys were pretty well thinned out. The weather becoming bad, we packed our traps and started for town in a soaking rain, the wagon full of game, and everybody well satisfied with their trip. V. M. H.

PIGEON MATCHES.

TORONTO GUN CLUB—*Toronto, Feb.* 15.—Monthly shoot, Wednesday, Feb. 12; 21 yards rise, 80 yards boundary:

J. B. GRAHAM, Sec.

MAINE—*Augusta, Feb.* 19.—Shoot at Granite Hall, Tuesday evening, Feb. 18, for a gold badge and the championship of the State, at glass ball shooting; open to any member of organized clubs of the State; 12 yards rise, 1¼ ozs. shot. The balls when shot at were from 20 to 24 yards distance; traps, steel springs, very variable, throwing some of the balls so low it was almost impossible to get on to them before they touched the floor in the double trap shooting:

Peaks Island Gun Club.

Jas B Jones	1 1 1 1 1 1 1 1 0 0 0 1 0 1 1 0 0 0 0 1—12

Cushnoc Heights Gun Club.

H A Thorndike	0 1 1 0 1 0 0 1 1 0 0 1 1 0 1 1 0 1 1 0—11
J L Colcord	0 1 1 1 1 0 0 0 0 0 1 0 0 0 0 0 0 0 1 1—7
R C Clement	1 1 1 0 1 1 1 0 1 1 1 0 1 0 1 0 0 0 0 0—11

J Higgins	1 1 1 1 1 1 0 0 0 0 1 1 1 0 0 1 1 1 1 1—14
J L Fish	0 1 1 1 1 0 0 1 0 0 1 1 0 1 0 1 0 1 1 1—12
C O Tibbets	1 1 0 1 1 1 1 1 0 1 1 1 0 1 0 1 1 1 1 1—16
H F Farnham	1 1 1 0 1 1 1 1 1 1 0 1 1 1 0 1 1 1 0 1—17

Lewiston Gun Club.

E W Coburn	1 1 1 1 0 0 1 1 0 1 1 1 0 1 0 1 1 1 1 1—15
S Shaw	1 0 1 1 1 1 0 1 0 1 1 1 0 1 0 1 1 1 1 1—15
C H Hebbard	1 1 1 1 1 1 1 0 1 0 0 0 0 1 1 1 1 1 0 1—14
F R Whitney	1 1 1 1 1 0 1 1 1 1 0 1 1 1 1 0 1 1 1 1—17

Androscoggin Sporting Club.

J K Gibbs	1 1 1 0 1 1 1 1 1 0 0 1 0 1 1 1 1 1 1 1—16
E E Pomroy	0 0 1 1 1 0 0 0 1 0 1 0 1 1 1 0 1 1 1 1—12
C W Curtis	1 1 1 1 1 1 0 1 0 1 1 1 1 1 1 1 1 1 1 1—18
C F Nason	1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—18
A E Frost	1 1 1 1 1 1 1 1 0 1 1 1 1 0 1 1 0 1 1 0—16
M Burleigh	1 1 1 1 1 1 0 0 0 1 1 0 1 1 1 1 0 1 1 1—15

Nason won badge with four straight on shoot off; Farnham and Whitney divided first money; Tibbetts won second, Coburn third.

NEW YORK—*Eastchester.*—At S. Odell's; pigeon match:

B Dick	1 0 0 0 1—2	T Stevenson	1 1 1 1 0—4
G Colburn	1 1 1 1 1—5	G Moller	1 0 0 1 1—3
J Courtes	0 0 1 1 1—3	E Diamond	0 0 0 1 1—2
Mr Stevenson	1 1 1 1 1—5	Mr Soneborn	1 1 0 0 0—2
Mr Husted	0 0 1 1 1—3— 18	Mr Vanderhoff	1 0 1 0 1—3— 14

After the match a sweepstake of 15 birds each was shot while the snow was falling fast, making shooting extremely difficult:

Mr Soneborn	0 0 0 0 0 0 0 0 0 0 0 0 0 0 1
E Diamond	0 1 0 0 0 1
Mr Stevenson	0 0 0 1 0 0 1 0 0 1 0 0 1

Buffalo, Feb. 18.—Audubon Club shoot for Sutter medal; 5 snow birds and 5 pigeons each; weather clear and cold; sun very bright on the snow; ground traps; birds, 18 yards; pigeons, 24 yards:

J P Fisher	1 1 1 1 1 1 0 1 0 0—7
G Fleischman	0 0 0 0 1 1 1 1 0 1—5
Dr Longnecker	1 1 0 1 1 1 0 1 1 1—8
Geo R Vine	1 1 0 0 1 0 1 1 1 1—7
Wm H Jaeger	1 1 1 0 1 1 0 1 0 1—7
Chas Suckow	1 1 0 1 1 1 1 1 1 1—9
B M Schultz	1 0 1 0 1 1 0 1 0 0—5
J Beir, Jr	1 0 1 0 0 1 1 1 1 1—7
A W Eggert	1 1 1 0 0 1 1 1 0 0—6
Thos Collins	0 0 0 1 1 1 1 1 0 1—6
Jas Rafferty	0 1 1 1 0 1 0 1 1 1—7
Chas Heinold	1 1 0 1 0 1 1 1 0 1—7
F Reigleman	1 1 1 0 1 1 0 1 1 1—8
S A Roberts	0 1 1 1 0 0 1 1 0 1—6
J Franklin, Jr	0 0 1 1 1 0 1 0 0 1—5
Wm Sheibert	0 0 1 1 1 0 1 0 0 0—4

Feb. 21.—Twenty-five snow birds each; ground traps, 20 yards; clear and cold:

Jas Rafferty	1 0 1 0 0 0 1 0 1 1 0 1 1 1 1 1 1 1 0 0 1 0 1 1—16
Thos Collins	0 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 0 0 0 1 0 1 1—19

Feb. 22.—Queen City Club shoot for club medal; ten birds each, ground traps, 21 yards; weather moderate; wind fresh and raw:

B Tolsma	0 1 1 1 1 1 1 1 1 1— 9
C A Kolb	1 1 1 0 0 1 1 1 1 0— 7
E Kener	1 0 0 0 1 1 1 1 0 1— 6
G W Smith	0 1 1 0 1 0 0 1 1 1— 6
C Gerber, Jr	0 1 0 1 0 0 1 0 0 0— 3
Chas Oehmig	1 1 1 1 1 1 1 1 1 1—10
Phil Voltz	1 1 1 0 1 0 1 0 1 1— 7
Chas Weiss	1 1 1 1 1 0 1 1 1 0— 8
Peter Bruener	1 0 1 1 1 0 1 1 0 1— 7

All things considered, this is about the best shooting of the season here. UNCAS.

Brooklyn Driving Park, Feb. 22.—Match between Messrs. King and L. H. Smith, 20 single birds from H and T traps and fifteen doubles from plunge traps, twenty-five yards rise. In the single-bird shooting King led, killing 15 out of 20 against Smith's 11 out of 20. In shooting the double birds King killed 19 out of 24 and Smith 18 out of 26, when he withdrew, the score standing: King, killed 34, missed 10; Smith, killed 29, missed 17.

MINER ROD AND GUN CLUB.—The Miner Rod and Gun Club, of which Mr. Harry Miner, of theatrical fame and popularity, is the President; Maj. George Aery, Treas.; Mr. John B. Voskamp, Sec., and Mr. Michael Egbert, Purveyor, have a comfortably furnished club room at 165 and 167 Bowery, and grounds at Springfield, L. I. Last week, Thursday, some of the members had a shoot. The day was unpropitious, snowing and very cold, and none but thorough sportsmen ventured out. The following is the score of that day's shooting at 25 yds. rise:

Harry Miner	1 1 1 1 1 0 1 0 1 1—8
George Aery	1 1 1 1 0 1 1 1 0 1—8
J T Davis	1 1 1 0 0 1 1 1 1 1—8
Wm Steers	1 1 1 1 0 1 1 0 1 0—7

Mr. Miner and Aery then shot at 10 birds each for $25 a side, of which the following is the score:

Miner	1 1 1 1 0 1 1 1 1 1—9	Aery	1 1 1 1 0 1 1 1 1 0—8

In the evening, at their headquarters, a splendid badge of fine design with a pigeon with spread wings on top was presented to Mr. Miner with a neat little speech by Mr. Wallace, accompaning the same was a most flattering letter. The "Wallace Medal" is to be won three times by one person when it becomes his property.

NEW JERSEY—*Erb's Shooting Ground, near Newark, Feb.* 22.—Private sweepstakes, to shoot at 30 birds each, 21 yards rise, from H and T traps, using both barrels and 1⅛ ozs. of shot:

"Wood"—1 1 1 0 1 0 1 1 1 1 1 0 1 1 1 0 1 1 1 0 1 0 1 1 0 1 0 1 1 0 1 1—22.

Bell—1 1 0 1 0 0 1 1 1 1 1 0 1 1 1 1 0 0 0 1 1 0 1 0 1 1 1 1 1 1—21.

Zerega—1 0 0 0 0 1 0 1 0 1 0 0 1 1 1 0 1 1 1 1 1 0 0 0 1 0 1 1 1 1—17.

PALISADE AND JERSEY HEIGHTS GUN CLUB.—A very enjoyable affair was had at the capacious and comfortable grounds of the Palisade Gun Club, West Hoboken, on Wednesday, Feb. 19. A challenge having been sent by the Palisades to the Jersey City Heights Gun Club, to shoot a match for glory and the championship, was promptly accepted, and the boys were on hand. The challenge read: Ten men each club, to shoot at 20 glass balls each, 18 yards rise, Bogardus traps and rules. Disappointment awaited the Heights boys almost at the start, for on reaching the ground their redoubtable captain and one of their most reliable shots was discovered to be not among them. Had he forebodings of a fearful defeat, and, Achilles like, was sulking in his tent? or had he forgotten; this most momentous of days? After waiting an hour and a half and the captain not appearing, the match proceeded with but nine men each side, with the following score as the result:

Jersey City Heights Gun Club.

Eaton	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 0 0 1—17
Dr Burdett	1 0 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 0—16
Harrison	0 1 1 1 1 0 1 1 1 0 1 0 1 1 1 0 1 0 1 0—13
Dr Fowl	1 1 0 1 1 1 1 1 0 0 1 0 1 1 0 1 1 1 1 1—15
McAndrews	1 1 1 1 1 1 0 0 1 1 1 1 0 0 1 1 1 1 1 1—16
Heddon	0 1 1 0 0 1 1 1 1 1 1 0 1 0 0 0 1 1 0 1—12
T H Smith	0 0 1 1 1 1 0 0 0 1 0 0 0 1 1 0 1 1 1 1—11
W Hughes	1 1 1 1 1 0 1 1 0 0 1 1 1 1 0 0 0 1 0 1—13
Dr Cummins	1 0 0 1 1 1 1 1 1 1 1 1 0 1 1 1 0 1 1 1—16—129

Palisade Gun Club.

O Hess	1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 0—16
Collins	1 0 0 1 1 1 1 1 1 1 0 1 1 0 1 1 0 1 1 0—14
L Jennings	1 0 0 1 0 1 0 1 0 1 0 0 0 0 0 0 1 1 1 1— 9
I Corbett	0 1 1 1 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1—17
H von Lengerke	1 1 0 1 1 1 0 1 0 1 1 1 0 1 1 0 1 0 1 1—14
Dr Talson	1 1 0 1 1 0 0 1 0 0 0 1 0 1 0 0 0 1 0 0— 8
J Joutras	1 1 1 1 1 0 1 0 0 0 0 1 1 1 1 1 0 0 1 0—12
J Von Lengerke	1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 0—17
L Palmer	0 0 1 0 0 1 0 1 1 1 1 1 0 1 0 1 1 0 1 1—12—119

Judges—Capt. Johnson, of J. C. H. G. C.; G. Graef, of Palisade G. C. Referee—E. Templeton, Long Branch G. C.
Scorers—W. Payne, Palisade G. C.; F. Crouse, J. C. H. G. C.

A glaring sun on the fresh snow, and the white background of the bulkhead, tended toward a lower score on both sides than perhaps might have been made. The Palisade is a first-class club, composed (with that prince of good fellows, A. Anderson, as their president) of some of the best sporting material of the country, and the way they treat their guests, as well as take a defeat, prove them to be thorough gentlemen, as well as genuine sportsmen. The uncertainty of a shooter's nerve or form was never more emphatically shown than in this contest, for H. von Lengerke and Dr. Talson, of the Palisade, who had been depended upon (from their past and daily record) by their associates for eighteen broken balls out of twenty, went to pieces themselves. The same of Harrison, Smith and Hughes, of the J. C. H. G. C.; but the latter it is but justice to say had but recently arisen from a severe attack of pneumonia, and was far from strong. In the case of the others, over anxiety to win probably threw them off their equilibrium. We noticed the jolly face of P——, of the *Turf*, bobbing around among the spectators, taking notes, chaffing "Justice," or, as we suspected, putting up a job on Payne. Look out for fun when you see P. around. Three hearty cheers having been given for the Palisade Club, and returned with a will by them, a challenge for a return match was accepted, to be shot on the grounds of the J. C. H. G. C., at West End (Marion), probably on Saturday the 15th prox., and there came to a close the first of what we trust will be many of the good times between the clubs. JACOBSTAFF.

PHILADELPHIA—*Feb.* 22.—Match between Thomas Pierce and Louis Baumeister; both new hands at the trap; the following is the score:

Pierce	1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—23
Baumeister	1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 0 1 1 1 0 1 1 1 1—22

L. B.

TOWANDA ROD AND GUN CLUB.—*Towanda, Pa., Feb.* 22.—Match today at pigeons; 20 yds. rise; 80 yds. boundary; Bogardus rules. The day was bad for good scores as there was a heavy snow squall throughout the shooting:

W A Chamberlin	0 0 1 * 1 1 1 1 1 1—7
E F Smith	1 0 * 0 1 1 1 1 1 1—7
P E Alden	1 1 1 0 1 0 1 0 1 1—7
Geo Dayton	1 1 1 1 0 1 0 1 0 1—7
S S Blodgett	1 0 1 1 1 0 0 1 1 0—6

E.

WASHINGTON, D. C., *Feb.* 24.—The following pigeon matches were shot here on the 22d inst. Much interest was manifested in the shooting, as Messrs. Engle, Kenly and Wirtsner, the crack shots of Baltimore, came over to take the "starch" out of our boys.

First match; 5 pigeons each, 26 yards rise, $5 entrance; $30 to first, and $15 to second:

Mills	1 1 * 1 1—4	Ferguson	1 0 1 0 0—2
Wagner	0 0 1 1 0—2	Jones	0 1 1 0 0—2
McCutchen	0 1 0 1 0—2	Mayhew	0 0 0 0 0—0
Engle	1 0 1 1 1—4	Williams	0 1 1 1 0—3

Mills and Engle divided; Williams took second.

Second match; 3 birds, 26 yards rise, $3 entrance; prizes, $14 and $7

Engle	1 1 1—3	Mills	0 1 1—2
Jones	1 0 1—2	Wimsatt	0 0 0—0
Wirtsner	0 1 0—1	Ferguson	1 0 0—1
Wagner	0 1 1—2		

Mills won second.

Third match; conditions as above:

Mills	1 1 1—3	Jones	1 0 1—2
Engle	0 0 1—1	Williams	0 0 0—0
Wirtsner	1 0 1—2	Wagner	0 0 0—0

Wirtsner won second with three straight. W. F. J.

TENNESSEE—*Nashville, Feb.* 19.—Major Taylor, of Louisville, was expected in this city to-day. He is said to be the bearer of a challenge from fifteen Kentucky gentlemen to an equal number from this State to shoot a match at pigeons the day before the spring meeting of the Louisville Jockey Club for a purse of $2,500.

Nashville, Feb. 19.—Several glass ball matches took place to-day, Bogardus rules, Betterlich traps. First match, M. Ragio beat M. Horne by a score of five out of ten balls, Mr. H. getting but one. Second match, a handicap sweepstakes, three balls each. Messrs. Mitchell and Buckholz got three each; the shoot-off was won by Mitchell. Third match, same as above. Mitchell, Horne and Buckholz tied on three; Mitchell won the shoot-off with four straight balls. Fifth match, Mr. Ragio beat Mr. Horne by breaking two out of five balls. The sixth match was at double birds. Buckholz was the winner, beating both Mitchell and Carter.

Feb. 22.—In the match at the fair grounds to-day for the gun presented by John A. Nichols, of Syracuse, N. Y., there were fifteen entries; 10 birds each, plunge traps, 18 yds. rise. G. C. Campbell, of Maury County, was the winner. Sweepstakes followed, the first match being won by Watkins and Mitchell, who divided on a tie of four straight each. In the second match Jones, Mitchell, Watson and Kirkman tied on five, and Jones won shoot-off. The third match was won by Watkins and Mitchell, who tied on three, and divided. The fourth and fifth matches were won by Watkins. J. D. H.

THE GULF CITY GUN CLUB—*Mobile, Ala., Feb.* 12.—Regular monthly contest for gold medal; 18 yards rise, three revolving traps screened:

Carre	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Vass	1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0—18
Scales	1 1 1 1 1 1 1 0 1 1 1 0 1 1 0 0 1 1 1 1—16
Bush	0 0 1 1 0 1 0 1 1 1 1 0 1 1 1 1 1 1 1 1—15
Holt	0 0 1 1 1 0 0 1 1 1 1 0 1 1 1 1 1 1 1 1—15
Fry	0 0 1 1 1 1 1 0 1 0 1 0 1 1 1 1 0 1 1 1—14
Tunstall	1 1 0 1 0 0 0 0 1 1 1 1 1 1 1 1 0 0 1 1—13
Goodall	0 1 1 1 1 1 0 0 1 0 0 0 1 1 1 1 1 0 1 1—13
Gimond	1 1 1 1 1 1 0 1 1 0 1 0 0 0 1 0 0 1 0 0—11
Priester	1 0 0 0 1 1 0 0 0 1 0 1 0 0 0 1 0 1 1 1— 9
Alexander	0 0 0 0 1 1 0 1 1 0 0 0 0 0 1 0 1 0 0 0— 6
Sheffield	1 0 0 0 0 0 0 0 0 0 1 0 1 0 1 0 0 1 1— 6
Nason	0 1 0 0 1 0 1 0 0 0 0 0 1 0 0 0 0 0 0— 4
Bizzell	0 1 0 0 1 0 1 0 0 0 0 0 1 0 0 0 0 0 0 0— 4

OHIO—*Vienna, Feb.* 22.—Match between Mr. H. Evans and James Roy at six birds each; ground trap, Ohio rules:

Evans	1 1 1 0 1 1—5	Roy	1 1 0 1 1 1—5

No birds to shoot off tie.

Sweepstakes at glass balls; 5 balls each; Bogardus rules:

Roy	1 1 1 1 1—5	Evans	1 1 0 1 1—4
Hardley	1 1 1 1 1—5	Lloyd	1 0 1 1 1—4

Ties shot off, miss and out:

Roy	1 1 1 0—3	Evans	0—0
Hardley	1 1 1 1—4	Lloyd	1—1

MICHIGAN.—In the first match of 1879 for the State Championship Medal, at Detroit, Feb. 20, J. V. D. Eldridge won with 15 birds straight, Frank Wherry killing 14.

—See Bogardus' advertisement.

Yachting and Boating.

FORE-FOOT.

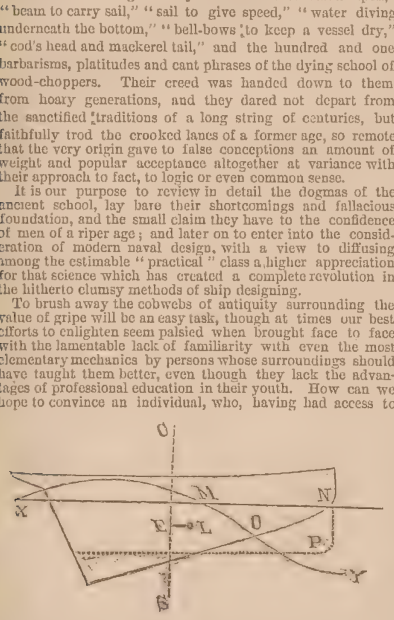
"CAN'T go to windward, hasn't got any fore-foot." This is a very common dictum universally met with among the "practical" fraternity and the many followers of their faith. The average individual who has "loafed it" a little around his father's shipyard, picking up chips for the fire "to hum," and once in a while overheard the ancient knights of the adze ponderously discussing about the dangers of going to sea without a fore-foot, is especially inclined to a firm belief that never a vessel could screw out to windward unless supplied with the regulation allowance of gripe and a little extra besides. His profoundly wise look as he, with owl-like wisdom and patronizing air, condescends to answer

a seeker of the truth: "Why, bless you boy, without lots of fore-foot there'd be nothing for her to hold on with," is something we have met with time and again, and the same individual is one of a kind our readers have no doubt come across as well. But the shining lights of the thumb-rule persuasion have finally had to succumb in this instance as in many others. Their cherished hobby concerning ample fore-foot is swept away before the irresistible march of science, with the equally crude, undigested, and absolutely meaningless vagaries, which have been accumulating in the shape of "practical" lore of ye ancient builders ever since the days when bold Noah is said to have gone down to the seas in a drygood's box—family, cattle and all the world besides.

"Fore-foot" has gone to join "bottom to stand upon," "beam to carry sail," "sail to give speed," "water diving underneath the bottom," "bell-bows to keep a vessel dry," "cod's head and mackerel tail," and the hundred and one barbarisms, platitudes and cant phrases of the dying school of wood-choppers. Their creed was handed down to them from hoary generations, and they dared not depart from the sanctified traditions of a long string of centuries, but faithfully trod the crooked lanes of a former age, so remote that the very origin gave to false conceptions an amount of weight and popular acceptance altogether at variance with their approach to fact, to logic or even common sense.

It is our purpose to review in detail the dogmas of the ancient school, lay bare their shortcomings and fallacious foundation, and the small claim they have to the confidence of men of a riper age; and later on to enter into the consideration of modern naval design, with a view to diffusing among the estimable "practical" class a higher appreciation for that science which has created a complete revolution in the hitherto clumsy methods of ship designing.

To brush away the cobwebs of antiquity surrounding the value of gripe will be an easy task, though at times our best efforts to enlighten seem palsied when brought face to face with the lamentable lack of familiarity with even the most elementary mechanics by persons whose surroundings should have taught them better, even though they lack the advantages of professional education in their youth. How can we hope to convince an individual, who, having had access to



shipyards all his life-time, gravely announces that after mature investigation—and ignorant of his own ignorance, he proclaims himself a critic!—he has come to the conclusion that there is no such thing as a permanent centre of lateral resistance, but that when the jib is set a ship's head pays off, and when the mainsail is hoisted, it does not. Profound announcement—*ergo*, it is self-evident that the centre of lateral resistance shifts from one end to the other and, accepted laws of mechanics notwithstanding, it is therefore sheer nonsense to assign a definite position to the centre! *Vraiment, c'est ennuyant ca!* For such there is no hope, they are incurable. But let us pass them by as unworthy further notice.

For sake of illustrating why a yacht not only may be, but other things being equal, always must be more weatherly without any fore-foot than one of equal lateral resistance but with a portion of her area incorporated in the shape of gripe, let us consider the annexed figure. It represents a vessel with all her fore-foot cut away, her keel running down at a sharp angle to meet the heel of the post. Let L be the "effective centre of lateral resistance," and the dotted line C S a perpendicular through the "effective centre of effort" of the sails. We use the word "effective" advisedly in contradistinction to the "geometrical" centres, for under the varying conditions of heel and trim of canvas, these centres will depart somewhat from their designed position at the upright. It is apparent that the vessel will have a tendency to "come up," or luff, with a force equal to the arm E L x the effective pressure on the canvas. In practice this tendency—well named "ardency" by our French cousins—is met by weather helm. At every casing of helm or wheel the yacht will luff out in obedience to the statical couple aforesaid, and will be continually "eating" to windward.

Now let her find her way out to sea or into lumpy water, and her weatherliness in opposition to the boat of large gripe will become very marked. Let the line X Y indicate a wave slope; the yacht in going through each sea will then decrease the immersed area of longitudinal section by only a comparative small piece, M N O. The centre L will shift aft to an amount dependent upon the area of M N O, the distance of its centre of figure from L. If, on the contrary, we had, in deference to the old school, carried the vessel's stem down plumb, or nearly so, in a manner shown by the dotted line, it is evident that in driving through a sea an area larger than M N O by the piece N O P would have been lifted from the water, and for the time being go for naught in holding the ship to her course. Not only would the emersed area be larger, but its centre would also be further forward, sending, in consequence, the centre of lateral resistance of the remaining wet section much further aft than in the case first considered. As the distance between E and L in a well designed vessel should always be small, L might actually be sent aft of E and the statical couple be reversed, the tendency of the vessel then being to fall off or ease away to leeward. The more rapidly she rises and falls to the sea, the more would she drop off, for it is impossible to counteract her every motion by a jerk of the helm. Should such an attempt be made it would be as fatal to potting a cup as her leewardly tendencies when left to their own device. In a long steady swell the yacht may be "met" to advantage by a spoke now and then, but in a lop such coaching is out of question. With these remarks the whole question of weatherliness, so far as gripe has anything to do with it, has, we trust, been made clear to all. The greater weatherliness of a vessel with round up forward, is due to the simple fact that she shifts her centre of lateral resistance to a less extent in pitching in a seaway than her sister supplied with a more liberal allowance of gripe.

Those who have a *penchant* for practical evidence of the advisability of cutting up forward are referred to the performances of *America*, *Comet*, *Olytie*, *Clio*, *Viking* (sloop), at home, and abroad to such famous wind jammers as *Miranda*, *Seabelle*, and the incomparable *Jullanar*, whose weatherliness could not possibly be improved.

Let us hear no more about "fore-foot to hold on with."

WINTER LECTURES OF THE SEA-WANHAKA YACHT CLUB.—No. 1.

By A. Cabry Smith, Esq., S. Y. C., N. Y. Y. C.

ON KEELS AND THEIR CONSTRUCTION.

As the keels of vessels are chiefly the means of getting lateral resistance, it would at first sight seem that the more keel immersed the better; but when we examine more closely into the laws of fluids, it will be found that such is not necessarily the case. The problem, strictly stated, is how to make the least surface do the most work. For surface friction is an important fraction in the resistance of a vessel, hence the need of keeping keel surface to the lowest limit consistent with weatherly qualities. Experiment also shows that when the water once has been parted, the effective lateral resistance grows less and less as one approaches the after end of the boat. This is borne out by Bland with small models, and proof is not wanting in vessels of full size. In general, laws similar to those governing the water lines would seem to be most beneficial to lateral resistance combined with as small surface as possible; an easy entrance with the greatest width aft of midships and a full round curve aft. Since we want to hang a rudder to the after end, it is customary to keep the sternpost plumb or nearly so.

It is still held by a good many that a deep fore-foot is needed to make a vessel "hang on" in a seaway; but experience does not show this; the old *America* has scarcely any fore-foot and she is, perhaps, the most weatherly keel boat we have. The English yawl *Jullanar* is another conspicuous illustration, and shows very plainly the possibility of combining great weatherliness without fore-foot. She draws only 14in. forward and 13ft. 9in. aft, with the sternpost about 15ft. from the after end of water-line. The immersed area compared with the depth by length of water-line is very small, yet her record proves her to be the most weatherly in a seaway of the entire British racing fleet, while she is also very quick in stays, a matter of consequence in short working. The same result can be obtained by reducing the draught forward and rounding up the keel aft, leaving the sternpost perpendicular. Such an outline brings the centre of lateral resistance well aft and allows us to carry less bowsprit, an advantage which will not be questioned. This form of keel holds good even in shallow centreboard boats, the *Comet* and *Olio* having almost no fore-foot, and both are remarkable for weatherly qualities.

In relation to the practical construction of keels, it may be said that they have been made as thin as possible and deep. This is a good form for speed, but very weak in construction, except perhaps in small boats. When a vessel with a thin and deep keel takes the ground away from a dry dock, it is very unpleasant, and yet most keel boats are built in this manner. Where a keel is thin, there is little hold for the floor timbers, and if the garboard strake is as thick as it should be there is only little wood to cut the rabbet into. As all bolts must be driven near the centre line, there is very little solid wood left to put in fresh ones in the event of repairs being needed, and a deep keel, if thin, is always in danger of being twisted off, should the vessel get aground. If it is intended to carry lead on the keel it must be made very thick or with ample "siding," and in large vessels must not project much below the planking. The cutter *Vindex* had lead put on her keel and it certainly was a great help to her, making her stand up better and without perceptibly changing her behavior otherwise. The *Volante* has likewise lead outside, and she is certainly a very able and safe craft, and can go on a cruise quite as well as a larger vessel. The English cutter *Alarm* was originally ballasted with shot and cement inside, and was not able to hold her own with the new cutters. Her ballast was ripped out and lead put on her keel as well as inside, whereupon she was once more able to cope with the best of the racing cutters. The *Alarm* is not a very narrow boat, but about the proportions of the *Sappho*. Lead on the outside of a wide shallow boat will always lead to disappointment, making her very rigid and uneasy in rough water.

We will now consider the construction of the keel for a yacht of 40ft. water-line. For so small a vessel it can readily be obtained in one piece, and should have a siding of nearly 12in., with 2ft. 6in. below the plank. The strength of such a keel will sustain the weight of the boat. If it is proposed to put lead on, it must lay against the main keel, and the ends should terminate in a scarph shape, so that a bolt can be put through both keel and lead. Metal pieces should also overlap the joint on each side and be bolted through.

The forward end of the keel, or "fore-foot," may round up so much that we cannot get a piece to work to the whole crook, so we must have recourse to an additional piece on top of the main keel, to which the stem is finally tailed on; or we may find a knee that will work long enough to do away with the additional keel piece. When the keel is set up, the position of the frames is marked, so that all fastenings through the keel may be evenly spread. There should be one "through bolt" between each frame, a short or "blunt-bolt" 3in. diam. through the heel of each futtuck, and a 1¼in. bolt through the floor timber, keel and lead, set up with a nut and washer. In this way the fastening is evenly spaced, and bolts are put through the whole length of the keel to the best advantage and economy. These bolts may be of plain iron, or galvanized, though rarely so, as in a good job, if well driven, they will last a long time. The object of using such large bolts through the lead is owing to the fact that lead wastes away the iron. If the boat is to be coppered, the outside ends of the bolts must be well-plugged with wooden plugs dipped in white lead to prevent contact with the copper and consequent corrosion of the bolt-heads.

Concerning the fitting of the garboard, it may be said that a great deal of a vessel's strength depends upon the manner of fitting it. It should, in the vessel now under consideration, run at least 6in. from the top of the keel, and the rabbet should be made to take a 2in. plank, though the latter may be tapered to 1¼in. at the end. For about one-third the length amidships it is well to drive "edge bolts" through the garboard and into the keel. As we go forward and aft, the garboard should be through bolted from outside to outside and the bolts riveted; this makes a strong union between all the parts.

In narrow or deep-throated vessels, it is almost impossible to get timber to "work" for the floors, in which case iron floors or hooks are made use of. This is the common practice in British cutters. The keelson can then be dispensed with, as it takes up a great deal of room where it is desirable to stow ballast; or, if employed, a part of it may be of lead, the large bolts going through from lead outside to top of keelson or floor timber, as the case may be, and secured by nuts and washers as before. With such construction we have a boat that will stand any work and be uncapsizable. At sea this is a great comfort to know.

For a larger vessel, say a schooner of 80ft. on the water-line, a popular size of craft for foreign cruising, the following will be fair proportions:

As it will not be possible to get the keel in one length, we are obliged to scarph shorter pieces together, keeping the scarphs clear of the mast steps. Siding of keel 12in. and not over 4ft. below the rabbet. If lead is to be carried, the siding should be increased to 15in. Without lead, the keel will be built up of three pieces, the upper two nearly alike and the lower in the nature of a shoe, which may come off without damage to the hull in the event of taking the ground. When the pilot-boat *Negus* went on the rocks some time ago, the keel was nearly ground off her up to the plank, and yet she came off without other injury, the oakum not even having started enough to cause a leak. Scarphs in the different thicknesses of keel must be shifted and not come underneath one another. The timber should be as hard as possible to hold the many fastenings without split or wear. The scarphs about 8ft. long. Where the keel rounds up forward it may be necessary to add another tier to the keel, and the stem will finally be secured to that by a "box-scarph," though often being merely bolted through and depending on an apron inside for effective joint. When simply tailed on, a seat of about 12ft. should be provided for it. The frame-stations being marked off, the bolts to hold the keel together are driven, say ⅞ or 1in. diam. When the frames are up in place there will be one bolt through the heel of each futtuck and one down through keelson, floor timber, and through the first piece of keel. The rabbet should run from 6 to 9in. below the top of keel, and be deep enough to take 3in. stuff. When the garboard is sprung into place, spike enough to hold it to floors and treenail the rest. Forward and aft bolt gar boards through from side to side, and the buts "square-bolted" through and through, clinching on either side of ceiling. A keelson is run from the apron forward aft to the post, being often worked in as part of the dead wood. Floor beams for cabins should be of fair size and well secured to the side by knees. Iron staunchions, screw-bolted at head and foot, will serve to hold deck and keel together and prevent straining where much ballast is carried. Effective tying of the deck will prevent opening in the beams and save the joiner-work. Lead should be put next the second tier of the keel and form a portion of the shoe. The bolts holding it ought to be 1¼in. thick, and secured as before described. The lead should be in one piece and not weigh more than six tons, though in England it has become customary to carry much more in their best vessels.

A keel boat to get the full benefit from her keel, should be narrow and of good depth; this form enables us to get along with a small rig and yet sail well. When inclined with a strong wind, shallow keel boats are apt to fall to leeward and lose in that way; a deep keel may be put on, but it is very weak and ineffective.

To "A Yachtsman" and Others.—With a little reflection you might have answered your queries for yourselves. We cannot afford either the time or space to condescend to notice scurrilous personalities. Our mission is to advocate the interests of the yachting community, to spread a knowledge of naval design and cultivate a taste for seamanship; not to engage in mere personal recrimination. Our columns will attest this fact as well as our ability to hold our own with persons not even conversant with the principles of the common lever. The Billingsgate you refer to is unworthy our notice. It is merely a bid for free advertising, and will fail to fetch its mark. Your queries do you little credit, as you ought to be able to distinguish without our aid between abusive invective and sound argument.

THE SHARPIE TO WINDWARD.

Roslin, L. I., Feb. 14, 1879.

Editor Forest and Stream:

I notice in this week's number of your paper a letter with heading of "Deep Draught vs. Light Draught," also the editorial comments, in which latter it is hinted that although the sharpie is a very good boat for smooth water sailing and, in so far as safety is concerned, well enough in rough weather, still she cannot be depended on for working to windward rapidly in a heavy sea.

Now, it is just here that I wish to put in a word. Men who have spent years of their life sailing sharpies in all sorts of weather state, and are willing to prove, that these boats are more seaworthy than any, and can turn to windward when other craft, of whatever type, have either to turn tail and run or lie to.

I very much suspect it is the old story of Theory vs. Practice, but whatever be the trouble I would suggest that it were well to "prove the pudding" in the usual way, if for no better reason than to brush fog from the eyes of just a few yachtsmen who appear to be "all at sea" in more ways than one.

I am at the present time building a sharpie, on experimental lines, and if the captain of any cutter, or deep-keel yacht is anxious to prove a shaky theory I will be most happy to give him a turn to windward and home in any kind of weather, and the rougher it be the more sanguine am I of demonstrating that fifteen inches is better than fifteen feet, in the way of draught.

The only restrictions I should wish to name would be nothing but fore and aft sails and but two men in each boat. T. C.

The proposition of "T. C." to match the sharpie against a deep-keel boat in a steep sea is a fair and laudable one. We trust a series of such matches may be arranged with the *Petrel*, of New York, or some equally smart keel-boat from the East. If "T. C." is correct in his estimate of the sharpie's abilities to windward, the sooner the public can be made to understand them the better for all concerned.

LIGHT DRAUHGT OR DEEP DRAUGHT?

ROCHESTER, Feb. 15, 1879.

EDITOR FOREST AND STREAM:

I am in favor of light draught yachts. I have one that I have sailed in 13 regattas where there were from 10 to 20 yachts in each race. I have taken 11 first prizes and one second, and carried away my mast once. She can go where any other boat of her size can go. I won in a race when I was the only boat that made the course, and there were larger and deep-water boats in the race. It blew a gale of wind, and the other yachts broke down, or cut and run. I took the first prize in that race and the other yachts sailed the race over for the second. My boat is 20 keel, 21ft. over all, 8ft. 4ins. beam, bow and sternpost, 3ft. 5ins. deep; depth in the centre, 34 ins.; dead rise, 8ins.; length of centreboard, 8ft.; width, 5ft. made of wrought iron and weighs 410 pounds. Her boom is 10ft. out board, hoist of jib, 25ft.; foot of jib, 15ft.; hoist of mainsail, 24ft.; gaff pecked up to a line of the luff of the jib. I never have carried anything but live ballast. This is her racing suit. Her cruising suit has 20ft. hoist. She is clinker built, keel and keelson of oak and siding butternut. She is 10 years old and the oak is getting rotten, while the butternut is sound. I shall put in a new keel and keelson. She was built by John Dana, of Rochester, N. Y. SETH GREEN.

THE GAEL-SUNBEAM MATCHES.

BOSTON, Feb. 17, 1879.

EDITOR FOREST AND STREAM:

Relating to Mr. Peabody's reply to my former letter I have only to say that if my memory is correct Mr. Peabody told me that he allowed for a collection of seaweed on his perfect patent log; such having been the case there must have been guess work. He says, "the *Dolphin* had run one hour and fifteen minutes, being short of coal." He must speak from "hearsay," as the *Dolphin* was known to race the steam yacht *Mischief* to Boston. Instead of running E. by N. we sailed N. E. by E. half E.; the wind was S. W. by W. half W. If he is correct as to time why did he start our race when we required a five-knot breeze?

Unfortunately, "our practical navigator" is somewhere in the region of the West Indies and unable to answer for himself.

When we arrived at our starting point they (the judges) were busy at the buoy and we sailed by. When they blew the preparatory whistles we proceeded to tauten our sails; during that operation we drifted some, but not the distance he claims, and were in a good position for the word go.

I see no reason why a buoy could not be placed in the shoal waters of Massachusetts Bay; it has been done often enough in deeper waters under more adverse circumstances, therefore Mr. Peabody's "comment on such yachtsmanship is unnecessary" falls to the ground.

We did not start our first trial for three hours after the appointed time. Why should the judges rule to start us one day at 12 o'clock and the next time call the race off because it was 10 o'clock and we not at the light? We got there early enough and they could, if they wanted to. The articles signed by us and *Gael's* people distinctly say that both boats should be at the appointed place on the appointed day, or shall forfeit the money. We have not handled their money and have not even seen the stakes, even after a written request that they should be held until new judges should be chosen.

The referee was not authorized to refund the money except by mutual consent of both parties. It certainly was in violation of all sporting rules. I make no apology for what I said. If any one wants proof of my words I have professionals and amateurs who will go on the stand at any time. The public has been misled by statements that "*Gael* was entitled to the prize" on the first trial, also that it was by mutual consent of both participants "the race was given up." Only from strong regard for the people that backed *Sunbeam* with their good wishes, and by personal request, have I put the matter in print. W. S. NICKERSON.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachinotu carolinus*	Grouper, *Epinephelpus nigritus.*
Drum (two species), Family *Sciænidæ.*	Trout (black bass), *Centrorpristis atrarius.*
Kingfish, *Menticirrus nebulosus.*	Striped Bass, or Rockfish, *Roccus lineatus.*
Sea Bass, *Sciænops ocellatus.*	Tailorfish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.*	Black Bass, *Micropterus salmoides*
Snapper, *Lutjanus blackfordii.*	*M. pallidus.*

FISH IN MARKET—RETAIL PRICES.—Bass, 25 cents; smelts, 15; bluefish, 12½; salmon, 35; mackerel, 20; shad, 75 to $1.25; white perch, 15; green turtle, 12½; frostfish, 8; halibut, 18; haddock, 8; codfish, 6 to 8; blackfish, 15; herring, 5; flounders, 10; eels, 18 lobsters, 10; scallops, 35 per quart; whitefish, 18; pickerell 15; red snapper, 18; smoked haddock, 12½; smoked salmon, 15; dry cod, 7; hard crabs, 30 cents per doz., soft crabs, $1.25 per doz.

HEADS OR TAILS?—We have quite a number of communications anent the absorbing but now somewhat trite question of How a Trout takes the Fly, which we should be pleased to give space to if we believed that they threw any additional light upon what has already been said; but having reached a conclusion of the matter, we feel obliged to decline the publication in deference to more important demands upon our columns.

SALMO SYMMETRICA.—We referred in a recent issue of FOREST AND STREAM to the trout peculiar to Lake Winnipiseogee in New Hampshire. Mr. E. M. Messenger, of Boston, calls our attention to a statement made in Hallock's "Sportsman's Gazetteer" to the effect that the same fish is found in Lake Monadnock, in the same State, which he disputes, and says:

"I believe this is not the case. The only trout found in Lake Monadnock is the *S. fontinalis*, of beautiful curved outline and brilliant markings and somewhat peculiar habits, they being taken in early spring, but seldom or never taken or seen later than the 10th of June. The lake is fed entirely from bottom springs, and in the middle of dry summer has an overflow through quite a large stream."

Samuel Webber, Esq., one of the New Hampshire Fish Commissioners, says of the trout of the Winnipiseogee and Monadnock lakes:

"The former is only *Salmo confinis* of a more brilliant complexion than usual from the extraordinarily pure water and white sand bottom of the lake; the latter in the same way being a bleached variety of *Salmo fontinalis*, having its exact counterpart in the trout in Greensboro Pond in Northern Vermont. These seldom exceed two pounds in weight, while the Winnipiseogee fish runs up to sixteen or twenty pounds, though not often caught so large, owing to persistent spearing on the spawning beds and other barbarities, which we are trying to stop."

The classification of the *Salmo symmetrica* in the ichthyology of the "Sportsman's Gazetteer" is sustained by the U. S. Commissioners of Fish and Fisheries' reports for 1872-3, pages 157-9 and 372. Respecting the characteristics of the Winnipiseogee trout, which are likely to be confounded with *S. confinis*, it is recognized by its very slender form, by lacking teeth on the central furrow of its tongue, and those of other parts of the mouth being disposed in single rows, and by the more anterior position of the dorsal fin. The trout of Monadnock Lake are dwarfs compared to those of Winnipiseogee, and their markings are very different. It is not at all strange that any observer other than a scientist, should consider them an entirely different fish, and more nearly allied to the brook trout *S. fontinalis* than to the lake trout (*S. confinis*), yet we are constrained to accept the classification of Prof. Baird, from whom we quote as follows: "These fish proved to belong to the group of lake trout, probably closely related to what Dr. Prescott calls *Salmo symmetrica.*"

HOW ENGLISH TROUT DO IT.—The London *Illustrated Sporting News*, remarking upon the discussion going on in American journals concerning the fashion in which a trout takes the fly, very modestly remarks about the method of striking with the tail:

"Naturally, English trout are not so cunning, and here, when a fly is offered to tempt the appetite of a trout, he goes for it in a more straightforward and comprehensible manner."

MOVEMENTS OF THE FISHING FLEET.—During the past week 26 fishing arrivals have been reported at this port, 4 from Newfoundland with 1,520 bbls. fresh herring, 405 bbls. salt herring and 307 turbot; 11 from the Banks, with 340,000 lbs. fresh halibut; and 11 from Georges, with 220,000 lbs. codfish and 20,000 lbs. halibut.—*Cape Ann Advertiser, Feb. 21.*

SALMON FOOD.—There can be no doubt as to salmon being as fond of worms, minnows, loach, or collcys (as they call them in Ireland) and shrimps as trout. I have caught and killed salmon fry in the Arrow, Herefordshire, from 2 to 4 oz. with minnow, and there are 20 salmon killed in the river Lea (Cork) with a big bunch of worms or a colley or shrimp to one that will rise at and take a fly. The number of fish in this river last season was enormous, and a nice dance they led me. In one reach I could see fifty fish from ten to fifteen pounds each jump out and in the water in every five minutes, and on my first day, I feel sure I saw 1,000 salmon rise, and could not get one to touch my fly. With such a stock what must be the millions of fry in that stream in May? I believe they feed on their own fry to an enormous extent. One of the oldest fishermen told me they never rise at the fly well until the fry have left the river for the sea. In five days I never knew a fish killed with fly; but one morning saw Mr. Haines, the Cork jeweller, have five, averaging ten pound each, on the bank from one stand—all killed with the bunch of worms. This was on Lord Baudin's water near Doornisky station.—*W. J. Bullock in London Fishing Gazette.*

THE BIG TROUT OF RANGELEY.

BETHEL, Me., Jan. 11, 1879.

MR. EDITOR:—Reading a very interesting reply to P. M. Marshall, Esq., of Boston, on trout fishing at Rangeley Lakes, by H. O. Stanly, Esq., of Hixfield, Maine, one of the Commissioners of Fisheries of this State, in the last issue of the Lewiston *Journal*, reminds me of the figures given me by that gentleman some months ago of the weight of trout taken last year and this, after close time, for the purpose of collecting spawn for their hatching house at the foot of Rangeley Lake.

I will give several days' fishing with fly and reel as Mr. Stanley gave them to me. He says: "I finished my hatching house Oct. 2, 1877, and commenced taking trout and eggs in the afternoon. I kept no record of less than two and one-half pounds. Oct. 2, 5 trout averaging 3 lbs.; Oct. 3, 21 trout 4 lbs.; Oct. 4, 16 trout averaging 5 lbs.; Oct. 5, 17 trout averaging 5½ lbs.; Oct. 6, 15 trout averaging 5½ lbs.; Oct. 8, 6 trout averaging 6 lbs.; Oct. 9, 7 trout averaging 3 lbs., making in all 413 lbs. in seven days. Of these one weighed 9½ lbs., one 8½ lbs., one 8 lbs., and one 7½ lbs. All of the above trout were taken at the outlet of Rangeley Lake. In the fall of 1878 (last fall) he fished at Upper Dam, foot of Mooslamaguntic Lake, but does not give the days of the month, but says he caught 72 trout weighing 349 lbs., and at the outlet of Rangeley 63 fish weighing 289 lbs., in all 135 fish; aggregate weight, 638 lbs.; average, 4⅔ lbs. each. Of these two weighed 10 lbs. each, over four weighed 9 lbs. each, five weighed 8 lbs. each and four weighed 7 lbs. each. They made no account of any weighing less than two pounds this year, and made the following remarks: "Trout were very plenty and I could just as well have taken double the number if we had had room for them in the hatching house. We turned in 100,000 blue-back eggs and 500,000 trout eggs—all we had room for." And he further says, in Lewiston *Journal* of Feb. 13, 1879, that 95 per cent. of these eggs hatch and mature and are turned into the lakes. Mr. Stanley writes me that he thinks trout are steadily increasing in these waters, and, under the present laws, in a very few years we may expect to enjoy fine sport and abundant supply for home consumption.

I can well remember the time, some twenty years ago, when it was very common to take one hundred pounds of red spotted trout in one-half day's fishing; but since that time taking with grapnel, spears and nets became the order of the day, and the fish were rapidly diminished. I recollect seeing at a fisherman's camp one October morning in 1854 one hundred trout which had been speared the night before, weighing six hundred pounds. An eight-pound trout was a common affair, and even now is becoming quite possible.

J. G. RICH.

BASS FISHING ON THE ST. JOHNS.

EDITOR FOREST AND STREAM: PALATKA, Fla., Feb. 11, 1879.

I wish to give you a report of a day's fishing in this vicinity for the benefit of those of your readers who propose to come this way in the approaching inclement season in your section, and who may thus be stimulated to bring along their rods and tackle to aid in passing time agreeably, and thus avoiding *ennui*, the bane of many invalids and tourists. The fishing season, that is, for black bass (called trout here by the residents), has just fairly commenced. Three gentlemen sojourning at the Putnam House—Dr. Hoffman, Mr. Beers and Mr. Lawrence—went up yesterday to Dunn's Creek, nine miles from here, in a rowboat, and returned in the evening. The day was rainy, and they got a good wetting, but not all of "fisherman's luck," for they brought home the finest string of fish I ever saw taken by a private party of such small dimensions. The aggregate weight was 110 lbs.; the two largest, 7 and 8 lbs. They were taken with the spinner and live bait, but mostly with the latter; and if these had not become exhausted prematurely, they might have added many more pounds to their score. They used the rod. The excitement must have been great, as the bait would hardly touch the water before it would be snapped up by the hungry fish, and the water was lively with their constant "bucking." This creek is a remarkable fishing ground, and success rarely fails to reward the genuine disciple of Walton. Later in the season, when the alligators, the turtles, and the large aquatic birds of various kinds are more abundant, the sport may be varied, or if it lags, may be supplemented by the rifle or shotgun. It is a most romantic stream, and well worth a visit even without the accompaniment of sport. It winds in the usual tortuous course of all our southern streams, and in all its ancient wildness, there being almost no clearings on it, for eight or nine miles through a dense tropical swamp, when you suddenly emerge into a broad and beautiful sheet of water, many miles in length and breadth, originally termed Drum's, now Crescent Lake. This is a type of scenery which is met with in various parts of East Florida. Very soon the fishing will be good within a few minutes' row from the hotels on the sand bars, either for trolling or still fishing. A time-honored method of taking these fish on the river, practiced by the natives, is "bobbing," and there is no reason why they should not take the fly, as this is rude fly fishing. Mr. Ned Orvis proposes to give them a chance at some of his uncle's famous flies when the season arrives, concerning the result of which experiment you may hear from me. This reminds me that, three years ago, the late Dr. Lindley (who lost his life in succoring the yellow fever sufferers last summer), my father and I went up to Salt Creek, on Lake George, to camp for the night and fish. Late in the afternoon my father, while waiting at the mouth of the creek for us to procure live bait, found a strip of old muslin on the ground, and attaching a piece to his hook, and with a light bass rod cast it over the opposite side of the narrow stream, and playing it on the surface by walking along the sandy shore, soon had the satisfaction of reeling in a five-pounder. A negro coming along with an old red cotton band on his hat, he reinforced the white with the red and in less than an hour had landed eleven fine specimens.

W. K. LENTE.

Rational Pastimes.

NEW YORK ATHLETIC CLUB.—The second annual assault at arms of the New York Athletic Club was held at Booth's Theatre last Friday and Saturday evenings. The first event of Friday was a boxing match between William Childs, of the Nautilus Boat Club, and E. Edwards McClinchy. In fencing with foils Louis Greenwald defeated Charles Fettig, both of the New York Turnverein. In a broadsword contest Greenwald won by five hits to Fettig's three. Richard Hayde defeated Peter McGill, of the Seawanhaka Boat Club, in collar and elbow wrestling. James Quigly, of the Scottish-American Athletic Club, defeated Thomas F. Adams, and H. E. Schopp, of New Brighton, Staten Island, won a victory over James Pilkerton, of the Seawanhaka B. C. James Lynch, of the Manhattan Athletic Club, and R. Bowne, Jr., of the Elizabeth Athletic Club, sparred, the judges awarding the prize to the latter. In a similar contest Thomas Powell, Jr., defeated Oliver G. Bates, of the Harlem A. C., and W. F. Banham, of the Harlem A. C., was awarded the victory over Stephen Blondell. Edwards and Cash then put on the gloves and gave an interesting exhibition, which closed the evening's programme.

In the final bout with foils between Louis Greenwald and Charles Koch the latter won with a score of five points to one. In the final bout of the heavy-weight sparrers, James Pilkerton and Joseph Dennison faced each other, and Dennison was awarded the decision. In the light-weight sparring Bowne defeated Banham, Powell won over John Knox, and in the final match between Powell and Bowne the latter won the victory. Fettig defeated Koch with the single sticks, and won the final bout with Greenwald. In collar and elbow wrestling Hayde and George McNichol came together for the final bout, the former winning. Koch defeated Fettig in the final broadsword contest, and James Quigly was awarded the prize in Greco-Roman wrestling. The feather-weights then appeared for the sparring match, which proved the event of the evening, L. A. Berte, of the Harlem A. C., being defeated by A. C. Williams, of the New York A. C.

ENGLISH CRICKETERS COMING.—Arrangements are in hand for the visit of three English cricket teams to this country during the present year. The first to come will be Lord Harris's twelve, now playing in Australia. This team will leave that country in April and will arrive at San Francisco in May, and from that time until the last of June will play through the States and Canada. Its games with the New York and Philadelphia clubs promise to be very interesting. The team plays an American eleven in Philadelphia about the 15th of June. The next team to visit the States will be the amateur eleven of the Lascelles Club, and as this club has practiced base-ball in England lately it will play with some of our amateur as well as professional nines, including the college teams of Yale, Harvard and Princeton. The third team will be a professional one under Daft, and will come over late in September. The play of the Philadelphians against the Australians last October has aroused quite a desire to visit America among the English clubs.

BERTHA VON HILLERN.—Miss Bertha Von Hillern, who has won much fame as well as a very snug sum of money by her walking exhibitions throughout the country, has, it seems, permanently retired from public exhibitions. She is now studying in Boston under the protection of two of her lady admirers, who, according to a Boston paper, "have undertaken to make their *protege* a credit to her sex." That means to instil Boston cultuah into her, we presume.

ANOTHER SIX DAYS' WALK.—The next walk for the Astley belt will begin at Gilmore's Garden, this city, March 10. The contestants will be Daniel O'Leary; Rowell, of England; John Ennis, of Chicago, and Harriman.

FIERY SERPENTS.—A curious and thrilling spectacle was witnessed Sunday evening by persons who were early at the scene of the burning of McDade's ice-house on the bay. It was caused by the escape of probably hundreds of snakes, which seemed to wiggle and crawl and bound directly out of the flames, and to then run for the bay, creating a continuous splash, splash, splash, as one after another of the reptiles went headlong into the water. The whole country for a mile around was light as day. The snakes seemed to come from every nook and corner of the building, and, writhing in agony from the intense heat, instinctively made directly for the bay, and, maimed and burned, as many of them undoubtedly were, they plunged in promiscuously, the larger ones—some of them of tremendous size—throwing great volumes of water high into the air. The watchman at one of the other ice-houses says that when he first saw the flames they enveloped nearly the entire building. He ran to the door and attempted to enter, but was driven back by the fire and smoke. Nothing whatever could be done to save the ice-house. It had no doubt been set on fire by tramps, several of whom were subsequently found lying near the ruins, fast asleep. One of these very graphically describes the rush of snakes from the burning building, which was a sight as terrible as it was wonderful. Out of the doorway, through the roof, in the midst of dense volumes of smoke they came by scores; large snakes and small, of almost every species known to this latitude, their eyes extended and their forked tongues darting defiance at the blaze, they actually raced through the air for a place of safety. They hissed with madness and pounded the earth with their tails in fury, and seemed to screech in the agony they experienced in coming through the fire The number of them appeared to be endless, until the whole structure was so fully consumed that no more could escape from it, if any there were. Great rattlesnakes, blow-snakes, moccasins, garter-snakes, water-snakes of every possible description and age were huddled and hustled together as they came forth, apparently borne by the flames. The creeping things were horrible to behold. No one dared attempt to kill them after they had passed successfully through such a furnace. Wild with rage and tossing venom into the fire, which seemed only to increase in volume, they coiled upon the ground with arched necks ready to strike the foe that approached them. Some of them even seemed to stand upon the edge of the ice-house, as if bidding defiance to the devouring elements, and to lick up the flames with their tongues before giving up what had been their home. It is declared upon good authority that some of these reptiles were ten feet in length, with bodies of enormous size, which made large swaths on the earth when they crawled; and as to their number, no one could give a more accurate idea than that there were hundreds. One of the largest, of a bright green and gold color, which was rendered beautifully brilliant by the fire-light, appeared through the side of the house, which was in full blaze, bearing in its mouth two of its young; and scales fell from its body like hailstones as it hurried away, uttering tones of torture as it proceeded. Some of the snakes took refuge in a large pile of lumber near the ice-house, underneath which several dead carcasses were found when the lumber was removed to a place of safety. The house was built with thin boards, by which a vacant space was made in the siding, creating an air-chamber; and it is supposed that the snakes had taken possession of this for a home. The tramps who endeavored to stay in the ice house Sunday night probably discovered some of the snakes, and attempted to smoke them out, but the effort resulted in the destruction of the building.

ARIZONA'S STONE WELLS.—A wonderful place is Tinajas, about 30 miles southwest of Mission camp. The mountains have one face of hard, smooth granite. All the water falling upon this basin has to flow through nine tanks, one above the other. The lower tanks are of easy access, and are often drained of their contents by men and animals traveling between Yuma and Sonora. The upper tanks are approached only by circuitous and difficult climbing over rocks. To one standing below they afford no indication of their existence, nor does climbing the smooth, steep mountain side seem possible to one unacquainted with the way to it. In the upper tanks water has never been known to fail. To this water comes game of all kinds in great numbers from the great waterless country around Tinajas. Antelope, mountain sheep and deer of several kinds, come in herds. Rabbits and hares are as plenty as anywhere, and are prey for many coyotes and beautiful little rock foxes. One would think that all this game would be thinned out by the Papago Indians who inhabit the country. But these Indians are superstitious and avoid Tinajas with abject horror. Within two miles of this water are certainly 150 graves, and probably more, each marked by rows of stone laid in the form of a cross. Scores of men, famished for water, have expended their last strength in reaching Tinajas, only to find the lower tanks dry, and, ignorant of the upper ones, have lain down in despair to die. The remains have been buried by later travelers, and the graves marked, Mexican fashion, by a cross of stones. During the rush to the gold fields of California, cholera attacked travelers on the road from Mexico, as it did American immigrants along the Platte, pestilence combined with thirst to gather corpses at Tinajas. Recollections of bleaching bones and grinning skulls protect the game from Papago arrows and flint-locks. After passing through its usual fermentation the water becomes clear and pure as any in the world; it comes from the clouds only, and, flowing into the tanks over insoluble granite, it carries no mineral matter. Every heavy rain pours a whirling torrent through the tanks, washing them out to the very bottom—no organic matter stays behind. The number and variety of birds here is marvelous, many of them appearing to be of new and undescribed species. At morning and evening the din of their song, confined by the sides of the mountains, is almost deafening. All around Tinajas is the remarkable vegetation of the desert; near its tanks are many and curious plants nourished by their moisture. The place is one of much interest.—*Arizona Sentinel.*

TOO MUCH HORSE FLESH.—Professor T. P. Wilson has found out why civilization is a failure. It is because there is too much horse flesh. In the course of a lecture delivered in Cincinnati one night last week, he remarked that the cities of America have reached their last milestone of progress. There has not been, he added, a practical improvement in those cities for twenty-five years. Not that they are not growing larger, but that there has not been an advance in the benefits and pleasures of city life. Chicago spends millions of dollars in mending her streets, and the newest pavement is the worst. "What," asks the Professor, "are horses or carriages or drays doing in the streets at all? They simply carry persons or goods, and everything must be subservient to the horse. Take all the horses and drays out of the streets, and there will be room enough for rapid transit. It costs 10 cents to ride in a 'bus on Broadway; about one in a thousand ride; the rest go on foot. Think what a revenue 1 cent from every person would give, and yet we are paying 4 cents more than we should, in consequence of having to support the horse. The way we make our cities now is to take some horses and build houses around them. Our cities are geometrically right but esthetically wrong. Why are our cities built straight? So that the horse may have place. The use of the horse in all our large cities is a blunder. By a better power we can move people for three-fifths less than we pay now, and in less than half the time." What the Professor gravely proposes to do is to take away the horses, pave the cities with asphalt or gravel, cover the streets with green grass, ornament them with shade trees and flowers, have cars running on steel rails, do all the work of transportation with a new motive power in one-half the time and for one fifth of the money, consume all the smoke, and render American cities the gardens of the world. The Professor is undoubtedly the most sanguine man of his generation.—*Tribune.*

GOVERNOR HAMPTON'S CAT.—Governor Hampton has a remarkable Maltese cat—very large, very intelligent, very fond of his master. When the Governor was in his health, Tom was his constant companion in his daily walks about the yard, and would occasionally accompany him on longer rambles through the adjacent woods. It made but little difference to Tom that his master was mounted on such occasions. Nothing daunted, he would trudge along at his horse's heels for hours together, perfectly satisfied so long as he could "keep up" or even keep his owner in sight. The Governor's election to office was a severe blow to his queer follower, as it involved a daily separation which was eminently distasteful to him, but, like the sensible animal that he is, he finally reconciled his own affections to the claims of public expediency, and contented himself each morning with escorting his Excellency to the gate, at some distance from the house, when he would bid him a sad, if silent, good-by, and return to the house until evening. The Governor always observed as regular hours as possible in the discharge of his duties at the State House, and generally returned to his home about the same time every evening. This regularity Tom seems to have remembered for his own benefit, as he proceeded to avail himself of it to the extent of hurrying back each afternoon a little before the appointed time to the gate, where he ever and anxiously remained to welcome his too-long absent friend on his return. During the Governor's illness Tom has been a constant and evidently sympathizing attendant.

A PARROT'S PIETY.—Capt. James Etchberger vouches for the following bird story. About thirty years ago, when in Honduras, in command of the bark Eldorado, his wife, then accompanying him, was presented with a parrot, a sprightly bird and a fluent discourser in the Spanish language.

The bird was brought to this city, where, after being domiciled in the household of the Captain's family, it soon acquired a knowledge of the English tongue. The next-door neighbor of the Captain was a garrulous woman—an incessant scold—forever quarreling with some one or something.

Polly, being allowed full liberty, was pleased to take an airing on the yard fence, and in a short time had learned to mimic the scolding neighbor to perfection, and finally became aggressive. Polly not infrequently rued her impertinence by being knocked off the fence with a broomstick.

This brought forth a torrent of abuse from her injured feelings upon the head of her assailant. Finally the bird's language became so abusive that the Captain was obliged to send it away, and Polly was transferred to a good Christian family in the country, where in course of time she reformed, and became to some extent a bird of edifying piety.

Some time ago, while she was sunning herself in the garden, a large hawk swooped down and bore the distressful parrot off as a prize. Her recent religious training came to her assistance, as at the top of her voice she shrieked, "O Lord, save me! O Lord, save me!"

The hawk became so terrified at the unexpected cry, that he dropped his intended dinner and soared away in the distance.

Polly still survives her attempted abduction.

RATS.—To discourage rats that burrow under walls, don't tamp the holes with broken glass bottles, which will merely incite them to dig new holes, but put a shovel full of dry sand over each hole. The rats soon come up through this, but in doing so let half the sand into the burrow, which, unlike earth, they cannot either force or carry up again, and by repeating this at every fresh-opened place their runs become quite filled up, and they make up your foundations again.

—If you get frost-bitten, extract the frost by the application of ice-water till the frozen part is pliable, avoiding all artificial heat; then apply a salve made of equal parts of hog's lard and gunpowder, rubbed together until it forms a paste, and very soon the frozen parts will be well.

Admirers of Artistic Potterv and Glass are invited to inspect some choice examples selected bv Messrs. TIFFANY & CO. during the Paris Exposition including:

New Plaques by Minton, decorated by Mussill with novel marine designs.

Salviati's latest reproductions of the Venetian Glass of the Sixteenth century.

Fac-similes of the Trojan iridescent bronze glass exhumed by Dr. Schliemann.

New Plaques by Copeland, decorated with strongly drawn heads by Hewitt.

Reproductions, by Doulton, of old Flemish stone ware.

Reproductions of the Scinde Pottery made by the Bombay Art Society.

Recent examples of Ginori's reproductions of old Italian majolica.

Specimens of Capo di Monti ware, Austrian iridescent and enameled Glass and Limoges Faience of new colors.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agen's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges"

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they once smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM: NEW YORK, Jan. 13, 1879.

Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until they became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun. A. H. BOGARDUS.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The rifle powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

ALONZO E. SMITH, YACHT BUILDER, ISLIP, L. I.

Builder of yachts Comet, Niantic, Sagitta, Onward, Windward, and many others. Vessels hauled out, and repairs and alterations executed at low rates. Several fine yachts for sale cheap.

Models and Specifications furnished at moderate rates.

T. DESMOND, *YACHT & BOAT BUILDER,*

37 PECK SLIP, NEW YORK.

Cabin Yachts, Steam Launches, Open Yachts and Sailboats of every description for racing or cruising at lowest rates. Also, Row Boats, Shells and Club Boats. Boats and yachts for export a specialty. Oars and sculls of all kinds.

GEORGE ROAHR, BOAT BUILDER,

FOOT OF 135TH ST., HARLEM, N. Y.

Builder of single and double-scull shells, pair, four and eight-oared shells; barges, gigs and club boats of all kinds. Fine oars and sculls. Fine boats always on hand. Orders executed upon short notice at lowest rates. *Shadow* and *Nautilus* canoes a specialty. Accommodations for boats and oarsmen. jan 80 1y

TRUTH LIES TO WINDWARD STILL.

MY boat is on a treacherous sea,
My boat is very frail,—
A painted toy on a boundless deep,
Yet it drifts not with the gale;
For on its mast, its swaying mast,
I have hoisted a snowy sail.

And snugly lies she on the wind,
It were rash to bear away,
For winds are transient and life is brief,
And my voyage?—I dare not say
How far to windward gleams the land
In the light of the eye of day!

A mist conceals the daylight land,
A mist that is all about;
But I must not lower my snowy sail
Nor yield to a hopeless doubt.
No! not if I shut the blue and gold
Of the starlit midnight out!

Nor though no beacon greet my eye,
Nor spire on towering hill,
Though not a buoy mark the way,
I can find it if I will;
For well I know, where'er I go,
Truth lies to windward still.

And so I cannot furl my sail
Though the sea with hills be strewn,
I must sail or drift, for no cable here
Can help me hold my own;
And amid the boiling waves of life
A calm is a thing unknown.

My boat will never reach the shore—
Poor fool! I fondly dreamed
That the daylight land lay near at hand,
Just beyond the mist it seemed.
Yet still I follow my zig-zag course
And I find that I only dreamed.

And other hands shall guide the helm,
And others shall watch like me
The broken waves as they drown her bow,
And in torrents roll off a-lee,
And others be drenched by the frighted foam
That flies from an angry sea.

But the boat will never reach the shore
Let mortal do what he will,
Let him toil from the morn till the noon come again,
Let him double his utmost skill;
When all is done—let him rest! let him rest!
Lo! Truth lies to Windward Still!

For Forest and Stream and Rod and Gun.

Adventures in the Rangeley Lake Region.

THE snow held off until quite late last fall in our lake region, but the first good time for still-hunting found me at the Upper Dam.

With my Ballard rifle in good working order, my cartridge-box full and a cold biscuit in my pocket, I left camp by daylight in the morning. I had been gone about three hours, when I struck the largest deer track, I think, that I ever saw. It had been made that morning. I took it up, cautiously going slow and looking sharp, never moving ahead a rod without looking over the next ten; now down on one knee, then on the other, looking here, there and everywhere, behind every tree, rock and old windfall.

At last, as it generally proves in still-hunting, I made the deer out in rather an unexpected way. He was lying down on low ground, and the first thing that attracted my attention was his huge antlers, which I could just see over the top of a large pine log, not six rods away. I had hardly time to cock my rifle before he rose to his feet. And such a sight! I see him still in my mind, as he stood there with his broadside toward me, his handsome head high in the air; his scraggy antlers looking like a dry cedar top; his large mule ears stuck forward; his nostrils expanded and his eyes wide open, staring in the woods to the left of me.

I raised my rifle to my shoulder, took a slow, and what I thought was a sure aim, and fired. He didn't fall—no, sir; nor drop on to one knee, nor even stagger; but just hoisted his tail in the air, blew his whistle so you would have known that steam was up had you been a half mile away, and took himself off out of sight in about three seconds.

I don't remember of saying anything worse than: "Cuss the luck! I have done something smart this time; overshot the biggest buck in the country, not six rods off! First one of the season, too; might as well shoulder my rifle and go home; shan't get another crack this season; miss the first one and you are sure not to get another chance." These were the ideas that ran through my head while I was reloading my rifle. But I didn't give way to my disappointment five minutes, for I was soon creeping along as though nothing had happened. I didn't look for blood, for experience had taught me that a deer never went out of sight with his tail up that had just had a .44 bullet shot through him. I was soon convinced that if I got another shot I would have to work for it. I looked at my watch; it wanted a quarter of eleven. I took out my biscuit and ate it, and then started in good earnest. Where the growth was open and I could see for a good way ahead, I would almost run; but where it was thick, and the deer, instead of going straight, would zig-zag a little, I slowed my pace.

I crossed several fresh tracks, and once had a good shot at a doe; but thinking the old buck was close by, and not caring much for the doe, I let the chance slip. Does looked small to me then; I was after something that had antlers, and I kept after that something, until on drawing my watch I was surprised to see that it was three o'clock, and I was obliged to throw up the game for that day.

Now, the first thing thought of after giving up the idea of shooting the biggest buck in the country was to get to camp as soon as possible. I had about two hours of daylight left, and a good eight miles of mountain, swamp and underbrush between me and it. I threw off my cartridge-box and coat, and climbed the tallest spruce tree there was handy, to get my exact bearings. I set my compass, took a hasty look at the needle and then at the surrounding country, scrambled down, whipped on my coat and cartridge-box, took a starting look at my compass, and struck out. S.W. was the course. I kept my compass in my hand, and set it as I went; by so doing I lost no time, and was sure to make a straight course; and the way I went over the underbrush and old logs was a caution to belated travelers. It was dark when I reached the top of the hill north of the camp, but I had no trouble in following back my tracks of the morning. A good hot supper did not come amiss, and before a red-hot stove that evening I told the adventures and disappointments of the day.

The hands on the old clock soon got around to nine, and we doused the glim. After breakfast next morning I again climbed the ridge in hope the deer would work back a little nearer camp. At ten o'clock I was on a buck track that had been made but a few hours, but he went through all of the worst going there was in the country, and finally the approach of night forced me to leave the track and turn my steps toward camp again. Another well-relished supper, a few questions about my luck, a story or two, eight hours of refreshing sleep, and it was again time to turn out. "Now, fellows," said I, at the breakfast table, "it is the third day, and you need not be surprised if I bring in something." I felt as though I should not hunt in vain, notwithstanding the bad luck I had the two previous days, and I did not, for at two o'clock I again drew a bead on a buck. He was standing behind an old spruce tree that had blown down, and I could hardly see him through the boughs. He was twelve or fifteen rods off; I knelt down, rested my elbow on one knee and fired. The deer disappeared from sight. I slid a cartridge into my rifle and then began to look around to see if he was anywhere to be seen, but he was not. I went to the place where he stood when I fired. There were his tracks where he stood, and those he made when he bounded away. I picked up a little wad of hair, but nowhere could I find any blood. I examined the hair and saw that it was cut out by a bullet, but I thought that also went against me, for instead of hitting him square I must have just shaved his back. I was almost ready to give way to despair and believe the old adage about missing the first shot. I started along on the track determined to make sure that I had not hit him. I followed about ten rods, and could hardly believe my eyes when I saw my deer. He was lying stretched out at full length and stone dead. I looked on him with admiration for a few moments, and then as I had no time to waste I took my sheath knife, skinned his neck whole and unjointed the back bone way up to his head, and of course saved his head. I soon had his carcass hanging from a limb. It was quite a job to dress him off. I had shot him through the body, and he made up for not bleeding outside by filling himself full inside. After dressing him I washed my knife and hands in snow, shouldered the head and skin and started for camp. I got there before dark without working very hard, and that night they did not joke me any. I made arrangements with Tom to let Boardman go with me and get the meat the next day. I thought we would get the venison the easiest to take a boat and row up the lake near the island, then leave our boat and strike across the country.

I took my rifle along, not with the idea of doing any hunting, but thinking perhaps something might come in our way, and Boardman took an old navy revolver. It was a dark, misty morning and rained quite hard as we went skipping along up through Trout Cove, Boardman pulling a good lively stroke with the oars and I keeping pace with the paddle. We had eight miles of boating to do, and that was by far the pleasantest part of our journey, as we soon found out after leaving the boat, for with the water running a stream off from every tree we were wet to the skin. The snow was three or four inches deep and fast melting. When we had been from the boat an hour or two we came upon two very fresh doe tracks; they were going very near our direction, so we concluded to try them. It was splendid weather for business, but not much for fun. The snow was so full of water we could go very still. I was ahead and Boardman a rod or two behind, when I caught sight of one of the does. She was standing front toward me with her head turned to one side. I clapped my rifle to my shoulder, took a good aim at the bow of her neck and fired. She disappeared from sight. I ran toward the place where I saw her last, loading as I went in hope of getting a shot at her mate. There was quite a high knoll a little to the left of where she had stood.

As I ran toward the knoll I saw a deer about half way up the side, standing still. I could not tell whether she was the one I had fired at first or not; but I blazed away, and whichever one it was I was satisfied I had fixed her that time, for she dropped without making a bound. I shoved in another cartridge, took a sharp look around, and then started for the knoll again. As I stepped up the side of it I caught sight of Boardman a little way from me, walking also as if he was stepping on eggs and his life depended on his breaking one, his hand behind him on the but of his revolver, which was still in its sheath, and with red-hot, premeditated murder glowing in his eyes. I think the deer which stood just over the knoll must have got a glimpse of her would-be assassin's phiz by the way she snorted, for she fairly made the woods ring. Boardman gave a jump as if lightning had struck him, and landed with his heels deep in the ground a full yard apart. His body was bent forward as his left hand held his coat-tail high in air, while his right pulled and twiched at his revolver, which seemed to have grown to its sheath all of a sudden. I laughed ready to split, as I ran over the knoll in hopes of getting a flying shot, but the deer was out of sight. I followed a short distance, and then gave her up. We had more on our hands now than we had got daylight for, and so hastened on to the dead deer and took her inwards out. Both of my shots had hit her, and the first one would have secured her. We left her where she was and started again for the venison of the day before. It was past noon when we got to it. We divided it up into two packs and struck for the lake again, reaching it after three hours of hard lugging and walking.

We laid our loads down and started off for the deer we had killed in the forenoon. We found her, put a string through her under jaw, one ahead of the other, and started with her. For the first half mile the job was easy, as the growth was open and the land descending; then we came to thick spruce "horse-locks," or ridges, with alder swamps between, and three or four inches of water. With night setting down upon us our fix was not pleasant. Nevertheless we got our deer through to the lake, but it was so dark when we got there that we could hardly tell ground from water. Our boat was three-fourths of a mile above us; so I tied my white handkerchief to a bush above the spot where we laid the carcass, and then got a bearing by the top of a friendly pine, which stood on one of the islands, and the top of Baldhead Mountain, which rose high toward the clouds from the further side of the lake. We then started for the boat. It was a great relief not to have the deer to drag; but the way we tumbled and crept through the thick bushes and over rocks and old logs was not like walking down Broadway. Probably many of the readers of the FOREST AND STREAM have been in the same predicament. To them I will say, "You know how it is yourself!" But to those who never were there I'd advise "Don't get there," for if you have the sweet disposition of an angel, the patience of Job, and a suit of black broadcloth on, you would spoil the whole in going half a mile.

But Boardman and I had nothing to spoil, and what we did have wouldn't have kept much longer, I guess, if we had not run against the boat when we did. We turned it over and tumbled into it—wet, stiff and hungry, but not cold. I took the oars and Board. the paddle this time. We first went up the lake for the first deer, and had no trouble in finding it, as we left it at the mouth of a little brook, and its rippling sounds guided us.

After getting it aboard safely, we pulled down the lake, until we reached the place where we had marked the second deer; then we worked along slowly and kept our eyes riveted on the top of our tree. When it came just in range of our landmark on the top of the mountain, we turned our boat and rowed directly ashore, keeping the two objects just in line. When the bow struck I got ashore and felt around for a minute, and was on the point of telling Board. that we had not hit just right, when I put my hand on my handkerchief that I had tied up for a sign. I could have seen it just as well had I kept it in my pocket. We soon had the deer aboard, and again shoved out into the darkness; this time we were cold as well as stiff and hungry. The day had been very warm and wet, but the night had set in dry and cold; but after we were fairly on the homestretch, I don't think we could have bettered our time if we had been in a race with a thousand dollars in the pool; and an eight-mile stretch gives a fellow a chance to try his third wind as well as his second. When we reached the point above the camp we both agreed that it was a mighty pleasant sight to see the light streaming out of the front window.

Perhaps the old camp has sometimes looked a little rough to some of our city sportsmen, but the White House at Washington never looked pleasanter to any in-going President after a close election. Tom and Peter weighed our venison. The doe weighed an even hundred pounds; the meat of the buck one hundred and fifteen. Of this Board. had socked out sixty-two pounds and I fifty-three. Thus ended my first .ill.1 1 1 of last fall.

I have reason to believe that the "Old Star," as the big buck is now known, still exists, as I saw his track about a week after this occurrence. No doubt he is now yarded with four or five of his trusty followers on the south side of some mountain, probably not ten miles from where I am writing. A pleasant winter to him! I wish him no ill-luck, but it makes me sad to think that those royal antlers are doomed to soon be bleaching and mouldering in the forest. If he would only run down to the corner of our camp some dark night and hook them on to the gate, and then pull back he would get rid of them just as well as he would to rub them off against a rock maple tree.

I have scribbled this little experience off for Forest and Stream, as many of the friends that I meet every summer at our lakes are readers of that paper. It may recall to their minds some of the pleasant times we have had together with rifle and fly rod. F. C. Barker.

For Forest and Stream and Rod and Gun.

A COLONIAL MANOR-HOUSE.

Last fall I made a flying trip a hundred or two miles from this city to visit a friend in Johnstown, Fulton Co., New York and thence into the woods of course. Perhaps you know Johnstown is a beautiful borough, possessing somewhat a romantic origin. It derived its name from and was founded by Sir Wm. Johnson, in 1760. The same year he erected an elegant villa on the site of Castle Cumberland, which is now known as Broad Albin. He also built a rustic lodge near by on the beautiful Sacandoga River. In 1763 he built "Johnson Hall" (or mansion), which was flanked by two forts built of stone, with subterranean passages connecting with the Hall, as a protection from hostile Indians. The Indians formed a strong affection for Sir William, and his mansion was a place of annual rendezvous for them. Their great councils were held there. On one occasion, 600 warriors gathered there in council. All the assemblages, however, were by invitation.

Sir William fitted up and furnished the upper part of his magnificent mansion for a Masonic lodge room, and frequently various field sports were improvised, to which his tenantry and the yeomanry of the surrounding country were invited and welcomed. The "Hall," now 115 years old, shows but very slight marks of time. This beautiful old mansion is now the inheritance of Hon. J. E. Wells, who has emblished it with an observatory and bay windows, finished with antique panel work corresponding to the other parts of the building. The halls are 15x40 feet, and the stair-rail still shows the marks of the Indians' tomahawks, which were a sign to Indians who should come there that the Hall was never to be burned.

The Indians were always loud in their expressions of praise of the "great man." They said, "Sir William never deceive Indian," and they gave him, unasked, a royal token of their confidence and affection; they presented to him as a gift, 6,600 acres of the land lying on the north side of the Mohawk, which gift was confirmed to him by a patent royal, granted from King George. This distinguished gentleman also built the Episcopal Church of the town, which now stands as a monument of his religious faith, in the grounds of which his mortal remains repose, unheeding the progress of events as the centuries march along.

We noticed likewise another relic of the times of Sir William. The court-house of the town was erected 110 years ago, built of brick brought from Holland. But excuse my wandering so far from my simple purpose of telling you about my little adventure in hunting, for we greenhorns love to say our say as well as others. In Johnstown there is a jolly, happy-hearted druggist, and a Dominie just about of the same stripe. But that druggist has a fine team of Canadian ponies that brought us to our destination in good time, some 14 miles, into about the worst section of hunting ground we ever saw. All the primeval forest under the weight, perhaps, of all the years since the Flood, had fallen in every possible direction, and lay rotten, or rotting, making it, together with a thick undergrowth of brush, briars and running vines almost impassable for man or dog to get through. It really seemed a "sell." But after a splendid lunch, and bagging one ruffed grouse, we headed toward civilization once more. The next day, however, we turned our course in another direction, and were compensated with a fine day's sport, bagging nine ruffed grouse, six gray squirrels and one woodcock. But for what cause we could not divine, the game was scattered over a large extent of country, only one or two birds at most were found together.

But the object of this note is to say, or what lead to this writing is, the painful fact as related to us, that no regard, or very little, is paid in that section to the game laws of the State, and at the rate everybody is shooting, in a few years the sportsman's dog and gun will be of no interest nor value.

New York, Feb., 1879. On The Wing.

Fish Culture.

The Salmon of New England.—Cognizant of the prolonged and intelligent efforts which have been made during the past decade to restore the *Salmo salar* to his ancient habitat in the New England rivers, many persons have anxiously looked and inquired for results. Where this precious food once flourished, a half century ago, in the plenitude of natural abundance, hardly a representative could be found when the good work began. The Connecticut and the Merrimack, and nearly all the streams of Maine, were wholly depleted. The Penobscot and the Kennebec afforded a few delicious specimens every year; but such were taken in nets. The Union and the Dennis were the only streams where an angler could capture a salmon with rod and fly subsequent to the year 1860. In 1859 we faithfully whipped the Aroostook River at the Falls where old man Russell had previously captured scores, up to three years before that date; and we tried the stream above, near the now thriving town of Presque Isle; but nary a fin could we raise. The last of the salmon had departed, with the last Mohegan. Subsequently the subject of fish culture came to be agitated, and then the States took hold of the matter, and operating through their chosen Fish Commissioners, have since accomplished much. Last year Connecticut River salmon were not a rarity in our markets, and Kennebec salmon were the favorite grade at fancy prices.

On the 26th of February, last month, there was a joint convention of all the New England Commissioners, with the exception of those of Rhode Island, who did not attend, at which the full story of their successful achievements was told, as far as information could serve. Imperfect fishways, which salmon could not readily ascend, and innumerable gill nets, seemed to be the principal obstacles to desired complete success. There had also not been full harmonious co-operation between the States common to one river. However, salmon which Massachusetts had put into the headwaters of the Connecticut River, had come up the river the past year and been caught, so that there is no way of showing what treatment is necessary in the upper waters. The run of salmon in the Merrimack last year was regarded as proof that they run up to spawn only every other year. Salmon have been seen below the Holyoke dam, but it is not known whether they passed up. The fishway is suitable for the passage of fish; the only question is whether they can find the entrance. It was said that salmon never turn down stream to find a passage around an obstruction, but struggle to get up the main channel. The fishway at Lawrence was not a success till the mouth was changed and put at the foot of the dam. It was suggested that such a change is necessary at Holyoke.

The fishway on the Penobscot at Bangor is thirty feet high, and the entrance is imperfect, owing to a high rock. But the fishway works well, and when examinations have been made salmon and alewives have been found in the compartments. After July 15, when the nets of fishermen are removed by law, salmon go up in great numbers. It is hoped to extend the current further down stream that the fish may more easily find the fishway. The bottom of the fishway is made of stones, which are found to be much more favorable to the fish than the smooth current which runs over planks. The Bangor fishway is spiral. It is perfectly easy for the weakest fish to go up such fishways as that at Lawrence.

After mature discussion a vote was finally passed to instruct the Legislatures of Vermont, New Hampshire, Massachusetts and Connecticut that it was the opinion of the Commissioners of said States that the taking of salmon in the waters thereof should be totally prohibited until July 1882, or a period of four months more than three years. This would be a most judicious interdiction. A similar act was passed in Nova Scotia in 1874 with regard to moose, and the effect thereof was proved by the great increase in the stock. Where a protective enactment is absolutely needed, in order to have effect, it should be absolutely prohibitive; otherwise it will avail nothing. We trust the several legislatures will make the desired law.

The following miscellaneous business was enacted before the meeting of commissioners adjourned:

It was voted to continue Mr. Powers in the position of superintendent of the New Hampshire hatching-house, at Plymouth, N. H.

It was regarded feasible to put salmon in the Westfield river, and re-establish its character as a salmon river.

A New Hampshire commissioner said that his State was perfectly willing to co-operate in re-establishing the salmon fishery in the Connecticut, but a Vermont commissioner stated positively that his State would not do anything till the salmon were seen at Bellows Falls. Show them a salmon there and they will then talk about co-operation.

Mr. Thomas Ellis, of Rochester, Mass., exhibited a model of a fishway. It was in several compartments in a straight line, but was open to the objections to present fishways, that the mouth is too far below the dam.

In regard to distributing salmon through other States, from Bucksport, Me., it was decided to hold further communication between the commissioners. It was stated that in Southport, Conn., salmon which were put into Mill River (a very small stream) in 1873 had come back in 1877 grown to a large size.

It was decided to take no action in regard to land-locked salmon. A general feeling was manifest that the inland fishery interest will make but little progress this year, owing to the lack of appropriations by the several legislatures.

THE LOBSTER FISHERY AND HOW TO PROTECT IT.

Read before the American Fish Cultural Association Feb. 26.

BY S. W. JOHNSON OF BROOKLYN.

This, like all questions having for their object the best method of economizing and preserving our supply of sea food, has become not only of great interest, but of great importance; and the discussion of such topics is looked upon with increasing interest from year to year as the necessity for a law in relation to them becomes more apparent. With these facts in view, I esteem it a privilege to accept the invitation of the secretary of this Association to consider briefly the causes of a very apparent decrease in the size of lobsters offered for sale in our markets.

The first question seems to be—What relation the supply bears to the demand, and the ability of the former to meet the latter, in the future as well as the present.

In looking for a reasonable solution of this problem, an inquiry concerning the means taken to provide the supply now, as compared with those taken in former years, might properly be prefaced by a statement of the fact that not as many lobsters are consumed now as formerly. A few years ago, fifty or sixty traps per man were considered a good number, while at the present time from seventy-five to ninety are used, and even with this addition it requires twice the number of men to catch the same amount of lobsters. These facts seem to show the danger of depletion in our efforts to keep up the supply, even if size and quality are disregarded.

It may be fairly estimated that from twenty-eight to thirty millions of lobsters are taken annually off the coast of New England, aggregating in weight not far from fifteen thousand tons. These figures may be considered only important here when taken in connection with the ability of the source of supply to furnish this amount without endangering its perpetuity. This calamity, however, I think most likely to ensue unless some proper restrictions are enforced, limiting this continual drain. When we compare the lobsters seen in the market to-day with those of former years, the danger becomes still more evident; and if this decrease in size goes on, the industry will, in a short time, become of little or no importance.

The reply to the oft-repeated question—Why do we not get larger lobsters?—must be, We catch them faster than they can grow; the smaller the lobsters we retain, the smaller will they become in the future, and as a natural consequence, if we continue indiscriminate fishing, practical extermination must follow. This ground I am anxious to maintain, and wish to have some remedy applied to obviate the evil, still, however, permitting a partial supply.

Before going further I would here give you a brief description of the process by which the lobster discards its old shell and assumes a new one:

Having grown to fill the old shell, a new one begins to form under it, at first no more than a film, which, gradually thickening, becomes in appearance not unlike India-rubber. The line seen running lengthwise of a lobster's back indicates the opening point which, when opened, room is provided for the extraction of the tail, together with the legs and bony structure of the body. Next comes the interesting, but apparently difficult, operation of drawing the large claws through the small joints by which they are connected to the large body or trunk; but this is accomplished by a beautiful yet simple provision of nature, viz., the decay of a portion of the shell, thereby forming a larger aperture. The place is indicated by an oval spot, seen on the inside of the first joint of the arm. This done, the animal is free from its shell and bony structure; for, let me state, the bones assisting in the working of joints are also withdrawn from the flesh, leaving him helpless and as if dead, the beating of the heart being the only visible sign of life. In a few days, however, the new shell is hard enough to permit the seeking of food, which is done with great eagerness.

But more especially to the result of this process would I call your attention. From actual observation I have found that a lobster measuring 10½in. in length will, after shedding, have increased to 12in.; but if we make the comparison in weight, it may be better understood. For instance, a lobster of 10½in. will weigh 1¼lb., while one of 12in. on an average of 2½lbs., or double its former weight, which will add to its market value in the same proportion, or 100 per cent. Now if a lobster sheds its shell once a year, which is approximately true, I think it shows that by establishing a reasonable standard of length (which must not be so high that it would prohibit fishing; neither so low that a sufficient age for reproduction may not have been attained) we may in time get back that which we have so foolishly sacrificed.

Lobsters of a less length than 10½in. *have* been found bearing eggs, but by careful observation and inquiry I have found the exceptions to be very rare. Therefore this standard could not be safely fixed *under* that length, but should, on the contrary, be as much above it as possible; still, not so high at first as to cause hardship to the fishermen, while from time to time an advancement might be made, as the supply of the required length increased and more nearly met the demand.

Having pointed out the necessity of such a law, and indicated the best modes of its application, it only remains to be shown how it may be made effective.

I think it is an established fact that protective measures can only be carried out in the open market, where the possession of unlawful fish or game is *prima facia* evidence of guilt. Such a law has been in full force in Massachusetts since 1874, but the possibility of finding a market outside the State has been a barrier to the best results; and just so long as there is any place where lobsters may be indiscriminately sold, we cannot justly judge of its efficiency. I am fully aware that in advocating a measure of this kind opposition will arise, which must be met and answered in the most tolerant spirit; for fancied rights of individuals are not always in accordance with the reasonable demands of the public good.

The first opponents of the law for the protection of lobsters in Massachusetts were the fishermen, whose testimony at the same time was the best evidence given of the necessity of such a law. These, however, after a trial of one year, not only became reconciled to it, but even its strongest advocates, and realize year by year more fully the wisdom of the measure they so bitterly opposed.

There has been one circumstance noticed which I think quite significant, viz., that the first year the law went into effect one-fourth of the whole number caught were obliged to be thrown back on account of their insufficient size, which proportion has gradually diminished until at present scarcely more than one in ten is discarded. The State of Maine, which possesses the largest lobster-producing grounds on the coast, has from time to time passed laws for the protection of the lobster fishery, but has had a powerful and important interest in opposition to a limit which no other State has, the size being of less importance for canning purposes than for other consumption. This year, however, a law has been enacted by which the canners are obliged to confine their operations to four months of the year, while for the remaining eight months a limit of 10½in. is required, and, I think, may be looked upon as a great step in advance of any law previously passed. This movement was made by the fishermen in the form of petitions to the Legislature, numerously signed, and from one end of the State to the other. Maine, New Hampshire, Massachusetts and Connecticut each have laws practically corresponding to each other, while New York, without a law which might so much assist in protecting the other States, only helps on an illegal and wasteful practice.

UTILITY OF FISH CULTURE.

MR. EDITOR: I read in your issue of the 30th ult., your just criticism on the wonderful predictions of an astute Virginia editor. "*Mirabile dictu*" should be the motto on his coat of arms. Only fancy fish so plentiful as to become the sole food of our agricultural population! Some clever genius should set to work to invent a plan to cause the fish to run straight from the water to the pot, the frying-pan or the gridiron, lest the next generation should starve. If too lazy to till the ground, they certainly will not take the trouble to catch fish for their dinner. Talk of the Golden Age after that!

The witty French poet, Boileau, one wrote the following bitter satire on the whole human race:

"Tout homme est fou, et pour n'ent pas voir—
Il faudrait etre seul, et casser son miroir."

Well, sir, once—that is nearly forty years ago—when writing an article to order, to oblige my friend Simmonds, of the *Colonial Magazine*, published in that small *village* called London, I was mad enough to quote the aforesaid satirical lines; and fearing that some folk not versed in the Gallic tongue might wish both Boileau and myself down the crater of Etna, Vesuvius or Stromboli—places to give a wide berth to, more especially when they become excited, as I have seen them—I thought I had better make it plain by undertaking the translation; and after spending a whole long winter's night, wasting half a quire of foolscap and sundry wax lights, in trying to reduce my version to two lines also, I had to give it up and content myself with the following:

Madness, proud man, 's thy universal fate,
What e'er thy birth, thy talent or estate;
And he who would no living madman see,
Must break his mirror and a hermit be.

There is an old Latin proverb, which is, I think, applicable to the present case: *Nihil tam absurdum, quod non dictum sit ab aliquo philosophorum.* The meaning whereof is, I believe, "There is no absurdity which has not been maintained by some philosopher." The only objection that I have hitherto heard to the present system of fish culture, so successfully developed in Canada and the United States, is from persons who assert that the whole is a fraud and a bill of expense to the State, from which no benefit can ever be derived. Facts are stubborn things, and the results already achieved are too well known to need comment. But, quoth Hudibras,

"A man convinced against his will
Is of the same opinion still."

Perce-Gaspè, Feb. 21, 1879. PHILIP VIBERT.

PROGRESS.—How this fish farming has grown since the fall of 1848, when I saw Ressigue, with his trout eggs from the Voger Mountains, France, in company with M. Coste, hatching the eggs in the Observatory, at Paris, and who can tell to what it will extend in the next decade?

Yours truly, DR. E. STERLING.

HERRING SPAWN.

PERCE-GASPE, Feb. 19, 1879.

EDITOR FOREST AND STREAM:

In reply to Spencer F. Baird's remarks relative to the fish spawn washed upon Bonaventure Beach I have not the slightest doubt that it is herring spawn and no other. In proof of which I beg to call the learned Professor's attention to the following facts:

1. When the immense shoals of herring arrive in June they are full of roe—fat and splendid eating; but when they leave, having spawned, they are poor and not worth curing.

2. The herring when spawning appear instinctively to make for the landwash, and I have seen them so thick along the Bonaventure beach for a distance of three to four miles that you could neither row nor pull one of the fishermen's flats through the dense mass—extending from three to four acres out from high water mark. And it is precisely at this period that the wind-row, so to speak, is formed.

3. The spawn when washed ashore is that of the herring in size and appearance—increasing in bulk on the fine, warm sand; the two black specks, which are plainly visible to the naked eye, appearing only a few days before the night-tide which washes away the entire mass.

I shall endeavor to send a bottle containing a portion of each to Professor Baird in the spring. Sincerely yours, PHILIP VIBERT.

Natural History.

THE FLESH OF THE SAGE GROUSE.

FREEPORT, Ill., Jan. 10, 1879.

EDITOR FOREST AND STREAM:

Just a word or two, by your leave, pertaining to the sage grouse controversy, from an old plainsman. Engaged upon the survey and establishment of the southern and western boundaries of Wyoming Territory during the summers of 1873 and '74, I had ample opportunities of testing the qualities of the sage grouse as a table bird. In 1873 we were in the field from April to October, and hardly a day passed when we were in the sage country that we did not have sage grouse, or as more commonly known "sage hens," served up in some kind of style. Much of the southern boundary, established that summer, runs through a country most favorable indeed for these birds, especially that portion immediately west of the "Rockies," known as the Red Desert, which is one vast sage plain of a hundred miles in width, extending from the western foot of the Rockies to the eastern foot of the Escalante Mountains. In this region sage was almost the only vegetation, even grass being very scarce, and the name, Red Desert, is exceedingly appropriate. Depending largely upon the "resources of the country" for fresh meat (a result of our army education), and the sage grouse being almost the only kind of game we found in this terrible desert, and being tame and easily bagged, we made use of large numbers of them. The next year we ran through a somewhat better country, but found abundance of sage and sage grouse, and I am free to say that I regard this bird as one of the very best of the game birds of the plains, and, so far as my experience goes, entirely devoid of any sage, bitter or unpleasant taste. In 1865, as a member of Gen. P. E. Conners' staff, I participated in the Powder River Indian Expedition, and traveled from Fort Leavenworth to Fort Laramie, and thence in a northwesterly direction to the headwaters of the Powder River, across the divide to Tongue River, and down Tongue River to the Yellowstone. Our experience with the sage grouse through this country was identical with that I have related above, and I fully agree upon this matter with the opinion expressed by Col. R. M. Dodge in his splendid work, "The Plains of the Great West and their Inhabitants." Col. Dodge is a thorough sportsman and a very intelligent gentleman, and as he was for many years on duty on the plains, his book being a compilation of what came under his own immediate observation, should be considered excellent authority. Speaking of the sage grouse, or Cock of the Plains, he says:

"There is a strong prejudice against this grouse, on the ground that its flesh is said to taste strongly of the sage, which is its principal food in winter. My experience is that this is simply imagination. I have never been able to discover such a taste, and I have eaten them at all seasons of the year. I must admit, however, that when I have shot them in winter I have so far yielded to the popular prejudice as to remove the crop at once. At all seasons of the year they feed, as other birds do, on insects—principally grasshoppers—and I have frequently opened crops which were distended to the utmost with these plagues. To my taste, there is no bird (except the field plover) so perfectly delicious as the young sage grouse during the month of August. It is juicy, tender and delicate as a spring chicken, besides having the richest game flavor." TRANSIT.

EDITOR FOREST AND STREAM:

The question as to the edible qualities of the sage grouse (*Centrocercus urophasianus*) is being agitated through your columns. I have shot and eaten many of these birds throughout the West, and must add my indorsement to your opinion on the subject. It is well known that a game bird's flesh is influenced in its flavor by the food it eats, and the same species may differ widely in its gastronomic recommendations when taken in different localities. The famed canvas back, shot where its favorite food is wanting, or at seasons when it is not accessible, is no better than, nor as good as, the mallard, which is omnivorous. This is applicable also, I think, to certain fish. The flesh of pond-fed trout, when they are confined to one diet, is very distinct in taste from that of the wild fish, etc. The sage grouse feed largely upon the leaves and blossoms of the shrub from which they take their name. After a certain age this constant diet infuses into their flesh a pungent, sagey taste, more or less noticeable in proportion as other food is procurable. The young birds cannot and do not immediately feed upon the sage, but vary their diet with insects, or any seeds that they may be able to procure. Late in the season, however, these having disappeared, they are perforce driven to the sage, which soon affects their flesh in the manner alluded to. To compare the edible qualities of the sage grouse, young or old, to those of our eastern or western ruffed grouse seems to me most absurd. As a game bird the sage grouse are way down on the list; their flight is clumsy, they are easily bagged, and when cooked are under no circumstances excellent, and, in my opinion, generally very poor eating. The ptarmigan, mountain and dusky grouse of the Rocky Mountains are far ahead of the Cock of the Plains; and all must yield to the superiority of ruffed grouse, Eastern or Western varieties. INCOG.

The discussion of this question seems to us utterly unprofitable, for from the nature of the case we can obtain no facts upon the subject. Each correspondent's views will differ according to his taste, and in consequence we can have nothing but a series of opinions. What is one man's meat may be another's poison. What would our readers say if we should print a number of contributions in favor of or against the flavor of the onion?

CURIOUS FACTS.

JEFFERSON CITY, Mo., Feb. 6, 1879.

EDITOR FOREST AND STREAM:

I noticed an article in a local paper here yesterday, stating that a gentleman, while out hunting in Calaway Co., a county adjoining this, in the month of January, found a quail's nest with fifteen or sixteen eggs, and the mother bird sitting on the nest. After she flew off the nest he examined it carefully, the bunch of grass covering it being filled with ice and frozen solid, leaving just space enough under it for the bird and her nest, and a place for exit. A few days after finding it he and other parties went to examine it again. This time they found the bird still sitting on the nest, but frozen to death. A portion of the eggs had been hatched, but the young were also frozen. Was this not a very singular occurrence? I should have been somewhat skeptical in regard to it if I had not met with very nearly a similar case while out quail shooting four years ago this winter, in company with a venerable sportsman, Mr. Pratt, of this place. Our dogs made a point. We flushed a single bird after considerable kicking around in the grass and snow, and found she had been sitting on her nest containing three apparently fresh eggs; but, alas! she never returned to finish her maternal duties. It was too late when we found the cause of her reluctant flight.

During the cold weather and deep snow of four years ago this winter, I was eye-witness to an attack on a rabbit by a lot of crows, in which the latter came off victorious. I was going duck hunting one morning (the ducks staid with us all that winter), and in passing through a strip of timber near my destination, my attention was drawn to a congregation of crows. I supposed from the noise they were making that they had found some belated owl, and were having a good time at his expense. After a little investigation, however, I heard the cry of a rabbit in the general medley of noises, and drawing still closer, watched the proceedings. The crows had apparently found the rabbit in its form, and, either driven by hunger, or knowing its helpless condition in the deep snow, had made a combined attack, flying at it in rapid succession, each giving it a vigorous peck. The poor animal was floundering about in the snow, perfectly confused, and at each successful thrust of its tormentors it uttered its pitiful cry. I went to it, and picked it up without difficulty, and found that both its eyes had been picked out. It was bleeding badly, and the snow where it had been was covered with its blood. I was unable to find any wound other than those made by the crows. I knocked it on the head, leaving it for the crows to breakfast on, thinking it might divert their attention for a short time from any ducks that I might kill or cripple and not retrieve immediately. Many a fine fat mallard and canvas-back have I lost in this way.

H. C. MUNGER.

POACHERS AND PIRATES.—The Cork correspondent of the London *Times* tells this story of a hoax recently perpetrated about a pirate ship off the Irish coast:

The gunboat Goshawk has been for some time past engaged in protecting the fisheries at Blackrock, near Cork, and it is supposed that, in order to carry out their illegal practices, some fishermen circulated the rumor that a pirate vessel was off the harbor. The intelligence being conveyed to Lloyd's, the gunboat was ordered out to look after this phantom depredator, with the result already known. In the meantime the poachers, it is stated, made large hauls. It will be remembered that about two years ago a hoax resulted in sending the Goshawk on a perilous trip to Vigo Bay, the fishermen of Cork harbor benefiting considerably by her absence.

MILES' ALE.—For as good ale as a man needs for his refreshment, try a sample at Miles' Brewery, 55-9 Chrystie street.

Woodland, Farm and Garden.

SHEEP CULTURE IN TEXAS.

EAGLE RANCH, Throckmorton Co., Texas.

EDITOR FOREST AND STREAM:

Last May I left New Jersey with a friend for Texas, with a view of starting a sheep ranch, if on looking over the country we liked the climate, the people and the prospect generally. After a pleasant trip of four days we arrived at Ft. Worth, a city of probably 7,000 inhabitants, and at present the terminus of the Texas & Pacific Railway. We remained here a week, procuring our outfit, which consisted of four ponies, blankets, cooking utensils, provisions, a shelter tent and a man to act as guide and cook. One of the ponies carried our baggage.

Our first stop was at Ft. Griffin, a frontier post garrisoned by a company of the 10th Regt., commanded by Capt. Lincoln. The town claims to have four hundred inhabitants, has quite good stores and a good hotel, "The Planters'." The principal trade of the town is with the buffalo hunters, who outfit here. We remained here nearly two weeks looking over the country, were very much pleased and selected a location. This accomplished, we laid in a fresh stock of provisions and resumed our ride turning our faces southward, our objective point being San Antonio, 355 miles distant, where we expected to purchase our stock.

We had very pleasant weather, saw plenty of game, antelope, etc., but only shot enough to keep our larder supplied. The country in general we found very beautiful, rolling and well watered. We reached San Antonio in fifteen days, having been in all twenty-five days in the saddle. We went into camp at San Pedro Springs, and leaving it in charge of our guide took up our quarters at Hord's Hotel; found it a very fine house. I passed a week very pleasantly and looking over the quaint old town found much to interest a stranger. The historic Alamo, originally a church and convent, but being converted into a fortress by the Texan patriots during their struggle for independence, became a modern Thermopylæ, not one of its heroic defenders escaping to tell the tale of disaster. The adobe wall which once surrounded it is gone, and the inclosure forms part of what is now the Alamo Plaza.

The Alamo itself is used as a warehouse. It should be purchased by the State and kept forever as the fittest monument to the brave hearts whose blood consecrated its walls. I say fittest, although a shaft has been erected, bearing a legend which stirs our blood now as "Remember the Alamo;" Remember Goliad," did that of the avengers of San Jacinto. The Thermopylæ had its messenger of defeat, the Alamo had none."

San Antonio is improving rapidly, many fine houses and substantial blocks of stores having been lately built. The streets in the old part of the town are narrow, and the sidewalks roughly paved. Now and again you see a quaint old Mexican house, with adobe walls and roof. The walls rising above the roof form a parapet, which next the street is pierced with holes every five or six feet, from which wooden gutters extend over the sidewalk, to carry off the rain. The San Antonio River, a rapid stream, runs through the city. A short distance above a large portion of its flow is divided, and the water being conducted through the streets into the country, causes a luxuriant growth of vegetables, fruits and flowers. Fruits we found very abundant; delicious melons at a few cents. The climate is warm, but there is generally a good air blowing up from the Gulf which makes it pleasant, and the nights are always cool. The banks of the river, which now and again deepen into quiet pools, are lined with a luxuriant growth of cannas and colodiums, whose forms are seen mirrored in the crystal waters below.

At the foot of nearly every garden is a little bathing house, a simple affair, only a light wooden frame-work, supported on some empty barrels and covered with muslin. A few miles below the city are the old Roman Catholic Missions of La Concepcion, San Jose, San Juan and De Espada. La Concepcion is in much the best state of preservation. Of San Jose there is nothing left but the lofty facade, with its wealth of superbly sculptured colossal figures, interspersed with cherubs and exquisite scroll work, and a small chapel under what was the bell tower. Here we found an old Mexican woman telling her beads. The stately roof, beneath which once knelt a crowd of dusky Indian worshipers, now lies a mass of ruins. On every side are the remains of irrigating canals, which wind in and out among what were once lovely gardens and fruitful fields. San Jose and De Espada are scarcely more than ruins, and of comparatively little interest.

After looking over a number of flocks of sheep for sale, we finally selected one of 2,400 head of "improved Mexicans," secured two herders, bought a wagon to carry camp equipage and provisions, and on June 30 started our flock toward their future home. They reached the ranch August 15—a long, weary drive. I did not go up with them, but returned home via Galveston, taking passage in the steamer *San Antonio* for New York. In September I returned, bringing with me a car-load of thoroughbred Spanish Merino ewes and rams.

We are located on Elm Creek, a few miles above its junction with the Brazos River, in Throckmorton County, twenty-five miles from Fort Griffin, which is our nearest post office, although we have the promise of one at Williamsburgh, a town of two houses, three miles from here. I am delighted with the country. The creek is a clear running stream, full of the finest fish—plenty of bass, as they call them here (although not the black bass of the North), weighing from five to six pounds. Ducks are very abundant. Wild turkey and antelope are seen nearly every day. A few years ago the buffalo were here in countless herds; now only a stray one comes along. As I write, two antelope and a deer fill our larder. This country is well adapted to stock of all kinds, the short, nutricious, curling, mesquite grass forming abundant pasturage, curling on the ground in the fall into natural layers, and remaining green at the roots all winter. It is a sad mistake, however, to think that sheep in Texas, or at least in Northern Texas, require no shelter or feed during the winter. It is true that several years may pass without there being any absolute necessity for it, but now and again will come such a winter as we are now experiencing, when they must have it or die. We at once began building correls of stone, with sheds along one side and across the ends. A terrible norther, accompanied by rain and sleet, came up before the sheds were entirely finished, and in the morning we found 125 dead sheep in one correl smothered and trampled to death in their frantic efforts to escape the pittiless storm, there not being enough shed room for all. In another correl, entirely open, we lost but twenty-five.

Hay can be put up very cheaply, as there is abundance of grass in the creek bottom that will make fine hay, and grain of all kinds can be raised without difficulty, as the soil is fertile.

If any reader of the FOREST AND STREAM has an idea of going into sheep-raising in Northern Texas, and calculates on getting along without any feeding, he will find his mistake, and before long will be a wiser and poorer man. Most winters it will be but a matter of feeding for a day or two at a time during a storm in preference to have them exposed to its fury, thereby insuring an increased length and evenness of staple in the wool, and greater strength and vitality in the lambs.

With Mexican sheep, shearing about 2½ pounds to the fleece, the loss of a month's growth, consequent on the chilling effects of a wet norther, amounts to but a few ounces; but which the flock shears, as it should, six pounds per head, the loss amounts to probably three-quarters of a pound, as I imagine wool grows more rapidly during winter, and the monthly average being evidently half a pound. At present the ground is covered with snow six or seven inches deep, and has been for a week. It is the third time it has occurred this winter, and the suffering of all kinds of stock is terrible. One party near Griffin has but 300 left out of 1,300 head of sheep. We have plenty of corn, but unfortunately have been until to-day without any hay; as a consequence, with the best care, our losses have been heavy.

So long as they could get at the grass they could get along with corn in addition, but now that the ground is covered with snow, to expect sheep to make a living, pawing for dry grass, is asking too much.

As an old Indian said the other day, it is "Heap bad weather—heap cold." I am convinced that sheep-raising will pay in Texas, but to manage a ranch successfully requires plenty of pluck and energy, for there is little fun and a great deal of work. Shed all your corrals, cut plenty of hay, raise corn and oats, then when the snow comes, or even a wet norther, keep your sheep in and feed them, and you will then be able to get along without swearing at the country or seeing your $50 rams dying daily, can sit by your fire and let the wind howl without feeling that it is singing the requiem of dying sheep.

The worst trouble we have with sheep, and one that cannot be avoided, is the screw worm. A sheep having a cut or sore, which no matter how slight, is liable to the attack of the fly, causes the sores, and in a flock of thousands it is difficult to detect those affected until pretty far gone. The scab is also very troublesome, as it spreads very rapidly, and soon ruins a flock. It is not, however, very difficult to check. A dip in a strong decoction of tobacco does the business, but unless the sheep are removed at once to a clean range or corral it is of little use. The foot-rot seems to be unknown here, as none of our sheep ever had it, and one or two were quite lame when they left Ohio.

Wolves are very plenty, as they are in all the frontier counties of Texas, but by having corrals four or five feet high there is no danger. A wolf don't care to jump into an inclosure when he can't see his way out. We have had but one sheep killed in the corral, and in that instance the wolf crawled in under the fence. Of course it was one of our $50 rams; probably thought he would enjoy pure Merino blood better than that of a $2 Mexican.

Our Merino sheep have done very well, much better in fact than the Mexicans, or rather half bloods, which compose the bulk of our flock, but we find that they must be herded by themselves as the native sheep graze so fast that the others are worn out running after them. We hope to have a fine lot of thoroughbred rams for sale next fall; see no necessity of sending to Ohio or Vermont for them when they can be raised here.

We are only about 75 miles south of the Fort Sill Comanche and Apache Reservation, and although everything is quiet and no trouble anticipated, yet if we had a fine lot of ponies I should not be surprised to see them turn up some day. It's very hard for an Apache to resist such temptation. We all carry our revolvers (more for ornament than use), and I never leave home without my Winchester. When one is lost and has to make a camp of it the wolves howl much less discordantly for their companionship.

I shot a fine wolf New Year's morning out of the door of the house. I have made the acquaintance of the officers stationed at Fort Griffin, and it is needless to say I found them gentlemen. The country is quiet, and I see no necessity for a decent man getting into any trouble. A very small jail accommodation suffices, as it is much easier to hang a horse thief than to be at the expense of boarding him. The country would soon be overrun with horse theives and scalawags generally if it were not for the Rangers, a fine company under command of Lieutenant Arrington, a thorough officer and a good fellow; is stationed near Fort Griffin, ready to go, when called upon, at a few moments' notice after any horse that is stolen. Each man is armed with a pair of revolvers and a Winchester carbine. They have no use for Indians, and would soon clean them out if permitted. I know whereof I write in relation to the Rangers, as I recently had occasion to require their services in a chase after a horse thief, riding with them eighty miles in twenty hours.

To give your readers an idea of the abundance of game, a short time ago while sitting writting I looked up and saw out of the window, about one hundred yards off, a large flock of wild turkies. I picked up my gun and stole around the house, but before I could accomplish this something frightened them and they were off. I shot as they ran but failed to get any.

January 14.—Our winter is over; weather as pleasant as April in Pennsylvania, though there is still ice on the creek in quiet nooks (has been four inches thick). This morning I started after the mules, and as usual took my rifle along. I had gone but a short distance when I came upon a deer quietly feeding. It ran into some bushes on the bank of the creek. Getting off my horse and following quietly, I saw it about 50 yards off, got down on one knee and aimed for the shoulder. The moment the gun cracked it gave a convulsive bound six or seven feet into the air and ran across the creek. Following for about fifty yards, I found it quite dead. The ball had passed through the heart. It was so large I was unable to manage it alone and was obliged to go for assistance. While we were busy skinning it one of our herders came in with a fine antelope slung across his pony.

If any reader of the FOREST AND STREAM should visit Texas and find himself at Fort Griffin we will be pleased to have him visit us and will cheerfully give him all the information we possess. He will find us by following the Fort Sill trail to the crossing of Elm Creek. H.

NURSERYMEN'S AGENTS.—*Editor Forest and Stream:* At the annual meeting of the Wisconsin State Horticultural Society recently held at Madison, resolutions were adopted demanding that nurserymen be held responsible for the acts of their agents; that the planters should require of all who solicit their orders unquestionable proof that they are authorized agents of some reliable nurserymen, and that such nurserymen are able and willing to meet the representations of their agents; and that allegations of scarcity, or extraordinary excellence, or exorbitant prices, should be taken as *prima facie* evidences of fraud. ROVER.

The Kennel.

NEW YORK DOG SHOW.

WE print below the rules and regulations under which the third annual dog show in this city will be held, also classification and list of premiums. There are some changes in the rules this year which will commend themselves to exhibitors. The latter will be furnished with seven tickets free of charge, and the three-judge system will probably be adopted at least in sporting classes:

RULES AND REGULATIONS.

This bench show will be held under the rules as adopted by the Philadelphia and Westminster Kennel Clubs, as follows:

1. The term dog where used in these rules is general in its application, and includes bitches and puppies, unless they are otherwise mentioned. The term puppy is restricted to dogs under one year of age.

2. Every person who enters a dog for exhibition must be his *bona fide* owner (or the duly authorized agent of his owner) at the time of closing the entries, and must identify in the entry by his name, and if known, his age, and also if known, the names of his sire and dam. If the name of a dog who has won a first prize has been changed, his name at the time of his winning any and every such prize and the place thereof, as well as his present name, must be given. If the names of his sire and dam are not known, he must be entered "pedigree unknown."

3. If a dog shall be entered without being identified, as directed in rule 2, he will thereby be disqualified from competition, and shall forfeit all entry fees, and any prize which may have been awarded to him.

4. Puppies may compete in grown classes, except in classes where they are specially excluded, and will be judged as if matured.

5. A dog which has, when a puppy, won a first prize in a puppy class, is not thereby disqualified from competition in a class where first prize winners are excluded.

6. A dog to compete in a champion class must have won a first prize in an open class at Springfield, New York, St. Louis, Philadelphia, Baltimore, Boston 78, Detroit, St. Paul or Pittsburgh, and a dog having won a first prize at any show held as above cannot compete in an open class when there is a champion class for his kind, but must compete in such champion class.

7. A dog affected with mange or other contagious disease is disqualified from exhibition, and on the veterinarian of the show giving his certificate to that effect to the committee of management, shall be immediately excluded or removed from the show, and shall forfeit any prize which may have been awarded to him.

8. The scales of points given in the third edition of the "Dogs of the British Islands," by J. H. Walsh (Stonehenge, will be used by the judges, when necessary, in judging the dogs.

9. In any class where there is only one dog entered for competition, if he possesses sufficient excellence to deserve a prize, the judges will award to him the prize which he is deserving of, whether it be first, second or third; and they are not to award a prize in any class where no dog possesses sufficient excellence to entitle him to a prize. In case two dogs in the same class possess equal merit, and one has an authenticated pedigree and the other has not, the dog with the pedigree will be preferred in awarding the prize.

10. The decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation or collusion can be shown; in any such case the committee of appeal must decide all questions, except those of merit, and the dogs may be rejudged.

11. Any protest as to the qualification of a dog for competition must be made before the close of the show, and may be investigated at the time or within ten days thereafter. A charge of fraudulent entry or false description must be made within one month after the close of the show, and may be investigated within two months after the charge is made. All protests and charges must be made in writing and lodged with the committee of management.

12. Any person who has misconducted himself in any way in connection with dogs, dog shows or field trials, is thereby disqualified from exhibiting any dog at the show.

13. The committee of management shall have the right to exclude or remove any dog from the show for any cause appearing to the committee sufficient.

REGULATIONS.

In addition to the above the following rules and regulations will be strictly enforced:

1. No dog belonging to the Westminster Kennel Club will be entered for a premium; but members have the privilege of entering their own dogs.

2. It must be distinctly understood by all exhibitors that the managers will not be responsible for loss or damage to any dog exhibited, whether the result of accident or any other cause.

3. It is desired that with each entry the exhibitor will state the price at which he is willing to sell his dog, a prohibitory price being, of course, permitted.

4. An entry fee of $2 will be charged for each animal entered, and no additional fee will be charged for entries for special prizes. The entry fee must in all cases accompany the entry, and includes care and feed for dogs during the exhibition.

5. Such special prizes as may be offered will follow the awards in the general classes.

6. All entries must be made on blanks furnished by the club, and can be had on application to the superintendent at his office, 117 Fulton Street.

7. The entries close on Tuesday, March 28, and as soon thereafter as practicable each exhibitor will receive a ticket of identification and a numbered tag corresponding with the stall number of his dog. When the dog is brought to the exhibition hall the tag must be attached to his collar, and his owner must show his ticket of identification before the animal will be received. Therefore exhibitors are requested not to lose their tags, nor to put them on the dogs, when practicable, until a few moments before they are presented at the door, and, in case of dogs coming by express, their tags must be firmly nailed to the crates.

8. Each exhibitor will receive a separate ticket of identification for every animal entered, which must be carefully preserved, as no dog will be permitted to pass out of the building at night until his owner deposits five dollars and surrenders his ticket to the check clerk.

9. Exhibitors will be permitted to take home their dogs every evening after ten o'clock upon leaving a deposit of five dollars with the check clerk and surrendering their identification tickets, both of which will be returned on the reproducing of the dog in the morning before nine o'clock. If prize winners should be taken out and not returned, the prizes will be forfeited.

10. All dogs must be removed and returned by the Twenty-seventh street entrance.

11. Exhibitors need not accompany their dogs. They can be sent direct to the exhibition hall, and direction cards, printed for this purpose, will be furnished by the superintendent. All dogs will be promptly returned to their owners, or otherwise disposed of as they may direct at the close of the exhibition.

12. The managers will use due diligence for the care and safety of all dogs exhibited, watchmen being on duty both night and day.

13. The members of the committee and managers will be in constant attendance, and especial attention will be given to the care of pet dogs, commodious boxes with wire netting being provided for the same. Each of these boxes will have a hasp and staple attached, so that the owners may, if they see fit, keep their dogs under padlock and key.

14. The managers will meet every morning and afternoon to receive complaints. Cases for the committee of appeal will be submitted through the managers. All communications must be made in writing and deposited in a box at the managers' office provided for the same.

15. No dog will be received unless supplied with a suitable collar and chain.

16. Bitches with pup, and small pups weaned, will be provided with suitable pens, if application is made at time of *entry*.

17. Should exhibitors abroad desire to compete, they are reminded that dogs cannot be landed at this port without payment of duties, unless they are accompanied by a certificate from the U. S. Consul at port of shipment, declaring that they are exported for breeding purposes.

18. No dogs will be received before 7 A. M. Monday, the 7th, or after 8 A. M. Tuesday, the 8th. All dogs will be received at the Madison avenue entrance.

19. The show will be open from 9 A. M. to 10 P. M. each day.

20. The judging will commence promptly each morning at 10 o'clock and continue until 1 o'clock, and also from 2 P. M. until 6 P. M. During these hours no dog must be taken out of his stall, not even by his owner; and if any dog is not found in his stall when called by the judges, the judging will proceed without him. This rule will be rigidly enforced, in order that the judging be not retarded. Owners are requested to be near their dogs, and when the class is called, to bring their animals into the judging ring. Owners who cannot be present should notify the superintendent, that their dogs may be taken in the ring for them.

21. Ribbons will be attached to the stalls of prize-winners as soon as practicable after the awards have been made.

22. Railway arrangements for the transportation of dogs are in course of completion with all railway companies centering in New York, and will be duly announced.

23. Each exhibitor will be furnished with a season ticket free; no attendants' tickets will be issued, except as season tickets, which will be sold at the usual rates.

24. All disputed questions in any way connected with the judging, will be referred to and decided by a committee composed of three members of the Philadelphia Kennel Club and three members of the Westminster Kennel Club, who will act as a Board of Appeals.

PREMIUM LIST.

Class 1—Mastiffs.—Dogs, 1st, $20; 2d, $10; 3d, silver medal.

Class 2—Mastiffs.—Bitches, 1st, $20; 2d, $10; 3d, silver medal.

Class 3—Mastiff Puppies.—Dogs and bitches, 1st, $10; 2d, silver medal.

Class 4—Rough-coated St. Bernard Dogs.—1st, $20; 2d, $10; 3d, silver medal.

Class 5—Rough-coated St. Bernard Bitches.—1st, $20; 2d, $10; 3d, silver medal.

Class 6—Smooth-coated St. Bernard Dogs.—1st, $20; 2d, $10; 3d, silver medal.

Class 7—Smooth-coated St. Bernard Bitches.—1st, $20; 2d, $10; 3d, silver medal.

Class 8—St. Bernard Puppies.—Dogs or bitches, 1st, $10; second, silver medal.

Class 9—Newfoundland Dogs and Bitches, 1st, $20; 2d, silver medal.

Class 10—Newfoundland Puppies.—Dogs or bitches, 1st, silver medal.

Class 11—Siberian or Ulm.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 12—Greyhounds.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 13—Deerhounds—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 14—Champion Pointers over 55 lbs.—Dogs (see rule No. 6), 1st, $35.

Class 15—Champion Pointers over 50 lbs.—Bitches (see rule No. 6), 1st, $35.

Class 16—Pointers over 55 lbs.—Dogs, 1st, $30; 2d, $20; 3d, silver medal.

Class 17—Pointers over 50 lbs.—Bitches, 1st, $30; 2d, $20; 3d, silver medal.

Class 18—Champion Pointers under 55 lbs.—Dogs (see rule No. 6), 1st, $35.

Class 19—Champion Pointers under 50 lbs.—Bitches (see rule No. 6), 1st, $35.

Class 20—Pointers under 55 lbs.—Dogs, 1st, $30; 2d, $20; 3d, silver medal.

Class 21—Pointers under 50 lbs.—Bitches, 1st, $30; 2d, $20; 3d, silver medal.

Class 22—Pointer Puppies over 6 and under 12 months old.—Dogs, 1st, $10; 2d, silver medal.

Class 23—Pointer Puppies over 6 and under 12 months old.—Bitches, 1st, $10; 2d, silver medal.

Class 24—Pointer Puppies under 6 months—Dogs, 1st, silver medal.

Class 25—Pointer Puppies under 6 months.—Bitches, 1st, silver medal.

Class 26—Champion English Setters.—Dogs (see rule No. 6), 1st, $35.

Class 27—Champion English Setters.—Bitches (see rule No. 6), 1st, $35.

Class 28—English Setters—Dogs, 1st, $30; 2d, $20.

Class 29—English Setters.—Bitches, 1st, $30; 2d, $20.

Class 30—English Setter Puppies over 6 months.—Dogs, 1st, $10; 2d, silver medal.

Class 31—English Setter Puppies over 6 months.—Bitches, 1st, $10, 2d, silver medal.

Class 32—English Setter Puppies under 6 months.—Dogs, 1st, silver medal.

Class 33—English Setter Puppies under 6 months.—Bitches, 1st, silver medal.

In classes 34, 35, 36, 37, 38, 39, 40, 41, a white spot or frill will be allowed, but a black, white and tan dog must go in the English setter class.

Class 34—Champion Black and Tan Setters.—Dogs (see rule No. 6), 1st, $35.

Class 35—Champion Black and Tan Setters.—Bitches (see rule No. 6), 1st, $35.

Class 36—Black and Tan Setters.—Dogs, 1st, $30, 2d, $20; 3d, silver medal.

Class 37—Black and Tan Setters—Bitches, 1st, $30; 2d, $20; 3d, silver medal.

Class 38—Black and Tan Setter Puppies over 6 months—Dogs, 1st, $10; 2d, silver medal.

Class 39—Black and Tan Setter Puppies over 6 months.—Bitches, 1st, $10; 2d, silver medal.

Class 40—Black and Tan Setter Puppies under 6 months.—Dogs, 1st, silver medal.

Class 41—Black and Tan or Setter Puppies under 6 months.—Bitches, 1st, silver medal.

Class 42—Champion Red Setters—Dogs (see rule No. 6), 1st, $35

Class 43—Champion Red Setters.—Bitches (see rule No. 6), 1st $35.

Class 44—Red Irish Setters,—Dogs, 1st, $30; 2d, $20; 3d, silver medal.

Class 46—Red Irish Setter Puppies over 6 months.—Dogs, 1st, $10; 2d, silver medal.

Class 47—Red Irish Setter Puppies over 6 months.—Bitches, 1st, $10; 2d, silver medal.

Class 48—Red Irish Setter Puppies under 6 months.—Dogs, 1st, silver medal.

Class 49—Red Irish Setter Puppies under 6 months.—Bitches, 1st, silver medal.

Class 50—Champion Red and White Setters.—Dogs (see rule No. 6), 1st, $35.

Class 51—Champion Red and White Setters.—Bitches (see rule No. 6), 1st, $35.

Class 52—Red and White Setters.—Dogs, 1st, $30; 2d, $20; 3d, silver medal.

Class 53—Red and White Setters—Bitches, 1st, $30; 2d, $20; 3d, silver medal.

Class 54—Red and White Setter Puppies over 6 months.—Dogs, 1st, $10; 2d, silver medal.

Class 55—Red and White Setter Puppies over 6 months.—Bitches, 1st, $10; 2d, silver medal.

Class 56—Red and White Setter Puppies under 6 months.—Dogs, 1st, silver medal.

Class 57—Red and White Setter Puppies under 6 months.—Bitches, 1st, silver medal.

Class 58—Chesapeake Bay Dogs or Bitches.—1st, $15; 2d, silver medal.

Class 59—Irish Water Spaniels.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 60—Clumber Spaniels—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 61.—Cocker or Field Spaniels.—Dogs, 1st, $15; 2d, $10; 3d, silver medal.

Class 62—Cocker or Field Spaniels—Bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 63—Cocker or Field Spaniels, Puppies.—Dogs or bitches, 1st, silver medal.

Class 64—Foxhounds.—Dogs or bitches, best couple, $20; 2d, $10; 3d, silver medal.

Class 65—Beagles.—Dogs or bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 66—Daschunds.—Dogs or bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 67—Fox Terriers.—Dogs, 1st, $20; 2d, silver medal.

Class 68—Fox Terriers.—Bitches, 1st, $20; 2d, silver medal.

Class 69—Fox Terrier Puppies.—Dogs, 1st, silver medal.

Class 70—Fox Terrier Puppies.—Bitches, 1st, silver medal.

Class 71—Collies.—Dogs, 1st, $15; 2d, $10; 3d, silver medal.

Class 72—Collies.—Bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 73—Collie Puppies.—Dogs or bitches, 1st, silver medal.

Class 74—Dalmatian or Coach Dogs.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 75—Bull Dogs.—Dogs or bitches, 1st, $20; 2d, silver medal.

Class 76—Bull Terriers.—Dogs or bitches, 1st, $20; 2d, silver medal.

Class 77—Bull Terrier Puppies.—Dogs or bitches, 1st, silver medal.

Class 78—Skye Terriers—Dogs or bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 79—Pugs.—Dogs, 1st, $20; 2d, silver medal.

Class 80—Pugs.—Bitches. 1st, $20; 2d, silver medal.

Class 81—Pug Puppies.—Dogs or bitches, 1st, silver medal.

Class 82—Scotch Terriers.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 83—Black and Tan Terriers over 5 lbs.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 84—Dandy Dinmont Terriers.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 85—Yorkshire Terriers, Blue and Tan, over 5 lbs.—Dogs or bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 86—Yorkshire Terriers, Blue and Tan, not exceeding 5 lbs.—Dogs or bitches, 1st, $15; 2d, $10; 3d, silver medal.

Class 87—Toy Terriers, other than Yorkshirs.—Dogs or bitches, 1st, $15; 2d, silver medal.

Class 88—Blenheim Spaniels.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 89—King Charles Spaniels.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 90—Japanese Spaniels.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 91—Italian Greyhound.—Dogs or bitches, 1st, $10; 2d, silver medal.

Class 92—Miscellaneous Class.—Dogs or bitches not specified in the above classification, 1st, $15; 2d, $10; 3d, silver medal.

Entries close March 28.

BENCH SHOWS.

HAVE they been beneficial in improving the canine race? To a great extent I think they have, as it has largely drawn attention to the loose manner with which breeding generally was being conducted, and has stimulated a greater action and renewed exertion to improve what was really good while at the same time it has brought together the best looking specimens in the country, and by comparison the inferior ones have been cast aside and those of superior merit secured It has also stimulated an honorable rivalry among breeders from which good result must be realized, unless this rivalry is carried to such an extent as to engender ill feelings among brother sportsmen. And those who do not accept the theory of the advocates of some particular strain have in some instances been personally abused for their ideas. Such things should not exist, and every man who attempts to improve any strain either by more careful or systematic breeding should be encouraged. Let them try experiments the result of which no person can foretell, as it may result in producing something extra good; and the result of such experiments acts as a guide to others who are skeptical and do not like to take the chances of a miscalculation. There has been at great expense some of England's finest stock imported into this country, both the Llewellin and Laverack setters. By breeding them pure for those who rely upon pedigree, and by crossing them with our old favorite strains, time will tell which is the better way to keep up and improve the breeds, but we must breed with judgment. Particular attention must be paid to the results we desire to accomplish. If to produce an extra field dog a different course may be required than if our aim is to produce only a bench show winner, where the handsome though worthless animal may win the larger share of the prizes. I think it will be conceded that inbreeding naturally impairs the intellect and physical stamina of a breed, yet renders them more beautiful in many respects to look at, so long as they live, which when it is carried to a great extent, is not for a long time. This great desire to breed to prize winners has not thus far been satisfactory in all cases, but I infer it is to a lack of judgment in not considering carefully all the mental and physical faculties of both sire and dam and their former progeny.

When breeders shall more carefully consider these points, I think instead of producing litters, a larger portion of which die young, there will be an improvement, and instead of breeding those physically weak we shall breed stronger and healthier litters, which can withstand a majority of diseases to which all canines are subject. Let us have no contentions as to the merits of one breed over another. Both may be good, and discussions will not change the minds of practical parties on the subject; but by all means give each breed a chance to compete at bench shows. Do not attempt to force the native and imported to compete in same class, but let the imported have a class by themselves, and include in that class all the progeny where they are by imported parents, or the progeny of the same on *both* sides. Let the natives have a class that shall include nothing but natives, or those bred either from native sire or dam, then we shall be able to plainly see whether a cross between the native or imported can in time even equal or surpass the imported stock. When the native stock shall be so far improved as to be able to hold its own in any class, then I would advocate one class; but that time has not yet come. Still I would be glad to see a sweepstake prize open to any strain, judged by the same standard, in which all English setters might compete on equal terms. I believe this would still further stimulate breeders to improvement. There is occasional complaint that by the judging at bench shows one gets a very incorrect idea, or, in fact, no idea at all, what constitutes a winner, as prizes are awarded to dogs of so many different forms. I should barely expect such remarks except from the superficial observer, as almost any dog with a fine head and coat catches the eye at once; but to the judge who has to consider as well the feet, legs, tail, loins, shoulders, etc., as the head and coat, it is entirely a different thing. Each part is credited with a certain number of points, consequently the dog with inferior head and coat may win over his competitor with the beautiful head, etc. I have noticed this in several shows at which I have been present, and heard the judge unjustly censured on account of it. I have heard of dogs whose tails were scimetar shaped and carried high winning prizes much to the disgust of some parties who would point to that tail as a sure cause why he should not have won; but if for a moment they would have considered that but five points were allowed for tail in a total of 100, they might, on examination, have more carefully satisfied themselves that the judgment was correct as given by the judge, and not have abused him unjustly. To make our bench shows and field trials of benefit to sportsmen generally, they must be conducted on honorable principles, and all be equally well treated. They should not be the cause of personal contentions and abuse amongst sportsmen, but all should meet on friendly terms and strive for the improvement of the canine race, having for their motto, "Let the best dog win," no matter by whom or how bred so that he wins on his merits.

SHAMROCK.

OUR LONDON LETTER.

EDITOR FOREST AND STREAM:

Not in the lifetime of the oldest dog alive has there been, throughout the length and breadth of our land, so severe a winter as that we now flatter ourselves we have got to the tail end of. For well nigh a month the ground has seemed sheathed in steel, and snow-clad; thermometers haven't had heart enough to rise much above zero, the wind has come steadily out of the East and the sun has never once shown face from behind the dull and leaden sky. Our hopes for better things now lie in the fact that for the last eight-and-forty hours we have been buried in a wet-blanket mist as dense as the jokes in the London weeklies, or the skulls of those who tell them.

But what a time skaters have had! While away up North people have, as a rule, dispensed with wheels to traps entirely and gone in for the good old-fashioned sleigh—the only improvement to which I could suggest would be the employment of dogs instead of horses. Oh! wouldn't my Hurricane Bob and my youthful Briton tool a sledge along just! Talking of skating, by the way, reminds me of the fate of the Roscommon hounds, who took to the ice after their quarry, and two-and-twenty of whom are now food for the water kelpies.

In the dog world, at present, everything is as dull as ditch water, the show season being for a time over and the principal employment of the caninities for the next few months will be the manufacture of new breeds and the restoration of old. We are a wonderful nation, we Britishers. Away beyond the Tweed, notably in "Ghaiska," they have men of straw; we South-downs have paper dogs. One wonderful specimen is the Leonberg, who has been having an airing in the sporting press for some time back. He is supposed to be a breed between the Newfoundland, the wolf-hound and the St. Bernard. You see, *Gallia diskus est in partes tres*, three halves, and so is the Leonberg. I walked ten miles to see a pure specimen the other day. I can't say I admired him, and should think that half a dozen more crosses would improve the beast.

At the same kennels I saw (why, what do you think?) a St. Bernard*ine*. The groom, who did not know me, assured me they were a distinct breed; and wholly different from the common St. Bernard. I thought about Maccassar oil and Maccassarine; likewise, about tweedledum and tweedledee.

Well, the Irish terrier, a game little craft, as you well know, was originally built in the yard of La Belle Sauvage, from materials brought from Belfast, Dublin and the Cove of Cork. Although there was much squabbling at the time over every timber of her, she was at last successfully launched, and has since sailed away into the sea of public favor. But the home rulers of "Ould Oirland" don't mean to rest content with their terrier, for here comes a bold Graham, likewise a doughty B. St. George, leading between them, set upon springs and mounted on wheels, the bones of an Irish wolf-hound. To these wheels the Graham calls aloud to every mother's son in green Erin to put his shoulders, and help to "resuscitate the noblest breed of dog that ever existed." More power to them.

But here comes Strathbogie, that erst was Roving Scot, that once did "wave a blood-red sword at Alma." None of your feather-bed sportsman is Bogie. None of your prick-the-louse-and-jag-the-flea school like some men I could name, whose puny frames have never been half a mile from a cow's udder since they were whelped. But a braw and brawny chiel is Bogie, and a bold front he shows, too, as he swings into the ring, with his new dog, the Kirkintulloch terrier. Bravo! Bogie. Caledonia forever!

Probably the most fashionable non-sporting dog of the day is the Highland collie, really good ones fetching from £15 15s. to double that amount and over. This fact is borne out by another. The London dog-stealing fraternity have recently turned their attention to the lifting of these wise and wonderful animals, and it is now almost unsafe for any one to take a walk with a collie at his heels. We have lately, however, succeeded in lodging several of these dog fanciers in the stone jug and, strange to relate (*sic*), the new penny organ of the rag-tag-o-bob-tail society advocates the raising of a subscription to float these scoundrels again on their exit from bondage!

An old woman verging on eighty received a term of imprisonment, with labor, for stealing a bit of bread for a starving child. Peace! we mean to hang; but the principal directors of the Present Glasgow Bank got off with eight months jolly good living in jolly good rooms called, by courtesy, a jail. It is said they will be allowed books to read, cards to play, wine to drink and their dogs to keep them company. We trust it will be a warning to the wretches.

Burglary is all the go now in England, Peace having made it fashionable, and good house and guard dogs have become more valuable in consequence.

Now, there is no road in the world more infested with tramps than the broad road that leads—not to destruction, but to Bath from London. You cannot take your walks abroad without being solicited for alms from laborers out of work, poor women with babies, professional thieves, professional beggars, lazy louts who wouldn't work if they could and your regular swagsmen. These latter, when they visit a village, are not long before they find out everything they want to know about the inhabitants thereof. They get to know your habits of life, your goings-out and your comings-in, your bolts and your locks, your forks and your spoons.

I was extremely gratified one day last summer in listening to a portion of a conversation. Listeners, they say, seldom hear any good about themselves, and on the present occasion I was no exception. There was no one at the roadside when I got through the gap in the hedge and seated myself on the other side and, as I was writing, they might have been talking as well as eating—for it was dinner time with the gentlemen—before I became aware of their presence. One of the speakers was a man of middle age, the other almost a lad. They were by no means badly dressed, and I for one would never have taken them for aught dishonest.

"No, no Bill," the elder was saying, "I tell ye that crib ain't worth cracking, and I've been longer in the world than you. Ah! yes, looks a nice little place, with all them trees around it and the gent flies a flag 'cause he belongs to the Navy, but bless yer innocent soul, Bill, he haint got nufflin but 'is 'arf pay. No, none o' yer silver-plated gents for this child."

"Besides," said the young one, "he keeps a lot of wicious dawrgs, don't he?"

"Dawrgs, you say? Is it dawrgs, Bill? Lor' bless your wision, boy, I 'ouldn't be afeared to face a score of 'em. But vot I say is this, the crib ain't worth cracking."

At this period I sent two Newfoundlands through the gap, just to look at them. The cracksmen were both on their feet in an instant. "Ho! Kreis Armight David!" exclaimed one, and "Holy Moses!" cried the other. And when I passed through a moment after I found the tramps had pitched the remainder of their dinner to the dogs, which the dogs didn't touch, of course. But as I passed on my way homewards I couldn't help congratulating myself that, in times so troublesome, I was only a silver-plated gent and lived in a crib that wasn't worth cracking.

Verily, verily, dogs have their uses.

GORDON STABLES, M. D., R. N.

Twyford, Berks, England, Feb. 1, 1879.

MONSON DOG SHOW.

MONSON, Mass., Feb. 28, 1879.

EDITOR FOREST AND STREAM:

The M. S. and F. Club held their exhibition of fowls, dogs, *fire-arms* and *other animals* Feb. 18, 19 and 20. Sporting and fancy-bred dogs, game and premium fowls and fire-arms were the main features, although other animals and pets were among the exhibits. Following is a list of the entries:

Dogs—63; consisting of setters, pointers, foxhounds, Scotch deerhounds, spaniels, Spitz, cosch, bul'dogs, Newfoundlands, Italian greyhounds and black and tans.

Cats—13 coops; including 2 'coon cats. Miscellaneous—1 cinnamon bear, 1 red fox, 1 grey fox Guinea pigs, Angora rabbits, 1 pair 'coons and 25 cages Canaries.

Poultry—113 coops; consisting of red, white and blue pyles, B. B. red, black hornet, ginger red, golden ducklings; white, black, brown, Dominique, and gold and silver pencilled Leghorns; light Brahmas, partridge, buff and white Cochins, Plymouth Rocks, American Dominiques, Houdans, white-crested black Polish, silver spangled Polish, Japanese sukies, Spanish creepers, Longshang creepers, and crimson Dorkers (imported by the M. S. and F. Club). Harris & Kinney, Willimantic, Conn., entered for exhibition some of the finest game birds in the country. Bantams—B. B. red, silver and golden ducklings, white Georgians., golden and silver laced ducklings, silver-laced seabrights, and a double-tailed white Leghorn cock entered by George Flynt, Monson, Mass., and a curiosity. One coop of white Holland turkeys, 1 cage

of peacocks, Guinea fowls, Rouen and black ducks, Muscovia and native ducks. Pigeons—Harris & Kinney, Willimantic, Conn., 1 pair white, 2 black Calcutta fantails, 1 pair dun colored fantails, 1 do. Jacobins, 1 pair blue and white swallows, 1 pair dun swallows, 1 pair each black and white canaries, 2 pair blue and white tumblers, 1 pair do. magpie, 1 pair bobs and 3 carriers; Earl Parker, Monson, 2 pair and white fantails.

Fire-arms—Parker Bros., West Meriden, Conn, 15 double guns, and some very fine ones, among them 4 Daly guns, 4 Scott guns, 3 Winchester rifles, 1 Sharps rifle, 3 Revolutionary guns (one the property of Erasmus Gates, Monson, whose ancestors served in the Revolution), 1 blunderbuss, 2 swords used at Bunker Hill, and about twenty ancient guns. One splendid case of Winchester rifles from the manufacturers. Sterns & Co., of Chicopee Falls, had on exhibition 27 pieces of fire-arms, consisting of shotguns, rifles and pistols; also 1 case of tools. Mr. L. H. Mayatt, of Springfield, Mass., was present throughout the show with a fine stock of guns, rifles, fishing rods, archery and sporting goods of all kinds.

The exhibit in every respect has been a success. The interest and attendance manifested was fully as large as was expected. The splendid assortment of Harris & Kinney is especially worthy of notice; also the premiums awarded them of a silver goblet at the Massachusetts Poultry Show in 1875, and an elegant card receiver presented by the President of the Connecticut State Poultry Show at Hartford for taking the largest number of prizes in the gallinaceous and aquatic divisions. They also had eight silver and three bronze medals, which have been awarded them by different societies for superiority and excellence of their entrees. This is the first time that fanciers in this section have had so favorable an opportunity of placing their stock side by side, and doubtless the result will be to improve and furnish more first-class stock in future exhibits. C. R. K.

A PREDICTION FROM A FALSE PROPHET.—We copy the following significant paragraph from the Chicago *Field*:

Mr. Davidson's services as a judge are ended, for with the odor of the Minnesota trials on him, no show can have him, and no man who would value a prize would care to contend for it before him as a judge, for with the prize would go suspicion of its having been unfairly gained, and with suspicion on the winner, more honor would there be with the defeated dog.

Let all who are interested in dogs and Bench Shows cut this out, keep it in their memorandum book, and see if it proves true.

INTERNATIONAL DOG SHOW.—The following letter from Rev J. Cumming Macdona, who visited this city at the time of the first dog show, in 1877, appeared in a recent issue of the *N. Y. Herald:*

His Serene Highness, Prince Albert Brannfels (than whom there exists no keener lover of a dog in the world), has just completed arrangements for a grand International Dog Show, to be held at Hanover, on May 31. It occurs to me that there are men in your great country with pluck enough to send over representatives from their kennels to compete for the magnificent prizes offered by the Emperor of Germany and other royal and distinguished sportsmen in Europe. A German line of steamers from New York to Hamburg will carry the animals within five hours' rail traveling of Hanover. From what I saw at your great show in New York during the spring of 1877 I am convinced you have a stock of dogs in America well able to hold their own not only in America but in Europe. The entrance fee is only six shillings for each dog. If your Westminster Kennel Club would take the matter in hand I have little doubt they would easily select from the kennels of Mr. Raymond, Mr. Donner, Mr. Fox, Mr. Brown, Mr. Belmont and many others, representatives well worthy of making a gallant fight for canine honors in the Old World and as likely as not to beat the old dog on his native heath. I am, sir, your obedient servant,

Cheadle Rectory, Cheshire, Feb. 11, 1879.

J. CUMMING MACDONA, M. A.

LOSS OF THE DUKE OF NEWCASTLE'S CLUMBERS.—Mr. Bralesford, of whom Mr. Thorne, of this city, purchased the Clumber spaniel Trimbush, writes that the Duke of Newcastle has had great misfortune with his Clumbers. One of the lot was taken with dumb madness, and before it was discovered had bitten nearly all the others, so that about sixteen dogs in all were of necessity destroyed.

A GOOD DOG.—*Nashville, Feb.* 28.—Col. Akers showed me his black setter dog Don to-day. He is a splendid animal with a good pedigree. His qualities in the field are excellent, he is rapid, at the same time careful, a wide ranger and as staunch as can be on game; a splendid animal for a lazy hunter, as he will take in a whole field and obeys signals by the hand, and, when he finds, will wait until you come up to him.

J. O. H.

DEATH OF HARRY.—Mr. T. B. Appleget, of Hightstown, N. J., writes: "My setter Harry, whelped Oct. 19, 1875, out of Allen's Gyp, by G. Forman Taylor's One-eyed Sancho, bred by Harris Allen, Esq., of Perrineville, N. J., died Feb. 25, of distemper. He was acknowledged to be the largest and one of the finest of Old Sancho's progeny, and was well broke, especially true as a retriever."

VERY SAD.—A correspondent writing from Madison, Wis., says: "Reports from various sections of Wisconsin are that the imported collie shepherd dogs are committing sad havoc among the sheep folds." ROVER.

FILM ON A DOG'S EYE.—A correspondent ("J. R. H.," of Newark Valley, N. S.) writes that he has used pulverized burned alum with success in removing the film from a dog's eye.

—Mr. Robt. J. Farrer, who over the name of "Ebor" furnished some very entertaining articles for the *Country* and other papers, has established himself at Orange Court-house, Virginia, under the firm of Green & Farrer, where he controls a large area of grazing lands. He grazes stock on shares, and calls attention to the good profits on live stock privileges when properly handled. He will be glad to furnish information to intending settlers.

—Mr. J. W. Bell, of Portsmouth, claims the name of May for his bitch, whelped May 28, 1878, out of Ruby, imported, by Capt. A. L. Emerson, by Macdona's Rover.

—Mr. H. P. Dortch, of Goldsboro, N. C., claims the names of Rose and Clare for a brace of red Irish setters (imported by Capt. D. R. Marchison, of Wilmington, N. C.,) about 14 mos. old, sired by Mr. Macdona's Rover and out of a bitch owned by the Marquis of Waterford, Ireland.

—Mr. J. T. Hammond, of Springfield, Mass., claims the name of Shot for his lemon and white dog, and Belle for liver and white (with tan markings) bitch pup, whelped September 13, 1878, out of Munson's Psyche by Westminster Kennel Club's Sensation. Also the name of Snap for his lemon and white and ticked dog pup, whelped September 21, 1878, out of Lincoln & Hellgar's Gipsey by their Snapshot.

—Mr. Robert Sewell, of New York, claims the name of Moose and Rex for his two red Irish setter puppies whelped July 10, 1878, by his Irish bitch Irish Fanny, sired by Captain Barnes' dog Snipe. These puppies will be exhibited at the New York show in April.

—S. B. Dilley's Queen whelped, on Feb. 22, three dogs and six bitches, all large, strong and most handsomely marked liver and white. They are sired by his champion Ranger.

Rational Pastimes.

A CRAZY TRAMP.—The phrase "walking mania" which has been bandied about at least 3,000 quarter times in 3,000 quarter newspapers, came very near assuming a tragic import one day last week. It was at the Hester street armory, this city, where Van Ness, the man who is trying to walk 2,000 consecutive half miles in 2,000 consecutive half hours, became for five or six moments more insane than usual, rushed from the track into his dressing-room and when the trainers attempted to drag him on to the track again, barricaded his door, pulled out a revolver and fired six consecutive shots intosix consecutive quarters of the compass. Such of the spectators as were not wounded had a sudden attack of the pedestrian fever, and walked out in marvelously quick time, many of them not stopping before they had put a goodly number of consecutive blocks between themselves and the pedestrian lunatic. The only individual who did not quicken his pace was a policeman who sauntered up after a while and wanted to know what was the matter, you know. Van Ness is still walking. The shooting matinees are of spasmodic occurrence. If any of our readers contemplate attending the Hester street entertainment we advise them to go down to Schuyler, Hartley & Graham, and buy a suit of armor, unless they have been on the plains and can dodge 3,000 bullets in 3,000 consecutive quarter hours.

THE ARMY OF MARTYRS.—The smartest journalist of today is the New York *Sun* man who has succeeded in keeping up with the walkers of the country, and in last Sunday's paper thus summarizes their efforts:

Last week was another gala week in the pedestrian world. Miss Sinclair, in Brooklyn, fainted at the end of her 1,359th quarter; Miss Warren, in Montreal, fainted on her 21st mile; Miss Bartell, in New York, stopped after her 1,439th quarter; Mr. Weston, in England, found his time gone at 1,977½ miles, instead of 2,000; Mr. Thomas and Mr. Andrews began a match of 75 hours, but retired at 20; Mr. Johnson, at Boston, began 50 miles, and dropped at 33; and Mr. Cunningham, in Albany, began 120 miles in 27 hours, but contented himself with 100. The week, however, had its triumphs. Mrs. Exilda La Chapelle, in Chicago, added 200 quarter miles in 300 periods of ten minutes to a score of 2,700 quarter miles in 3,700 quarter hours; Miss Von Blumen, in Albany, trudged 100 miles in 26¼ hours; the coachmen, Redmond, Carroll, Dowdy, and Haggerty, in Williamsburg, won a whip, a watch, a medal, and a cup; Messrs. Wilson and Lollaur, Messrs. O'Keefe and White, Messrs. Herbert and Brown, and Messrs. Shivell and Bond showed in various cities, various degrees of prowess; Mr. Moran trudged throughout the week, and so did Mr. Barry; Miss Mandeville began 3,000 quarter miles; Miss Hughes and Miss Miller began 100 miles; Mrs. Von Clasburg and Miss Moore began an eight-day promenade; Miss Le Vanion, the gymnast, and Miss Cushing the laundress, tripped through the first half of their 3,000 quarters; Miss Edwards began her second thousand of quarter miles; while Mrs. Franklin, having walked 25 days in Williamsburg, transferred herself to New York, with a brass band to draw a crowd, police to drive it away, and a city surveyor to measure her distances, and so continued her quarter miles without break. No grandfathers' or paralytics' walk is announced for this week, but the Misses Higbee, aged 5 and 8, will take the track; and next week come O'Leary, Rowell, Ennis, and Harriman.

THE SIX DAYS' WALK.—Arrangements have been completed for the international six days' walk for the Astley belt and "gate money." The contestants—O'Leary, Rowell, Harriman, and Ennis—are all in the city, practicing in various ways, and preparing themselves for their task. The walk commences Monday morning next at Gilmore's Garden, this city.

WESTON'S WALK.—Weston started on Jan. 18 to walk 2,000 miles in 1,000 hours on the turnpike roads of England. As he would not walk the twenty-four hours of Sundays, his actual allowance was 856 hours. His time expired at 4:10 o'clock Feb. 28, when he retired with 1,977½ miles to his credit. He experienced much annoyance in the latter part of his walk from the dense crowds which thronged the way, seriously impeding his progress. Rain or snow fell nearly every day of the journey.

BASE BALL.—At a convention of the International Association held at Utica, last week, the championship was awarded to the Buffalo Club, the Stars being second and the Uticas third. The name of the association was changed to the National Base Ball Association. L. J. Powers, of Springfield, was elected Pres.; C. J. Everett, of Utica, Vice-Pres.; J. A. Williams, of Columbus, Sec. and Treas.

MANHATTAN CRICKET CLUB OFFICERS.—At the annual meeting of the Manhattan Cricket Club, Mr. Henry Tucker was elected Pres.; Mr. James White, Vice-Pres.; Mr. L. Love, Sec.; Mr. S. E. Hosford, Treas., and Messrs. B. J. Jenkins, C. W. Jackson and W. Mackenzie, Jr., managing committee.

YALE ATHLETICS.—In the athletic exercises at the Yale Gymnasium last Saturday, the following were the successful competitors:—Horizontal bar, W. W. Hawkes, '79; vaulting, J. Jewell, '79, S. S. S.; O. D. Thompson, '79, won the kicking jump with the record of 9ft. 2in.; the tug of war between Juniors and Sophomores was won by the latter; running high jump won by O. D. Thompson with 5ft. 2in.; tug of war between Seniors and Sophomores won by Seniors.

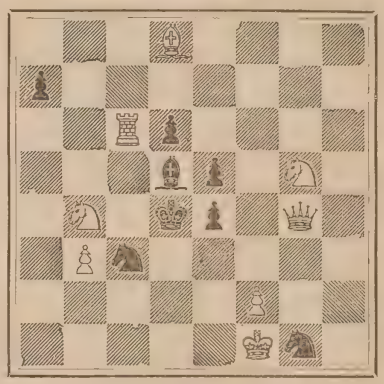
LACROSSE.—The Ravenswood Lacrosse Club will go to Montreal on May 24, to play a series of games with the Shamrocks and Caughnawaga Indians. It is propable that an international tourney will be held under the auspices of the Westchester Polo Club about the first of next June.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 46.

Motto: Nota Bene.



White to play and give mate in two moves.

Game No. 104.

New York Chess Club Tournament, played Feb. 10, 1879. Odds of P and two moves; remove Black's K B P:

White. Mr. Cayhen.	Black. Mr. Fowler.	White. Mr. Cayhen.	Black. Mr. Fowler.

NOTES.

The above is a brief specimen of what is possible for a second player at these odds. We believe that no game, at these odds, is in existence wherein the second player scores so rapid a victory. In fact, the second player ordinarily contents himself with an even but confined game in the number of moves in the text.

CURSORY JOTTINGS.

—The score in the International Tourney is now in favor of Great Britain—17 to 16, and 4 drawn. Rev. C. Ranken has won another game from Mr. W. H. Berry. Mr. Belden—whose courtesy and good nature we can bear testimony to, and to whom we are greatly indebted in the preparation of this week's chess matter, he having kindly placed his exchanges at our disposal—generously offered the game to ourselves for publication, which we refused. However, it will appear in this column after its publication in the *Times*.

—The book of the Paris Chess Congress of 1878 will shortly appear. It will comprise all the games played in the International tourney, sound competing problems in the problem tourney, and also the prize contributions to the literary, which, we would here state, was no doubt suggested to the committee by Mr. Belden's famous literary tourney.

—A game of Living Chess will probably be shortly played at the Academy of Music between Capt. McKenzie and Eugene Delmar. If the proposed programme be carried out, it will be a magnificent and gorgeous representation of the chess pieces. The matter is in charge of a committee of the Manhattan Chess Club, under whose auspices the game is to be presented, the moving spirit of which is the indefatigable Frere.

—A game of Living Chess was played last week at Pike's Opera House, Cincinnati, Ohio. The spectacular features were exceedingly brilliant. The players selected were Messrs. C. Miller, S. A. Charles and H. Loeme, against Dr. Meredith, D. F. Starbuck and H. H. Muller.

—A chess club is likely to be established at Louisville, Ky. Judge Ballard, Prof. P. A. Towne, and a number of prominent players have the matter in charge. The Louisville *Monthly Magazine*, edited by Prof Towne, is to have a Chess Department hereafter.

—The Toronto (Canada) *Globe* offers a silver medal for the best three-move problem contributed to its Chess Department on or before May 23, 1879. Composers are not restricted to the number of competing positions they may wish to contribute.

—The line of chess Kings now going the rounds of the chess press—Legalle, Philidor, Carlier, Bernard, Deschappells, La Bourdonais, St. Amant, Staunton, Anderssen, Morphy, Kolisch, Steinitz and Zukertort. Only five of them are now living. Next!

—At a recent game tourney of the Lima (Peru) Chess Club, Mr. E. P. Ducios won the first prize, consisting of a handsome gold medal. Another tourney is now in progress at this club's headquarters.

—Herr Zukertort, winner of the Paris International Tourney, states in a card that he has never received any challenge from Capt. MacKenzie, or his friends.

—Mr. James Mason, it is said, will shortly play a match with the famous English player, Potter, at London. His return to N. Y. is also announced.

—Mr. Medley has placed at the disposal of the Chess Editor of the Holloway *Press* a portion of the Lowenthal Fund, which is offered as prizes in a three-move problem tourney. Competitors should observe the usual rules regarding motto, sealed envelope and full solution. Problems in three moves, not to exceed two in number, should be addressed Chess Editor Holloway *Press*, England, on or before March 11, 1879. The prizes are: 1, "Chess Gems" and "Chess Strategy," their value in money, or any works of equal value; 2, *Westminster Papers*, *Huddersfield College Magazine*, each for one year, and Taylor's "Chess Chips," or their value in money, etc.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

WHERE TO GO FOR GAME.—Correspondents who send us specific questions as to where to find best localities for game and fish are referred to our game columns. All the news that comes to us is there given. By keeping themselves informed from this source our friends will save themselves and us much trouble. Read the paper.

W. D. W., Phila.—Your bitch was undoubtedly too fat to breed.

S. H. E., West Upton, Mass.—We can only suggest that you get a physician to look at your dog.

W. C. W., Sag Harbor.—Please give in your next issue open season for trout in Connecticut? Ans. April 15 to July 1.

G. N. E., New York.—Do you know of an Irish gunmaker named J. W. Black, Omagh? Ans. Never heard of him.

J. H. T.—For netting send to Hooper, Baltimore, Md., or to J. P. Travers & Son, 46 Beekman st., New York, and mention our name.

Z. B., Jacksonville, Ill.—Send to the *Golden Rule*, Boston, Mass., for W. H. H. Murray's "Perfect Horse." It is comprehensive and reliable.

F. R. C., Buffalo, N. Y.—I have a shotgun made by W. Johnson, of London, and wish you would tell me what reputation this maker has. Ans. We do not know this maker.

H. G.—For elk and antelope on the Pacific Railroad go to Kearney Junction, Nebraska, and strike off into the Loup River country. You will find good wild fowl shooting there.

H. P. D.—We can only suggest that you get the pedigree of the dam of your dogs through the party from whom they were purchased in England. We have no Kennel Register.

J. C. D., Providence, R. I.—What color of setter dogs are they breeding most, lemon and white, tan and white, liver and white, or tan? Ans. Of those you name, lemon and white.

B. T., Boston.—Would be glad to oblige you, but it would be impossible for us to name the best breaker in the United States, even were it not against our custom to recommend breakers.

C. C. H., Bangor, Me.—Do you know of the firm of J. Hollis & Sons, Birmingham or London; and if so how do their shotguns (breech-loaders) rank? Ans. Good firm, but guns not well known.

F. W. H.—I have a gun that with 1¼ oz. shot will lead. Will you please advise me whether tin-coated shot is a sure preventive? I have never tried it. Ans. The manufacturers claim that they are.

J. R. H., Franklin, Pa.—Can you tell me where I can get a .32 cal. Remington target rifle, second-hand, for shooting at glass balls and at targets? Ans. Write to E. H. Madison, 564 Fulton st., Brooklyn.

E. H. H., New York.—Where is the best place place for fishing this time of the year around New York City where I can catch decent-sized fish? Ans. Flounders and smelts are the only fish to be had now.

A. H., Bridgeport, Conn.—Can you inform me of the best publication on trout culture, and where such a book can be obtained, and its price? Ans. Livingston Stone's "Domesticated Trout," price $1.75. We can furnish it.

G. W. M., Boonville, N. Y.—You might make a living hunting and prospecting for gold in the Black Hills, especially if you should happen to strike a bonanza. The address you want is Merwin, Hurlburt & Co., Chambers st., N. Y.

G. A. H., York, Pa.—Please give best manner of making table for loading shells—what number of holes and how deep should they be? Ans. We do not believe such a table can be made of practical use unless it contains measures, etc.

C. O. D.—Common stout paper that will stand wear and take shellac will do for a paper canoe. Write to Crane & Co., Dalton, Mass. Use common coarse shellac, which you can procure in your neighborhood, for gluing and making watertight.

F. B. M., Luling, Texas.—1. What is a skeleton stock? 2. Can quail be shot from a trap as well as pigeons? Ans. 1. A frame work to convert a revolver into a rifle as regards position in shooting. 2. Yes, if they can be secured for the purpose.

O. B. K.—Codfish of 75 lbs. weight, taken on the Newfoundland Banks, are not uncommon. A fish of that weight should measure five feet or more in length, and about three feet in girth. Labrador shore cod are small, averaging perhaps twelve pounds.

E. E. P., Madison, Ind.—Puppy has a white film growing in the lower corners of his eyes, which I am afraid will injure his eyesight. Please inform me if I can do anything for him? Ans. A correspondent writes that he has cured this film by using pulverized burnt alum.

C. M. S., Norway, Me.—To what place are fox skins shipped, and what use is made of them? None of the fur dealers in this section know. Ans. Write to W. H. Gunther, 184 Fifth ave., New York, or to some Boston fur dealer. The skins are used for carriage robes.

BROWNIE, Toronto.—My cocker spaniel bitch is due to whelp April 23. Would she be too far gone to send her to the New York show April 8? Ans. No, not if she was taken good care of on the return journey. Her condition, however, might be against her chances of winning.

H. S. D., New York.—1. How can I break my setter bitch from whip-shyness? 2. She was in heat in October; when will she be in heat again, and how long do they generally stay in heat? Ans. 1. You had better send her to a good breaker. 2. Probably in April; nine days.

H. H. A., Philadelphia.—Where can I get a book on preparing and stuffing birds, and what will it cost? What would be the price of different glass ball traps? Ans. "How to Hunt and Trap," by J. H. Batty. We can furnish it. Write to any gundealer for prices of glass ball traps.

J. B., Newark, N. J.—Is a gun of 7½ lbs. heavy enough to shoot pigeons, and what charge of powder and shot is used for a breech-loader? Ans. Yes; and the charge of powder and shot for a breech loader depends, first, upon the weight and calibre of the gun, and secondly, upon the game.

J. W. A., Perry.—We cannot advise you to use your shotgun for shooting balls at large game, and the man who says that his shotgun carries as well as an Express rifle says what is not so. At close quarters it might answer, but for such shooting at large game, as you would find in Colorado, you want a rifle.

H. H. W., Pittsburgh.—Original or editorial matter in a journal is always readily distinguished from selected or reprinted matter by any person except the most obtuse. We did not print the snake story you speak of in the expectation of having it believed. We printed it as a story merely, to amuse the reader who likes variety.

H. J. F., Boston.—Is there any method of preserving small birds except by stuffing—whether drawing the entrails and filling the inside with some chemical would preserve it in good condition and appearance? Ans. Yes; birds are embalmed by two or three different processes. Address E. H. Crane, Grand Rapids, Michigan.

E. H., Baraboo, Wis.—I have seen some accounts in your paper in regard to Edgar's barbless fish hook, and a fish once hooked is sure game. Now, will any of your correspondents state how easy it is to take the fish off the hook when caught, especially in the throat? Ans. Our correspondent will find a full answer in our Angling Department.

W. R. L., Rushville, Ill.—I have a six-months-old pointer pup. It took sick in cold weather, and is now stunted and no larger than one of three months; will not get fat. Is there any cure, or can you tell me what the matter is? Ans. Liberal diet and a tablespoonful of cod liver oil every day will bring it out all right. Possibly it has worms.

ADMIRER, Franklin, Tenn.—1. What are snoods made of, and how and where? 2. Is snood or snell the proper name? Ans. 1. Snoods or snells are lengths of silkworm gut to which the hooks are attached. 2. We have printed several columns on this subject. Can furnish the papers, but have no room for more definite answer in this column.

N. C., New York.—My cat is losing her hair on her nose and back of her ears, and seems sick. Is this mange? What is the remedy? Is there danger of her giving the disease to a setter dog with whom she plays? Ans. Rub a little crude petroleum on the bare places, and give her a dose of castor oil, say ½ oz. There is no danger of contagion.

READER, Utica, N. Y.—Do you consider the Clumber breed of spaniels the very best for partridge and woodcock shooting in thick cover? If not, what particular breed would you recommend, and of whom could pups of the breed you recommend be had? Ans. Perhaps not the best, but as good as any. Cockers are frequently advertised for sale in our columns.

D. N. L., New York.—You can secure bantams of H. V. Crawford, 120 Hudson st., city. We have no advice to give about the best game cocks for fighting, as cock fighting is not in our line. We are at a loss to understand why any one should apply to us for such information. We have neither sympathy with the amusement nor respect for those who find delight in it.

W. B. R., Welland, Ontario.—My dog has a running from the penis of a yellowish color, and I observe his appetite is poor and he is very lean. Coat appears bright. Food, oat-meal porridge and table scraps. Ans. Give your dog twice a week the following draught: Sulphate of magnesia, 1 oz.; nitre, 15 grs.; water enough to dissolve; mix. Write us if he does not improve.

W. W. E., West Point.—What do you mean by saying "The Setter, by Lavarack, for sale?" What kind of a dog is it, or is it a bitch or a pup, and how do you send it? I will send the money if it suits me. Ans. "The Setter," by Laverack, price $3, is a book written by the late Mr. Laverack, originator of the breed of dogs which bears his name. This will answer some score or more correspondents.

G. B. S., Poughkeepsie.—1. What size shot should be used in shooting over live decoys for geese? 2. What do you consider the proper charge of shot on 6 drs. powder in a No. 8 bore gun? 3. Is there any advantage in the use of tin-coated or chilled shot, and if so, what? Ans. 1. No. 1. 2. 1¾ to 2 oz. 3. An advantage is claimed for them, but we cannot speak from actual experience.

W. H., Jersey City.—Robins and meadow larks are insectivorous birds, and cannot be killed. Sail for round-bottom boat 21x3½ft. should be a spritsail, 10ft. hoist, 13ft. 6in. foot, peak 16ft. above foot of sail at mast, 8ft. head. Light boom on foot, and sprit running from peak to 4ft. 6in. above boom at mast, where it steps into a becket around the mast. Mast 3¼in. at thwart, book 1¾ at centre, sprit 1½.

R., Georgia.—1. Can I have my Sturtevant shells creased or indented to prevent wads starting? If so, at what cost, and where? 2. What is the cost of the tin-coated shot as compared with the old or plumbago finish? 3. What will it cost to have the choke taken out of both barrels of my gun, the work to be well done? Ans. 1. Yes; by the U. M. C. Co., of Bridgeport, Conn. Do not know cost. 2. About two cents per pound more. 3. $5.

M. W., Hoboken.—Please give definition of a red and white Irish setter? How much white will place a red and white one in the red and white class which is to be established at the coming N. Y. show? How much white is allowed for such a setter? Ans. The object in making this class was that "all red" being the highest standard for red Irish setters, a class for red and white setters would give all red dogs with white markings a chance.

A. W., Cincinnati.—Is there any good fishing for black bass, and in what streams near Kanawha Falls; and would Aug. 1 be a good time to fish for black bass and trout there? What other fish would I be likely to find there? Ans. The best fishing is at the Falls. There is good fishing at many points in the river, the best beginning early in July. You will also find pike perch and white perch of large size. There are comfortable homes for sportsmen near by.

J. A. W., Cambridgeport, Mass.—Being quite interested in yachts and boating, also fixtures for same, I take the liberty to send you the inclosed adv., which I cut from your paper of last week, and to ask you "how the thing works?" Ans. The present issue will probably satisfy your curiosity. Its appearance last week was wholly due to accident; the cut was capsized, so to speak, and represented the apparatus ready for use in such a catastrophe to your yacht.

L. J. H., Cincinnati.—Is there a book published about farming? If so, does the book tell when is the proper time to sow different kinds of seed, and how to raise stock, and in general how to manage a farm? If there is such a book, please state the price of it and where it can be bought? Ans. Yes; we have a list of over 100 works on Agriculture, ranging in price from 25c. to $15. Write to H. N. F. Lewis, publisher, Chicago, telling him about what price you wish to pay.

COCKER, Bradford, Pa.—What is the proper mode of feeding young dogs, *i. e.*, what should be fed them, and how long a time must elapse before feeding them meat? I have a five-weeks-old cocker spaniel pup that I want to bring up properly, and have an idea that proper feeding now may have some effect upon her usefulness hereafter. Ans. Bread and milk, the latter boiled, or corn bread until she is three or four months old, when you can begin giving her table scraps, bones, etc.

H. B. B., Boston.—What kind of duck decoys do I need to take with me for duck shooting in Calaveras Co., California, and will it be cheaper to buy them here or in Cal.? Also, will it be cheaper to buy a good setter dog here or in Cal.? Ans. It would be cheaper for you to buy your duck decoys in California, if you need them at all. Liddle & Kalding, of San Francisco, could probably supply you. A good dog would be more difficult to get, and we would suggest your taking one from here.

L. D. S., Germantown, Pa.—1. Wishing to get a collection of stuffed birds for scientific purposes, and not liking to shoot them without a special permit, would you kindly inform me where I can get legal papers giving me full permission to collect all of our birds without being liable to be fined? 2. I have a muzzle-loading shotgun, laminated steel barrels, marked Thos. Weston, London. Is he a reliable maker, and does he still make guns? Ans. 1. You must get a certificate from some Natural History society. 2. Do not know him.

W. A. N., Newton, N. J.—Can you inform me whether there are any works published relating to the birds of New Jersey or the Middle States, and if so, what is the price and where can they be obtained? Ans. No special works devoted to the birds of New Jersey as such; Turnbull's "Birds of Eastern Pennsylvania" would be a convenient list for you to have, but it is out of print and somewhat rare. DeKay's "Birds of New York," in the State reports, might help you, but it is rather antiquated. Use mainly Coues' "Key," and Baird, Brewer and Ridgway.

G. A., St. Paul.—1. Where can I get a photograph of a thoroughbred Irish spaniel? 2. I have an Irish spaniel bitch. A friend of mine wishes to line her with an Irish setter of his. He argues that the setter would give a better nose, and that it would produce a larger dog than the spaniel, with the same water powers. A spaniel is hardly large enough for duck shooting here. Ans. 1. Possibly from J. H. Whitman, 103 So. Clark st., Chicago, who is a large breeder of these dogs. 2. Keep your breed pure, and do not make the proposed cross. The thoroughbred Irish water spaniel is as large as a setter.

MORTIMER, Colchester.—You can obtain the Seth Green barbless hook of Abbey & Imbrie, tackle dealers, 48 Maiden Lane. The Edgar barbless hook is distinguished by having a stiff spring, clamp or keeper, which meets and presses against the point of the hook. When the fish bites, the spring is pressed back sufficiently to allow him to hang his lip on it; then it closes back and holds it. We printed a cut of this hook some weeks ago. One sensible advantage of this hook is that while it holds the fish firmly on, it is comparatively harmless to man should it chance to strike into his flesh, there being no barb to butcher out with one's jack-knife.

C. A. G., Toms River.—1. Where can I get a Chesapeake Bay pup and at about what price for one two months old? 2. What is the proper name of the duck, very plenty in Florida rivers, and known, here in Barnegat Bay as the crow duck? 3. Ducks did not appear in the usual quantities in the upper part of Barnegat Bay this last fall, and the shooting was of no account. Can you tell me if this was the case in the bays on the Eastern shore of Maryland, the Northern part of Chincoteague Bay? Ans. 1. Possibly from O. D. Foulks, Chesapeake City, Cecil Co., Md. Do not know price. 2. You evidently refer to the Raft Duck or Scaup. 3. From advices received from those quarters we believe it was.

C. O. B., Middlesex.—1. Can you get as good penetration with cheap powder by using enough as you can with clean, strong powder; and the same distribution with one as the other? 2. Can you get as even distribution with a choke-bore as with a true cylinder? 3. Does a choke-bore shoot stronger than a true cylinder? If so, what is the cause? Ans. 1. When the force exerted is the same in each case, the penetration should be the same. 2. Yes. 3. Trials have proven that they do, and the cause is probably in the fact that the greater distribution causes more resistance—as, for example, in throwing a single stone you can get greater velocity than with a handful of pebbles.

E. G. R., Baltimore, Md.—To brown gun barrels: Make a preparation of tincture of muriate of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; rain water, one pint. Securely plug up the barrels, leaving the plugs of sufficient length to be used as handles. Thoroughly clean the barrels with soap and water; cover with a thick coat of slacked lime, and when dry remove with an iron wire scratch brush; this is to remove all dirt and grease. Then with a rag apply a coat of the fluid, and allow it to stand for twenty-four hours, when a rust will have appeared. Then immerse the barrels in boiling water, after which scratch them well with the scratch brush. Repeat the process until the color suits, which will be after three or four applications. When the process is completed let the barrels remain in lime water for a short time to neutralize any acid which may have penetrated. Do not touch the barrels themselves during the operation.

PARTRIDGE, Dover, N. H.—1. Where can I obtain "The Surveys of the West," carried on by the Government; and which is the best one on the subject of ornithology, and what would be the probable cost? 2. What is the best paper published in this country on military? 3. Have Bogardus and Carver settled on a match yet? 4. Where can I get photographs of some of our prominent men? 5. I wrote to the Adjutant-General of N. H. about those reports as directed by you, but received no reply. Are such documents procurable at any other source? 6. Who is the Adjutant-General of New York; also of Pennsylvania? 7. What is the Hayden Survey? On what subject, *i. e.*, mineralogy, ornithology, or what; and where can I get it? Ans. 1. Prof. F. V. Hayden, U. S. Geological Survey, Washington, D. C. For ornithology address Dr. Elliott Coues, Smithsonian Institution, Washington, D. C. 2. The *Army and Navy Journal*, 245 Broadway, New York. 3. No. 4. Of Currier & Ives, Nassau st., New York. 5. No. 6. Gen. Latta. 7. The Hayden Survey includes the geology, zoology and botany of the Northwest. You can send to the office in Washington for reports.

INQUIRER, Williamsport, Pa.—1. Who makes a plain glass blue-colored ball, and what address will reach the agent? 2. Have dealers any right to fill glass balls with feathers to sell if they are not Paine's balls? 3. You state that Bogardus shoots with both eyes open when you reply to correspondents, but Bogardus states in his book that he sights with one eye in shooting birds; who is right? 4. In shooting pigeons from the trap, 10 gauge Parker gun, 8½ lbs. weight, modified choke, what amount of powder would you use of best brand, and would No. 7 shot be preferable to No. 8 for winter weather; birds, strong flyers? 5. What is your opinion of the Greener gun; is there any stronger shooting gun made? 6. Can you give any scores made by Carver shooting pigeons from the trap? 7. Give his best score at balls with shotgun and also with rifle? 8. I see that Master Eugene Bogardus holds the championship medal for glass ball shooting; how long does he have to hold it for it to become his property? 9. Which is the harder shooting, to break balls from Card's rotating trap or pigeons from the trap? Ans. 1. Do not know the maker. 2. No. 3. He said he shot with both eyes open. 4. 4½ drs. and No. 8 shot. 5. Have no opinion to offer. 6. No. 7. Have not seen it. 8. A Philadelphia gentleman won the medal and surrendered it, as he did not want to be challenged. The conditions of the match were published at the time. If you would read your paper and remember what you read better, all these questions would be useless. 9. Try it, and tell us.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK THURSDAY, MARCH 6, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

A GREAT FISH DINNER.

IF the American Fish Cultural Association has no other object in existence, so long as it keeps up its practice of holding an annual fish banquet it is deserving of full credit and support. It has in that a sufficient *raison d'être*. Fools there be who say that the practice of dining together, of letting the mouth give forth good things as it takes them in, of setting the process of digestion off at a good pace with many a bon-mot and lively repartee is to die out, and that the coming man will account it more spiritual to subject his animal tastes to the curb of his affectation and pretend to live on the etherial essence of things unseen. But the gentlemen of the association are not such mullet-headed philosophers, and believe in having a good feast bounteously spread. They have done good service in showing the American people and the world what good things there are in the sea and the waters under the earth. They have peopled our depopulated streams and have made the Lenten season almost the holiday section of the year, and, as a last stroke, one of these ambitious fishmongers has set out to turn the broad Atlantic into a grand fish farm; and then they very properly round out their work by showing that they are not afraid to add practice to precept. So, very logically and very sensibly, and certainly very hospitably, the fish growers sat down, and their friends with them, on the evening of the 26th, at the Metropolitan Hotel.

It was a merry party from the start, the morning of that day had been spent in a discussion of the question of the propagation of eels, and each member had been very certain that each other member was in error, while acknowledging that he knew nothing of the subject. Yet all were hopeful of soon being the lucky accoucheur of some happy event in an eel household, and all came up to the work of the evening with an appetite as only a day in the Fulton Fish Mart can give. One enthusiastic gentleman honored the event by wearing a set of alligator-tooth shirt-studs, under the impression that this snapper up of trifles in Florida lagoons was a fish. But each and every one had the appetite of a pike, and, when President Roosevelt led the way to the dining-hall, no school of porpoises ever followed in better order. The table suggested the designs of the incoming host. It was Blackford's fish stand glorified through the efforts of the chief. It was a board to gain a place on which even the proudest of royal salmon might be glad to close his regal lips and give the last flop to his majestic tail and submit to the embrace of the landing net. The *pièces montées* were high art of a brilliant order. Neptune disported in his car before the President, while down at the foot of the table Venus Anadyomene, stepping out from between a pair of cockle-shells, was enough to rouse the appetite of the most bachelor recluse. Here and there were pieces of prawns, or lobster, or sardines, or clams, or oysters done in jelly; while in magnificent succulence, resting upon a vestibule, beneath which a miniature fish boy kept a very faithfully detailed fish stand, was a magnificent sample of the *Lutjanus Blackfordii*, or red snapper. He represented that rare combination of a thing of beauty and a thing of use.

But let us be seated. We are in good company. Hon. R. B. Roosevelt looks beamingly down from his place of honor at the head. His hale and hearty looks have been gained on many a fishing tramp. Beside him sat Joaquin Miller, the Poet of the Sierras, and ex-Mayor Smith Ely, Jr.,—odd fish, both of them. Then here and there were poets and journalists, fish-makers and fish sellers, but one and all were for the nonce lusty fish eaters. Fred Mather, Seth Green, Isaac W. England, T. C. Banks, C. B. Evarts (of Windsor, Vt.), H. M. Francis, Otto Witte, Capt. E. Spicer, Henry Mallory, Henry Steers, Geo. E. Ward, H. Kilbourne (the artist, with whom fish are glad to sit for portraits), H. McGovern, Barnet Phillips (the Secretary of the Association, who can say more graceful nothings than any member of the body), Eugene G. Blackford and George Sheppard Page—good fellows both, and a good part of the life of the association.

But here is the order of the feast; here is the text which for several hours this company of ichthyphobists discussed in all its bearings:

MENU.

Oysters on half shell. Blue Points.
Hochemer.

SOUPS.

Green Turtle a la Pontchartrain. Bisque of crawfish a la Cobb's Island.
Old Reserve.

MORS D'OEUVRE.

Scollops en coquille a la pecheur.
Rissoles of soft clams a la Point Shirly.
Chateau Yquem.

RELEVES.

Darne de saumon, garni d'epersians, a la Roosevelt.
Alose de Charleston, farcie au gratin a la Seth Green.
Filet de boeuf pique aux tomates farcies.
Cucumber salad. Potato croquettes.
Mumm's Extra Dry Champagne.

ENTREES.

Filet of striped bass with shrimps a la Baird.
Pauplettes of English sole with oysters.
Stewed terrapin with cream a'la Page.
Pate chaud with quenelles of pickerel.
Chablis.

PUNCH.

Lone Fisherman au rhum.

VEGETABLES.

French peas. String beans. French mushrooms.

COLD.

Lutjanus Blackfordii au beurre Montpelier.
Aspic of lobster a la ravigote. Sardines sur socle a la Parisienne.
Crabs stuffed a la Hell Gate.

ROAST.

Brochette of eels a la tartare. Oysters farcies a l'americaine.
Celery salad. Oyster salad, Sandy Gibson. Prawn salad.
Johannisberger.

THE CAR OF NEPTUNE.

Venus in demi-coquille. Ice cream in forms.
Fruits & Cafe.

It were foolishness to go into detail on the dinner, from the opening raws to the last whiff of the choice Havanas at the close there was naught to find even the shadow of a grumble upon; the *chêf* had more than excelled himself, with such excellent material to work upon he had added the graces of the high art of cookery. The close season for brook trout was respected, that prince of fish was absent from the feast. The salmon was there, had left his home in the cold waters of the Restigouche River last June and had hung in the refrigerator since in order not to disappoint the diners. England had sent sole, and from the gulf, from the lakes, and from the Atlantic coast far and near the waters had been searched until not an item was missing; and all washed down by the most delicious of wines, truly fish never suffered death to enjoy a more tempting bath or to assist at a more magnificent spread.

To reproduce in the sombre black and white of the printed page the jest, the merriment, the ringing laugh, the good things of wit and wisdom flung back and forth across the table were a task beyond the limits of the possible. The guests were no such subtle feeders as to make meals on air, sup on a blast and think a fresh gale a second course. But there was a period to this stage. The fish food was evidently working up to the President's head or into his feet, for he was getting uneasy, as Seth Green had been for an hour or two before, and when the "Lone Fisherman au Rhum" appeared in the tall glasses, a few raps reduced the noise a few dozen degrees, and the brain part of the feast began to flow. One after another the fishermen and their friends fired off the good things they had conjured up for the occasion. The President was in a punning humor, and spared nothing and nobody, and poor Mayor Eel-y was the first to spring to his feet in righteous indignation, and declared he did not know nor care anything of the propagation of young Eels as he was a bachelor [Fact.—Ed.], and while he could not lay claim to such fish knowledge as Pres. Roosevelt or St. Peter, he could not do worse than to declare, as he once had done, that to his taste cat-fish and brook trout were as one.

Seth Green here made a speech.

Vice-Pres. Page told in his inimitable fashion how fortunes in fish are not made by any pencil calculations, and then he told of his brilliant anticipations after he had purchased a farm with a spring on it; how he sat down and by a few pencil strokes converted millions of eggs, to bebought for a song, into many more million pounds of trout meat, to be sold for millions of dollars. Ten years' experience had left him still a poor man and a fisherman, while Seth Green, who had led him into the snare, went on being a million upon million times a grandfather to the great shad family of the country. Mr. Page did not sit down at this stage of his speech, but went on to tell of a trout fishing trip, and the size of that big fellow, and when he had pushed over Blackford on one side and Mr. Phillips on the other, trying to give an approximate idea by spreading his arms of the size of "that trout," he sat down. Nobody felt like breaking the harmony of the evening by saying "You're another," but something must be done the President saw at a glance, and met the crisis by making a "terrible example" of Mr. Page, telling the other guests that he was not a drinking man, therefore that his trout sizes must go on record. The array of empty bottles before Mr. Page sent back a hollow sound to the President's endorsement.

Seth Green here made a speech.

Mr. John Ford said the fish to him were always a study, and such a study they should be in their mute habits—to Congressmen and politicians. Mr. Blackford he congratulated on having the red snapper named after him, for now, he said, the name would never die out and the race of Blackfords would multiply at a rate which the original could never have expected to equal. Mr. Isaac England spoke of fishing journeys up Jersey streams where never fish had swum, Fish Commissioner Noah having neglected to stock that section.

Seth Green here made a speech.

Joaquin Miller spoke of the fish of Oregon. On his last visit to that region his father took him out fishing in a lake at the headwaters of the Williamette River. Beneath the boat were giant petrified trees, every limb accurately portrayed in the limpid water. They took trout fifteen to twenty inches in length, and as yellow as gold. Nowhere else did he ever see similar fish. In less than an hour they caught a gunny-bag full. [Cries of "Oh! Oh!"] "I am telling you the cold truth," said the speaker. "My father was engaged while I was there in putting up a fence to keep the fish from treading down his grass. [Oh! Oh!] This happens to be a matter of history, gentlemen. The fish out there are able to jump twenty-one and a half feet by actual measurement, and when going up the narrow streams to spawn they sometimes become confused, and, landing in the meadows adjacent, flounder about until often one fish will ruin half an acre of grass." [Shouts of disapprobation.]

Fred. Mather was on his feet offering to "catch one thousand quarter trout in one thousand quarter hours, if Secretary Phillips would give an equal number of flops to his tail in a greater number of seconds or less; go as you please, barbless hooks. "Phwats the matter with ye?" asked a salmon fisher from the Liffey, and Fred. subsided without having named the terms of his great match, and

Seth Green here made a speech.

There were others, too. Blackford talked and talked like a trooper, and old Sam Green and Mr. Banks told a tale of truthful simplicity, and then, and then— "Let's swim out, Jim; there's sw-eels around here. Guzzer-bye. See you later, ol' fel'."

Seth Green here made a speech.

LONG-RANGE AND REPEATING RIFLES.

THOUSANDS out of the thousands who have read about and been present at the International and other long-range contests at Creedmoor and elsewhere shake their heads in wise self-conceit, admire the fine work shown, the remarkably brilliant scores and the marvelous accuracy of the weapons, but conclude their complimentary remarks with the saving clause, "but after all it is fancy shooting." Our militia magnates are fond of thinking that military shooting finds its extreme range about midway up the field, and give to the long-range men credit for working out many interesting problems, for providing data which may be turned to advantage in the improvement of the soldier's weapon, but when a purely military range is to be laid out, it may, in their judgment, stop at 600 yards, or at 500 even, and provide all the accommodation necessary.

Under one view of the case these officers are correct. If the volunteers whom they are endeavoring to train into an ability to do fairly average work are to be employed only as special police in the preservation of the public peace against the depredations of mobs, then such practice as is now offered is all that could or should be reasonably indulged in, and moreover the weapons in the hands of these troops will do good work at no longer ranges than those over which they are now employed.

But this should not govern in the case of our national service. What skeleton of an army we do possess should at least in matters of information keep abreast of the trained forces of other nations, and just now a comparison would not be very flattering or reassuring to us.

The continental nations are rapidly showing that the army of the near future must be one which can on occasions do effective work at the longest ranges. Not merely through a set of sharpshooters scattered along a skirmish line in a dispersed order and doing their work in an independent manner, but under a system as carefully elaborated before hand as the volley and file-firing of a company or regiment at the closest range. The "fire discipline" must extend over all the ranges, and perhaps over ranges which even our "fancy shooters" do not yet essay, and it must be practiced by every man in the ranks.

The careful observations taken during the Russo-Turkish war have set aside many old notions of warfare, and on this point there we[illegible] more strongly indicative of the necessity of utilizing the powe[illegible] of infantry to fi[illegible] long ranges as a whole and not as individual marksmen. This involves the provision of a system of supply for ammunition, and on this the critics are

not so clear. This long-range work must be made effective for attack as well as defense, and it is needed "to lend a moral support to his advance as well as with a view of inflicting serious loss upon the enemy. The assailant must reply to this long-range fire by long-range fire, and therefore, however cogent may be the arguments urged against it, long-range fire will in future be largely employed."

In the Prussian and Austrian army musquetry regulations instructions are now laid down for long-range practice, and a recent semi-official reminder to the French General Staff insists that those who oppose long-range fire shall at least consent to its study, since it "would occasion grave inconvenience if its practice were imposed for the first time on the field of battle."

England, with her Martini-Henry, is not altogether at ease at this prospect, and her habitual ridicule of the prediction that the long range of firearms would be utilized in modern war is giving way to a confession of the evidence of the deadly power of long-range rifles used by large bodies of men.

Another section of this same movement does not find the U. S. so far in the rear. It is the introduction of magazine, or "repeating," rifles. In France the Kropatschek rifle has been adopted for the navy. The Swiss infantry use them. Sections of the Norwegian and Austrian armies are so equipped. The Turkish forces gave that terrible rain of lead at Plevna from Winchester repeating rifles, while our own army will soon have the Hotchkiss repeater in their hands, at least to a limited extent.

In fact, it will soon be absurd to speak of "military" and "any rifles" as more than destinctive appellations. There will soon be room in warfare for every form of weapon. For the silencing of field batteries, the match rifle and the telescope sights may be invaluable; but when the pinch of battle comes, the rattle of the magazine gun may give the victory to those who possess them and know how to use them with effect.

WHAT THEY SAY OF US.

PAINESVILLE, Ohio, Feb. 12, 1879.

MR. EDITOR: That article in your issue of the 6th inst. from an Ohio correspondent, enumerating the results which followed his subscription to the FOREST AND STREAM some four years since, reminds me that my experience has been about the same, only more so.

I have been a subscriber about fourteen months, and it has been indirectly the cause of my purchasing a $45, $60 and an $85 Remington breech-loader; also my last and final purchase in the way of a shotgun—a beautiful $300 premier W. & C. Scott & Son breech-loader; two fine sole leather gun cases from Thompson & Sons; breech-loading implements from Edward K. Tryon, Jr., & Co.; a hunting suit from Holabird; a pair of wading pants and fishing-tackle from Holberton; flies from Sarah McBride; two lots of Dittmar powder; fifty nickel shells; Spratt's dog biscuit and U. M. C. paper shells from H. C. Squires; fishing tackle from Conroy, Bissett & Malleson and Bradford & Anthony; a pocket scale of Fish & Simpson; a fly and bass rod; a patent cartridge belt from Pooler & Jones; two pure blooded dogs; "Hallock's Sportsman's Gazetteer" (the best book of its kind ever written); "Field, Cover and Trap Shooting;" "The Breech-Loader," by Gloan; "Shooting on the Wing;" "On the Wing;" "Game Birds," and other books I have seen mentioned in the FOREST AND STREAM. Besides the above articles, I have bought many others for my friends, among which are about $40 worth of Pool & Jones' belts. I might mention here that everything I have bought has been all that was claimed, and the firms who have advertised with you I have always found "square." I always find your advertising columns interesting, but I think it would pay your patrons in that department if they would change their advertisements oftener. The cost is but a trifle more, and they would find an increase of orders to amply repay them for the extra expense. I mean such houses as Read & Son, Tryon, Conroy, Squires, Abbey & Imbrie, Schuyler, H. & Co., etc.—firms who carry an extensive line of sportsmen's goods, among which are many articles that are useful to all who hunt and fish, but are known but to few that happen to have catalogues. Being a business man myself, I know that an advertisement should be constantly changed to obtain the best results. I was pleased to read those communications on Dittmar powder, as I believe in it. Have been trying some shells loaded three months since, and find they shoot as well as when first loaded. SUBSCRIBER.

QUINCY, Ky., Feb. 10, 1879.

FOREST AND STREAM PUBLISHING COMPANY:

But a few months since I was unaware that such a journal existed, living, as I do, away from large centres, isolated among the hills of northeastern Kentucky. Thanks to the kindness of a friend, a captain of U. S. Engineers, whom I met upon the beautiful Ohio (and, by the way, a sportsman of no mean pretensions, as the possession of a $225 Greener, a long-range Sharps, a handsome pointer, a couple of English bows, traps, glass balls, targets, field glass, etc., *ad infinitum*, would attest), who loaned me a copy, charging me with its safe return. I wondered a little then, but not now, as I value each number now as highly, I hope, as did my friend. To abbreviate, permit me to say that I believe that from no source could I have obtained such knowledge on the various subjects therein treated of, as your valuable paper has given me. If the class of men known as out of season or pot-hunters were intelligent human beings, all that would be necessary to eradicate the evil would be to mail them a few copies of FOREST AND STREAM; but the opposite being the rule, with few if any exceptions, it would be "casting pearls before swine." If my acknowledgment finds favor in your sight, I may some day tell you what I have possessed myself of, solely attributable to the fact of their having been advertised in and indorsed by FOREST AND STREAM.

Very truly, V. B. MORSE.

LE ROY, N. Y., Feb. 24, 1879.

EDITOR FOREST AND STREAM:

So much of the so-called sportsman's literature is unfit to bring into a family; but your paper contains less objectionable matter than nine-tenths of the daily newspapers. You have my hearty sympathy in every movement which has for its aim the freeing of field sports from the odium commonly attached to their pursuit because of the low character of pseudo sportsmen and the free use of the flask. CATKA.

CUSTOM HOUSE, NEW YORK, Collector's Office, Feb. 24, 1879.

EDITOR FOREST AND STREAM:

Permit me to congratulate you and your fellow editors upon the steady and rapid improvement of your paper. Its tendency to scientific discussions and to articles suited to all grades of students in Natural History, as well as the plain common-sense views of its many correspondents from isolated and frontier points, render it at once scientific, practical and as necessary to the lover of field sports or investigations as his easy chair and slippers are to his home comfort.

With regards, believe me very truly yours,

WEDWORTH WADSWORTH.

GAME PROTECTION.

CLOSE OR OPEN SEASONS—*A Correction.*—In our table of existing Game Laws which we printed last week, we inadvertently printed the word "close" when we should have said "open." Of course, a glance will convince the reader what we intended; yet the blunder is a bad one. Also in regard to the proposed season for trout, it should read that the close season called for, shall be between the months of August and April. As it now reads, the summer months constitute the close season.

NEW GAME LAW TESTIMONY.—A New Hampshire correspondent writes regarding the table of game seasons, which we published last week:

The table gives the New Hampshire close season for woodcock as ending July 1st instead of August 1st, and that for ruffed grouse, quail and deer as ending August 1st. Deer can be shot in Coos County after August 1st, but not in all the rest of the State for three years, and the close time for grouse and quail expires Sept. 1st, as it always has. The trout time also is wrong, beginning April 1st instead of May 1st, and ending September 3d.

We take great pleasure in setting ourselves up for correction, simply because in no other way can we better show how hopelessly tangled this game law business is. We have attempted again and again, with the exercise of that care and systematic endeavor, which avail in other undertakings, to compile a correct comparative table of the close seasons of the various States, and each time we have failed. Our failure has been simply and solely due to the puzzling condition of the laws and counter-laws, amendments and counter-amendments, alteration with reason and alteration without reason, which conspire to confuse the expert and wholly bewilder the novice. Were a table compiled with absolute correctness, the chances are that before it could be published it would have already become obsolete in some one particular. We repeat what we have said before, that it is utterly impossible to keep up with the game laws. This is of itself a sufficient argument for the adoption of such a co-operative scheme as we have advocated. Only when such a scheme is adopted will the question of game protection be satisfactorily solved.

MIGRATORY QUAIL FOR NEW YORK.—An interesting meeting of the Brooklyn Gun Club was held at their rooms on the evening of the 3d of March, at which much interesting information was elicited respecting the habits of the migratory quail in England, Germany, and the countries bordering the Mediterranean; also concerning the results of the efforts made by Judge Everts, of Vermont, and others to introduce and acclimate the birds in America; and whether these results were sufficiently satisfactory to encourage other like efforts. The meeting was addressed by Dr. Stutee, of Germany, Navy Paymaster Billings, John Acklinert the veteran naturalist, and Chas. Hallock. Mr. Acklinert, who is an Englishman by birth, was able to tell much of the habits of the bird in that country. He also stated that attempts were made more than twenty years ago to plant migratory quail in this country, and that he had mounted specimens which were obtained near Jamaica, Long Island, and elsewhere in this State. He had heard nothing since relating to the experiment. The general impression of the meeting was, that the birds would not afford the very best of sport over a dog, but that they would prove a very desirable acquisition to the game stock of this country, and it was therefore voted unanimously to import 300 for distribution on Long Island and other localities in this State. An order was forwarded to Horace P. Tobey, Esq., 17 Oliver st., Boston, to accompany others which he already has secured. These will soon go to Sicily, and the birds will be received here early in May.

The example set by the Brooklyn Gun Club is most praiseworthy, and should be followed by other Clubs and by individuals. Should any such wish to order a lot, they should send in their orders to Mr. Tobey, as above, at once. We learn that Rev. J. C. Fletcher, of Indianapolis, Indiana, has ordered 180 quail for his section.

The Brooklyn Gun Club is comprised of some of the most substantial citizens of Brooklyn. Dr. Aten is the President.

—Rev. J. C. Fletcher, author of "Brazil and the Brazilians," and one time Secretary of Legation to Brazil, is now a resident of Indianapolis, Indiana. He is one of our most enthusiastic sportsmen in the West. He is just sending for 100 Messina quails.

EUROPEAN PARTRIDGES.—We shall be indebted to any of our correspondents who may give us any information about attempts to import into this country the European partridge. Have there been such attempts, when, where, how, and with what result?

ST. JOSEPH SPORTSMEN'S CLUB.—The following officers were elected at the annual meeting of the St. Joseph (Mo.,) Sportsmen's Club: President, Paul Francke; Vice-President, N. E. Barnes; Corresponding Secretary, H. Carter; Recording Secretary, C. B. Claggett; Treasurer, C. Mast. The club is in good active condition, and five new members were added to the roll. H. CARTER.

QUAIL IN OHIO.—The General Assembly of Ohio has just passed a law prohibiting the killing of quail, Virginia partridge, and prairie chickens until Nov. 15, 1880. This is a sensible step and the only way in which to preserve the birds.

THE NEW YORK GAME LAWS.

EDITOR FOREST AND STREAM:

There seems to be a disposition to overhaul the game laws at the present session of our Legislature. Let us hope the matter will receive the intelligent consideration which its importance deserves. Vigorous and sweeping reforms are necessary everywhere. The first in urgency, it seems to me, is the limiting of the season in which game may be exposed for sale or had in possession. This must be apparent to any one who has watched our city markets this winter. The amount of game, principally quail and grouse, brought to this city since the proper shooting season closed is simply appalling. When the season so handicaps the birds in their struggle for existence that they can be taken in such quantities as to enable the marketmen to transport them a thousand miles, pay two or three profits, or peddle them through the streets at less than the price of beef, we must, if we will not submit to their utter annihilation, either limit the selling season, or evoke divine power to surpress snow storms. So long as any birds remain this destruction will be repeated every season of heavy snows. It is evident the law must come to the rescue or the birds be exterminated. I have found on examination of the immense bunches of birds in market that a large percentage were absolutely nothing but skin, bone and feathers, showing that they had been almost (or quite) starved to death. How utterly unfit for food such meat is! This consideration alone should stop the sale of it. Since our lasting snows rarely fall before the first of January, if the season for selling game expired with the season for shooting the same, or, say fifteen days thereafter, it would preserve untold thousands of birds which are necessary to propagate the species in sufficient numbers to maintain an undiminished supply.

I fancy I hear some one saying, "Yes; but many of the birds now in market were picked up dead on the prairies, or, at least, in such a state of exhaustion and starvation that they could not have lived till spring. Why then, so far as protection to the game is concerned, do you object to their being sent to market?" A little reflection will show that this does not alter the case a whit, for, while it is undoubtedly true that many birds are sent to market which would otherwise be wasted, it is also true that as many more are taken which would have pulled through if if left alone. Then again: You, Mr. Editor, have shown in one of your late valued editorials how much can be done, and very easily too, by farmers and others to prevent game from dying in stress of weather, by scattering grain, erecting brush heaps, offering the hospitalities of the haystack and barnyard, etc. Now it seems to me that this would be more generally done if there were not a price on the head of every bird. If farmers could not find a market, probably self-interest would induce them to give the birds food and shelter to keep them alive till the next season. I am informed that in certain localities of this State more ruffed grouse are snared and marketed (as western birds I suppose) after January 1, when they are under the law's feeble protection, than are killed during the whole open season. So no person, be he ever so selfish, can oppose this measure by saying, "Oh, we don't care what becomes of the game of other States so long as our own are preserved." Therefore, I would most earnestly beseech the gentlemen who have in charge the duty of amending the game laws to give this question their first and best attention. Let January 1 be the very latest date on which it shall be legal to sell or possess game of any kind. And don't let the open shooting season extend a day beyond the present limit, January 1. It has always seemed to me that summer shooting should be abolished *in toto;* legislation in many States has been gradually approaching this end.

The law which for the last two seasons has prevented shooting till August 1, has, so far as I can judge, worked well, and can only be bettered by one more advance and striking off the remaining summer month. It is now proposed, however, to allow the killing of woodcock (young quail and grouse incidentally) in July, and then call off the dogs till Oct. The reason for this truly ingenious plan is, probably, to sanction the killing off of the young, half-fledged broods in early summer in order to reconcile people to letting what are left moult in peace, when it is naturally more difficult to find one bird than a dozen poor, helpless, just-hatched things earlier in the season. In other words, it is thought expedient to sacrifice a dozen little chicks in order to give one old and secluded bird a chance to moult unmolested. Aside from the question of whether, if properly observed, it offers better protection, such a law will work confusion. We have by all previous legislation become accustomed to one uninterrupted open season; and now to have it open, close, and open again, would, I fear, so blur the lines of demarkation that they would be over-stepped both ways. It is easier to keep the gun on the hooks till it can be used uninterruptedly than to take it down just long enough to get it nicely warmed and then be obliged to let it cool off again.

Gentlemen, let good common sense rule this time and we shall have cause to rejoice for years to come. OSSINING.

New York, Feb. 24.—Editor Forest and Stream: I saw in your paper of Feb. 13., that the N. Y. Association for the Protection of Game had adopted a resolution to recommend to the Senate Committee the adoption of the following as a law, viz: "That woodcock shooting be allowed during July, then close, and open again on Oct. 15." I hope this will not become the law in this State and that you will not favor its passage. I don't wish to re-open the arguments for and against summer shooting, as they were well ventilated in your columns some time since; the law was passed prohibiting woodcock shooting till August 1, and has proved very beneficial to all sportsmen. The birds are not all full grown in July, and if shooting were again permitted then, there would come the old complaints of a scarcity of ruffed grouse when the season for them opened, as many are shot by pot hunters when out shooting woodcock. If there is to be any change in the present law, let the opening of the season be fixed for Sept. 1, or even as late as Oct. 1. In any event I am not in favor of again having summer woodcock shooting, and I trust many of your readers are of the same opinion. S. A

Poughkeepsie Feb. 26.—I wish to call your attention to the destruction of quail and partridge during the winter months. This has been done to a very great extent during the past winter all through Dutchess and Ulster Co. There is an unlimited license to the pot hunters and others in this section of the State owing to the great defect in the Game Laws of our State in allowing the sale of these birds, and having them in possession after January 1. You cannot see a saddle of vension exposed after the law has expired, and why should our quail and partridge? This winter has been more than favorable for the trapping of these birds owing to the amount of snow we have had, and there are as many birds exposed for sale to-day as at any time during the season; and they do not come from other markets but are purchased here from the trappers. Cannot there be something done to remedy this great evil? I trust you will swing your quill in this direction till something is done to prevent the sale of these birds after it is unlawful to shoot them, then, and not till then, we shall have them in abundance.

W. S. JOHNSTON.

New York, Feb. 22.—I am in favor of repealing every game law in our statute book, and substituting for the incoherent and contradictory jumble a concise, consistent and efficient code, to be matured by a commission of experts chosen from the various interests to be affected. It must be sensible and comprehensive, and have the support of public opinion as well as the approval of gentlemen sportsmen. It is worse than folly to leave this subject to the hazard of annual legislative tinkering, while we have men who are thoroughly competent to frame a code of game laws well-nigh perfect in all respects. Their views might differ, but such men will compare and compromise and agree, not omitting to avail themselves of the judgment of practical men, who, from long experience and close observation, know whereof they may affirm as to the game of their respective localities. The time is ripe for the exhaustive treatment of this whole subject with the intelligent forethought its magnitude and importance demand, although there may be no occasion for hasty action. The protection from wanton and mercenary slaughter, in season and out of season, of our deer, grouse, woodcock, quail, beach bird, and fresh and salt water fishes, by sensible enactments, which all good citizens will respect and aid to enforce, is drawing the attention of many thoughtful men outside the ranks of our sportsmen and game dealers—and none too soon. H. H. T.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT
For the Short-Range Championship of 1879

First prize to be ten monogram medals, presented by the FOREST AND STREAM AND ROD AND GUN. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish there own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

NEW YORK SCHUETZEN CORPS BALL.—The New York Schuetzen Corps, under command of Capt. David G. Yuengling, held their annual invitation ball and calico hop at the Germania Assembly Rooms last Monday evening. The hall was filled with a very large gathering, the costumes were fine, the music of the best, and everything conspired to make the occasion a most brilliant one. A pleasant feature of the evening was the presentation of a handsome sword to Capt. Yuengling, Capt. Aery making a neat presentation speech. Then Capt. H. D. Hill, President of the Schuetzen Park, at Hoboken, and the founder of the Association, presented to Captain Aery, in the name of the corps, a valuable gold watch and chain, the locket attached to which contained the likeness of Mrs. Capt. Aery and of little Miss Aery, the "Bundes' Daughter," who, it will be remembered, was the biggest prize won by the gallant captain at the Schuetzenfest last summer. Then the merrymakers sat down to a banquet—plates were laid for five hundred—and the dancing which followed was kept up until—well, we came away before sunrise.

MASSACHUSETTS—*Boston, Walnut Hill, March* 1.—To-day closed our Maynard rifle match. It has been a most interesting match all through, but to-day the earnestness to move up was strongly manifested and keenly felt by all, and score after score was shot with no improvement. Captain Jackson got two 47's, but he wanted a 48. The red disk close in would tantalize him when he expected the white. On his last score he was made happy by seeing the white eight times, and he stood No. 1. The contest in the first class was between the Captain, Tyler and Lowell; the latter put a 47 to his score. Harris surprised everybody, and himself, by a splendid 48, and E. W. Law, that thought he should be in the third class, stepped to the front in the second, making 184 out of a possible 200. The match developed some splendid shooting, giving the gentlemen participating a great deal of pleasure, and added a nice little sum to the club treasury.

The weather conditions were capital for good scores, the wind giving no trouble, although it vacillated from 9 o'clock, at the beginning of the match, to 6 in the afternoon, and was decided in its "fish-tail" character. The sky was overcast. A gray light and clear atmosphere brought out the little "bull" remarkably clear, and the gentlemen saw the white disk appear often. The pavilion was crowded, and the visitors were numerous, many from abroad being well repaid for their visit. Among the well-known "wing shots" were noticed Messrs. Bacon and Brigham, of the Tremont Club, and Lawrence, Medford, Salem and New York were well represented. Mr. J. B. Osborn made the unprecedented score of thirteen consecutive bull's-eyes in bull's-eye practice, and it is unfortunate it cannot go upon record, as it was a brilliant achievement.

There were 162 entries, the leading scores standing at 200 yards, off-hand, three pound pull and ten pound rifle:

W H Jackson	5	5	5	4	4	5	5	5	5	5—48
H S Harris	5	5	5	5	4	5	5	4	5	5—48
E W Law	5	4	4	5	5	5	5	5	4	5—47
J A Lowell	4	5	5	5	4	5	5	5	4	5—47
H Withington	5	4	4	5	4	4	5	5	5	5—46
L L Hubbard	5	5	4	5	4	5	5	4	5	5—46
A B Archer	4	4	5	4	4	5	5	5	4	5—45
J S Sumner	4	5	5	5	4	5	4	5	4	5—45
C A Parker	4	4	5	4	5	5	5	5	4	4—45
J N Pepper	4	4	4	5	4	5	4	5	4	4—43
J A Brown	4	4	5	4	4	4	5	5	4	5—44
C U Meiggs	4	4	4	4	5	5	5	4	4	5—44
H Mortimer	4	5	4	4	5	5	5	4	4	4—44

C R Grifling	40	38	35	113

MAMMOTH GALLERY—*Boston*—The monthly shoot for February closed without a perfect score, but with a large amount of excellent work over the fifty-yards range used. The best shots for the month were:

L F Newcomb	4	5	4	5	5	5	5	5—39	H A Pickering	4	4	5	4	5	5	5	5—37
E W Archer	5	4	4	5	5	5	5	5—38	D F Small	5	4	4	5	4	5	5	5—37
Geo Lamb	5	4	5	5	4	5	5	5—38	A L Eames	5	4	5	4	4	6	5	5—37
E S Tobey, Jr	5	4	5	5	4	5	5	5—38	W H Harrison	4	5	5	4	4	5	5	5—37

D F Hunt, C O Barrett, E F Richardson, C H Russell, W Bradford, W H Johnson, F H Hartshorn, William H Kestarick, Colonel Nat Wales, J J Dunne, M L Pratt, George E Everett, 36 each.

A new contest for March has opened, and the manager's offer, in addition to the three regular prizes of $20 cash for the first perfect score, still holds.

—In the contest between the Lake View team, of Chicago, and the Medford (Mass.) team, Feb. 22, eight men per team, ten shots per man at 200 yards, the scores stood: Chicago, 325; Medford, 324.

—The March series of matches at the Bellevue Range, Medford, opened yesterday.

—A grand time was held yesterday by the Walnut Hill riflemen on the presentation of the prizes at the store of Wm. Read & Sons.

—The Walnut Hill men will begin on Saturday next the Winchester rifle match, under conditions as follows: Distance, 200 yards; rounds, fifteen without cleaning; rifle and position any allowed by the rules. The first entry for members, $1; for non-members, $1.50; subsequent entries 50 cents each. Members of the Association to be divided into three classes, on an entirely new and revised classification. The principal prize will be an elegantly finished Winchester rifle, valued at $55, which will be awarded to the competitor of either class making the highest score three times. Two other Winchester rifles, made expressly for this match, valued at $45 each, will be the first prizes in the two classes which do not win the principal prize. First class open to all comers; second and third classes open only to members of the Massachusetts Rifle Association. Any competitor in a lower class may enter a higher, but scores must stand in the class where they were made. The competitor having the highest aggregate in either class will have the first choice of prizes offered in his class, the one the next highest the second choice, and so on, but a competitor can win but one prize. Prizes will be awarded whenever the receipts shall equal the value of the prizes and the expenses. There are already thirty-one prizes of an aggregate value of $288.50.

Medford—The February series closed with a good record, the prizes being awarded as follows: First class—First prize, H. K. Richardson; second prize, H. H. D. Cushing; third prize, H. Withington. Second class—First prize, W. G. Tousey; second prize, J. R. Teele; third prize, H. S. Harris. Third class—First prize, G. H. Howe; second prize, G. B. Gill; third prize, E. F. Kendrick.

CONNECTICUT—*Collinsville, Feb.* 27.—At a regular meeting of the Canton Rod and Gun Club, held to-day, the following scores were made; off-hand; 200 yards; ten shots:

	Mass.	Creed.		Mass.	Creed
O B Hull	97	42	J D Andrews	85	49
J Lanbenstein	96	43	J Hamilton	85	39
H B Moore	93	40	H Konold	83	38
G F Lewis	87	40			

—A Captain Lou Sholes, Inspector of Target Practice in the Third Connecticut Regiment of Militia, has been doing some very curious work in the way of instruction. Recently before some companies of his regiment he went through some shooting as follows: From the right shoulder; from the left shoulder; from the right shoulder, with both eyes open; from the left shoulder, with both eyes open; with rifle reversed above the head; with looking-glass over the shoulder, with back to target; between the legs, and as a pistol. The target, which was only three inches square, was hit thirteen times out of fourteen. Captain Sholes has also another trick, which is that of holding the rifle out at half-arm and standing sideways to the target, shooting by aid of a looking-glass.

CREEDMOOR, JR.—A match was opened on the 1st instant at their tunnel gallery for a Ballard rifle, open to teams of five from any insurance company, bank, college, mercantile house or telegraph company; members of teams to be *bona fide* employés of the company or connected with the institution represented; number of shots, two sighting and seven scoring shots each man; position, standing; three teams to make a match; prize to be won three times before becoming the property of the winners; entrance fee, 50 cents per man; no charge for rifles and ammunition; prize to be shot for every Saturday, from 3 P. M.; entries made up to close of match; prize, Ballard .22 cal. rifle, with globe and peep sights. The teams represented and scores made were as follows:

North British and Mercantile Insurance Co	156
T. H. Holton Manufacturing Co	152
Donaldson Bros	146
Home Insurance Co	143
New York Custom House	134
Gregory & Miller	133
Phœnix Insurance Co	130

ZETTLER'S GALLERY.—Two hundred yards; Creedmoor target reduced: February 5.

H Sprieser	46	H Spamer	36
E Zennigg	38	F Burghardt	35
Gillwitzer	38	C Recht	33
T Schmager	36	L Denis	33

February 12.

H Sprieser	46	E Zennigg	37
H Spamer	41	G Magg	36
L Denis	40	A Ulterst	36
G Ilwitzer	39	O Born	34
G Recht	39	F Hamburger	33
D Genundt	36	F Haylck	33

—A final contest, or match, between the New York and Jersey Schuetzen Corps for a valuable gold medal from the United Schuetzen Association, will be held at Union Hill Schuetzen Park during the month of April, each corps having won the medal three times.

—Major Wm. Arms won the Lilienthal cup at Frogmoor, N. O., on the 16th ult., with a score of 201 in the possible 225 at the long ranges. Dudley Selph made 200.

MICHIGAN—*East Saginaw, Feb.* 22.—At the sixteenth weekly practice of the East Saginaw Amateur Rifle Club the following scores were made; 200 yards target reduced; possible 50:

Captain W J Shaw	5	4	5	4	5	4	4	5	5	4—45
C C Yawkey	4	4	5	5	4	5	4	4	4	4—43
R F Corbyn	5	4	5	4	4	5	4	4	4	3—42
F R Osborn	5	4	4	4	4	4	4	5	5	4—41
J H Howry	4	4	4	4	4	5	3	4	3	3—38

CHICAGO TO THE FRONT—*Chicago, Feb.* 23.—*Editor Forest and Stream:* In your paper of January 9 was published a letter from Bradford, Pa., which you very appropriately headed, "A Fool and a Gun." On reading it our club immediately voted the writer the champion off-hand yarn-spinner of the United States, and if there ever should occur an International long-range prevaricating match, we should insist that he be the captain of our team—even against such experts as Eli Perkins, Gath, or any other man. But all that is changed now. The vote on the championship has been thrown out. An event of to-day, at the Lake View Rifle Range, restores Mr. Smith to the ranks of truthful men, and entitles him to take position with George and his little hatchet. One of our reserves—a man who knows and loves a rifle—was late in arriving, and was ordered to take his sighting shot at once. His gun was a Remington barrel, with the Butler breech action. He put in a shell without noticing that the cleaning rod was left in the gun, stepped to the firing point, and pulled the trigger. No report following, he opened the breech, letting out the report and the shell, the latter striking the vernier with sufficient force to bend it. The subsequent proceedings were unlike those of the gentleman from Pennsylvania. The bullet had been wedged into the grooves and around the chambered end of the wiping rod, and could not be started either way. Our man removed the stock from the barrel and inserted the latter in a coal fire until the lead was melted, then wiped it out, put the gun together again, and at the conclusion of the match made a score of twenty-two in five shots—proving that neither the gun nor man were rattled.

LU H. DRURY.

DENVER VS. CINCINNATI.—The match on the 19th ult. between the Denver Rifle Club and the Cincinnati Shooting and Fishing Club resulted in a victory for the Colorado team. The match was a good one on both sides. More of the same kind would promote better feeling among sportsmen, and tend to the improvement of all participating. At Cincinnati the weather was far from good, and this may go far to explain the manner of the result. The firing was at 200 yards, off-hand, fifteen shots per man, according to the National Rifle Association rules. The scores stood:

Denver Team.

C Gove	4	4	5	4	4	5	5	4	4	5	5	5	4	5	5	—88
W Y Sedam	4	4	4	4	5	4	5	4	5	5	5	4	5	5	6	—87
O Gore	5	5	3	5	5	4	5	5	5	4	4	4	4	4	4	—86
W Durell	4	4	4	4	5	5	4	4	5	5	5	4	4	5	4	—86
M Spangler	4	4	4	4	5	4	5	5	5	4	4	4	4	4	4	—85
Geo Schoych	4	5	3	4	4	5	5	4	4	4	4	5	4	4	4	—84
H H Miner	4	3	4	4	4	4	5	4	4	4	4	5	4	5	4	—82
M B Goodell	5	5	4	4	4	4	4	3	5	4	4	4	3	4	4	—81—519

Individual average, 64¾.

Cincinnati Team.

Fender	5	5	4	5	4	4	4	5	4	4	5	4	4	4	5	—66
Henson	4	4	4	4	4	4	4	5	4	5	5	5	4	4	4	—64
Baum	4	5	3	4	4	4	4	5	3	4	4	5	4	4	5	—63
Caldwell	4	4	4	4	5	5	4	4	4	4	4	4	4	4	4	—62
Hall	4	5	4	4	4	4	4	4	4	4	5	5	4	5	4	—62
Gindelin	4	4	6	3	4	4	4	5	4	4	4	5	3	3	4	—61
Campbell	4	4	4	3	0	5	4	4	5	4	4	4	4	4	4	—57
Disney	5	4	4	4	5	4	4	5	4	3	4	0	4	4	0	—60—495

Individual average, 61¾.

Campbell's fifth shot and Disney's thirteenth shot on the Cincinnati team were protested, and misses were scored instead of centres. A glance at the score shows that out of 120 shots fired by each team, the Cincinnati club made 88 fours and the Denver club 71; the Cincinnati 28 fives, and Denver 44. Among the sixteen shooters, C. Gore, of Denver, made the highest score, and W. Y. Sedam, of Denver, the second best. The frank and manly way in which the defeat was owned up by the Cincinnati boys, whom we all expected to win, is shown in the following letter. However, they are ready for another bout;

CINCINNATI, Feb. 20, 1879.

Frank Church, Esq., Secretary Denver Rifle Club, Denver, Colorado.

Dear Sir: My telegram of last night gave you the aggregate score of the Cincinnati Shooting and Fishing Club match shot with your team on yesterday, viz., four hundred and ninety-five points.

Your club was represented by a reliable marker in the pit, and by another who scored in the shooting-house.

Your telegram, received this morning, sets at rest, at least for the present, whatever notions the individual members of the Cincinnati Shooting and Fishing Club may have entertained in regard to the superiority of their rifle team over your own. Your score of five hundred and ni neteen points is a good one—too good for the C. F. and F. C., as they have never equaled it; no such shooting has been done here yet. Enclosed please find the original score, kept by your representative, and also signed by the scorer of the C. S. and F. C. On it are two protests noted, both of which have been decided in your favor.

The match was shot over snow, and snowing, with a stiff breeze blowing irregularly. But had all the conditions been of the most favorable kind, the result would have been, in all probability, but little, if any, changed. I can only return thanks to the members of the Denver Rifle Club for the confidence reposed in Yours respectfully, WM. HALL.

ARMY RIFLE PRACTICE.—The departments of the army are evidently minded to make a better bid than ever for the top place at Creedmoor next fall, and the liberal disbursements to the troops at the various posts of material for practice will remove any chance of complaint on the old score of want of ammunition. The Ordnance Department has intimated that it will fill requisitions for reloading supplies as follows for the average number of men that may be expected for duty in each company during the year: Fifty Winchester reloading cartridge shells, cal. .45, per man; 500 lubricated bullets, cal. .45, 405 grains per man; 500 charges musket powder, 70 grains—in pounds (one pound of powder loads 100 cartridges)—per man; 500 primers, No. 2, for Winchester shells, per man. One set reloading implements for each company, as follows: One reloader for military cartridges; one wad cutter, necessary for reloading with reduced charges, for instruction of recruits; one charge cup. The above will give each man more than 500 shots per annum at a less cost to the Government than that of the present authorized allowance. When company and post commanders find more ammunition to be necessary they will submit requisitions for the same. The cost of material is nearly as follows: One bullet, $0.006; one primer, $0.002; one charge of powder, $0.0023; total, $0.0103. The Department of Texas reports for the month of December, practice at 100 yards, the best regimental average for the Twentieth Infantry at 70 per cent., while the best company average was Co. B, Twenty-fifth Infantry, 76 per cent. Priv. J. Bell, of Co. I Twenty-fifth Infantry, had an average of 96 per cent., or 24 in a possible 25, while the poorest man in the Department averaged but 4 per cent. From the Division of the Pacific the reports show averages as follows:

First Regiment Cavalry.

	100 yds	200 yds	300 yds		100 yds	200 yds	300 yds
Co A	38	49	32	Co I	—	52	—
Co B	46	69	—	Co K	63	49	—
Co C	48	46	—	Co M	78	58	—
Co G	62	43	—				

Fourth Regiment Artillery.

Co C	60	62	—	Co L	—	39	—
Co E	—	40	37	Co M	56	51	—
Co H	44	51	33				

Second Regiment Infantry.

Co D, 24 at 200 yards, 30 at 300, 32 at 400, 32 at 500, 24 at 600, 18 at 700 yards; Co F, 56 at 100 yards, 48 at 200, 47 at 300 yards.

Eighth Regiment Infantry.

Co G, 30 at 200 yards; Co E, 81 at 100 yards; Co G, 30 at 100 yards, 41 at 200, 33 at 300 yards; Co I, 63 at 100 yards, 47 at 200 yards.

Twenty-first Regiment Infantry.

Co A, 67 per cent. at 100 yards, 51 at 200; Co B, 57 at 100 yards, 41 at 200, 40 at 300; Co C, 35 at 200, 28 at 300 yards; Co E, 47 at 100 yards; Co H, 44 per cent. at 100, 46 at 200, 45 at 300.

General Hancock has issued a general order on the subject, and his men at Governor's Island are doing excellent practice.

WIMBLEDON MEETING.—The date fixed for the opening of the camp at Wimbledon this year is July 14. Although this date is unusually late it is probable that, owing to the increase in the number of prizes and of competitors, the meeting will extend beyond the usual fortnight.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

MASSACHUSETTS—*Salem, March* 3.—Our harbor and North River are yet frozen up, but soon must be cleared. Off the shores now are lots of whistlers, old squaws and mergansers, but they are rather shy; some coots in the bay. Snow buntings and shore larks are not at all plenty. No cherrybirds yet, nor any robins. Some grosbeaks around Boxford. A fine mallard taken at Gloucester. Quite a number of butcher birds have been about the city this winter, also yellow rumps. Saw woodpecker last week. Crows move around spring-like. I use Dumolein in all parts of my gun where grease is needed, except the locks; on these I use porpoise oil same as used by watchmakers in our city, and find twice a year often enough to apply it. MARK SNIPE.

SHELTER ISLAND, Feb. 28—This cold weather and the floating ice seem to have driven off the fowl, and but few remain at present. The coot, old squaw, etc., do not make much shooting on the east end of Long Island in the spring months, though sometimes the shell drakes are beautiful. They call here the old squaws, old wives, and old Indians; on the New England coast they name them generally "Quandys," and on the Virginia coast "South Southerlies." The gunners here generally stick to their old muzzle-loaders, but they are beginning to understand the superior excellence of the breech-loader, and a few of them are arming with that weapon. Some of them have been borrowing of me your excellent paper that they may learn where to send for a breech-loader. Last week one of our gunners here shot a seal on the ice, which had been driven into the bay with the floating ice. McL.

SOUTH CAROLINA—*Aiken, Feb.* 25.—On Saturday, the 22d of this month, the Aiken boys all took the hunting fever, and three parties hied away to different hunting grounds. Sheriff Holly, with three prominent lawyers of the Aiken Bar, took the celebrated pointers, Rory O'Moore and the Rose of Allendale, and put out at the break of day for Low Town Well. Old man John Williams and Capt. Jordan, with the dashing pointer, Sam Patch, made for the high hills of Bridge Creek, and your deponent, with Mr. Crimmins, of New York city, and the renowned old pointer, Jerry-go-Nimble, struck for Croft's Plantation. The first named party, going twelve miles off, bagged 41 quail and 5 rabbits; the second party bagged 15 quail and raised 2 foxes, which they did not shoot; the third party got 7 quail, 1 rabbit and the finest woodcock that ever stuck his bill in the mud. The hunting and shooting was all fair and square, except that the old man, John, who has passed through sixty winters, took three quail on the ground from his horse at one shot; but the old fellow is somewhat short-legged, his blooded filly is long-legged, and he says it worries him mightily to be getting up and down every time Sam points. ONE OF THE GANG.

TENNESSEE—*Nashville, Feb.* 27.—Snipe are anxiously looked for, now being about the time they pay us a passing visit. Valentine and Mitchell will try their luck after them to-morrow. Valentine will take out his puppy Prairie Belle; he says she is remarkable in the field for one so young. I heard to-day that a bill for the protection of game in this State had been framed and presented to the legislature, and that it is now in the hands of a committee who have such matters under their charge. J. D. H.

ALABAMA—*Mobile, Feb.* 28.—Snipe are just arriving. Myself and companion were on Madri Gras and bagged 44 in an evening's shoot. BLACK GEORGE.

Huntsville.—Ducks remain all winter on the Upper Missouri. They are seen constantly at Fort Benton. H. A. K.

TEXAS—*Willis, Feb.* 22.—I'm going to try some Express bullets at deer; have just ordered some from the U. M. C. Co. I think when I shoot one into an old buck's neck he will hand in his checks. How would I have heard of the Express bullet or the Dittmar powder had it not been for the discussions in FOREST AND STREAM about them? If I had used the Dittmar powder this winter on duck I would have doubled my bags; but I had no confidence in it until the hot discussions got up, although I think that was run in the ground. I have killed lots of mallard, wood, teal and black duck this winter. They were quite plentiful on our streams and ponds, but are about returning north now. Our next game to play is on wild turkey. "Oh, them's 'em!" And now for the solid little .38 Wesson or .40 cal. Nichols & Lefever. But shotgun, "nix, nix!" We want no Express for an old gobbler, but a clean little solid shot. We want as small a hole through him as possible. It would spoil *le cuisine* were it otherwise. There is much about this bird that thousands who are sportsmen never even learned. C. L. J.

OHIO.—The Youngstown "Forest and Stream" Sporting Club still lives. Old officers re-elected for another year. The club has been vigilant during the past year in securing a general observance of the game and fish laws. Last October some six of our number took a flying trip to Twin Lakes, in Montmorency Co., Mich. Had a good time, such as sportsmen only know how to enjoy. Bagged five deer, one 'coon, many ducks and geese. Fish—well, we did not keep count.

F. S. W.

CALIFORNIA—*Los Angeles, Feb.*21.—Dr. Shorb, of San Frisco, Mabury, and I killed 214 quail one day last week,

H. M. M.

—Capt. Bogardus was at Mobile, Ala., on the 6th of March where he was engaged to shoot.

THE AUXILIARY RIFLE BARREL—*Winn, Me., Feb.* 26—*Editor Forest and Stream:* I have been using the auxiliary rifle barrel in my shotgun, and after repeated tests of its accuracy and effectiveness, am very much delighted with my purchase. This barrel is certainly all that the manufacturers claim for it, and sportsmen will find it fully equal to the many sporting rifles. R. J. CUSHING.

UNEXPLORED FLORIDA.—We have another very interesting letter from our correspondent, who is engaged in the Government Canal Survey in Okefenokee Swamp. The information which he gives us of those unexplored regions is very instructive and entertaining:

OKEFENOKEE SWAMP, Georgia, Feb 18, 1879.

EDITOR FOREST AND STREAM:

We have halted for the night at Nixon's, forty miles from Homerville, on the A. G. R. R., the nearest railroad station to the hunting grounds of any note. We have traced the Suwanee from where it enters the swamp, at this place, upward about twenty miles. At some points it flows with a deep, sluggish current; at others it forms many little streamlets that diverge from the main and form drains to vast prairies, and in three places the river is spread out through a dense cypress swamp, where it seeks a southwesterly course, but does not remain without a well defined channel for more than a half mile at either place. Any canoeist with perseverance can find the retreat of aboriginal times as well as innumerable alligators and wild fowl, which were most plentiful in the vicinity of Floyd's Island, so called from the failure of Floyd to secure the Seminoles that were encamped upon it; and if a million men had entered their village by the cypress lands they could not have caught one of them, nor even see one, as they could easily escape in canoes by routes which were known to them alone. Their descendants remain here unmolested. The mounds which cover them are of various forms; the largest is oblong, 100ft. by 30ft. and 8ft. high, and has no evidence of the earth being taken from near it to form it; and others have trenches alongside. The centre of the island has the appearance of having lost a greater portion of its trees by camping parties, no stumps remaining. The land has an occasional pine and a low growth of scrub oak in the centre, and at either end a dense growth of live and water oaks, as well as various other woods and almost impassable canebrakes. But do not attach the word swamp to this island, as it is nearly surrounded by prairies, and its land is high and rolling, and among the pines is not unlike the sand hill near Rockaway, except in the shape of footprints, which are as abundant as one could wish to see in a well-stocked deer park, which it proves to be by our abundant larder, and several seen on our way out alongside, in the alligator crawls, that serve as boat routes from the rivers which flows in sight of it on the north. I have never before found a locality where deer were so free from the visits of their natural enemies, unless bruin can be classed as one. He roams here and raises his children, and the marks of their playful antics are abundant on the bark of many trees near the hammocks which are found all about its outskirts, affording resting-places for deer when the rain season is over, and places to hide, should they be pursued by dogs.

I shall fail to do justice to it in describing the chain of lakes found here. In my mountain home, in the Granite State, I have been led to express contempt for a landscape without a mountain; but here nature has realized the need of a substitute, and furnished it in a variety of forms. No one of its lakes resemble another, except in the varieties of fish, which are plentiful in all, and, when fished for, can be had with the least experience and the crudest of fishing tackle. But a word that may not come amiss I will put in here. I would not give any one who is not a sportsman in its truest definition a word of encouragement, if he contemplates a visit here. Prepare to rough it, or you will have to return too soon if you do not. EDW. NORTON.

—Messrs. J. Palmer, O'Neil & Co., whose advertisement will be found in another column, are a very popular firm of Pittsburgh, Pa., and sportsmen of the vicinity will find in their extensive stock a fine choice of excellent firearms.

DITTMAR POWDER.

BINGHAMTON, N. Y., Feb. 22, 1879.

EDITOR FOREST AND STREAM:

Sir—Although you are severe in your editorial of a late issue on the white powder, I must say that I have to thank your paper for having been able to make my powder perfect, as I begin to think and to try to obviate faults as soon as anything serious appears against the powder in your columns. Letters such as you bring from time to time come seldom to me personally, most of my letters are very flattering, and I can see only the powder becoming more and more popular; but I like to hear just as well what can be brought up against it, as I want the powder so that every one can use it without any trouble or extra care, and with perfect safety. You can—not, nor do I, expect that my powder will supersede the old and tried black powder in so short a time as the new powder has been out, but I feel absolutely sure that I shall see it supersede the old powder, as breech-loaders have superseded muzzle-loaders. Its cheapness is the test, and it is now cheaper than the best black. Since November 5th last, all I have manufactured has been tested with the Government pressure gauge, and is perfectly reliable and safe with heavy charges. As I expect our own pressure gauge in a few days from the Springfield armory, I shall not let a single pound of powder go out without having it tested thoroughly for strain. I consider the Orange Lightning as the mildest black powder, and I shall make it the standard to go by. There are other black powders in the market which strain the guns considerably, but if anything happens to the gun no one blames the powder. Now, to distinguish this new issue of my powder I shall send it out in sealed packages only, the seal being the warrant that it is safe. The kind I made last year up to Nov. 5 is also perfectly safe if used according to directions and with no heavier charges than recommended in the circulars. I made that kind according to Capt. Bogardus' views, who has used it extensively, and who is perfectly satisfied with it as he loads it just right, not using more than necessary. In his great shoot at Gilmore's Garden he used a lot which was returned from St. Paul, Minn., as being too strong and straining guns. That it does not strain if loaded according to my instructions he has proved at that great shoot, and also a short time ago in Chicago at the great tournament in the Exposition building; the same ammunition was used by every one who shot in that contest, and every one assured me of his satisfaction at the working of the powder. I found, however, that heavy charges are more in use than small charges, at least in the West, and therefore, to obviate mistakes, I shall make only one kind for all purposes, for strong and weak guns, light and heavy charges, without any more instructions than to use two tight fitting wads on top of powder, otherwise no more care than in the use of common black powder. As to the charge of the powder being less reliable, because it absorbs moisture more readily from the nature of its ingredients, I claim that the new kind absorbs less moisture than any other powder, every grain being coated with a waterproof composition, which at the same time makes the ignition slower and dampens the explosive and straining force without impairing the propelling power. My experience is that the powder keeps any length of time when loaded, as well in rifle as in shot-gun ammunition. This is easily proved if you will allow me to send you some ammunition sealed up in a package and to be opened and used after six months or longer. If your correspondents who complain about the powder not keeping when loaded will give me their full address I will forward them some of my own ammuuition for trial. As to the injuring of the interior of a gun barrel I must say it cannot be from free acid, as the powder reacts alkaline, which every one can notice after a shot. Smelling at the muzzle or breech he will smell ammonia. If your correspondents would give full particulars of the trials I could find out what the trouble is. In the case of Mr. C. M. Starck I think he either used only one wad on powder or two not tight fitting wads. In that case he will have found that in withdrawing the empty shell some yellow smoke coming out of the barrel, and in looking through the barrel he would have found the gun fouled, while when using two tight fitting wads white smoke comes out of the barrel and the gun is clean. In the first case part of the powder may have only burned without exploding, the burned powder giving a different composition of gas from the exploding powder. In such a case I would clean the gun. I can see no ill effect of the powder in my own guns.

Captain Bogardus, who has used more of my powder than any other man, never made a remark to me about the eating out of his barrels. If Mr. Stark will use the same amount in bulk of my powder as of black he will get better pattern and penetration. I do not think it entirely fair to use ¼ dr. more of black powder in a comparative trial, and then publish the result.

I must again say that my powder is not a "wood powder," as it is entirely different in its composition. I use partly paper pulp, which may not be of wood at all; but I use so many other ingredients besides that the pulp is but a small portion of the whole, and it is not only different in composition, but also in properties, from the real "wood powders,"

I was connected with the manufacture of the Schultze powder sixteen years ago, and I could see at that time that it would never supersede the old powder, and I have worked ever since to invent an entirely new powder which will do what Schultze powder never can. Hoping that my reply and explanation to comments on my powder will find a place in your columns, I remain, Yours truly, CARL DITTMAR.

EDITOR FOREST AND STREAM:

It beats all, the opposite practical results of the Dittmar powder, as learned from your columns, from sketches of its use by men apparently practical in the use of fire-arms and ammunition. One will report a bursted gun and useless weapon, with the loss of a finger or narrow escape from involuntary suicide, and another will have a glowing report of its excellence under nearly every conceivable condition to test its results. I shot my first charge on the first day of the quail season, and killed my first bird making his rapid flight through some trees for thick cover. I had the supreme satisfaction of seeing my bird fall from quite a height (the greater the height the more prolonged the satisfaction, "you know"), dead as a "door nail." That same day I made the longest double shot with the same powder I had ever made or ever seen, taking the first bird full forty-five yards away, and the second, thinking I was shooting for nothing, just as he was going into cover. Each I saw fall. With other powder I could not have seen the second fall, had I hit it, and would certainly have despaired of hitting it any way. And then no recoil. It is surprising to me where all the powder comes from. It seems to upset the old philosophic principle, "action and reaction are nearly equal." But there it is, and needs no argument. I shot not a single load of any other kind the whole season, unless a few shells perhaps which I had previously loaded, and my experience with it adds more pleasure to my shooting in two features, at least—seeing the game fall, and freedom from recoil. I also think it stronger. It seems to me not as quick as black powder of a good grade. In close shooting especially, where you need your eye on the bird all the while it is possible, it is invaluable. I shall enjoy, I am sure, woodcock shooting more now. In a couple of gulleys behind the Institute here a few broods always hatch. Last 4th of July I brought seven to bag in seven successive shots; but I saw not one fall. In the early morning, still damp with dew and moisture, the black powder made more smoke than usual. But with the Dittmar the sport will be increased. It seems to me if persons will get a good article of it they will have no trouble. It must be the imperfectly first made powder, which was doubtless irregular in its results. C. J.

DITTMAR POWDER TO BE TESTED.—We have received the following card from Mr. Dittmar, which we publish with pleasure. We feel gratified by the confidence which Mr. Dittmar places in us, but think it impolitic, as journalists, for us to select judges for this or any other trial:

BINGHAMTON, N. Y., Feb. 23, 1879.

EDITOR FOREST AND STREAM:

I wish to give a public exhibition, in which such questions as safety and efficiency may be settled, and I would be very thankful if your paper would name the judges. I wish to convince the public especially that the new powder is safe in every way, and I can prove it when the pressure gauge, which is at work in the Springfield Armory, is ready. I wish also to show that there is no injury to the inside of the barrels, and no absorption of moisture in loaded shells, etc. I wrote in another letter about that. I am sure now of success, and I would be very sorry if your paper should begin to go against me now. I must say that I made a mistake last year in making the powder according to Bogardus' views. It would have been all right if people would follow my instructions, but as they do not, I make the powder now so that it can be used with safety with the heaviest charges, although some may grumble, preferring the quick grade. We have also reduced the price from $1 to 65 cents per single canister, 60 cents in lots of six canisters, 55 cents for twelve, etc., which, I think, is cheap enough. As soon as I can make my own acids, we shall reduce the price still more, and I will use every effort to supersede the old dirty and smoky competitor. My people can see already that the new advertisement takes effect, as we get numerous letters referring to it every day. CARL DITTMAR.

FRANKLIN, Del. Co., N. Y., Feb. 15, 1879.

EDITOR FOREST AND STREAM:

Sir—Will you please give me space for the following, in answer to the article from Oleout Sportsmen's Club, which appeared in your paper of Feb. 13? First, let me say that that article did not by any means emanate from our club direct, but from one of its members, who sanctioned and gave his voice to prohibit its use at all our club shoots. Now Mr. Editor, in fairness to Mr. Dittmar, and lest the above-named article might prejudice the readers of FOREST AND STREAM against its use, I will state how the matter was conducted. At the time of the club's meeting, Jan. 1, there were only two members using the Dittmar powder, myself being one; and my experience with it at that time was only limited, as I had not given it a fair trial, only having used it mixed with black, about equal parts; and I found it decidedly cleaner than all black, and much pleasanter to use. The motion was made to prohibit its use in all club shoots. I begged for an amendment of the motion, and asked the mover to withdraw it until it was tried; also for a committee to be appointed to test the powder,—but in all was refused. Now let me here say that the man seconding the motion had not at that time ever seen or used a grain of the powder in question and did not until some time after the action of said club. The club acted entirely through fear and ignorance, as there were only three members present who had used it in any shape. You will see that it was truly an extraordinary case. In due time I purchased a can from Mr. Dittmar. Myself and five of the club's most respected members, including our secretary, gave it a fair trial with both breech and muzzle-loading guns. In said trial Dupont's No. 2 and Orange Ducking were used, and the result was that the Dittmar gave a pattern 60 per cent. better than black, and most decidedly better penetration. I will here say that with a 10 bore breech-loader, 28in.; with 4 drs. Dittmar and 1⅜oz. BB soft shot at 38 yds., measured with tape-line, I got a pattern of 21 in a target 10x12, with great penetration, going entirely through an inch pine board, with little recoil. The above trial was highly satisfactory to all connected. I would not have the readers of FOREST AND STREAM infer in any way that I am advertising this powder, for such is not the case. I am only giving bare facts. I am not under any obligation nor interested in any way with Mr. Dittmar or his powder, but my advice to sportsmen is to try before condemning. ROBERT WALKER.

UTICA, N. Y., Feb. 22, 1879.

EDITOR FOREST AND STREAM:

I have read with considerable interest the letters published in FOREST AND STREAM on Dittmar powder. I have used the powder for three years. I will therefore give you my experience with it. I have a Fox gun, 12 bore, 28in. barrels; maker's weight, 7½ lbs.; actual weight, 8¼ lbs. I have loaded shells with 3¼ drs. Dittmar powder and 1 oz. No. 8 shot, and at a distance of 40 yds. I have shot through both sides of an oyster can, and with the same load could not stick the shot in a pine board. All were loaded exactly alike and at the same time. For cover shooting I think it is the best powder made. If, however, a person wishes to be certain to kill at a long distance, black powder is the thing. For keeping guns clean give me the Dittmar powder. The first discharge will dirty your barrels as much as any number of discharges afterwards will do. I therefore mix the powder with black, half and half, and find that the result obtained is satisfactory, as the Dittmar powder enables me to clean the gun without washing.

THOMAS BIRT.

AUGUSTA, Me., Feb. 20, 1879.

EDITOR FOREST AND STREAM:

Dear Sir—I have read numerous letters recently published in FOREST AND STREAM relating to the use of Dittmar powder, and having purchased of H. C. Squires last season ten cans of the C brand, which was used by myself and members of the Cushnoc Heights Gun Club, can say that it proved perfectly satisfactory to us all, and in no way damaged gun or shells. At the shoot at Granite Hall, on the evening of Feb. 18, for a gold badge and the championship of the State at glass ball shooting, Dittmar powder was used wholly, and gave the best of satisfaction.

H. FRANK FARNHAM.

—See Bogardus' advertisement.

PIGEON MATCHES.

BROOKLYN GUN CLUB—*Cypress Hills, L. I., Feb. 25.*—Regular monthly contest for a Fox gun, presented by the club, shot for at ten birds each, from five ground traps, handicapped rise, 100 yards boundary, club rules:

W Wynn	30 yards	1 1 1 1 1 1 1 1 1 1—10
T Broadway	25 "	1 1 1 1 1 1 1 1 1 1—10
R Robinson	26 "	1 1 1 1 1 1 1 1 1 1—10
Johnson	28 "	1 1 1 1 1 1 1 1 0 1—9
Waite	26 "	1 1 1 1 0 1 1 1 1 1—9
Eddy	28 "	1 1 1 * 1 1 1 1 1 1—9
Welsford	26 "	1 1 0 1 1 1 1 1 1 1—9
Madison	26 "	* 1 1 1 1 1 1 1 1 1—9
Blankley	26 "	0 1 1 1 1 1 1 * 1 1—8
Atkinson	26 "	1 * 1 1 1 1 1 1 1 0—8

Wynn and Broadway tied again on three each.

LONG ISLAND GUN CLUB—*Dexter Park, Jamaica Road, L. I., Feb. 28.*—Regular monthly handicap meeting; prize, Champion Silver Cup; 1¼ oz. of shot, 80 yards boundary; H and T traps; the club rules to govern:

	Yards			Yards	
Wm Murphy	21	1 1 1 1 1 1 1—7	Hughes	25	1 1 1 1 0 1 0—5
Gildersleeve	25	1 1 * 1 1 1 1—6	Talbot	25	1 0 1 1 0 1 0—5
Landcake	25	1 1 1 1 1 1 0—6	Rivers	25	1 1 0 1 1 * 0—4
Midner	21	1 1 1 0 0 1 1—5	Chappel	23	1 1 0 0 * * 1—3
Eddy	25	0 1 1 1 1 0 1—5	Smith	25	* 1 1 1 0
Wynn	25	1 1 1 1 0 1 0—5	Madison	25	1 1 *
Hamilton	21	0 1 1 1 1 0 1—5	Raddin	21	1 1 0
Martin	21	1 0 1 1 1 0 1—5	Alder	25	1 0

In a sweepstakes match Talbot and Landcake divided on three each; Hughes, Madison and Murphy on five out of seven each.

KNICKERBOCKER GUN CLUB—*Port Morris, N. Y., Feb. 22.*—First handicap shoot for club badge, to be shot for monthly; fifteen balls; eighteen yards rise; three Huber traps; Bogardus rules. Wm Swift acted as referee. The snow storm interfered somewhat with the making of good scores, otherwise it was the most successful meeting yet held by the club:

Jacques, scratch	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1—14
Henshaw, "	1 1 1 0 1 0 1 1 0 1 1 0 1 1 1—11
Hover, "	0 1 1 0 1 1 1 1 0 1 1 1 0 1 1—10
Condon, "	0 0 0 0 1 1 1 1 1 1 0 1 1 1 1—10
Caughlin, "	1 1 1 0 1 0 1 1 0 0 0 1 1 0 1—9
Dannerlein, "	1 1 0 0 0 1 1 1 1 0 0 1 1 0 1—9
Potter, Jr., two balls	1 0 1 1 1 1 1 0 1 1 1 1 1 1 1—14
Fulton, three balls	1 1 1 1 1 1 1 1 0 1 1 0 1 0 1—12
Reynolds, three balls	1 1 1 0 1 0 1 0 0 1 1 1 0 1 0—10
Miller, five balls	1 1 1 1 1 1 1 1 1 0 1 0 0 0 0—10
Steincke, five balls	1 1 1 1 1 0 0 1 0 0 0 0 1 0 1—8
Gecks, seven balls	1 1 1 1 1 1 1 1 0 0 0 1 0 1 0—10

Ties on fourteen—five each—21 yards rise.

Jacques	1 1 1 1 1—5	Potter, Jr	1 1 1 0 1—4

Birds on hand were shot for as follows; 21 yards rise:

Hover	1 1 1 1 1 0—5	French	0 0 —0
Potter, Jr	1 0 1 1 0 —3	Steincke	0 1 —1
Fulton	0 0 1 1 —2	Henshaw	0 1 —1
Caughlan	1 0 1 1 —3	Miller	1 —1
Jacques	1 1 —2		

A. E. M.

NEW YORK—*Buffalo, Feb. 28.*—Sweepstakes, five birds each, 21 yards, ground traps; weather clear and very cold:

Thos Collins	1 0 1 1 1—4	W Scheibert	0 0 1 1 0—2
Chas Gerber, Jr	1 1 1 1 1—5	J P Fischer	1 1 1 1 1—5
J Beier, Jr	0 1 1 1 1—4	J Rafferty	1 0 1 1 1—4
C Heinold	0 1 0 1 0—2	Chas Kolb	0 1 1 1 1—4
Chas Oehmig	1 1 1 0 0—3	C Suckow	1 1 1 0 1—4

Gerber and Fischer divided first; Collins and Rafferty, after shooting Kolb and Suckow out, divided second.

Same Day—Thomas Collins killed 22 out of 25 snow birds; 21 yards; ground traps. UNCAS.

Brooklyn, March 1.—The Ridgewood Gun Club, lately organized, held its monthly handicap contest to-day for a Weaver shot-gun, presented by the President, C. W. Field; five ground traps; 80 yards boundary; 1¼ oz. shot, and the club rules to govern:

C W Field	1 0 1 1 1 0 1—5	Blackwell	1 0 1 0 0 1 0—3
Andrews	1 0 0 1 1 0 1—4	J H Heming	1 0 1 0 0 1 0—3
L B Field	1 0 0 1 1 0 1—4	F Heming	0 0 1 0 0 1 0—2

JERSEY CITY HEIGHTS GUN CLUB—*Marion, N. J., Feb. 26.*—Regular contest for fifteen balls badge; three Bogardus traps:

J Powell, Jr	18 yards	1 1 1 1 1 1 0 1 1 0 1 1 1 1 1—13
R C Johnson	16 "	1 1 0 0 1 0 1 1 1 1 1 0 1 0 1—10
Harrison	21 "	1 0 0 1 1 0 0 0 1 1 0 1 0 0 1—7
A McAndrews	18 "	1 1 1 0 1 1 1 0 0 1 1 1 0 1 1—11
A Heritage	18 "	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—15

March 1.—Regular contest for twenty ball badge; three Bogardus traps:

A Heritage	21 yards	0 1 0 1 1 1 1 1 1 1 1 1 0 1 1 1 1 0 1 1—16
R C Johnson	16 "	1 0 0 1 0 0 1 1 1 0 0 0 0 1 1 1 1 1 1 1—12
C Leroy	16 "	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—18
P Loring	16 "	1 1 1 1 1 1 0 1 0 0 1 1 0 1 1 1 1 1 1 1—16
J Powell, Jr	18 "	1 1 1 1 1 1 1 1 1 0 1 0 0 0 1 1 1 1 1 1—16
J Cole	18 "	1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 0 1 0 1 1—17

P. W. LOVERING, Sec'y.

NEW JERSEY—*Red Bank, Feb. 28.*—The Shrewsbury gun Club had a shoot at fifty glass feather balls each, from a Parker trap, eighteen yards rise, Bogardus rules, which terminated with the following score:

T F White	1 1 0 0 1 1 1 0 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—42.
Chas Stilwell	1 1 1 1 0 1 1 1 1 1 1 0 1 1 0 1 0 0 1 0 0 0 1 1 1 1 1 1 0 1 1 0 1 0 0 1 1 1 1 0 1 1 1 1 1 0 0 1 1—34.
H C White	0 1 0 0 0 1 1 1 0 0 1 1 1 1 1 0 1 0 0 0 1 0 1 1 1 1 1 1 0 0 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 1 0 1 1 1—33.
G F Marsden	0 1 1 1 1 0 0 1 1 0 0 1 0 1 0 1 1 1 1 0 1 0 1 1 0 1 1 0 1 1 0 0 0 1 1 1 0 1 1 1 1 0 1 0 1 0 1 1 0 0—30.
J B Bergen	1 1 1 1 0 1 0 0 0 1 1 1 1 0 0 1 1 0 0 0 1 1 0 1 1 1 1 0 1 0 0 1 0 0 1 1 1 1 0 1 0 1 0 1 0 1 1 1 0 1—30.

PALISADE GUN CLUB.—*West Hoboken, N. J., Feb. 22.*—Washington's Birthday Tournament, at their club grounds in West Hoboken, N. J. Classified sweepstake, open to all amateurs, $2 entrance, three prizes, $15, $10, $5; three Bogardus traps, and rules:

Templeton	0 1 1 1 0 1 1 1 1 0—7	Ruttles	1 1 1 1 1 1 1 1 1 1—10
Armstrong	0 1 1 1 1 0 1 1 0 0—6	Long	0 1 0 1 0 1 0 1 0 1—5
J Corbett	0 0 0 0 1 1 1 0 1 0—4	Otto	1 1 1 1 1 1 1 1 0 1—9
Rowland	0 0 0 1 0 0 1 0 0 0—2	Herbert	1 1 1 1 1 1 0 1 1 0—8
Stone	0 1 0 1 0 0 1 1 1 1—6	L Good	0 0 0 0 0 0 0 0 0 0—0
McCam	1 1 1 1 0 1 0 0 0 1—6	G Good	0 0 0 0 0 0 0 0 1 0—1
Graefer	0 1 0 0 0 0 0 1 0 1—3	Payne	0 1 1 1 0 0 1 1 0 1—6
Zellner	1 1 1 1 1 1 1 1 1 0—9		

After shooting off ties the prizes were awarded: Ruttles, first; Zellner, second, and Herbert, third.

Classified sweepstake, $1 entrance: $10, $6, $4, $1:

Armstrong	1 0 1 0 1 0 0 0 0 1—5	V Lengerke	1 1 0 1 1 1 1 1 1 1—9
Templeton	1 0 1 1 1 1 1 0 1 0—7	Corbet	1 0 1 1 0 0 1 1 0 0—6
Ruttles	1 1 1 1 1 0 1 1 1 1—9	Anderson	0 1 1 1 1 0 0 1 1 1—7
Stone	1 1 1 0 1 0 1 1 1 1—8	G Good	1 1 0 1 0 0 0 0 0 1—4
Long	0 1 1 0 1 0 1 1 1 1—7	Herbert	1 1 1 0 1 1 1 1 1 1—9
Graefer	1 0 0 0 0 1 0 0 1 1—3	Otto	1 1 1 1 1 1 1 0 1 0—8
Rowland	1 1 0 1 1 1 0 0 1 0—5	U S Grant	1 1 0 1 1 0 1 0 1 1—7
Collins	1 1 1 1 0 1 1 0 1 0—7	Hopkins	1 1 1 1 1 1 0 1 1 1—9
McCam	1 0 1 0 0 1 0 1 1 0—5	Payne	1 1 1 0 1 1 1 0 1 1—8
Hesse	1 0 1 0 1 1 1 1 1 1—8	Zellner	1 1 1 1 1 1 1 1 0 1—9
Hughes	1 1 1 1 1 1 0 1 1 1—9		

After shooting off ties the prizes were awarded: First to Herbert, second to Hesse and Otto divided, third to Collins and Anderson divided, fourth to Corbet.

Classified sweepstake, $1 entrance; $8, $5, $3:

Heritage	1 1 1 1 1—5	Jones	1 0 1 1 0—3
Van Gelder	0 0 1 0 0—1	Hughes	1 1 1 1 0—4
Graefer	1 1 1 0 0—3	Harris	1 1 1 1 1—5
Harrison	1 1 1 1 1—5	Payne	1 1 1 1 1—5
Corbet	1 1 1 1 0—4	Anderson	1 1 0 1 0—3
McCam	0 0 0 0 0—0	Von Lengerke	1 1 1 1 0—4
Hesse	1 1 1 1 1—5	Herbert	1 1 0 0 1—3
Jacobstaff	0 1 1 1 1—4	Otto	1 1 1 1 1—5

Heritage and Harris divided first, Corbet second, Graefer third.

Besides these, five other sweepstakes were shot and decided in favor of Hopkins, Hughes, Heritage, Herbert, Graefer, Templeton, Otto and McCam. It will be seen from the above that the gentlemen sportsmen of New York and vicinity were well represented, and the shooting was extraordinarily good, considering the blinding snow storm and the difficult way the traps threw the balls.

JUSTUS VON LENGERKE, Secretary.

TENNESSEE—*Knoxville, Feb. 25.*—Class shooting at 25 yards rise, 80 yards boundary:

E S McClung	1 1 1 1 1 1 1 1 1 1—10
C S Newman	1 0 0 1 0 1 1 1 0 1—6
F Armstrong	1 0 1 1 1 1 0 1 1 0—7
J C Duncan	0 1 1 1 1 1 1 1 1 1—9
S B Dow	1 1 1 1 1 0 1 0 1 1—8
W H Kirk	0 0 1 0 1 1 0 0 0 1—4
F McClung	0 1 1 1 1 1 1 1 1 1—9
E McClung	1 0 1 1 1 0 1 1 0 1—7
S B Dow	1 1 1 1 1 1 1 0 1 1—9
C S Newman	1 0 0 1 1 0 1 1 0 1—6
F Armstrong	1 1 1 1 1 1 1 1 1 1—10
W H Kirk	1 1 0 0 0 1 0 1 1 0—4
J C Duncan	1 1 1 1 1 1 1 1 1 0—9
S B Dow	1 1 0 1 0 1 1 1 0 1—8
W H Kirk	1 1 0 1 1 1 1 1 1 1—9
F McClung	1 1 1 1 1 1 1 1 1 1—10
E S McClung	1 1 1 1 0 0 0 1 1 1—7
S B Dow	1 1 1 1 1 1 1 1 1 1—10
E S McClung	1 1 1 1 1 1 1 1 1 1—10
F McClung	1 0 1 1 1 1 1 1 1 1—9
J C Duncan	1 1 0 1 1 1 1 1 1 0—8
W H Kirk	0 1 1 0 1 0 0 0 0 1—4
S B Dow	1 1 1 1 0 1 0 1 1 0—7
C S Newman	0 1 0 0 1 1 0 0 0 0—3

The prizes were: First, an elegant silver dinner set, worth $85; second, $20; third, $10; fourth, $5. E. S. McClung, F. McClung, F. Armstrong, S. B. Dow tied for first prize; won by Armstrong at the second round at 31 yards. Ties on second: F. McClung, Dow, Duncan, and Kirk; won by McClung at 41 yards, the others miss and out. Third prize won by Dow at 31 yards, Duncan and Dow being the only contestants. For the fourth prize Armstrong, McClung and Dow; won by E. S. McClung at 26 yards. Each man shot at five birds in succession, E. J. McClung killing 18 out of 20; Armstrong, 9 out of 10; Duncan, 13 out of 15; Dow, 24 out of 25; F. McClung, 13 out of 15, but afterward making a clean score and the best average, missing but two birds out of thirty. As the wind was high and puffy we thought it a very fine match, and so send you the score. S. B. D.

ALABAMA—*Mobile, Feb. 28.*—Score of shoot for the championship of our city, between H. P. Vass and Jas. C. Bush, at fifty birds each, 21 yards, H and T plunge traps; and private match between Captain Wm. Cottrill and Mr. Carre at the same time. The birds for the championship were picked out of a lot of 300 good, strong, tame birds, favored by a cold north wind, and, under the circumstances, I think the score is good. Captain Bogardus is with us at present, and will give an exhibition of his shooting on the 6th proximo:

Bush	0 1 0 1 0 1 1 0 1 1 0 1 1 1 1 1 0 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—43.
Vass	1 1 1 1 1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 1 0 0 1 1 1 1—42.

Cottrill and Carre tied on five each at 21 yards, Cottrill winning at 26. Sweepstakes followed, 21 yards:

Scales	1 1 1 1 1—5	Bush	1 0 1 1 0—3
Tunstall	1 1 1 1 1—5	Gillespie	0 0 1 1 0—2
Prichard	1 1 1 1 1—5	F Sheffield	0 0 0 1 1—2
Vass	1 0 1 1 1—4	Vaughan	0 0 1 0 1—2
Carre	1 1 1 0 1—4	Sherrard	1 0 0 0 1—2
W Sheffield	0 0 1 1 1—3	Webster	0 1 0 0 0—1
Alexander	0 1 1 1 0—3		

Ties on five—26 yards.

Scales	3	Prichard	1
Tunstall	1		

Second sweep, three birds, 21 yards rise:

Tunstall	1 1 1—3	Gillespie	1 1 0—2
Scales	1 1 1—3	Carre	1 1 0—2
Bush	1 1 1—3	Vass	1 1 0—2
Alexander	1 1 1—3	Huger	1 0 1—2
Webster	1 1 1—3	Prichard	1 1 0—2
W Sheffield	1 1 1—3		

Tie on three—26 yards.

Tunstall	3	Alexander	1
Scales	3	Webster	2
Bush	3	Sheffield	1

Ties on three—31 yards.

Tunstall	3	Scales	3

Second tie—31 yards.

Tunstall	3	Scales	0

Tie on two—26 yards.

Gillespie	3	Carre	1

Gillespie won second money. BLACK GEORGE.

MONTGOMERY VS. NEW ORLEANS.—Match at Frogmoor, New Orleans, Feb. 24, between the Montgomery, Ala., and New Orleans gun clubs; pigeons; plunge traps; 20 yards:

New Orleans Gun Club.

LeBreton	1 1 1 1 1 1 0 0 1 1—8
Cousin	1 1 1 1 1 1 0 1 1 1—9
Hall	0 1 1 0 0 0 0 1 1 1—5
Scannall	1 1 0 0 0 0 1 1 1 1—6
DaPonta	1 1 1 1 1 0 1 1 1 1—9
Manning	1 0 1 1 1 1 0 1 1 0—7
Guillotte	1 1 1 0 0 1 1 1 1 1—8
Chaudet	1 1 0 1 1 1 1 1 1 0—9
Renaud	1 1 1 1 1 1 0 1 1 0—8
Vallette	1 1 0 0 0 0 1 0 0 0—3—72

Montgomery Shooting Club.

Metcalf	1 1 1 1 1 0 0 1 1 1—8
Spear	1 0 1 1 1 0 1 1 0 1—7
Crommelin	1 0 0 0 1 1 0 1 0 1—5
Ledyard	0 0 0 0 0 1 1 1 0 1—5
Wilkinson	1 1 1 1 1 1 1 1 1 0—9
Randalph	1 0 1 0 0 1 0 0 0 1—4
Hannon	0 1 0 1 1 1 1 0 1 1—7
Elmore	0 1 0 1 0 0 0 0 0 1—3
Davidson	0 1 1 1 1 1 0 1 0 0—6
Nicoll	0 1 1 0 1 1 0 1 0 1—6—60

At the banquet in the evening the Montgomery Club presented to their hosts a massive silver punch-bowl, upon one side of which was represented a hunting scene, and on the other was the simple inscription, "The Montgomery Gun Club to the New Orleans Gun Club, February 24, 1879."

—The challenge recently issued by Abe Kleinman, of Chicago, to shoot a match for $250 or $500 a side, at 100 pigeons or balls, fifty single and twenty-five double rises, has been accepted by Fred Erb, of St. Joseph, Mo., for $500 a side, to be shot in St. Louis, Mo., March 19, 1879.

A RACING FIVE-TONNER.

The *Freda* is a British five-ton racing cutter of the modern type. She measures, according to Lloyd's Register, 31ft. 3in. stem to post on deck; 6ft. 1in. beam, and 5ft. 2in. hold. Her length on water-line is therefore probably 30ft. Size, 30x6.1x5.2=930; sloop of same tonnage, say, 28x11.9x3.10=931. We have before us a handsome photograph of *Freda*, which shows her to be a perfect little ship, high sided, with an average free-board nearly equal to the entire depth of the American model; flush deck fore and aft, handsome sheer, and as well proportioned a set of spars as we ever saw on any yacht. In appearance she puts to shame the American sloop of the same size, we will not say in outline, for that is largely a matter of taste, but in spars, gear, fittings and completeness she will be acknowledged very much ahead of our small sloops. As she lies moored, she seems ready to sail at a moment's notice, put right out to sea and take wind and water just as they come without flinching. Imagine the lamentable figure a 28ft. jib-and-mainsail would cut alongside of *Freda* in a breeze. Without a mountain of bags to windward, and a crew of a dozen or more, conditions altogether at variance with the necessities of cruising, to say nothing of rough water, our sloop would be slow, unhandy, helpless and dangerous in the extreme. Surely we are putting the contrast between cutter and sloop of small tonnage in the true light, for even our most inveterate champions and loyal patriots will not for an instant maintain they can knock about the coast in safety and comfort in a 28ft. sloop under racing spars and canvas, yet that is just what *Freda* does year in and year out, and with only one hand before the mast and her owner aft! She is fast too, for not only does she make away with her own class, but she tackles eight-tonners with impunity, and works the open reaches and broads along the English coast with the greatest ease in weather when we regret to confess our yachts would incontinently capsize if they showed more than a mitten to the breeze, and when sloops twice and thrice the *Freda's* tonnage would be compelled to idly swing to an anchor, with a long scope, too. Of the little British crack, *Land and Water* has the following: "In the South the 5-ton racing might almost be described as '*Freda* first, the rest nowhere,' for that little beauty as completely drove the 5-tonners out of the field by her superior speed, as *Miranda* did the schooners. *Freda* started ten times and won ten prizes of a total value of £85. Light weather or hard made no difference to this perfect little ship, and as a racer or cruiser she cannot be beaten, even if she can be equaled, which appears to be somewhat doubtful."

In an account of her year's work in the London *Field* we find much that will give an insight into her qualities as a cruiser: "We (two hands) immediately set our spinnaker, carrying it as far as Blythe, where we took it in. One hears a great deal about the difficulty of setting a spinnaker..... Though our ship's company consists of only two, all told, we seldom have any trouble with it.....I should mention that when about to force a passage we always reef our bowsprit close in and set our third jib (we carry five).....Though we never set a large jib, we often set our bowsprit spinnaker and balloon.....When it does blow hard enough for two reefs we lower the foresail rather than shift jib. With a rattling breeze from the south and west, the flood tide kicked up a nice fumble from the Middle to the Sheers. At the Mouse we met the first of the ebb. It being then two P. M., we had to realize that it would be dark before we could get to the Jenkin, and hence would have to beat up Sea Reach in the dark, a rather gloomy lookout for a 5-tonner. However, there was nothing to do but make the best of it; so we (two hands all told) at once housed topmast and made a long board over the Mouse and Daze Sands.....The captain of one of the larger racing yachts regreted his davits had been left behind, otherwise he would have hoisted us up. All the way up Sea Reach we worked short tacks.....At 10:30 P. M. let go our anchor in the Hope.....We carried our whole mainsail all day, which surprised every one, as *Myosotis* (40 tons), a well as the tens and twenties, had no more canvas set, and seemed to have quite enough." These remarks will show the power of the long, easy form in windward work, and how well they carry their sail in a breeze. Where would the American jib-and-mainsail have been had she attempted to beat up the Reach with *Freda?* "I am often asked how on earth we live or even sleep in such a craft, and am seldom believed when I reply 'Very comfortably.' When at anchor we usually spend our day much in this way: Turn out at 6:30 A. M.; make up and stow away blankets and bedding; then have a tub on deck or overboard, wash and dress, which brings us to 7 A. M., when we scrub decks and copper and chamois round, which takes us to 8:30; then the mate goes below and gets breakfast ready, while I coil up ropes and clean the brass-work. After breakfast we clean the vessel out below, see to the hundred and one things on board a racer that require continually looking after, till dinner time, 2 P. M.; after which there is little to do till tea time—6 P. M.—and less after that meal till we turn in.....Our cabin has two sofas, one having a leaf like a table, which, when put up, makes a wide, comfortable bed.....Pillow, rugs, and bedding are strapped up in the morning and stowed away in the sail-room, which is large enough to hold all such things, besides five jibs, mainsail, trysail, three topsails, jib topsail and two spinnakers!"

We might go on quoting to show that, all in all, *Freda* offers comfort and stowage much in excess of our shallow sloops, whose room, except in the cock-pit, amounts practically to nothing more than small lockers. Fancy stowing *Freda's* racing sails, gear, and even a collapsable boat, below decks on the *W. T. Lee*, *W. B. Brooks*, or craft of that size, with a cabin trunk over the major part of the cockpit! Can we possibly make the superiority of the small cutter as a cruising craft of good speed any plainer? In face of these facts, is there any one who would rather make a cruise around Long Island, to Block Island, the Vineyard, New Bedford, Washington or Norfolk in a sloop with 9ft. of length below a house and not more than 3ft. head room between decks, than sail in a sea-going little ship like *Freda?* Then why not take to the cutter?

WINTER LECTURES OF THE SEAWANHAKA YACHT CLUB—No. 2.

By A. Carey Smith, Esq., S. Y. C., N. Y. C.

THE CONSTRUCTION OF CENTRE-BOARD YACHTS.

THE first point to be considered is the position of the centre-board. As the board has great influence on the performance of the boat, it is important to place it so that the various centres shall come nearly in the same plane. To effect this, the centre of lateral resistance of the hull should coincide with the centre of buoyancy; the centre of lateral resistance of the board should be very near the same place, and may be aft of that point with advantage.

Almost all boats are found to perform better with a "skag" put on, showing plainly that the board was placed too far forward. Had not this error been committed, the skag might have been dispensed with and friction saved. The skag on the *Madcap* has a surface of 16 sq. ft., and is added at the deepest part of the boat, offering much needless resistance. As an example of the amount, we can refer to practice. When lead was doubled on to the keel of *Vindex*, though only 3in. thick, with ends tapered down, it interfered perceptibly with her running fast, simply on account of increased resistance. Not only do we gain by dispensing with skags, but also by doing away with long bowsprit, rendering the boat easier in her motions. The best working boats will be found those most perfectly balanced.

In connection with the practical construction of centre-board boats, let us refer to the example of a little sloop, 30ft. water line—about the smallest size that can afford any degree of comfort for cruising.

The keel itself should be 10x10in., left solid in wake of the trunk, and forward and aft of that a slot is sawed out horizontally for the floor timbers to reeve through. The portion left above will serve as keelson; the part below as keel; while the frames are nipped in between. The forward end may be left the size the timber will work to, and the stem tailed on with a tongue and bolted through. Aft the post is mortised to the keel and the dead wood built up. In wake of the trunk, the timbers are secured with a tennon of dovetail shape. A yellow pine wedge driven in at the sides will make a strong fastening. The rabbet should be taken out of the solid wood in the style of a "back rabbet." When the garboard is put on in this way the seam can always be reached to caik without the cotton being forced through. The frames should be in one piece of natural crook, and may be quite light when the plank is worked in one clear length and riveted through the timbers.

The keelson being bolted through the floor timbers and well into the keel, the boat may take the ground with impunity, and wrench off any ordinary centre-board without material damage. The well, or trunk, should be made up of 2½ in. pine, bolted together with "blunt bolts," ⅜in. diam., spaced about 12in. By this system the first seam is brought above the floor timbers, and can be reached at any time with a calking iron, and a new trunk put in without disturbing anything else. All panels and casings should be put in place with brass screws, so as to be readily removed should the trunk need re-calking. If a solid log of sufficient scantling cannot be procured, a piece of 4in. plitch may be used and a trunk log put on 6in. or 8in. thick, passing beyond the length of the centre-board slot about 3ft. at each end. This thick piece may be let through the slot in the keel by having a lip of 1¼in. thick on its inside. This will bring the seam of the lower part of the trunk outside where it can always be got at. Flannel or baize, soaked in white lead, should be put between keel and trunk log when ready to bolt, and "stop waters" driven at the ends of the slot. The keelson in this case is put in separate. The ends of the trunk are formed by vertical pieces termed head pieces, the forward one should run up and take a hold of a deck beam, and, if possible, the beams which cross the trunk should be bolted down into the latter. The centre-board for a boat of this size should be built of half-seasoned yellow pine, being stiffer when water soaked than oak. Bolt with ⅝ inch blunt bolts ranged "brick work" fashion and about 12 inches apart. The lowest tier of wood may be oak, as it wears better in sand or stones. When often taking the ground it is best not to shoe with iron, as the sand wears away the wood and cuts through just above the iron very fast. But for deep water always strap with metal or sheath edges with 3-16 inch iron, riveted through with ¼ inch iron. Lead on the top will make the board sink quicker.

If we now pass on to a larger vessel of 40 to 50 ft. length, keel and keelson cannot any longer be cut out of one and the same log. The midship length containing the slot is made to run beyond the slot, and the keelson scarphed to it at both ends. In other respects the trunk and frames are fitted as before described. The rabbet should come well down on the keel as far as the limited dead rise will allow.

This type of boat, with good freeboard, can be made to combine speed with fair seagoing qualities if not heavily rigged or driven. There is a boat 50 ft. long and about 13 ft. wide, called the *Colwell*, that "runs the beach" with oysters and works up in bad weather as well as many larger boats. Such boats can, on account of light draft, make every harbor on the coast. The *Admiral*, about 60 ft long, runs the coast in all weathers and steers very easily. Her jib can be furled and she will come about or jibe under mainsail only. Her board is well aft; she has very little fore-foot and large drag.

We will now consider yachts of 80 ft. and over. Joints in the keel should be brought under the deadwood, so as to keep the amidships as solid as possible. The trunk is built up in the same manner as before described. On each side of the trunk sister-keelsons are often worked to keep the former from working laterally. The same may be effected by working knees in wake of the trunk over each floor, saving room thereby for stowage of ballast. A stout beam is also worked across at each end of the trunk at the height of the cabin floor, with the end pieces jogged in and secured. In large yachts of 100 feet and over the keel must needs be made in three lengths, bringing a joint under each deadwood. A shoe is always put on in large vessels to take the wear of grounding, docking, etc. In wake of the trunk the heels of the first futtocks are mortised in as usual and a sister keelson laid over them. In some cases the trunk log is placed on the side of the keel, thereby leaving the keel intact, and any strain on the keel is not transferred directly to the trunk.

In large vessels experience would seem to indicate little difference between the speed of keel or centre-board vessels, excepting in short work, where the latter have a slight advantage. In the match between *Dauntless* and *Mohawk* the former had much the better form and finally won, though she was beaten to windward, outcarried and outsailed, and *Mohawk* had only 40 tons of ballast below to trim her with. It would seem, then, that in very large yachts beam is better than ballast, at all events as long as full sail can be carried. The *Sappho* also showed this in England, when she carried only as much ballast as an English vessel 40 ft. shorter.

When we remember the numerous fleet of coasters that have to keep the sea in all weather, often without ballast, in good or bad trim, we are led to think that the centreboard will hold its own on our coast on account of our lack of water. A deep boat with a centre-board may be made to combine speed and safety; the long cruises of the *Palmer* and *Idler* are cases in point, and yet these vessels have their share of plate to show that they are not lacking in the coveted qualities of the "mug hunter."

YACHTING NEWS.

Seawanhaka Yacht Club.—The third lecture of the series given under the auspices of this club will be delivered at Delmonico's, New York, Saturday, March 8. The subject will be "Yacht's Iron Work," by Robt. Center, Esq., whose long and varied experience in building, fitting and sailing yachts entitles him to speak with authority on such topics. The lectures have been well attended, and besides being instructive in their nature have formed pleasant reunions of the club and its friends during the dreary winter months.

Nova Scotia Yacht Squadron.—The annual election of the squadron took place Feb. 14. The committee of management made a very favorable report concerning finances and membership. His Excellency the Marquis of Lorne, Governor-General, accepted the post of Commodore, vice Right Hon. the Earl of Dufferin. Vice-Commodore—Lieut. E. R. Hussey, R. E., *Seafoam*, schooner, and *Muta*, sloop. Rear-Commodore—James W. Stairs, *Carrie*, steamer. Honorary Secretary—F. C. Sumichrast, Y. R. A., *Mystery*, sloop. Committee o Management—The Flag Officers and Hon. Secretary, *ex officio*; S. A. White, *Kestrel*, yawl; F. M. Passow, *Bertha*, cutter; J. E. Butler, *Hebe*, sloop; H. St. G. Twining, *Spray*, sloop; and D. C. Chalmers, *Fiona*, sloop. Sailing Committee—The Flag Officers and Hon. Secretary, *ex officio*, Lieut. Col. H. W. Clerke; D. Cronan, *Albatross*, schooner; Lieut. C. C. Carter, R. E., *Seafoam*, schooner; W. H. Weeks, M. D., *Lily*, sloop; and G. A. Black, *Petrel*, sloop. Measurers—J. E. Butler and W. H. Troop. A vote of thanks to Mr. F. C. Sumichrast, Honorary Secretary, for his exertions to promote the success of the squadron, was adopted by acclamation. We may add that the vote was a well deserved tribute to a gentleman to whom yachting in Nova Scotia owes much of its present Corinthian spirit and thorough organization. The following members were added to the list: Mr. D. B. Robertson, *Dauntless*, sloop, 24 tons, Commodore Bay of Quinte Yacht Club, and Mr. R. J. Bell, *Kathleen*, sloop, 10 tons, Secretary B. Q. Y. C., honorary members; and Mr. C. E. Brown, *Nymphæa*, yawl, and Capt. Cautley, 97th Regiment, *Osprey*, schooner, ordinary members.

Buffalo Yacht Club.—Two gentlemen are now negotiating with Hingston for the purchase of the new craft, before noted in these columns. She is said to be a New York model, 50 feet long, 13 feet beam, centre-board, standing cabin, two headsails. It is expected that she will be added to the fleet. *Fleetwing* is having an overhanging stern added. Sloop *Arrow*, Mr. J. E. Bowen, is receiving an overhauling. Chilcott's new schooner is rapidly approaching completion, and is going to be a very handsome vessel. She will be canvassed by Com. J. S. Provost, which is equivalent to saying that she will have a fine suit as flat as the proverbial board. Considerable activity is noticeable among yachtsmen, in spite of the backward season.

San Francisco Yacht Club.—Among other talent the club contains is Captain E. Moody an artist of no little fame. The cuts which embellish the club-book are from his hands, we believe, and engraved by him on copper in a manner creditable to the club.

The New Iron Sloop.—Work on Mr. Busk's new iron sloop is progressing at Wilmington, Del. She has in her model many of the most salient points of a good design, so far as they can be engrafted upon a beamy, light draught sloop. No forefoot, U frames all through, and easy lines. Her advent among the racers will be looked forward to with keen interest. She has been built of iron to withstand the terrible wrenching strains the wide sloop is subject to in rough water, something difficult to obtain in a wooden hull in connection with lightness. Special precautions will be taken to obtain a smooth skin.

The Eastern Outlook.—We are informed that a very lively season is expected in Eastern waters; one that will surpass even last year in the number of events. When it is borne in mind that many New York vessels have been bought by Eastern gentlemen, and will hereafter hail from Boston and vicinity, we can well imagine that a lively time is in store. *Tarolinta*, *Egeria*, *Meta*, *Sea Witch*, *Addie V.*, and many others, have found new owners in the East. On the contrary, but for the efforts of the Sewanhaka Yacht Club in New York, things here have a very dull aspect indeed, especially in the apathy of our two largest clubs; something never before equaled in their history. One of them seems almost ready to strike colors and die of sheer *ennui*.

Dorchester Yacht Club.—Messrs. King and Clark, of the Dorchester Yacht Club, formerly owners of the fast cat-rig *Psyche*, have purchased of Mr. Geo. T. Bigelow, of the Quincy Yacht Club, the sloop yacht *Waif*. She is a handsome, well-built craft of 32ft., built by Mr. W. F. Maybury, of Quincy Point, and will be represented in the Dorchester, Beverly, Nahasset and Quincy yacht clubs. Messrs. K. and C. have not fully decided to race her a great deal this season; but if they do, there can be no doubt of their success.

Beverly Yacht Club.—The annual meeting of the Beverly Yacht Club was held on the 22d inst. There was a full attendence. The reports of the secretary and treasurer showed again in the number of members and in the number and quality of the yachts enrolled in the club, as well as a pecuniary

gain. The following board of officers was elected for the ensuing year: Commodore, W. Lloyd Jeffries, of the *Bluebell;* Vice-Commodore, George Lee, of the *Peri;* Secretary and Treasurer, S. W. Burgess, of the *Holden;* Measurer, Wm. D. Hodges. Regatta Committee—Geo. P. Gardner, of the *Olga;* Joseph G. Menot, of the *Breeze;* John T. Coolidge, 3d, of the *Elise;* S. W. Burgess, of the *Holden,* and George P. Upham, Jr., of the *Bessie.* There are several new boats building for the club, and next season's races are expected to be lively. It has been decided to offer prizes for a small class to sail over a short course.

An Interesting Paper.—Mr. John Harvey, M. I. N. A., of Wivenhoe, England, sends us a copy of his paper read at the nineteenth session of the Institution of Naval Architects, 1878. In it he enters in a general way into the subject of yacht construction from data obtained during his career as one of the foremost builders in Great Britain. It appears that Mr. Harvey formed certain ideas and worked up to them more and more in the successive vessels he laid down. That his craft have proven fast is beyond question, but we are very much in doubt as to whether the successful performances of *Miranda, Seabelle* and *Jullanar* are to be traced to the peculiarities which Mr. Harvey attempted to impress upon their design in regard to the curves of the centres of gravity of the water-line planes of fore and aft body, or to elements upon which he does not lay so much stress in his paper. In general the curves resulting from joining these centres of gravity of the water-lines indicate in *Seabelle* a fuller entrance and run with well rounded U frames, conditions favorable to weatherliness but not for running, while in *Miranda* the same curves point to more flare and finer ends. As shown by actual test, this schooner is a little the better off the wind. These peculiarities of form, it is true, carry with them such curves as Mr. Harvey refers to, and as a graphic or geometrical means of illustrating form they are useful, for they offer a more accurate means of comparing the relative locality of volume in different vessels than the mere guesses based upon a glance at their models in the block or in the body plan. The paper is full of interest, and the sections and centres given of four smart vessels of different types will add tangible matter of much value to yacht designers. We may recur to the paper at some future time.

How to Become a Sailor.—Something like what may be termed "real" yachting is about to be undertaken by Mr. Dexter, of Boston, in his schooner *Meta.* He is now fitting out, and in April will break ground for Hampton Roads and Norfolk, Va. That is something after our own heart. Get out to sea if you can, and rough it a bit. You will learn something, see something and come home with a rolling gait and the wrinkles of a jack-tar. "Cruising foreign" is what our yachtsmen need; mill pond sailing has too long been the bane of the sport. It would be a good plan to reeve off a full set of life lines aboard the good ship *Meta,* for wide vessels of her class have an ugly way of pitching their crews overboard in a lumpy sea. When *Eva* came up the coast some three years ago she ran into foul weather and tossed her skipper over the quarter. The poor fellow, a fine sailor too, was drowned; topgallant bulwarks, a foot high or more, which had been worked on above the rail were of no use. Mr. Dexter proposes to live aboard his yacht while abroad.

Catamarans.—The fever for double-hullers has subsided on the coast. California has a very slight attack of it, one having been shipped there recently, and the lakes in the centre part of New York State are to see some launched before long. The tendency among the coast population seems to be in the direction of small, handy, cheap cruisers. Reasonable cabin accommodations are in greater demand, and sand bags are falling into disrepute steadily.

Sold South.—The well known jib and mainsail, *W. R. Brown,* has been sold to Savannah, Ga., where she will again be heard from as a racer. This gives some of her sisters in the North a chance.

Phantom Ice Yachting.—Some of our contemporaries have been badly caught on the ice yacht business, falling into the traps set them by the imaginative genius of a wily *Herald* man, with a childlike simplicity refreshing to behold. Shoemaker, stick to your last! Leave the yachting business to those who know what they are writing about.

SUNBEAM-GAEL MATCHES.

Editor Forest and Stream: Boston, Feb. 25, 1879.

In your issue of the 20th inst., Mr. John F. Lovejoy undertakes to represent the *Gael.* I might take exception to much that he relates as fact. The *Sunbeam* has taken thirty-one prizes during her five years' handling, and is considered a fast, able sea boat. She took in one season seven out of ten races, and from her record we shall claim the fastest keel sloop of her inches in these waters. If any one questions our right we stand ready to sail for fun or money to windward and back. W. S. Nickerson.

THE LAKE CHAMPIONSHIP.

Belleville, Ont., Feb. 11, 1879.

Editor Forest and Stream:

In your issue of the 6th inst., under the heading of "Yachting at Oswego, N. Y.," appears the following sentence: "The *Ella,* of 20 tons, is by many considered the fastest boat of her size on the lakes, for in the matches at Oswego and on the Canadian shore she defeated *Surprise* with gallant Cuthbert at the wheel." This statement is true, as the yachts named competed in two races together, and in each *Surprise* was beaten; in the last instance by some four or five minutes, in addition to a time allowance of thirty seconds (if I recollect aright) per ton. But, and here an important omission occurs, it is not stated that *Surprise* measures under ten tons, the mere statement of which fact shows that *Ella's* owner cannot claim any large amount of glory for his boat on that achievement. Again, the inference to be drawn from your paragraph is clearly that, previous to *Ella's* appearance, *Surprise* was considered the fastest yacht up to twenty tons on the lakes. How true such a deduction would be let the facts decide: On the 26th of June last *Surprise* sailed a match here with *Katie Gray,* a yacht of her own size, for $200 a side, and was beaten by 6m. 43s., or considerably more than *Ella* beat her. She was beaten again by the *Katie* at the Trenton regatta, in the Bay of Quinte Yacht Club's race here, and at the Kingston regatta, at which latter place *Kathleen* (also ten tons) beat her 7½m., the *Katie Gray* beating her 3½m., and *Victorine* also finishing 2m. before her. Thus you will see that *Ella* must beat something better and bigger than *Surprise* to make good what is claimed for her. That she is a very speedy yacht I believe from what I saw of her in Oswego last summer; but if *Dauntless* and *Madcap* of our local fleet—the former 24 and the latter 16 tons—are put into racing trim during the coming season, I shall expect both of them to beat her, especially in a hard blow. Port Tack.

THE CUTTER FIEND RESPONDS.

"A bone, a bone, I'll pick with this sailor fell."—*H. M. S. Pinafore.*

Brooklyn, Feb. 21, 1879.

Editor Forest and Stream:

Your correspondent, under the name of "Grampus," having snorted somewhat at the lines which were published in your issue of Jan. 30, I feel in a measure bound to respond, as I alone am responsible for the perpetration of that draught. When I sent it to you I really had no idea it was so very wrong; in fact, in my own mind, I imagined it to be rather a nice bit of marine architecture; but the rude grunt of "Grampus" has dispelled the idea, and revealed the subject in its true light.

"Every man of experience," he says, "knows (and I shudder at my ignorance, for I didn't know it) that a yacht of such dimensions, with such a weight hung on her keel, cannot help burying herself every time she gets into a heavy sea." This is positively deplorable. Why did I not know of this before, for your correspondent blows like a man who is quite sure he knows what he is snorting about? But this on y goes further to show the pig-headedness of the English, for they, year after year, have built just such boats, and have had the temerity to sail them, also, in water notorious for the nasty chop sea prevalent there.

It is said by some that the English assert their boats are most excellent sea boats—safe, dry and fast; but of course this cannot be true in the face of such evidence as is put forward by "Grampus," who, of course, must have resided for a great length of time in Great Britain to make such very positive statements concerning cutters, as no such decided knowledge could be acquired in this country. Before I close there is one question I would like to ask of my critic, and that is, what his exact meaning was in remarking that the boat had not enough displacement to carry such a weight on her keel, and that consequently she would bury in a sea way? I confess it puzzled me. I did think at one time that it was the top-side of a boat that held up her nose in a sea; but coming from such a source the statement is indisputable. We are all aware, undoubtedly, that a pound of ballast will weigh from two to three times as much on the keel, as when stowed in the garboards; but I would like to know, as a matter of curiosity, whether the poor little cutter would sink bodily in a sea-way on account of her insufficient displacement, or go down one end at a time? I would like to know this, as I fail to grasp his full meaning.

Yours, in dire ignorance, Martin Gale.

"Martin Gale" appears to be quite able to take care of his own boat. Right here let us remark that as long as the advocates of the orthodox sloop model and rig base their preference for her upon special qualities of the type, such as light draft, low cost, etc., they are treading on rational ground, but when they venture to question the sea-going qualities of the cutter or her adaptability as a cruiser they are undertaking a much more difficult task than most of them suppose. The modern cutter, as exemplified by *Jullanar, Kreimhilda, Formosa, Heva, Cythera, Neptune,* etc., represents the highest attainments reached in practice in consonance with naval science. It is generally supposed that the present type of cutter is merely one result of the pinching tendencies of the Y. R. A. rule of measurement. This is by no means always the case. *Jullanar* was designed not as a "tonnage cheater," but simply as an example in strict accordance with the teachings of naval architecture, her owner desiring especially a vessel which should afford the *largest* (not merely *widest*) accomodations attainable for the tonnage and sea-going qualities of the highest order. How great a measure of success rewarded his efforts is fully proven by this famous yawl's record, for not only has she shown herself a magnificent vessel in a sea, but a fast one as well, while in light airs and smooth water there are few, if any, who can show her the way round the mark. With her 100ft. of length and only 16ft. beam, the American is apt to hold up his hands in horror and venture the assertion that she must always be sailing on her side. So far is this from being the case, that she actually has greater stability than vessels of 80 by 20 with greater mean draft! It will take some very strong argument and liberal experience to shake the moral of such facts.

The truth is that the advance of naval science is just beginning to open our eyes, and the hobbies hitherto in vogue and ridden to death must vanish before the dawning of light.

THE QUESTION OF TYPE.

Boston, Mass., Feb. 14, 1879.

Editor Forest and Stream:

I fully concur in your remarks under date of Feb. 13, as I experimented with the sharpie years ago, trying to force her to windward in a heavy sea. I have found that the sharpie will, when the sea has risen higher than a given point, on being forced to windward, strike with violence as she pitches upon her broad bottom. The effect of this is to take all her headway out of her, rendering progress to windward difficult. Where the qualities desired in a small-sized yacht are comfort and security, a deep draught and comparatively narrow beam are indispensable; but when the yacht reaches a certain size, say 50ft. keel, I doubt whether the deep and narrow model is the most comfortable and most seaworthy. By deep and narrow model I mean the one which is in style nowadays, and usually cutter-rigged, after the English idea. I believe a model which is a *composite* of the American and English idea, if I may use that term, is the best and most comfortable. My belief is based on some experience. I have a yacht of the following dimensions about: keel, 58ft.; length over all, say 73ft.; beam, 20½ft.; draught aft, 9ft.; forward, 5ft. She is built with a long, almost flat floor, very broad, which unites with her keel, so that as it goes aft her bottom becomes, as it were, a mere slab, composed of the thickness of her keel and her timbers and plank for several feet upward from her deepest draught aft, gradually uniting with her floor by a proper curve. It is impossible to give more than a general, and perhaps vague, idea of her model in words. As compared with the English model of about her size, her advantages are that she is exceedingly stiff, rarely heeling when on the wind so as to throw articles off her cabin table, even with a smart breeze, and rarely in a stiff sailing breeze putting her lee scuppers under water, when an English model yacht has her lee rail almost under, and her decks wet fore and aft. She carries spars as follows: mainmast, 74ft.; foremast, 72ft.; bowsprit, 18ft. outward; topmast, 20ft. in the clear; main boom, 56ft.; foreboom, 20ft.; main gaff, 28ft.; fore gaff, 19ft. Now, as to her sea-going qualities, I have beat her dead to windward in a heavy head sea, from abreast of Little Gull light, Long Island Sound, to Menemsha Bite, Martha's Vineyard, say 60 miles, in ten hours, going past Block Island outside, and had my dinner cooked and served as usual, which would have been difficult with an English model yacht, if not impossible. I have sailed her along with an English model yacht out at sea, where I carried all sail, while the latter had to take a reef. I have taken her outside of Minot's Ledge light, and directly out to sea in the teeth of an easterly gale, when our pilot boats were at anchor in Hull on account of the rough weather. In all these cases I never found her to fail to work very fast to windward and prove herself a very dry and safe boat. She is what may be termed a windward boat; that is, she sails, proportionately, far better to windward than free. Going free, however, I have made a run of 138 miles in thirteen hours, the wind varying during the run from a stiff breeze to moderate. It seems to me that, for a landsman who cares nothing for a mere racing machine, and who loves nothing better than to take a run out to sea from ten to forty or fifty miles, such qualities ought to be satisfactory. At any rate I have yet to find the English model as good in the element of comfort, whatever may be said upon other points. Open Sea.

It is possible that with some such change in model the sharpie may be improved in windward work in rough water without losing her other strong points. Experiments in this direction are now being made, and we will be glad to chronicle their success. In relation to the schooner out of which "Open Sea" has obtained such excellent work, we cannot close our eyes to the fact that, however satisfactory he found his schooner of (say) 65x20½x6—7,995, he would still have to acknowledge the superiority of a cutter, or, better still, a yawl, of 70x14x8½—8,085. The yawl will be very handy and have a faster rig, accommodation will be increased, and speed off and on the wind in rough water will be greater than that of the broader and shorter schooner, while she will be easier on her crew and spars, and can be "driven" when a wide vessel is in danger of capsizing or carrying away her sticks. If the schooner offers all the accommodations desired, it is evident that the same could be got out of a smaller cutter model, while the yawl rig is very handy, and faster than the schooner.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachinotus scarolinus*	Grouper, *Epinephelpus nigritus.*
Drum (two species). Family *Sciaenidæ.*	Trout (black bass), *Centrorpristis atrarius.*
Kingfish, *Menticirrus nebulosus.*	Striped Bass, or Rockfish, *Roccus lineatus.*
Sea Bass, *Sciænops ocellatus,*	Tailorfish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.*	Black Bass, *Micropterus salmoides M. pallidus.*
Snapper, *Lutjanus blackfordii.*	

This is the month, and Saturday of last week was the date, on which the anglers of New York City were wont to open the trout season on Long Island (by special Legislative permission). Now they cannot fish until April 1, the same date when the season begins in the rest of this State. Oh! it was fun, in those other days, not so long since past, to see the ardent fly-fishermen trying to blow warmth into their blue fingers on some freezing first of March, while they attempted to pick the ice off their frozen lines, so that they would render through the rings of their rods! But now "dem time's gone by." No more will the clatter of the "chips" be heard in the quaint old hostelries, nor the fizz of the red-hot poker as it is thrust into the flip on those memorable opening days. The law requires that anglers shall wait until the genial sun absorbs all the snow water from the ponds and streams, and common sense tells us this is best. But still those were good old days when the "trout season opened" on the 1st of March.

A Most Convenient and Comfortable Fly-Book.—Messrs. Conroy, Bissett & Malleson, 65 Fulton street, have secured the sole agency of the Holberton full-length Fly-book, and now manufacture a handsome leather-covered wallet which will hold six dozen flies on clips, besides leaders, silk, thread, wax, and other little requisites in repairing flies, or bending hooks, on gut snoods. The price is only $3, and the book being very thin, is most comfortable in the breast pocket. They have fly-books of all capacities and prices.

The Orvis Rods.—Mr. Chas. F. Orvis, of Manchester, Vermont, attends industriously to the wants of his constituency among the Green Mountains, and has spared no pains in acquiring the art of making rods and dressing flies as skillfully as the oldest and best-artists in anglers' goods. We have just received his catalogue of goods for the spring trade, giving prices of wooden and bamboo rods, reels, lines, etc., with a list of *seventy-two* kinds of artificial trout flies which

be manufactures! Such a bill of fare ought to please the most fastidious connoisseurs of *viandes des mouches*.

FLY-BOOKS FOR THE PACIFIC COAST.—We understand that Messrs. Abbey & Imbrie, 48 Maiden Lane, have contracted to make a large quantity of the Holt clip fly-book for delivery at Kalama, Washington Territory. These are very handsome, capacious fly-books, adapted particularly for salmon anglers. We described them in a recent issue of our paper. They are for sale by Messrs. Abbey & Imbrie, who also have fly-books in great variety, to suit all requirements.

—W. H. Buckingham, of Utica, the *ci-devant* amateur bamboo fly-rod maker, has become so much encouraged by his success that he has entered into competition with the trade in company with Mr. Perrie, for the manufacture of his superb rods. The firm, Buckingham & Perrie, advertise in our columns.

LIVE GRAYLING.—It will greatly interest those who have never seen a grayling, dead or alive, to examine the beautiful specimens in the tank at Eugene Blackford's stand, Fulton Market. They will prove a most interesting study and a great curiosity.

CANADIAN SALMON RIVERS.—In commenting upon some remarks concerning the price of Canadian salmon river privileges, which we reprinted the other day from the London *Fishing Gazette*, a New York correspondent very sensibly observes:

In regard to the low prices at which Canadian salmon rivers are leased, as compared to the sums paid for fly fishing privileges on British waters, I would draw attention to the fact that the season in Canada is practically from the middle of June until the middle of July, after which good fishing is exceedingly doubtful and seldom had. British rivers have seasons of six months, and some still longer. Canadian rivers are 1,000 miles off, and the expense of getting and remaining there so heavy that very few anglers are rich enough to go, while British rivers are near by and quickly and cheaply accessible to lessee and friends. These two facts—of only a month's good fishing and heavy expenses prove—the apparent cheapness of Canadian salmon fishing leases to be illusory.

MANHATTAN.

MAINE—*Foxcroft, Feb.* 25.—I have just returned from a ten weeks' trip up Moosehead Lake. I was accompanied by John K. and Ben the Frenchman, two as jovial fellows as ever dropped a line in Moosehead. Our object was to fish through the ice for trout. We had very good luck. I succeeded in bringing up a Lake trout that tipped the beam at 21 pounds. Deer and Caribou are very plenty in this vicinity this winter, with occasional sign of moose, owing to a sharp crust that has recently been formed, making it impossible for deer to run. They are being slaughtered by men and dogs. The men that are killing the deer are back hunters who kill them for their own consumption. H.

MASSACHUSETTS—*Boston, March* 3.—During a recent trip of a friend and myself to the northern part of the State, we went to a lake to fish for pickerel, we were much astonished to catch during the day three trout, weighing together about three pounds, and seventeen pickerel. The water was only three feet deep and the ice two feet thick, with muddy bottom. I never caught trout this way before, and think it a rare occurence in this State. Of course the law is on the fish, but as they were taken accidentally and somewhat hurt we did not return them. Bait was live fish. S. K. J.

MOVEMENTS OF THE FISHING FLEET.—Twenty-eight arrivals have been reported from Georges the past week. The fleet report rough weather and considerable losses of anchors and cables in the late storm, but fair fishing when the weather would allow. Receipts for the week, 560,000lbs. split codfish and 24,000lbs. halibut. The number of Bank arrivals has been 6, several of them bringing good fares, the receipts for the week being 240,000lbs. halibut. Three arrivals have been reported from Grand Menan, with moderate fares of frozen herring. Whole number of arrivals for the week, 37.—*Cape Ann Advertiser, Feb.* 28.

SHELTER ISLAND, *March* 3.—No fishing here at present, except with fykes, in which they take considerable numbers of flat fish, which are sent to New York market. These are net-traps stretched over big hoops four feet in diameter, staked and anchored with stones in a depth of two or three feet of water. My two friends here have set out in the bay some forty of them which they lift three or four times weekly, taking now about two barrels of the pike each time. But later the fish are more numerous, and at times as many as a barrel of them are caught in a single fyke. It is cold and hard work, requiring a deal of rowing, and the water is freezing cold with ice, so that the money received for them from the market men is fairly earned. It is too early yet for the pound-net men to begin their labors. McL.

TWO AT A TIME.—*Mr. Editor:* The freaks and capers that are cut up with individual anglers, hunters, etc., are always interesting. While up in the mountains last summer, on the tributaries of West Canada Creek, we were encamped, four of us, on the shores of G. Lake—Prof. Davis and Al. Stacy, of Newport; Mr. Church, of the Japanese Consulate, No. 7 Murray street, New York, and myself. Advantage had been taken of the early morning to stock-up with fish the empty larder. Prof. D. and Brother Church (he would laugh to see the cognomen) were on a raft, out about fifty yards from shore, Stacy a little farther up the lake, while I was almost on shore, near the landing, catching "pumpkin seeds" for the fun of it. They seemed to be very thick, and on pulling up my line once I found two fish hanging to my single small hook, in the form, too, of a cross. I called the attention of the other party to it by a hearty laugh. I had caught one in the mouth properly, and on coming out of the water quite suddenly, the hook had caught near the pectoral fin of his neighbor, with whom, possibly, he was contending for the bait, and had brought him out, too, balanced at right angles to the other. At any rate, I had caught two fish at one time with a single hook—something I never expect again, even should I fish where fish are plenty and with that special object in view. C. J.

Matawan, N. J., March 1, 1879.

A MISSISSIPPI FISH FRY.—*Nashville, Tenn., Feb.* 19.—*Editor Forest and Stream:* Country life in the swamps of Mississippi is at best monotonous, but particularly so to the ladies, few of them being hardy enough to indulge in the chase; settlements and plantations are too far apart to admit of much social visiting, so their lives are anything but pleasant. However, when the spring time arrives and the woods become passable, one of the favorite enjoyments in which they all join is a grand fish fry. This character of entertainment is peculiar to the country, and jollier days I have never passed anywhere than at several of them. Far and near in the neighborhood preparations are made for the frolic days in advance, and at the set time, ladies and gentlemen, boys and girls, all meet at some agreed upon place on the banks of one of the many creeks or bayous with which the country abounds, and which are, without exception, stocked with quantities of black bass, and with perch, to say nothing of cat and drum. Each party brings along their hampers filled with the good things from home, a few frying pans and condiments for preparing the to-be-caught fish. Simple tackle is used, and everybody goes to fishing; the gentlemen baiting the ladies hooks and taking off the fish, which are usually caught as fast as the process of casting the line and drawing out the game can be accomplished. In the meantime, the servants, which each family brings along, have gathered wood, built fires, cleaned the fish, and are hard at preparing them for the table, which consists of mother earth with a table-cloth spread down. One who has eaten fish prepared under these circumstances can form an idea how delicious they are. The repast through with, a dance is most sure to follow. A piece of level ground is cleared away, and the ball-room is ready, one or two darkies with fiddle and banjo to furnish the music, which would puzzle Bernstein or Thomas, with their wonderful orchestras to create more enthusiasm among the dancers. Thus the day is passed, perhaps winding up with a little more angling before going home. As it is the custom in that country to never go from home without one's gun, the scenes are often enlivened by the killing of a 'gator or deer, or perhaps a wandering bruin. J. D. H.

THAT CURIOUS HOOK.—*Willis, Texas, Feb.* 19.—By your leave I wish to put in once more about the Edgar barbless hook. Like every new-fangled thing, everybody is doubtful of it and fault finding. When the breech-loading gun first came out nobody would pick one up in the road; but how changed now in but half a score of years! I can't see any fault to this hook; I have tried them on black bass, crappie (white perch), catfish, etc., and I consider any hook that will hold under all circumstances seven out of ten bass is good enough for any reasonable man; and, as to this hook, it will hold and safely keep nineteen out of every twenty black bass or any other fish that swims—I mean game fish. Unless the hold tears out or the hook breaks the fish cannot escape. Your Florida correspondent "S" finds one fault in putting on a live minnow. Why, man, only press the keeper back, run the hook through your bait, and then let go the keeper. This hook does not lacerate the bait or the fish caught with it. In taking the barbless hook out of a fish's mouth always press back the keeper or shaft and the hook is as easily withdrawn as a pin-hook, and no tearing or lacerating the fish's mouth or throat, as is inevitable with the old style hook. If you bait with live minnow run the point of the hook in the mouth of the minnow, pass the point through one of its jaws or under lip (but not through the gills, or back, or other part of the body, or the little fellow will die), and the minnow will live much longer, and your chances are doubled to hang your bass, as he will swallow the bait head foremost, anyhow, and will get the hook deeper into his mouth on the first seizure of the bait; and again, the hook is freer and less clogged or filled with the fleshy portion of the bait. Another objection I think I have heard alleged against the Edgar hook is that it would not catch large fish. I think this idea only can arise from believing the hook would only catch in one way, viz.: to pass entirely through the fish's jaw, and the keeper to come up on the outside and affect the lock. Ah, yes! that was my own belief at first until I tried them. I caught a catfish (mud cat), which weighed twenty-four pounds, with a No. 5 Edgar hook. The hook fastened in the roof of his mouth (as though for an experiment), to the thin membraneous lining thereof, and seemed to stick and freeze there despite all his efforts to get away. It took near three-quarters of an hour to land him to the boat's side. I find they will seize on to any part of the mouth, lip, throat or outside, and hold on.

I have no interest in these hooks or their manufacturing, only the delight I enjoy in being able to furnish Mr. Black Bass something that will trump all the tricks he has played on me for fifteen years, and to assure my fellow sportsmen anglers that if they want to play their salmon, bass or trout, and sit and smoke at the same time, get a lot of those hooks, and, without prejudice or bias, try them yourself, and then let us all hear from you through this journal. C. L. J.

HOW THE TROUT TAKES THE FLY.

We have several articles on this subject from distinguished sources which we cannot decline to print. Though the question itself is trite to satiety, the information gathered by our contributors will prove entertaining and useful. The near approach of the trout season will give them additional zest:

PORTLAND, Oregon, Feb. 20, 1879.

MR. EDITOR—I have not seen all the articles in your paper concerning this question, perhaps not the first, and may not understand exactly what was claimed in regard to the "trick" of the trout striking the fly with his tail before seizing it with his mouth. If it is claimed that the fish tries to knock the fly into his mouth, that is a statement that I am not prepared to defend. But that he often tries to kill it, or drown it, or to see what sort of stuff it is made of, by a vigorous blow of his tail before he ventures upon the more dangerous business of closing his jaws upon it, can hardly be denied by a fisherman of much practice. I have seen it done times without number, more frequently perhaps in smooth lake fishing. I think it is very often done in a variety of places, when it is mistaken for a veritable bite. And I think a lesson is to be learned from this that many a time will tell in the weight of the basket at the end of the day. When you see a large and startling splash in the water, and instantly "strike" and find to your disappointment that you have nothing, all the chances are that it was a blow of the tail. My theory is that the instinct of the fish leads him to do this first, for some reason best known to himself, and then if he is satisfied with the result, instantly turn and seize the fly in his mouth. Let me advise your doubters to try and accommodate themselves to the trout's view of the case and see if they will not have their reward. Instead of striking immediately you see and hear this tempting splash and boil of the water, hold your fire half a minute, and bad will be your luck if your game is not back and fast on your hook before the other half of the minute is gone. Sometimes your trout will jump clear out of the water and over the fly as if to take a top view of the situation, or else to whet your own appetite before he surrenders to your skill. Don't be so foolish then as to jerk your fly away from him before you have any advantage of his matured judgment, but keep a steady hand, give him time to turn on his game, and in a moment he is yours.

I have sometimes seen the trout so much in this mood that whenever one leaped over the fly in this way I knew his end had come, and four times out of five I knew aright. A single case may be given in proof of the tail-striking habit. On one occasion I was fishing in one of the beautiful streams of Washington Territory, where my fly—a green drake—had floated down the current to a lovely and tempting eddy above a large log, when suddenly there was a startling splash, a thrilling pull on the line and whirr of the reel, and away went trout, fly and all. In the pardonable excitement of the moment I could not search my book for just the same fly, and tried a different one—once, twice, three times—all in vain. With more patient search I at length found another green drake. This I let down with my best skill to the very spot I had my first splash and pull, and lo! in an instant I had my victim just where I wanted him. The rod bent and the reel spun, and in another minute or two I had a beauty at my feet, with one green drake in his mouth and the other well hooked in his tail! With this experience I cannot laugh at those who claim to have seen the same. OREGON.

Waterbury, Conn., Feb. 19.—Mr. Prime says: "Surely no one doubts that a trout sometimes strikes a fly with his tail." I certainly do not doubt it, but I venture to assert that when he does so strike it is purely accidental. The mouth of a trout is peculiarly adapted to seizing and holding his prey, whether it be the swift moving minnow or the winged insect, and is vastly superior to his slippery tail, even to bring his food "out of the air into the water." I have great respect for Mr. Prime from a literary point of view, but I must say that I think his trout theory has grown out of "impressions from memory," rather than "close observation and study." He asserts that trout more often strike first with the tail to bring their game to the water and then rapidly turn and take it in their mouth. If so, I venture to assert that the trout would as often be hooked in the tail as the mouth. The "strike" of the expert fly-fisherman follows the instant of the "break," and if the tail of the fish were curved and his muscles rigid, I see no difficulty in a sharp hook penetrating his skin; and yet not one trout in a thousand is caught hooked in the tail. Mr. Prime says the object of the trout in striking his prey with the tail in the air is to bring the fly to the water. Now, the tail of a trout is almost his only propeller, and while in the air he must wait the action of gravitation to carry him into the water, he can get no leverage for his rapid turn until he gets into his element. This takes time, and as the skilled angler "strikes" on the "rise" he would probably miss the mouth of the trout and hit the tail; even the tyro would get his return cast half made before a trout could go through the operation of coming head first at his prey, turning his tail into the air, hitting the fly a rap over the head or flirt water over its body, turn round and present his mouth to the bait. Why, even a trout would know better than to splash water over a fly in its perfect state to disable it. Most of the flies on which trout feed first emerge from the water, and when transformed into the perfect fly you may submerge them, and the instant they come to the surface they can take wing. The May fly (*Neuroptera ephemera*) when it rises to the surface of the water in the pupa state is inclosed in a membraneous sac, which cracks open on the top, serving as a boat to carry the insect, while its wings are unfolding. While in this transition state a splash from the tail of a vigorous trout would probably capsize its frail bark and render the poor fly an easy victim; but I have many a time sat in my boat watching the marvelous change, and have seen repeatedly small trout rise and seize this same fly in its mouth, but never to strike it with the tail. In a distant State I well remember a deep pool many rods across, formed by the side of a fall in the river, where within the twenty years last past I have taken many hundred pounds of elegant trout. I have observed year after year that the trout invariably rise in a particular spot on the pool. An examination revealed the fact that the edding currents carried the floating trout food to that particular spot on the pool and near the shore. The trout lay in the deep water, and the moment an insect floated to that spot a trout, one or more, would dart for it, and I have seen times almost without number a trout come to the surface with open mouth and seize its prey, this too, at my very feet and under my eyes. A small, frisky trout rises with a dart and is gone like a flash of light, even a "binocular glass" would fail to reveal its evolutions, but large trout of two or three pounds might rise more slowly, and you can, if a close observer, see just how they do it. My observations have extended over many years, and my study of the habits of the trout have been very careful, and it is strange if trout are addicted to such marvelous habits as Mr. Prime attributes to them, that they have never practiced them in my presence. Respectfully yours, W.

Camp Howard, Mount Idaho, I. T., Jan. 28.—I know how they do it in this part of the world; if they have different habits elsewhere I will not be held responsible for that. It may be there is truth on both sides of this question, and because of this bare possibility it does not become one to be dogmatic. It is very likely the trout (as well as the people) of the far West are not up to the best methods of doing things, and you must not be shocked when I assert most positively that out here trout take the fly right in their mouth and get caught, because they don't know any better. I have watched hundreds of them doing it; there was no other gesture or motion accompanying the act on their part. This is the invariable rule here, but trout do sometimes overleap the lure and hook themselves by other parts of their bodies. So much I am very certain of, and I think it is true that sometimes trout do play with the lure, that is I am almost positive I have seen them rush at the fly with their mouths closed, as though they had a wish to make it rise or struggle. At such times I could not take many fish. Then, again, here is a trait of trout that I am sure of: they do sometimes, in still water, approach very near the fly and then turn tail and give the water a slap of disgust, pretty much as the "You-can't-come-it" signal of a gamin is executed. Always in such cases that trout knows the fly is a fraud, and will not rise again. It is my experience, and the experience of every fisherman I have talked with, that large trout are more wary than small ones. This would seem to prove that trout learn as they get older. Where there are plenty in a stream the fingerlings strike at every floating bit of bark or straw; but let a grasshopper fall on the water from some secluded place, and there rushes out a two-pounder and Mr. Grasshopper will never gambol on the green again. I have sat on the bank and watched these things many and many a time. HAL. CYON.

SAPANULE!

TO SPORTSMEN---"THE ONE THING NEEDFUL!"

SAPANULE—Nature's ally—the best friend to man and beast. A preparation that is antagonistic to Inflammation. Congestion, Soreness and Fever cannot exist where this popular lotion is applied. For animals that are hard worked it is a sure restorative. For wounds, cuts, bruises, sprains, contusions, sores, new or old, it is a prompt and infallible cure. For all skin diseases and abrasions its healing and cleansing power is wonderful. SAPANULE is an admirable article for the bath and toilet. Used in foot and sponge baths, it will bring immediate relief from all pain or soreness in feet or limbs. SAPANULE takes all soreness out of bunions and corns, and is a sure cure for chilblains. Owners of dogs will find that by washing their dogs in Sapanule and water will remove any unpleasant odor, leaving the coat clean and silky.

SOLD BY ALL DRUGGISTS, 50c. and $1 per bottle.

HOW TO START A BALKY HORSE.—There are many ways of accomplishing this much desired object. Indeed, as for a human ailment, everybody has a different receipt—but the right one. Some advocate the Dutchman's plan—build a fire under him. This is effectual, as it is calculated to render the animal's nerves steady. Try it by all means, and if that does not do, pour sand in his ears; never mind if you do make him deaf for life—who wants a balky horse? If the sand trick won't work cast off the tugs and traces, tie his tail fast to the whiffle-tree and start him off. After this dodge he may never sulk again, but the chances are he may be minus a tail; never mind—who wants a balky horse? If this plan fails stand in front of him and blow in his nostrils. In wonder at the ridiculous appearance of the fool under his nose he may forget the cause of his stubbornness and move off. If he doesn't let three or four men catch him by the head and drag him along. If the last is no go thrash the hide off him. Do not seek to find the cause of his balkiness. Don't look under the collar to see if there is a blister, or reason whether the load is too heavy for him. Give him a curse and a blow instead of a kind word. He is only a dumb brute and it does not matter. Do not, under any consideration, give him time to get his wind when he stops after a hard pull, but lay the whip on until he is beaten to a standstill. Break his spirit down; let him know that you are master and tyrant, not master and friend. There is one way some foolish people have of managing a balky horse, and that is to take him out of the shafts, unharness him, walk him up and down a few minutes, then harness again and hitch him up. He will invariably start right off, and not be apt to repeat his trick unless *imposed* upon. Try it.—*Walla c's Monthly.*

WOLF PLAYING 'POSSUM.—Reuben Lowry of Walker township, Anderson County, Kansas, was out hunting wolves one day during the snow. He got track of a wolf and with his dogs followed to the timber, where he overtook it, and the dogs and the wolf fought in the snow. Uncle Reuben, however, who was on horseback; managed to put a load of shot into the wolf. An old greyhound laid the wolf out on the snow apparently dead. Uncle Reuben had strings attached to his saddle behind to tie game to, and lashing the carcass of the wolf to the saddle he mounted for home. All unconscious of any difficulty, the awakened suddenly to the fact that the wolf had been playing 'possum and was viciously snapping and making vigorous efforts to get away from the saddle thongs. Uncle Reuben, of course, could not get off the horse to kill the wolf, and was in imminent danger of being bitten where he was. He had the presence of mind, however, to watch his opportunity, and grabbed the beast by the neck in such a manner that it could not bite, and held it there until he got home, where his grandson killed it.

—Near Ashland, Oregon, early one morning recently, a forest of pine trees were seen bending down as though bowed by a terrific gale of wind. At the same time not a breath of air was in motion. During the previous night a furious storm had passed over the forest, accompanied by rain and snow, and the steady force of the wind had bent the trees and held them in that position until the falling snow and freezing rain had fastened them in unyielding bonds of ice, and so they remained until the sun set them free.

THEY THAT HAVE EARS.—The Yonkers *Gazette* is responsible for this. Some one ought to take a gun and go hunting around that sanctum:

"That dog looks more intelligent than his master," said Mrs. Mic, as she and her husband passed a huntsman and hound on the roadway. "Evidently," returned C. O., "he is a man of but one idea, while the dog is a creature of two wide-ears, at least."

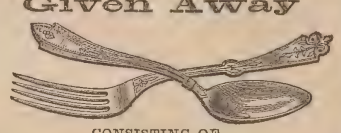
OUR NEW-YEARS GIFT.

A $6.00 NEW YEAR'S GIFT
—OF—
COIN-SILVER TABLEWARE
Given Away



CONSISTING OF

An Elegant Set of Warranted Extra Coin-Silver Plated TEA-SPOONS that retails at $4.50 per Set, and an Elegant Extra Coin-Silver Plated BUTTER-KNIFE that retails at $1.50, and one Elegant FIVE-BOTTLE CASTER that retails at $2.00, thus making a valuable and useful Gift, that all should receive at once.

Under a very favorable proposition from the old established and reliable **Eagle Gold and Silver Plating Co.**, Cincinnati, O., you will be supplied with this valuable Silver Tableware as a New-Year's Gift. This **elegant set of**

SILVER TEASPOONS AND BUTTER-KNIFE

are of the latest style pattern, and **each article is to be engraved with your name or initials**, if desired, **FREE**, thus making the most useful and beautiful Gift ever presented. Don't neglect to send your initial or name with orders to be engraved.

Cut out the following order and send it to the **Eagle Gold and Silver Plating Co.**, at Cincinnati, for redemption, together with sufficient to pay boxing, packing, postage, or express charges. **This Silverware is to cost you nothing**, except the packing, postage, or express charges, (which is one dollar,) which you are required to send, and the Silverware is then

DELIVERED TO YOU FREE.

☞ Please cut out the following New-Year's Gift Silverware Order, and send same to **Eagle Gold and Silver Plating Co.**, 180 Elm Street, Cincinnati, Ohio.

☞ *Cut Out this Order, as it is worth $6.00.* ☜

NEW-YEAR'S GIFT SILVERWARE ORDER.

On receipt of this order and **$1.00**, to pay postage, packing, or express charges, we will mail you FREE one Set of Extra Coin-Silver Plated Teaspoons worth $4.50, also one Elegant Butter-Knife worth $1.50, with your monogram initial engraved upon same in good style—thus making the Elegant Set of $6.00

TEASPOONS AND BUTTER-KNIFE

a valuable and useful FREE New-Year's Gift to you. Send for Silverware at once, together with **$1.00**, stating name in full, with post-office, county, and State.

Address all orders to **EAGLE GOLD AND SILVER PLATING CO.,**
180 Elm Street, CINCINNATI, OHIO.

Cut out the above order, so that we may know you are entitled to it, and send for the Gift at once, together with **One Dollar** to pay postage and packing charges, so that the articles can be delivered to you **free of any expense.**

Address, **Eagle Gold and Silver Plating Co., 180 Elm St., Cincinnati, O.**

Miscellaneous.

A GREAT INVENTION!

STAINED GLASS, *Imitation*

Patented Dec. 3, 1878.

CURTAINS, SHADES AND BLINDS dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or **Elegantly Stained Window**. It is easily applied to the glass in Windows of Houses, Churches, Public Buildings, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full **effect and brilliancy** of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established,

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, WHOLESALE PRICES, etc., on receipt of $1.00.

Agents Apply to L. LUM SMITH, Patentee & MFR'S. 717 Sansom Street, PHILADELPHIA, Pa. (Sole Agt. for U. S & Canada.

READ the following Extract from the *Representative Agents' Paper* of the world, THE PHILADELPHIA, PA., AGENTS' HERALD:

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and extraordinary sale. It will offer the best opportunity for coining money that has ever been presented to Agent's, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the Agency business, for want of some meritorious and suitable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges"

AGENTS' HERALD

THE LARGEST, SWIFTEST AND ONLY REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

By over 200 responsible advertisers in this month's issue of the AGENTS' HERALD. Grand outfit, including Circulars, terms and a beautiful 10x14 Engraving of the EMBROGRAPH, sample Card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's AGENTS' HERALD, all for 10 CENTS. YEARLY SUBSCRIPTION, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste,

OLD JUDGE SMOKING TOBACCO.

The Only Tobacco Ever Manufactured that Does not Bite the Tongue.

"OLD JUDGE" CIGARETTES.

Manufactured under Letters Patent granted Charles G. Emery, March 5, 1878, by which the rice paper used as wrappers is so prepared that the unpleasant odor and injurious effect of the OIL OF CREOSOTE thrown off when burning is completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR *EXPORT*, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

GUNPOWDER.

DUPONT'S

Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength quickness and cleanliness; adapted for Glass Bal and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong and clean Powder of very fine grain for Pistol shooting.

DUPONT'S RIFLE, FG., "SEA SHOOTING,"

FFg and FFFg.—The Fg for long-range rifle shooting, the FFg and FFFg for general use, burning strong and moist.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L KNEELAND, 70 WALL ST. N. Y.

N. B.—Use NONE but DUPONT'S Fg or FFg Powder for long-range rifle shooting.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.,

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6¼ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order. Safety Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by woodcut, sent free on application to the above address.

PURE TIN-COATED & BURNISHED DROP AND BUCK SHOT.

AMERICAN STANDARD--EAGLE BRAND.

CAPTAIN BOGARDUS ON TIN-COATED SHOT.

EDITOR FOREST AND STREAM:
Having been asked by many of your readers as to the merits of TIN-COATED SOFT SHOT, I desire to say that I consider it the best shot I have ever used. I have given it a very severe test, having shot my 6,000 ball match, Jan. 8 and 9, with it. In that match I used two sets of double barrels, one of 10 and the other 12-bore, and each single barrel was discharged 1,500 times without being once cleaned. The inne surface of the barrels is bright and free from scratches, although in shooting I used them until the became so hot that they would not bear handling. I cannot imagine any case of ordinary use which could so severely test the cleanliness and perfection of the tin-coating and its freedom from injury by any heat which could ever result from continuous discharges of the gun.

Dittmar Powder

THE CHAMPION POWDER

OF THE WORLD.

NO SMOKE--NO DIRT--LESS RECOIL

STRONG AND SAFE.

SUPERIOR IN EVERY RESPECT TO BLACK POWDER

6,013 SHOTS WITHOUT WIPING IN A SHOT-GUN.

Captain Bogardus' great feat of breaking 6,000 glass balls has proved that the powder is all that is claimed for it. The barrels, without being wiped, were as clean at the end of the match as after the first shot. The fact of the firing of so many shots in succession, and that the Captain has used about 200 pounds of the same powder during the last year in one gun, shows, without a doubt, that the powder is EFFICIENT, UNIFORM and SAFE.

The ride powder is also without a rival. The standing challenge to test this powder against any other has never been accepted. Many riflemen throughout the country have been successful with the powder, as, for instance, Mr. E. B. Souther, of the Massachusetts Rifle Association, won last year two gold medals, two silver medals, two revolvers, and four other prizes in using the DITTMAR RIFLE POWDER.

Greater facilities and greater demand have enabled us to reduce the price of the powder considerably, and the fact that the Government Armory at Springfield is making now all kinds of testing machinery for us will enable us to produce always a uniform, and in every way reliable, article.

TRY OUR NEW WATERPROOF SHOT-GUN AMMUNITION. Cheap, and warranted to give satisfaction in every respect. Ammunition for gallery rifle practice always on hand, and all kinds of rifle ammunition made to order.

For Forest and Stream and Rod and Gun.

OVER THE BROWN HILLS.

OVER the brown hills the dreaming cattle roam;
Down in the valley the mill-stream greets the gloam;
Sunbeams play fondly with the pine-tree's crest,
And low, soft notes of twilight arise from Nature's breast.
Over the brown hills the white-flecked moon appears;
One timid starlet its twinkling presence rears,
And night winds gently rustle the golden harvest sheaves,
While swallows twitter "Good night" beneath the shelt'ring eaves.

Over the brown hills my love went years ago;
Down by the mill-stream his words were sweet and low;
The sunset kissed the pine-top as gently as to-day;
We knew not 'twas our parting, forever and for aye!
Over the brown hills come mem'ries sad and bright;
I trace the rugged pathway that bore him from my sight;
There on the brow he lingered, as oft he had before,
And "Good night" floated downward—'twas farewell, evermore!

WEDWORTH WADSWORTH.

For Forest and Stream and Rod and Gun.

Among the Wisconsin Pines.

IN the latter part of September last business of some importance called me into Jackson County, Wisconsin, just on the borders of the great pine forest which covers almost the entire northern portion of that State. As I would have nothing in particular to do after this business was concluded, and being rather in need of a little recreation, I decided to spend the month of October in the woods of Clark County, which lies just to the north of Jackson; and with this end in view I took with me my favorite Ballard rifle and an immense Scotch deer-hound which had been presented to me by an English uncle, and which I had named Smoker in honor of Harry Archer's famous hound. Three friends, who had been my companions on many a similar expedition, concluded to accompany me into the woods, and we made arrangements to meet on the first day of October at Black River Falls, the country seat of Jackson County.

I arrived at the place of meeting about noon, and my three friends—Messrs. Ogden, Fowler and Eaton—came in on the afternoon train. They brought with them the necessary camping-out fixings, including a dozen steel traps and a couple of hounds of the common breed.

We were quite a formidable party as regards firearms. In addition to my own rifle, Messrs. Ogden and Fowler carried Winchester repeaters, and Mr. Eaton, who had no faith in his own ability to hit anything with a single ball, placed his faith in a heavy muzzle-loading shot-gun, which threw buckshot with remarkable force and precision.

The town of Black River Falls contains in the neighborhood of fifteen hundred or two thousand inhabitants, the so-called falls being merely a series of rapids in the stream. The stream itself is very inconsiderable at this point, whatever it may be nearer the mouth. After inspecting the town we found a lumberman—Bill Johnson by name—who agreed for the sum of one dollar per diem to perform the duties of guide and cook for our party. To our unaccustomed eyes his style of dress was rather startling, he being clad in a blue flannel shirt, a pair of immense boots armed with large projecting nails, and a pair of inexpressibles of the most vivid scarlet; but, as we had no intention of taking anything so conspicuous into the woods with us, we informed him that he must exchange this latter article for one of a more sober hue. He seemed to consider this an unwarrantable intrusion on our part, but nevertheless complied. Not thinking our armament sufficient, he took with him his rifle—a muzzle-loader of the "Old Kentucky" pattern.

A conveyance was next in order. We found no difficulty in hiring one of the style denominated "lumber-wagon," and early the next morning set out for Hatfield, a small town about a dozen miles up the river, just within the borders of Clark County. The country hereabouts is chiefly forest, with a few small stretches of prairie; but north of Hatfield these latter cease entirely, and the only clearings are those made by the ax of the lumberman. The soil is poor and grow still poorer toward the north, and is unsuitable to the production of anything but timber. The whole country is exceedingly flat, more so, indeed, than the average prairie land; but there is a very decided slope toward the south, a is conclusively proved by the rapidity of the streams. Comparatively little farming is done, most of the inhabitants being engaged in lumbering. The road we found to be in tolerably good condition.

About ten o'clock we arrived at Hatfield, and, after making about twenty miles more, camped for the night. A little after noon the next day we arrived at the so-called "town" of Greenwood, where our wagon left us. The number of buildings required to constitute a town in this region is not very great. A saw-mill is erected, two or three slab and log shanties are thrown up, and the frontier city is full-grown. Upon leaving the wagon we shouldered our impedimenta and struck into the woods. After traveling some three miles we pitched camp a short distance back from the main stream and near a small branch, from which a supply of water could be obtained. At this point the Black River is nearly as broad as it is at the falls, nor is the volume of water much diminished. It can be easily waded at almost any point. We saw no stones in the neighborhood excepting a very few in the stream. The current is very rapid for so level a country. The fish are similar to those of the Upper Mississippi, but some of the brooks are reported to contain speckled trout. We found nothing, however, to support this assertion. The river is bordered by a great belt of pine, sometimes half a mile in width, but beyond this belt other trees are plentifully interspersed, chiefly sugar maples, hickories, especially the pig-nut or butternut, elms and a few oaks. Large tracts are covered almost entirely with maples, and further south considerable sugar is made in the spring. The ground is very free from underbrush, the view frequently being unobstructed.

In this neighborhood much of the best pine has been cut, but Johnson told us that a short distance to the west we would find a region which the lumbermen had not yet penetrated. The pine of this portion of the State is generally considered tougher and harder to work than the Michigan pine; but we learned from Johnson that this was not so much due to any quality inherent in the wood as to the fact that nearly all the Wisconsin lumber is rafted down the Mississippi, and becomes toughened by its long immersion in the water.

Having obtained as thorough a knowledge of the country as was possible under the circumstances, we resolved on a deer hunt for the next day, and, in order to facilitate the passage of the river, the guide felled a huge pine across it at a point nearly opposite the camp. Ogden, Eaton and the guide were in favor of still hunting, but Fowler and myself preferred a run. As a general thing, running deer with hounds is impracticable in this country. Owing to the openness of the woods there are but few regular run-ways, and, as there are no streams of any magnitude for which the deer are likely to make, the hounds only succeed in driving them out of the country instead of bringing them within range of the hunter. But during our day's wanderings we had found a well defined path, where the deer had been in the habit of crossing the river, and as neither Fowler nor myself felt equal to a twenty-mile tramp, we resolved to send out the hounds and trust to fortune for the rest.

Next morning Ogden and Eaton were off bright and early, and after exhorting them not to lose themselves, Fowler and I took Johnson and the dogs and proceeded to the crossing, where we stationed ourselves. Johnson made a circuit to windward and sent out the dogs, and then returned to camp thoroughly disgusted with the whole affair, and muttering something under his breath which was probably not very complimentary to us; and in fact neither of us was very sanguine of venison of our own killing; but for once the Fates proved propitious. We had lain scarcely twenty minutes in ambush when a loud challenge from the hounds announced that game was afoot, and not three minutes later a five-spike buck came into view, running straight for the crossing. The hounds must have been close upon him before he discovered them, for Smoker was scarcely ten yards behind. His course brought him within fifty yards of us, and we both fired together. He faltered at the shots and fell to his knees, but before he could recover himself the great deer hound caught him by the throat and pulled him down. Fowler quickly put an end to the struggle by cutting the buck's throat. This, however, was a piece of good fortune which could not be expected to occur every day, and although we tried the same thing several times afterward, and generally succeeded in starting a deer, they invariably went straight away, and on one occasion the hounds did not return until the following day. We did have several successful runs, but under rather difficult circumstances. Ogden and Eaton returned empty handed and were very much chap-fallen when they heard of our success.

On Monday we tried for a bear, but failed to find one, and, meeting with similar ill success on the following day, we broke up camp on Wednesday and moved over to a branch of the Eau Claire, some ten or a dozen miles to the west. Here we were fortunate enough to find an empty cabin which belonged to some trappers who frequented this region in the winter, and this we promptly appropriated.

The stream we were now on is much smaller than Black River, being in places not more than four or five feet wide, with a depth of about two feet. Johnson said that it was one of the best trapping streams in the country, that the woods were full of sable and fisher, and that bears were plentiful. Of the truth of this last statement we had ample proof on the following day. Just as we were squatting down to breakfast a couple of Indians came into camp. The larger of the two carried an ancient musket, which looked dangerous. Johnson recognized them as old acquaintances, greeting them as Jim and Joe respectively. At his recommendation we invited them to breakfast, in hopes of hearing something concerning the whereabouts of a bear. Joe did not seem to be very hungry, and only devoured about half a dozen pounds of venison; but Jim, to quote Johnson's expression, "just got right up and spread himself." He would certainly have devoured everything in camp had not the guide retained sufficient presence of mind to remove all our more precious edibles, such as sugar, butter, etc., out of his reach. When they had finished eating they informed us that they had that morning seen two bears about a mile and a half down stream, and offered to guide us to the spot for a consideration. The offer was accepted without delay, and we were off inside of five minutes, leaving Eaton to keep camp. The Indians led us directly to the spot where the bears were last seen, and the hounds after a little sniffing found the trail and dashed off baying lustily. We followed as rapidly as possible, but before a mile had been traversed a tremendous uproar some distance ahead announced that the dogs had found something. We braced, and arrived upon the scene in an extremely short space of time. The game proved to be an old she bear with her half-grown cub. At the approach of the dogs the cub took a tree, but the old woman sturdily backed up to a large maple and showed fight. The hounds pranced around, getting in a nip now and then though not doing much damage; but when we came up the old bear thought better of it and turned to run. She had not gone her own length before the hounds grappled her, and for a few moments there was a general scrimmage; but she quickly shook off the dogs and took to a tree. Ogden and Johnson took the cub and Fowler and I the old bear, and in a very few moments the matter was settled to the full satisfaction of all concerned, except the victims. We skinned the bears, and, as the cub looked tender, we took the hind-quarters and the feet. Johnson said that bear meat was best when cooked with the skin on, but we did not care to spoil the hide for the sake of trying the experiment. The Indians did not return to camp with us, much to our satisfaction. During our absence Eaton had managed to kill a deer which passed near the camp, whereat he was greatly elated; and having plenty of venison we resigned the bear meat to the guide, who happened to be fond of it.

After supper Johnson gave us a short dissertation on the Indians of this region. According to his account but few of them have mingled with the whites sufficiently to speak our language even tolerably. Their ordinary dress consists of a breech-clout, a calico shirt and a pair of moccasins, only a few of the more civilized indulging in the luxury of breeches. They are a great pest to the lumbermen, as nothing portable is safe while they are around. He summed up his general opinion of their character by saying that "of all sneakin', dirty, murderin', lyin', thievin' vagabones they are the worst."

As we were now well supplied with meat, Johnson concluded to do a little trapping, and, as we had no fancy for that kind of work, we loaned him our traps on condition that all the otter caught should belong to us. As he didn't expect to catch any otter, he readily agreed. A few trappers generally come up here every winter, arriving about the first of November. By the middle of this month the country is covered with snow and all traveling is done on snow-shoes. They generally work in couples, and their *modus operandi* is about as follows: They start two lines running in different directions, and each one attends to his own line. Upon starting out he proceeds as nearly as possible in a given direction, blazing a tree occasionally to make his way, as there are no landmarks whatever. Upon reaching what appears to be a favorable place, he stops and sets a trap, generally under some log, baiting it with fresh meat or offal. He then goes on for half a mile or so and sets another trap, and so on until it is time to return to camp. The next day he examines and rebaits the traps already set, and then, turning sharply to the right or left, proceeds to lay out a line as before. The next day he begins where he left off on the preceding and lays out a line parallel to the first line, extending this until he is opposite the camp, as nearly as he can judge; from this point to camp he extends a fourth line. The traps are thus set in the form of a quadrilateral, in one corner of which is the camp. This quadrilateral sometimes has a perimeter of forty or fifty miles, and the trapper is three or four days in making the round. The game caught is chiefly sable or marten and fisher, with mink and an occasional otter along the streams, and, when the price of fur is high, considerable profits are sometimes made. Johnson, of course, proceeded on a scale much smaller than the one described.

A lynx is occasionally seen in this part of the country, and Johnson gave us an account of an adventure he once had with one. He had killed a deer one morning, and piling the offal between two trees about three feet apart, he inclosed it with brush, leaving only one opening, in which the trap was set. Upon making his rounds next morning he found that a fisher had been caught in the trap, but that some large animal had killed and nearly devoured it. There was no snow on the ground, so that he was unable to determine the nature of the animal by tracks; but, suspecting that it was a lynx, he made preparations to give him a reception in case he re-

turned again that night. Leaving the remains of the fisher as additional bait, he set a number four trap in the opening and attached the chain to a heavy clog. An inch or two of snow fell during the afternoon, and upon visiting the trap next morning he found it gone, clog and all, but without leaving any visible trail. While cogitating on this rather remarkable circumstance he happened to observe a place where the clog had struck the snow, fully sixteen feet from the spot where the trap had been set. Upon following up the line of sight, there sat Master Lynx about sixty yards distant, with a very unamiable expression of countenance and evidently meditating a rush. Before he could carry out his intention, however, a bullet, properly planted, put it out of his power to do mischief.

On Saturday morning Johnson brought in a fisher which he had found in one of his traps. I think that there must be something wrong in the application of this name. According to Audubon and Bachman a full-grown fisher (*Mustela canadensis*) will weigh about eight and a half pounds, while an animal of the same name in Maine weighs about forty pounds. Now the one which Johnson caught, and which he assured us was a full-sized specimen, weighed about twenty pounds. The difference in locality certainly cannot account for so great a difference in size, so that there must be at least three different animals to which this name is applied. Audubon's description seems to answer pretty well in all other points. Why this animal is called a fisher at all is something I never could ascertain. To be sure, it will eat fish when it can get it, in common with all the weasel tribe, but the domestic cat will do the same, and the latter is almost as much a water animal as the fisher. We saw none, except a few that Johnson caught.

On Monday Eaton found an otter-slide some distance up the river, and Johnson set a couple of traps there. Much to our astonishment and his disgust, two otters were caught, which we claimed according to contract. This was a very unexpected streak of luck, which we appreciated accordingly. It did not happen again, however.

For several days nothing occurred of a very startling nature; but on Friday morning Eaton met with a little adventure. A couple of ducks flew past the camp and settled some distance up the river, and, after charging the gun with number fours, he started after them. For some time his search was unsuccessful, but, upon rounding a bend in the stream about a quarter of a mile from camp, he chanced to hear a slight splashing in the water, and slipping up to the bank he looked over, expecting to see the ducks for which he was searching. Somewhat to his surprise, he found himself face to face with an enormous old he bear, which was evidently not half so badly frightened as he was by their unexpected meeting. He was so startled by the sight that he forgot that his gun was loaded with buckshot, and fired right in Bruin's face, the entire charge striking him upon the snout, whereat his bearship became greatly enraged and "went for" the hunter with considerable interest. He, thinking discretion the better part of valor, promptly took to his heels, and for a few moments covered ground as rapidly as a Homeric hero; but, seeing that the bear was right at his heels and evidently meant business, he dropped his gun and quickly placed himself among the branches of a tall sapling, which fortunately stood near. The sapling was too small for the bear to climb, so after several ineffectual attempts he was obliged to content himself with growling and rubbing his sore nose, while Eaton made the woods resound with his yells. We all happened to be in camp at the time and turned out *en masse* to his assistance, letting loose the dogs. They got there first, and by the time we arrived a lively fight was in progress, in which the dogs were being decidedly worsted. Bruin was too much occupied to notice us, and we found no difficulty in approaching within fifty yards, but it was something of a problem how to shoot the bear without also shooting a dog; so one of us suggested that this was a good opportunity for Johnson to show his prowess, and we all urged him to wade right in and show us how to kill a bear with a knife. (Johnson had bragged a good deal about his hand-to-hand encounters with only a knife). Strange to say, he didn't seem inclined to wade, but, on the contrary, began to back off, muttering something about not feeling very well that morning, and having left his knife at camp; but we entreated him not to let such a trifle as that disturb him, as we would lend him one. Just then the bear happened to see us and put an end to all further discussion by charging straight in our direction. As he seemed to be in earnest, and withal a little excited, we did not await his coming, but scattered immediately. He did not get far, however, before the dogs pinched him again, and Fowler, getting a fair chance, shot him through the head and put an end to the fight. The meat proving to be rather tough, we took nothing but the hide.

As yet none of us had been lost, but Ogden and I had a little experience of that kind on the afternoon of that same day. We started out in the hope of finding a deer, leaving the rest of the party at camp. Ogden took the eastern side of the river and I the western, the deer hound accompanying me; but, not caring to follow the course of the stream, I struck off into the forest. I wandered rather aimlessly, too much engaged to notice the direction; and having tramped four or five miles without finding anything worth shooting, was about to give up and return to camp, when Smoker announced that there was game somewhere in the neighborhood. I stopped to investigate, but the moment I halted a buck, apparently as large as a buffalo, started up from a clump of underbrush some fifty yards to my left and went nearly straight away. I fired, but did not succeed in stopping him, although he was evidently hard hit and bled freely. Laying on the hound I started after him; but the chase was soon ended, the hound running into the deer and pulling him down within half a mile of the point whence he started. He proved to be a fair sized buck, although not so large as I had supposed, and was much too heavy for me to carry all the way to camp; so having skinned him, I wrapped the two hind-quarters and saddle in the hide, and, shouldering my load, started off. Just then the thought happened to strike me that I had no definite idea of the direction in which camp lay. I had a heavy load of meat to carry, night was not far distant, and, to cap the climax, a storm was evidently coming on. There seems to be a species of occult connection between a storm and losing one's self. I knew, however, that the river lay somewhere to the eastward, and that by walking in this direction I would eventually reach it; so, taking my course from the trees, I started. After walking about three-quarters of an hour I came to a branch of the main stream, and proceeded down it; but by this time it was pitch dark under the trees and raining heavily, and, in order to avoid losing my way altogether, I was obliged to walk in the bed of the rivulet. It was weary work; the channel was intersected by such a network of pine roots that I was obliged to use the greatest caution to avoid falling, and by this time the weight of my load of meat had increased to something like a ton. In spite of all my caution I got several heavy falls and was becoming pretty well used up, when, to my great joy, I found myself in the channel of the river and only a few hundred yards from camp. My appearance was hailed with a chorus of questions. "Where have you been?" "What kept you so long?" "Where's Ogden?" "What did you kill?" I responded, that I didn't know where I had been; that I had lost myself and been unable to find my way back any sooner; that I knew nothing of Ogden's whereabouts, and that I had killed a deer. I also intimated that, to my mind, supper was a matter of the greatest importance just then. The others, however, were getting a little anxious about Ogden, who had not been seen since he started out with me, and a search was proposed; but while we were discussing the matter Ogden himself came in. He said that he had wounded a deer and had followed it several miles without being able to come up with it. Upon giving over the chase he found himself in a predicament similar to mine, and had escaped from it by pursuing a similar course.

During the next three days it rained dismally, and we spent most of our time lying around camp. Up to this time we had been peculiarly favored as regards the weather, and, indeed, this was the only bad spell of any importance which occurred during our trip. The temperature, too, remained exceptionally high for this season and climate. The weather cleared again Monday night, and the remainder of the week was pleasant. During the week we tried several runs in a swamp about five miles distant, and succeeded in killing two more deer. This swamp was filled with dense underbrush and traversed by a number of beaten paths, and by stationing ourselves upon these paths and sending in the dogs, one of us generally managed to get a shot. This was the only place we found, however, where a run was at all likely to prove successful. This was about the last game we killed. Although the weather still continued pleasant, the season was getting late and snow might be expected at any time. As we had no desire to be snowed up, we shouldered our baggage and set out for civilization on the following Monday. As Johnson had been tolerably successful in his trapping, his furs, combined with our hides, proved a pretty heavy load; but, greatly to our satisfaction, we were fortunate to find a teamster at Greenwood who was on his way down the river, and agreed to carry our baggage as far as Hatfield, where we arrived late Tuesday evening. The next day we went on to Black River Falls, where we took the train for home. The trip on the whole was quite a success, but I think we might have done better in another part of the State.

S.

Fish Culture.

WHITEBAIT.

[Read before the American Fish Cultural Association, Feb. 26.]

BY EUGENE BLACKFORD.

MR. J. H. CANNON, a gentleman who was examined before the English Fishery Commission in June, 1878, stated that the toothsome little fish was not discovered until about 1780, and that it was his grandfather who had the honor of introducing it to the British public. It would appear that its pre-eminent merits were not at first appreciated even by its discoverer. Old Mr. Cannon was a fisherman, and the first use to which he applied the tiny creature was the baiting of eel-pots. It was in this way that it came to receive its name by which it has been since known. In the "Natural History of British Fishes," by E. Donovan, published in 1809, is a plate giving a beautiful picture of the English whitebait, and in the text Mr. Donovan expresses the opinion that they are the young of shad. In 1828 Professor Yarrel in a paper published in the *Zoological Journal*, entitled "On the Supposed Identity of Whitebait and Shad," discusses the subject at great length, and gives it as his unqualified opinion that it is a distant species of the herring family; names it *Clupia alba*, and claims to have examined specimens in which he found roe, and that he believed they deposited their spawn during the winter. Yarrel states the fishing commences at the end of March and continues until September, and that no other fry of any value swim with the whitebait. Gunther in his catalogue of British fishes states: "As regards the whitebait, this is a purely nominal species, introduced into science by Yarrel and Valenciennes in deference to the opinion of fishermen and gourmands." All the examples of whitebait he examined were young herrings from one and a half to three inches in length.

At the present time it is accepted as a well settled fact by all English ichthyologists and naturalists that the whitebait is neither more nor less than the young fry of the herring family, which is fully assured from recent experiments at the aquarium in Brighton, England, where some live whitebait, about one and a half inches long, were placed in one of the tanks and in a few months developed into herring of about nine inches in length. Much of the discussion in England over this fish arose from investigations having confounded different species of the *Clupea* genus.

Keeping the results of the investigations of our English cousins in mind, let us now take up the history of whitebait in American waters. In the early part of the year 1876 Mr. Charles Waite, of this city, suggested to me that I should get some of our fishermen to bring in some very small fish about one inch long, as they would, in his opinion, equal the famed whitebait of England. This led me to make inquiry in various quarters as to the character, appearance and habits of this fish, and in April, 1876, I received from Liverpool, through the kindness and courtesy of Professor T. J. Moore, of the Derby Museum, some specimens of English whitebait. After examining them I was convinced the same fish could be found in our waters. Shortly after I met Mr. J. Carson Brevoort, and knowing that he had fished the waters of New York Bay very extensively while engaged in his researches into the habits of fish found on our coast, I asked him if he ever found any fish in his nets resembling whitebait? He assured me that he had, and that they would be found in the vicinity of Bay Ridge. In the spring of 1878 I requested a shrimp fisherman to bring me all the small fish he might find in his net when fishing for shrimp, and on April 16 he brought me three small fish that were identical in appearance with the English whitebait. The next day he brought about fifty specimens. Some of these I sent to Professor F. Baird, who, after examination, wrote me that they were the young of two distinct species—one, the *Pomolobus pseudo harengus*, the common alewife or gaspereau; the other, the *Pomolobus mediocris*, or sea or Taylor shad. Having determined that they were not the fry of any of our valuable food fish, I took measures to procure a supply for table use, obtaining which, I sent them to the Union Club, where they were served, and the Superintendent, M. Chisholm, informed me they tasted so much like the English whitebait that some of the members supposed that they had been imported from the other side.

After receiving this verdict on their superiority as a table fish it only remained to introduce them to the public. I did so in May, 1878. The demand at once exceeded the supply, as at no time during the season were over sixty pounds taken in one day. They were sold at fifty to seventy-five cents per pound. The great call for these dainty little fish led the fishermen and some of the dealers to supply the demand with a small fish that is found in our harbor in large numbers, called by the fishermen "spearing," a very inferior fish for table use, which fact epicures soon discovered, and the price soon declined so low as to make the catching of them unprofitable. These spearing are a species of anchovy, *Engraulis vittatus*, and differ but slightly from the famous anchovy of the Mediterranean, *Engraulis encrasicholus*, which is so prized by good livers. They may be easily distinguished from the whitebaits, as they are totally unlike in appearance, the anchovy being marked by a bright silver band, running from the opercle to the caudal fin. The entire body of the fish, with the exception of this band, is semi-transparent and of a milky color, which turns to a red soon after they are taken from the water. The true whitebait, or young of the *Pomolobus* family, present a uniformly silver appearance over the entire body, are covered with minute deciduous scales; the color on the back is greenish ash and the abdominal line serrated from the pectorals to the caudal fin. They are caught in our harbor at Bay Ridge and along the shore of Coney Island; but the most plentiful supply is found in Gravesend Bay. They are usually seen swimming about a foot below the surface, are most numerous about the 1st of June, and disappeared entirely last year about the 1st of July.

A fisherman at Gravesend informs me that when he lifts his ground nets in which he takes weakfish, he can see thousands of the whitebait going out through the meshes of the net, and that the stomachs of the weakfish are often full of them. In his opinion they are the principal food of the weakfish during May and June. If he lifts his nets at any other time than at slack water no whitebait are to be seen.

Some apprehension has been felt by fish culturists, that in taking the whitebait the young fry of the shad might be destroyed, thus neutralizing the efforts of our New York State Fish Commission in stocking the Hudson, but when the whitebait are most abundant the shad has only just commenced to spawn, so I think we may sit down to a whitebait dinner without feeling that we are inconsistent with our professions as fish culturists.

REPORT OF THE FISH COMMISSIONER OF MISSOURI.

To the Hon. John S. Phelps, Governor of Missouri:

The Fish Commissioner of Missouri, appointed in accordance with the law of 1877, respectfully reports the following as the result of his work to the present date:

During the fall of 1878, I received from the United States Commissioner of Fish and Fisheries, 200,000 eggs of the California salmon, for the use of the State of Missouri. There is no establishment for hatching embryo in our State, consequently this lot was sent to the State hatchery of Iowa to be developed. The spawn arrived in excellent condition, and it is gratifying to announce about ninety five per cent. were hatched. After they were sufficiently grown, I made arrangements to have the young fry brought to St. Louis for distribution, giving general notice through the press that they would arrive there in two installments—the first about the 20th of December, 1878, the second about the 5th of January, 1879. I solicited applications from all who might feel sufficient interest in the enterprise to give their personal attention to planting them properly. A very general correspondence ensued, yet, as the cans containing the minnows in no instance had less than 10,000, it was not possible for me to furnish a less number. In some instances, consequently, requisitions were not filled. The very remarkable cold prevailing at the time fixed for distribution, prevented others who had solicited portions, from appearing to receive what had been alloted to them. Still, the work of planting about 190,000 young California samlets in Missouri waters has been accomplished in a very satisfactory manner: In the Missouri and tributaries, 60,000; in the series of lakes and private waters of St. Louis county, 35,000; in Spring River and tributaries, 20,000; in the Lamine and other streams of Cooper county, 15,000; at Pierce City, for the system of waters from the southwest, heading in that vicinity, 50,000.

In the execution of this work for the very valuable assistance rendered, and without which it would not have been accomplished, my thanks are due to the Hon. Basil Duke, of St. Louis; to the Hon. Henry T. Mudd, of Kirkwood; to Dr. J. R. Hereford, H. A. Stephens, Oscar Reid, Mr. Glasgow, F. Jefferson Clark, Esq., and others, of St. Louis county; to the Hon. H. J. Maynard, of Pierce City; to Judge Joseph P. Betts, of Carthage, and Col. J. L. Stephens, of Boonville; and, in this conjunction, I especially desire to acknowledge the courtesy of Capt. Rodgers, superintendent of the St. Louis and San Francisco Railroad. He generously passed my agent and stock of fish, without charge for the transportation.

I respectfully suggest to your Excellency, the importance of having within our own territory a State hatchery, from whence all the considerable streams of the State could be rapidly stocked at a comparatively small cost; and individuals, for their private lakes, might in moderate quantities (without cost), under the direction of the Commissioner, be supplied with such varieties as they desired.

That our waters can be restocked and made in a few years to yield food fishes as abundantly as of yore, has been demonstrated by the success attending the efforts made in twenty States preceding ours in the undertaking. The appropriation made for the purpose by the Legislature of 1877 is inadequate. In my judgment, instead of one, the commission should consist of three or five persons. The correspondence entails more work, the expenditures and distributions more responsibility than one individual should be expected to perform gratuitously.

Very respectfully,

JOHN RETD,
Fish Commissioner of Missouri.

FUNGUS ON SALMON.—This disease has been very prevalent the past year among the salmon of England. The fungus has been ascertained to be the *Saprolegnia ferax*, or white

fungus, familiar to keepers of aquaria. This fungus multiplies with amazing rapidity, and speedily covers any fish it attacks. The head, tail and fins appear to be covered with a white cottony down, which looks as if it could be readily removed; but any attempt to rub it off reveals the fact that the scales and other parts to which it adheres are rotten. One fish so infected gives off many millions of spores; but the fungus appears to die with the fish, the death of the latter being brought about, as a rule, by the choking of the gills. The fungus is said to be incapable of existing in salt or brackish water, a fact which, if it be one, points to the only possible remedy. We stated this fact in connection with our visit to the Wisconsin State Hatchery last summer, mentioning that Supt. Welcher had used salt with gratifying success.

EASTERN TROUT ON THE PACIFIC SLOPE—*Kalama, W. T., Feb.* 12.—I have nearly one thousand brook trout, about one month old, the first ever hatched in Oregon or Washington Territory. The eggs were shipped from Messrs. Thomas & Brainard, Randolph, N. Y. I expect 5,000 more eggs to be shipped on the 20th of this month, and if they arrive in good condition, shall expect to hatch at least 4,000 of them. There are several parties interesting themselves in the matter in Oregon, and, I presume, next season one or two more small hatching establishments will make a start. The trout are intended for a stream not far from here, and the object is to introduce the "red speckled fellows" into the waters of this vicinity. Come out in a year or two and help catch 'em.

H. H. HOLT.

Mr. Holt is the contriver of the patent fly-book we referred to in our columns a few weeks since.

CALIFORNIA SALMON FOR TENNESSEE—*Savannah, March* 4.—Mr. Wm. Hamlin, of Maryland, has within the past three or four days visited our waters with a supply of seven or eight thousand salmon fry. They were in splendid condition when they reached Buffalo River, in which stream they were to be deposited. I did not have the good fortune to meet the gentleman, but received my information from the officers of the steamer which brought them up. WILL.

TO STATE FISH COMMISSIONERS.—The Kirtland Society of Natural Sciences, of Cleveland, Ohio, would be glad to receive the reports of the fish commissioners of the various States. They have already in their library all the reports up to 1877.

Natural History.

THE BITE OF THE SKUNK.

DENVER, Col., Feb. 5, 1879.

EDITOR FOREST AND STREAM:

Upon receipt of your issue containing my note of Nov. 21, 1878, respecting "Death from Skunk Bite," which you considered a subject worthy of discussion, I set about gathering facts and opinions relative thereto. Thus far I have not accumulated a great deal of information, but am enabled to make a partial report, which is offered for what it may seem worth. Among other things, I sought for particulars respecting the two cases referred to in my letter of November 21, and will first refer to them.

The case mentioned in Southeastern Colorado was that of S. E. Jones, aged 22 years. Of the particulars of his death, Mr. Charles W. Bowman, editor of the *Leader* at West Las Animas, Bent County, writes: "The only intelligent witness of the biting of 'Bud' Jones lives thirty miles away and has not been in town since the receipt of your letter. He was bitten through both lips at left side of his mouth while asleep. His death occurred about nine weeks later. He was out on the range when bitten, and at the camp that evening the boys had been shooting at some skunks in the rocks, and finally built a fire over the mouth of the cave, or hole, inhabited by them. After being bitten, 'Bud' immediately came to town. He was considerably alarmed at first, but the wound soon healed and he appeared quite unconcerned about it. He had little or no treatment. I believe Dr. Chary, of Fort Lyon, told him the only thing he could do would be to cut it out, but it seems there was no desire on 'Bud's' part to have such an operation performed. He soon after went to Texas, apparently in the best of health, where he was attacked with convulsions and died in a few hours."

In announcing Mr. Jones' death at the time, Mr. Bowman published the following in his paper:

"Skunk bites are of frequent occurrence on the plains, and not a few deaths from this cause are related by old settlers. Whether the animal does this only under a fit of madness, or whether it ever becomes rabid, is not known. It is true, however, that very few persons escape death as a consequence of being bitten. The skunk, unlike other denizens of the prairie, has little or no fear of man, but will as leisurely walk into a tent or camp at night as would a domestic cat. Its habit with human beings is to bite them while asleep; it may be on the ear, face, hand, or any exposed part. Of course the sleeper is immediately awakened, and the varmint is driven away. The wound inflicted may appear no worse than the scratch of a briar, but it is nevertheless a thing not to be trifled with. In case of skunk bite, the following suggestions will prove useful: If possible, a physician should be consulted, and that without delay. That being impracticable, the treatment is to cut out the flesh to the depth of the wound, or burn it out with a hot iron, or destroy the poison with caustic potash. It is the sense of the medical profession that the poison deposited with the bite of rabid animals lies for a time in the wound before being absorbed. How long it thus remains is not definitely known, though five days has been reckoned as the outside limit. The importance of immediate treatment is therefore apparent. If nothing else is at hand, a bridle-bit heated would answer for the burning, or concentrated lye for the caustic. There is but little virtue in drinking whisky, as is done in snake bites."

The case in Texas was reported to me by General F. L. Britton, of Austin, that State. Being in impaired health, he spent last winter in camp about the headwaters of the Colorado River, on the Staked plains in Western Texas. The country in the neighborhood was full of buffalo hunters. The subject was a young man about nineteen years of age, who belonged to a camp about nine miles distant. I was in error before in stating that he was a member of my informant's party. Convulsions ensued in eight or ten days, and death resulted two or three days later. It was the subject of camp discussion at the time, and many similar cases were talked of, only one of which the General now remembers. That was of a decrepit old lady, twelve miles from Fort Concho, not far distant, which had occurred not long before. She was sitting in her house, when a skunk entered through the open door and bit her foot, from which she died. General Britton says that it seemed to be the universal opinion among the hundreds of plainsmen in the neighborhood of his camp that a skunk bite was certainly fatal. He also says—pertinent to a communication in FOREST AND STREAM of January 30—that some people in that State harbor the animals about their houses, either wholly or partially domesticated, as vermin destroyers. He names one family who have for years had a family of skunks living under the floor of the house in which they live. They appeared as familiar about the premises as so many domestic cats, and, he thinks, were never offensive.

The following cases are reported by Mr. Bowman: A brother of A. Ruder was bitten in the hay field, in this county, in 1874 or '75, and died three months later. A child was bitten at Peeled Pine white in camp at night, in 1875. Its parents were traveling across the country from Grenada to Trinidad, and slept in a tent. The child was bitten on the nose and died in two or three days. Two of the Hall brothers, of Madison, New Mexico, have been bitten and are still alive. Nathan says he has a spell of sickness every year, about the time he was bitten. "Mid" was bitten on the top of the head, and it swells every year about the time the bite was received to the size of a hen's egg. R. E. McAnulty, of Fort Elliott, Texas, was bitten eleven years ago. He was taken with violent vomiting and bleeding, which continued three days, after which he recovered, but his health has not been good since.

Doctor Cushing, of Trinidad, Colorado, who has, no doubt, seen several cases, gives it as his opinion that the natural bite of the skunk produces hydrophobia—that it does not need to be suffering from rabies itself. He says its bite will kill the victim sooner or later without fail. Doctor W. L. South, who has had great experience in Texas and New Mexico, says "the bite will fetch the victim some time," meaning that it will sooner or later result in death.

Mr. Bowman appends the following postcript to his interesting letter: "The animal does not emit the odor when it bites. The smaller-sized ones having but little white on them are supposed to be the most vicious. The cow-boys drive them out of their camps with a torch or a stick with fire on the end of it. In the night, when coming into a tent, they sometimes make a sniffing noise, which wakes the boys. When exasperated, they bite everything. They appear sometimes, when met on the prairie, to be disposed to give battle; at other times they pay no attention to man."

In FOREST AND STREAM, of January 23, there is an interesting editorial article upon this subject, quoting Col. Dodge, M. C. Hovey, Dr. Spearer and Dr. Janeway. All except the latter agree with the prevalent opinion entertained by plainsmen. Dr. Janeway—with whom I was quite well acquainted a few years ago—differs with them, yet his evidence, in so far as you quote it as specific, is hardly more encouraging. He cites the cases of two herders who were bitten (presumably at the same time and by the same animal), one of whom died and the other recovered; but the latter required twenty-four days of most heroic treatment—nitrate of silver and strychnine—before the poison was conquered. And then it would be interesting to know whether the subject really "recovered" or still suffers periodic or chronic effects, as some of those cited above. He also cites eight other cases who recovered from skunk bites, but their treatment or the degree of "recovery" are not given. Both would be of interest, as well as the proportion of fatal cases set down against them. The fact that two dogs frequently bitten by skunks have suffered no evil results therefrom need give no assurance of safety to man. I have never heard of a dog or any other animal contracting rabies from skunk bite.

The Doctor also thinks the malady "epidemical, no cases having been reported previous to 1870 in this region" (Kan.). Does he cite cases in any other part of the country prior to that time? It is certainly more than twenty-five years since I read—and was startled by—the first account I had ever seen, or heard of, of death caused by the bite of a skunk. It occurred on the North Platte, on Sweetwater, between Fort Laramie and the South Pass. I was of opinion that it was in *Fremont's Journal*, and occurred in 1842 or '3, but I cannot find it now in his report, and concluded that it must have been in something else. Am quite confident it occurred between 1840 and 1850, and am positive as to the place. Similar incidents and like results have been of common report ever since I have known this Western country, now twenty-seven years.

I have never seen any of the papers referred to in your issue of 23d ult., but believe that a discussion in a popular journal, so widely read as is the FOREST AND STREAM, will bring out more valuable information on the subject than has yet reached the public. WM. N. BYERS.

EDITOR FOREST AND STREAM:

I have been much interested in reading several articles in your valuable paper on the fatal effects of the skunk bite. I am not prepared to give any facts in support of the opinion so generally advanced by hunters, plainsmen, etc., but rather to relate my own experience with the little "white head." Several years ago, when I was quite a lad, I was one day wandering through the fields with my dog, Old Tige, when all at once Tige came to a sudden halt at the mouth of a small hole in the ground, and as I was armed with a small ax we determined to dig out the supposed rabbit; so went to work, and after digging for a short time I placed myself flat on the ground and reached into the hole for our game. My pluck was good but my judgment very bad. I however secured him by the hind leg and soon brought him to the surface. He proved to be a full-grown skunk, and as I drew him forth he fastened his teeth on poor Tige's nose and lacerated it in a shocking manner, but was soon shaken off and killed. The dog was sick for several days, but soon recovered and lived to a ripe old age, and I believe fully glutted his vengence on the skunk family, as he killed many. As for myself I was not *bitten*, but am of the opinion that I should have been much happier had I been and had died on the spot. CHAS. E. LEWIS.

Suspension Bridge, N. Y., Jan. 28, 1879.

PENSACOLA, Fla., Feb. 1, 1879.

EDITOR FOREST AND STREAM:

In your article "Death from Skunk Bite," Jan. 23, you state that bad results from the skunk's bite are yet unheard of east of the Missouri River. Now, among the people living on Choctawhatch Bay the skunk is considered quite a dangerous animal, and I am informed by several of the oldest settlers that their dogs when bitten by it invariably died "of fits," they say, but as hydrophobia is unknown there, I imagine that it was that disease. Respectfully yours, SILAS STEARNS.

We feel greatly indebted to Mr. Byers for his very full and careful report on this most important subject, and we commend his paper to all our correspondents as a model of its kind. We shall hope before long to receive further definite information relating to the effects of the skunk's bite. We do not know Dr. Janeway's present address, but if the above communications should meet his eye we should be most happy to receive his comments on them. The letters printed above referring to the effects of the bite of this animal in the East are interesting.

For Forest and Stream and Rod and Gun

LIST OF THE BIRDS OF NOVA SCOTIA —Land Birds.

BY J. MATTHEW JONES.

(Continued.)

42. *Hirundo horreorum*, Barton, Barn Swallow.—Very common throughout the province. First broods fully fledged by the middle of July.

43. *Tachycineta bicolor* (V.) Cs., White-bellied Swallow.—Very common, and is the earliest swallow visiting the province.

44. *Petrochelidon lunifrons* (Say), Cab., Cliff Swallow.—Very common. The nests are crowded together under the eaves of our public buildings, particularly when ornamental woodwork affords cosy nooks for shelter.

45. *Cotyle riparia* (L.), Boie, Bank Swallow.—On the sides of most of our inland lakes and rivers, and especially on the shelving, clayey shores of the Basin of Minas, this species may be seen, and builds its nest in the usual situation.

46. *Progne purpurea* (L.), Boie, Purple Martin.—Not common. Frequents the interior of the province, but is very rarely seen on the sea coast.

47. *Ampelis garrulus*, L., Bohemian Waxwing.—Rare. A flock of twelve was observed some few years ago near the Three-Mile House, eleven of which were shot for specimens.

48. *Ampelis cedrorum* (V.), Bd., Cedar Bird.—Not uncommon, especially in the fall, when they roam about in flocks. In wild, hilly districts, far away from the settlements, where each rocky ridge, formed of granitic boulders, is sparsely clothed with a growth of young hardwoods, from out of which, like spectres, rise the bleached and wasted trunks of once noble pines, whose evergreen foliage years agone succumbed to the raging flames, these birds appear at home; and certainly one of the prettiest forest scenes I ever saw was at the dawn of a bright autumnal day, when, camped on the summit of the Blue Mountains at the back of Shelburne Co., I rose benumbed by the keen frost which had coated every inanimate object with its hoary rime, when my first glance fell upon a flock of cedar birds stationed on the summit of an old pine. The first rays of the rising sun shone upon the flock as each bird was preening its wings for the daily flight, and not a sound was heard to break the universal silence which reigned around, save the wild wailing notes of the loon on the distant lake. Not long, however, was I permitted to gaze upon the charming scene, for soon the morning's toilet was completed, and rising *en masse*, they spread their wings upon the frosty air and vanished from sight.

49. *Vireo olivaceus* (L.), V., Red-eyed Vireo.—Common.

50. *V. gilvus* (V.), Bp., Warbling Vireo.—Not uncommon.

51. *V. solitarius* (Wils), V., Solitary Vireo.—Rare.

52. *V. noveboracensis* (Gm.), Bp., White-eyed Vireo.—Not uncommon.

53. *Collurio borealis* (V.), Bd., Great Northern Shrike.—Not uncommon about the settlements in hard winter.

54. *Collurio ludovicianus* (L.), Bd., Loggerhead Shrike.—Very rare.

55. *Pinicola enucleator* (L.), V., Pine Grosbeak.—Common during the winter months. Females go in flocks at that season, and are far more often seen than males.

56. *Carpodacus purpureus* (Gm.), Gr., Purple Finch.—This bird, which is known to Nova Scotians as the "red linnet," is very common during the summer months, arriving from the south about the first week in April. It is taken in a trap made in the form of a bird cage, and sold as a song bird, its pretty note and gaudy plumage causing it to be much sought after.

57. *Loxia leucoptera* (Wils.), White-winged Crossbill.—This bird is very common during some winters, and was especially so the last (1877-8), large flocks frequenting the spruce woods about Halifax.

58. *Loxia curvirostra*, L., Common Crossbill.—Not so common as the former species.

59. *Ægiothus linaria*, (L.), Cab., Red-poll Linnet.—Abundant at all seasons.

60. *Chrysomitris pinus* (Wils.), Br., Pine Linnet.—Not common.

61. *C. tristis* (L.), Bp., American Goldfinch.—Not uncommon, but rare some seasons.

62. *Plectrophanes nivalis* (L.), Meyer, Snow Bunting.—This bird generally makes its appearance from the North about the last week in November or first week in December; but some seasons I have known it arrive as early as the first week in November. From observations made during ten successive winters, I am inclined to believe that the larger flocks of these birds follow the course of snow storms, for I have invariably found that although the absence of these birds in their accustomed situations has been conspicuous up to the setting in of a heavy fall, they have almost always appeared within twenty-four hours afterward in numbers. Their principal ground here is on Halifax Common, a level tract of ground, almost bare of trees, about one hundred acres in extent, crossed by public roads, much travelled over by horses, whose droppings seem to be the great attraction to these birds; indeed, I think they chiefly rely on these for their supply of food in deep snows, when the whole district is completely covered. At other times, when high winds occur, the snow is blown off the exposed parts of the shelving banks and they are enabled to procure some of the tiny seeds of the grasses and small plants which form the scanty herbage of this barren spot in summer time. Where they rest at night in time of heavy snow storms has always been a mystery to me. If they couched together in twos and threes, as is supposed, under the shelter of the stone walls about, they would assuredly be covered to a great depth by the drifts, and certainly prevented from reaching the surface again by the hard crust which forms there before morning, unless they free themselves by picking their way out. Possibly some ornithological reader of FOREST AND STREAM may be able to throw

light on this matter. The latest appearance of these birds in spring I have recorded in my journal is April 19.

63. *P. lapponicus* (L.), Selby, Lapland Longspur.—Rare. I have only obtained one specimen, which was shot when in company with a small flock of shore larks on the coast in January, 1876.

64. *Passerculus savanna* (Wils.), Bp., Savannah Sparrow.—Very common in summer.

65. *Poœcetes gramineus* (Gm.), Bd., Bay-winged Bunting.—Rare.

66. *Ammodromus maritimus* (Wils.), Sw., Sea-side Finch.—Very common; arriving from the South about the end of March, and frequenting the lowland contiguous to the shore. All I have procured have had a yellow blotch at the base of the beak immediately upon the nostril, and then continuous as a yellow line above the eye and a little beyond it. The edge of the wings, faint yellow. Two middle tail feathers very sharp. Feet and legs very pale flesh color.

67. *Melospiza palustris* (Wils.), Bd., Swamp Sparrow.—Common.

68. *M. melodia* (Wils.), Bd., Song Sparrow.—Very common. This is probably the first song bird to arrive from the South in spring.

69. *Junco hyemalis* (L.), Sel., Snowbird.—Very common; arriving from the South the first week in April. The nest is usually made in a tuft of grass in low situations about the first week in May, and the first brood is hatched about the middle of the month. A second brood is also hatched about the beginning of August. A few stay through the winter, but the main body departs south about the end of October.

70. *Spizella monticola* (Gm.), Bd., Tree Sparow.—Not uncommon during the winter months.

71. *S. socialis* (Wils.), Bp., Chipping Sparrow.—Rarely observed on the coast, but not uncommon in the interior of the province.

72. *Spizella pusilla* (Wils.), Bp., Field Sparrow.—Common.

73. *Zonotrichia albicollis* (Gm.), Bp., White-throated Sparrow.—Very common; arriving from the North about the first week in May. Its local name is "Poor Kennedy Bird," derived, it is said, from the supposed resemblance of its plaintive notes to the words "Poor Kennedy—Kennedy—Kennedy," originating in a legendary tale of an unfortunate traveler of that name, who, being lost in the deep forest, shared the fate of the babes in the wood, save the covering of leaves; and ever since, this bird, whose ancestor was present at the sad scene has continued to sound this lament, "Poor Kennedy—Kennedy—Kennedy."

74. *Passerella iliaca* (Merrem.), Sw., Fox Sparrow.—Not uncommon, but only staying on their autumnal and vernal migrations for a short time. They usually arrive in small flocks from the North about the last week in October, and return from the South about the first week in April. Mr. Downs informs me that this bird breeds in Newfoundland.

75. *Goniaphea ludoviciana* (L.), Bowdich, Rose-breasted Grosbeak.—Rare on the coast, but not uncommon in the uncultivated districts of the interior. Mount Thorn, in Picton Co., is a noted locality for this bird, which appears to delight in hardwood forests, which clothe the mountain and its vicinity.

(*To be continued.*)

THE BIRDS OF GRENADA.—We have received, through the kindness of Mr. Geo. N. Lawrence, another of his papers relating to the birds collected by Ober during the latter's explorations in the Lesser Antillia. This catalogue, which is published in the proceedings of the United States National Museum, contains notes on fifty-four species taken or observed during the stay of the collector, and is in many respects of very great interest. The Island of Grenada is very near the South American coast, being only seventy miles from Tobago and one hundred miles from Trinidad, so that we might well expect to find here a number of typical South American forms of bird life. In fact, however, there are but two species noticed, which are strictly South American, *Glaucis hirsutus* and *Tyrannus melancholicus*, a fact which shows, as Mr. Lawrence remarks, how markedly Grenada and the islands north of it are defined as a distinct zoological province. Besides the peculiarities attaching to the bird fauna of the island, it is interesting to note that we find here an armadillo and a monkey. Mr. Lawrence has our thanks for his most interesting paper.

A CHECK ON THE SPARROWS.—Our correspondent, E. H. Howell, who writes to us from Bath, Steuben County, New York, says:

I notice quite a number of the small hoot owl around the place feeding on the English sparrow. Is not this something new?

We have known of the same thing before, and indeed only a few evenings since we saw a small owl (*Scops asio*) hunting for sparrows about an old church. Among the ivy with which the building was overgrown many sparrows roost every night, and no doubt the bird of prey fared sumptuously on them. As we passed on our way, we wished the bird of wisdom good speed in the good work which he was performing.

CORVUS CORAX IN NEW HAMPSHIRE.—Our correspondent, "M. C. A.," who writes from Warner, New Hampshire, under date of February 27, announces the capture of a raven near that place. He says:

A rare bird for this vicinity was brought me for mounting recently. It was a raven (*Corvus corax*), a young male. It was caught in a trap set for a fox, about ten miles north of here, about February 1. I have never known of a specimen of this species being taken in this vicinity before. This one was in company with another of its own sable kind.

LINNEAN SOCIETY.—The meeting of February 25 was, as usual, well attended. An interesting paper from Mr. Thos. S. Roberts, of Minneapolis, Minn., was read, giving a detailed account of the warblers found in and around that city. Owing to the peculiarly level tract of country in which the city is situated, there is a great lack of heavy timber, the favorite resort of these birds, and consequently many species are noted only as migrants, although breeding a hundred miles further north in what is termed the "Big Woods." The tamarack swamps, which abound in any favorable locality around Minneapolis, are the resorts of these birds during migration, and especially so for the young in the fall of the year, when they come trooping through by the hundreds. The Nashville and Tennessee (*Helminthophaga ruficapilla* and *peregrina*) yellow rumped and black poll warblers (*Dendroica coronata* and *striata*) and the Maryland yellow throat (*Geothlypis trichas*) are found associating together at this time, and are the most abundant.

He cited ten genera, including twenty-eight species, all but three of which he has verified himself, and these three are given on the authority of Dr. P. L. Hatch. Among the rarer ones may be mentioned the golden-winged warbler (*Helminthophaga chrysoptera*), which is found at Minneapolis during the spring and into June. On June 12, 1878, he took a nest which he is almost positive belongs to this species. The birds were seen in the immediate vicinity, and the eggs and structure of the nest coincide exactly with that of this bird. The blue-winged yellow warbler (*H. pinus*) is very rare or accidental, only one specimen having as yet been noted, and that by Dr. P. L. Hatch, in 1874. The black-throated blue warbler (*Dendroica cærulescens*) is rare, arriving about the middle of May and proceeding northward to breed. *D. blackburnie* is not common. The chestnut-sided (*D. pennsylvanica*) is common, and breeds. The Cape May warbler (*D. tigrina*) is rare. The two specimens on which it was identified as belonging to the fauna were taken by Mr. Roberts, May 15, 1875, and afterward he took several in the fall. The mourning warbler (*Geothlypis philadelphia*) is but rarely met with around Minneapolis, and only during migrations; but northward, in Carleton and St. Louis counties, where the forests have been cut down by fire and the charred timber lies piled up in inextricable confusion, these birds are found as common residents. A dense undergrowth has sprung up, which gives them the best protection for their nests and young, and where it is difficult to procure any but the males, who, more venturesome, appear on the dead branches of some standing tree and utter their characteristic notes. Nests were not actually found by Mr. Roberts, but the discovery of the young just from them (July 18, 1878,) was proof positive of their breeding.

Mr. Ingersoll read a paper on intelligence or education in animals, citing various instances of birds, dogs, horses, etc., finding their way home again after apparently interminable wanderings by rail, water and land, and often after long periods of detention at their new homes, when all desire seemed to have disappeared and they were finally set at liberty. This ability seemed to be due to higher mental faculties, and in those animals where this was lacking there was no attempt to return to a former home or place.

Mr. Merriam read some extracts from his journal of the past year, in which he mentioned an instance of an old cock partridge (*Bonasa umbellus*), which came every day to a certain log lying alongside of a woodpile, and there drummed incessantly, without seeming to mind whether there were cattle or poultry by it or not, and on his near approach, would simply walk to the end of the log, hop off and disappear in the neighboring shrubbery, to come back again in a short time. This was kept up all summer, and when the weather became quite warm, the drumming was kept up until into the night—as late even as two o'clock. He also spoke of the male purple-finch (*Carpodacus purpureus*) starting up in the air from the tree on which they were perched, and then letting themselves fall, so to speak, all the while giving forth a volume of song, and apparently utterly regardless of where they would alight.

HARD TIMES FOR THE BIRDS—*East Stroudsburg, Pa., Feb. 18—Editor Forest and Stream:* This morning, while watching some woodpeckers, I observed a turtle dove. I threw a piece of ice at it, but it did not stir. I threw again, and was more successful, and brought it down. I ran up and got it and found it very nearly frozen. I took it in the house and put it in a cage. I am feeding a flock of thirty-seven quail. They come into the barnyard every morning, and are as tame as the other fowls. A great many are being trapped around here; they can be bought in almost any store in town. I hear that a great many are starving and being caught by hawks. S. A. R.

Woodland, Farm and Garden.

For Forest and Stream and Rod and Gun.

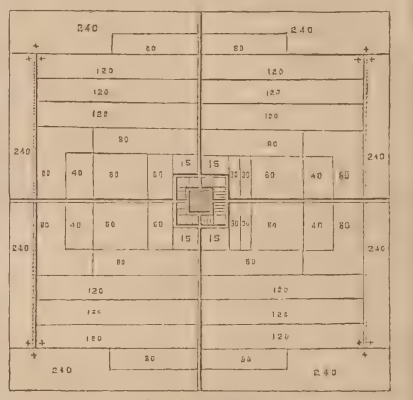
FARM COLONIES.

WHILE the tide of emigration has been setting toward the West in a ceaseless current for years, it until recently acquired its chief volume from the farming districts of the older States, and from Europeans accustomed to farm labor, who were ready to assume the hardships of a pioneer life that they might establish homes of their own in a land of liberty. But in recent years the depression that has prevailed in our manufacturing and commercial circles has awakened the emigrating impulse in a large class heretofore engaged in industries that are now suspended or no longer afford a comfortable income. There are large numbers hesitating between desperation and despair, who would gladly fly from the difficulties that beset them to engage in farming, but who shrink from the isolation, discomfort and danger of setting up a home in the dark forests or on the lonely prairies.

The formation of colonies, composed of persons of congenial tastes and those accustomed to town associations and privileges, offers a practicable means of relieving life in a new country of many of its objectionable features. Colonies of this kind have been recently formed in a number of our northern towns and cities, and one in Brooklyn has purchased several thousand acres of prairie land in Northern Texas, to which a number of families have already removed, and others are to follow. To secure the highest advantages of settlement in a colony a definite plan of laying out and subdividing the land should be agreed upon as the colony is formed. So far as we are aware no such subdivision has been made by any of the colonies referred to, but some of the principal members of the Brooklyn colony have approved the plans herein presented, and urged their publication for the consideration of those who are contemplating a removal to the West or South.

To parties going South the plan of settling in colonies removes the objection (which is usually very much exaggerated) that northern settlers are not cordially welcomed by a large class of the southern people.

It is not proposed by the term "farm colony" that any individual rights shall be surrendered, or any communal interests or obligations be established beyond a simple co-operation in selecting and subdividing a large track of land into farms of size suitable to all, so that each family shall be within convenient proximity to others, and to a common centre, around which the school, church, store, post-office, and other institutions and enterprises of a miscellaneous character pertaining to a village may be located. The question of having a village charter, and imposing restrictions on the sale of liquors and the suppression of nuisances may be left to the decision of the members, but if it is proposed to organize a colony on temperance principles, it should be so announced at the outset to secure harmonious action as the settlement progresses. For intelligible illustration the accompaning plot of Farmville is presented, which may, of course, be modified to suit a larger or smaller colony, but it is believed to embrace the most practicable way of subdiving land into large or small farms, in securing to each a pleasant and equitable frontage, and the utmost convenience in the working operations of the farms.



PLOT OF FARMVILLE.

The plot embraces about 5,120 acres, or eight sections of 640 acres, and is assumed to be of uniform quality and value, and to consist of fertile prairie or timbered land, large bodies of which can be selected in various States and Territories of the West and South, within convenient reach of railroad or river communication. Should the land not be level, or of uniform value, or the plot not admit of such exactness in subdivision, the size and value of plots may be determined by lot, or by fixing a small premium for choice, the amount so paid to be devoted to street improvements or other public purposes. If the majority of a colony should desire larger farms than are indicated in the plot it would be better to reduce the number of members in the colony, rather than materially increase the size of the tract, as a larger area would destroy the admirable village features of the settlement.

The plot, as before stated, represents eight sections of 640 acres each; these are subdivided into square blocks of eighty acres each, through which two broad avenues, at least eighty feet wide, extend from the middle of each side to a common centre, where there is a public square, the size of which may be fixed at the discretion of the colonists. It is assumed that the square, with the lots and streets around it, occupies about 1,000 feet square, or twenty-five acres. In the centre of this there might be a small plaza three or four hundred feet square, with the town lots, hereafter noted, located around it. Each of the eighty-acre lots is about 1,800 feet square, and twenty eight of them front on an avenue, each of which extends 7,200 feet from the centre of the public square. The subdivisions are so made that the occupants of the eight farms farthest from the centre, by erecting their buildings near the corner, will be but a few hundred feet more than a mile from the public square. While no farm has a frontage of more than 1,800 feet on an avenue, and a majority of them only 900 feet, the rear lots are assigned to those having street fronts, constituting several large farms, each occupying very similar relations to the others of like size. Thus there are eight farms of 240 acres; twelve of 120 acres; sixteen of 80 acres; ten of 60 acres; four of 40 acres; four of 30 acres, and four of 12 to 15 acres, according to the size of the public square. The smaller farms are chiefly located near the square, as best subserving the interest of such of those who may wish to pursue other avocations in connection with farming.*

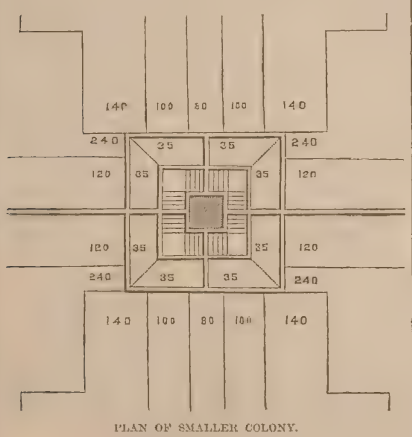
It might be very desirable to lay out around the central part of the public square as many town lots of equal size as there are members of the colony, so that each lot shall be about 50x150 feet in size, with a street in front, extending around the square, and in their rear, separating them from the farm plots. One of these lots to be apportioned to each of the settlers without reference to the size of his farm, and without charge, save the actual cost of the land, and a nominal fee to cover the expense of surveying and laying out the public square. The size of above diagram does not admit of a detailed plan of the square, but it is believed that it will be intelligible to the reader without further explanation. A better plan, perhaps, would be to reserve all these "town lots" around the public square as village property, to be sold at discretion, and the proceeds to be applied to street improvements, shade trees, school house, public hall, etc. This would involve a village charter, which is in many respects desirable. Either plan should be duly considered, and the one most approved should be adopted before settlement is begun.

The number of small farms may be varied to suit the wants of the colony; so, also, the number and size of the larger farms may be increased or diminished; but since a settlement of fifty families would require a physician, preacher, teacher, merchant, miller, baker, blacksmith, butcher, one or more

* For convenience in adapting this diagram to our columns, only one half the size of the large farms on the extreme right and left is presented. For the same reason, the outside and rear portion of the plots in the second diagram is left undefined—the purpose being to present a clear idea of the street boundaries in the limit allowed in the column.

carpenters, painters, shoemakers, and perhaps others who would not wish the care of large farms; and as there would be likely also to be several of limited means unable to buy much land, or who would join the colony for the purpose of working for the larger farmers, it is believed that the proportion of small farms is not too large. It is assumed that the entire plot is rich arable land, and that little, if any, need for some time at least be reserved for pasturage, as the cattle roam at will over the almost limitless prairies. Hence a farm of forty acres would be equivalent to one two, three, or even four times as large in the Eastern or Middle States, and twenty acres well-tilled would more than suffice to supply an ordinary family with the leading food staples. Of course the school, church, store, and miscellaneous industries would chiefly concentrate near the public square. A steam grist-mill, and (if located in the cotton-growing district a cotton press, gin) movable threshing machine, etc., would be desirable, especially for the smaller farmers. The larger farmers would have their own cotton press, gin, reaping and perhaps threshing machine, and would furnish employment for some of the colonists, or for laborers owning little or no land. The owners of the small farms would find it convenient to avail themselves of the machinery, teams, etc., of the larger ones, or to "exchange work" in breaking up land, harvesting, etc. Those who wish to pursue stock raising or general planting on a large scale could secure land outside the village by lease or purchase.

It may be urged that the larger farms are located so remote from the central square as to render the plan inequitable. But it must be remembered that any mode of subdivision which placed large farms in the centre would destroy the village character of the colony. If Messrs. Smith, Brown and Robinson insist upon having three or four hundred acres each immediately adjoining the public square, it will throw at least two-thirds of the colony three-quarters of a mile and more from the centre, and destroy the leading object of the whole plan. Large farms properly and of necessity belong outside of villages, and if those who own large bodies of land would enhance their value by encouraging the establishment of villages, they must accommodate all the members of the community as far as possible. The Mennonites seek to preserve the community plan, by giving their farms a very narrow front on one long avenue, and making them correspondingly deep as to size. But they rarely desire large farms, and a tract of more than eighty or a hundred acres laid out in this way would be so deep as to be inconvenient in farm operations. The larger farmers might require several herdsmen or croppers, whom it might not be desirable to make members of the colony. They would necessarily be required to live further from the centre than the regular colonists for convenience in reaching their herd or their crop. These could be located at points indicated by three stars, either as tenants or owners of such plots as the owners of the farms might be disposed to sell to them. They would be about a mile and a half from the public square in a direct line, or two miles by the avenue, to which there should be a lane, as indicated by the dotted line, as well for the convenience of the croppers as for the farmers whose lands connect with it. These settlements would comprise families of congenial tastes and condition, who would be better satisfied with this partial isolation than to be on the public avenues. All large farming districts abound in this class of settlers, who in some parts of the South have been designated by the whites as Crackers, and by the blacks as "poor white trash." But they serve a valuable purpose at last in the social economy, and are far more useful and worthy citizens than a large class of coarse, noisy idlers, which abound in almost all towns and cities.



PLAN OF SMALLER COLONY.

Should it be desirable to sink an Artesian well it should be located near the square and the water conveyed in pipes or logs along each avenue to every house. The public square and the avenues should be at once bordered by trees (if in the southwest, the eucalyptus and willow being rapid growers and effective absorbents or neutralizers of malarial poison, are believed to be preferable).

A diagram is presented of a smaller colony, of twenty-six families, located on a tract of about 2,500 acres, the residences being located on four avenues, forming a square of three-fifths of a mile in extent; the centre of the square to be laid out in a public plaza, surrounded by town lots, as in the Farmville diagram, with eight small farms of thirty to forty acres in extent, occupying the area between the avenues and the public square. The advantages of this plan are that it can be readily modified to suit a larger or smaller number of colonists, and by reducing the extent of the central area, would be found an admirable plan for adoption by a half dozen or more large farmers, who might thus have several hundred acres each, and still all live within a mile or less of each other. Those who have traveled in the Southern States or in many portions of the West, will realize how a neglect of some plan or system in the early settlement of the country has isolated the population and rendered the successful establishment of a public school system a problem of most difficult solution.

A colony such as we have indicated, if located in an unsettled district, and especially in the great grazing region of Kansas or Texas, would at once bloom out like an oasis in the desert, and would soon attract ranchmen and others, who would gladly purchase lots and erect houses, where their families might enjoy the advantages of civilization and refinement. In the progress of time, should a railroad be located through the tract, a depot might be established, and our rural farm village at once assume the importance of a thriving business centre. But without any such agency, the location of fifty families in the centre of a body of land five, ten or twenty thousand acres in extent, could not fail greatly to enhance the value of the whole and make each individual investment much more valuable than it could possibly be if the colonists were scattered without system or co-operation.

This plan is predicated on the ability of every member of the colony to make his own location, erect his buildings, and raise his first crop without assistance. To do this, ready cash of at least a few hundred dollars would be absolutely essential. It is believed that capitalists would find the formation of such colonies, with moderate loans to such as require it, a much safer and more profitable investment than ordinary enterprises in the older States afford. The enhanced value of reserved sections would insure a good profit on the original cost of the land, and the improvements made by settlers would afford the amplest security for money advanced on the purchase and improvements. But to secure the highest advantage from the colony system of emigration, the members should each possess sufficient means to establish themselves on an untrammeled footing, and should be persons of such congenial tastes and public spirit as would make the improvement and progress of the village a general inspiration. Thus they will at once enter upon the independence and thrift of farm life, without incurring the anxieties incident to debt, and without divorcing themselves from the refining influences and privileges to which they have been accustomed. Thus will our ideal Farmville become a model of rural comfort and prosperity.

No reference has been made to the influence of the colony system of emigration upon the development of diversified industries. Thirty or forty thrifty farms will soon furnish staples for a cotton or woolen mill, a merchant flouring mill, a tannery, wheelwright shop, and other useful enterprises; and thus will the development of manufactures go hand in hand with agricultural progress.

Aside from the advantages of a village settlement in the relations of social life, a very material saving can always be made by purchasing a large body of land. Special rates can also be secured with the various railroad companies for the transportation of colonies and their effects. The saving in this way to a large family will amount to the value of a good many acres of land. In the purchase of lumber, building materials and farm implements a colony will command the discount accorded to the wholesale buyer, and afford material protection against imposition, since the trade and good will of its members would be objects worth retaining. Of course, a wise discretion should always be exercised in the selection of agents to purchase land or other property, and experience has shown that it is always the wisest policy for each colonist to make his own payments, receive and control his own deed, and, as far as possible, avoid all opportunity for fraud or speculation by the projectors or agents of the colony, the object being to make the mutual or colony feature simply an auxiliary to individual interest and action. Where colonies are formed by capitalists under stipulated conditions, of course it will be necessary to surrender somewhat of the independence which a settler feels whose means render credit unnecessary. And only capitalists who are persons of known probity and liberality should receive the confidence or co-operation of even the humblest settler. Thousands of honest emigrants have been duped and robbed by greedy and unscrupulous "land sharks" and their agents; and it is believed that no surer method of defeating their schemes can be devised than the adoption by intending emigrants of the colony plan of settlement.

THE YAWL RIG ON SAN FRANCISCO BAY.

San Francisco, March 1, 1879.

Editor Forest and Stream:

There is one rig which possesses many advantages which will bear discussion among Corinthian yachtsmen. I refer to the yawl rig, which has at least become recognized in San Francisco Bay as one no longer to be lightly spoken of by that large class who poke fun at everything of which they have no personal knowledge. Having advocated the former rig against prejudiced arguments for so long, it is a satisfaction at last to see it come to the front far enough at least to be considered and impartially discussed.

As the builder of the first one of the modern style of yawl yachts on San Francisco Bay, and with an experience of some four years in sailing and taking care of her myself, I think that perhaps your many yachting readers who like to handle their own boats might be interested in a description of the rig, with some details of the advantages further than those stated in your article in Forest and Stream of October 31, where, by the way, you refer only to the English yawl. As I do not suppose many of your readers are familiar with San Francisco Bay or its peculiarities, it may be well, at the risk of trespassing on your space, to mention the circumstance under which we sail in this point of the world, for they have a bearing on the question, inasmuch as they have called forth what may be termed the Americanized yawl in use here.

San Francisco Bay proper covers an area of 290 square miles. San Pablo Bay is merely a continuation of it, and with the Straits of Carquenez gives us 130 square miles more. Above the Straits is Suisun Bay, which to the confluence of the Sacramento and San Joaquin Rivers is sixty miles more, or a total of 480 square miles. A wide sheet of water, say you, and a good place for yachtsmen. When you come to add the numberless navigable creeks and sloughs emptying into the bay and meandering through the tule lands that border the bay and extend beside the rivers, you will see that our sailing space, although all inland, is somewhat extended. We can sail from San Francisco north to Sacramento, 120 miles, and south to Alviso, thirty-five miles; so any one who starts from the latter place can have 155 miles of sailing on inland bay and river at a stretch, or he may go for over 200 miles up the San Joaquin River, if he chooses, in a light draught boat. So much for our cruising grounds.

Now we come to our winds, of which we often have so much that we would like to spare a little for some of the occasional drifting matches of which we read in your part of the country. Here such a thing never occurs. Our northwest summer winds begin in April, and blow straight on end until October calms their ardor. Our average afternoon breezes blow about twenty-four miles, and from that up to thirty miles per hour. In the channel, where we take our afternoon sails on the way to and from the club-house at Sausalito, and where the winds have full sweep through the Golden Gate, which we cross, they average for one month in the year, from 11 A. M. to 5 P. M., some thirty miles per hour. Before and after that they subside somewhat. To show the regularity of these strong breezes one instance will suffice. The old Lotus Club sailed on a yacht of that name every Saturday afternoon in the summer for seven consecutive years. We never once in all that time failed to get back across the channel and home by evening. A steam yacht couldn't beat that for regularity, as she would have broken down more than once in that period. Our highest monthly velocity of winds is in July—about thirty miles—and in December it is only from twelve to fourteen miles. In fact we lay up our yachts in winter after a few up-river cruises for ducks, more on account of lack of wind than anything else; for often for weeks at a time in that season the surface of the bay is never ruffled with a breeze, though we have our winter gales occasionally. We never have any snow, as you know. When you remember that the tides from this immense bay must flow and ebb through the Golden Gate, which is only a mile wide, you will know what our currents are in the lower bay. Observations prove that there is seven times as large a body of water passing through the Golden Gate in a given time than the Mississippi carries past New Orleans.

These strong winds of ours, and the consequent sea they kick up, combined with our strong tides, render a style of boat necessary here which is different from that preferred for bay and river sailing with you. Moreover, we have found the sloops to be so unprofitable that we have made up our minds to schooners or yawls.

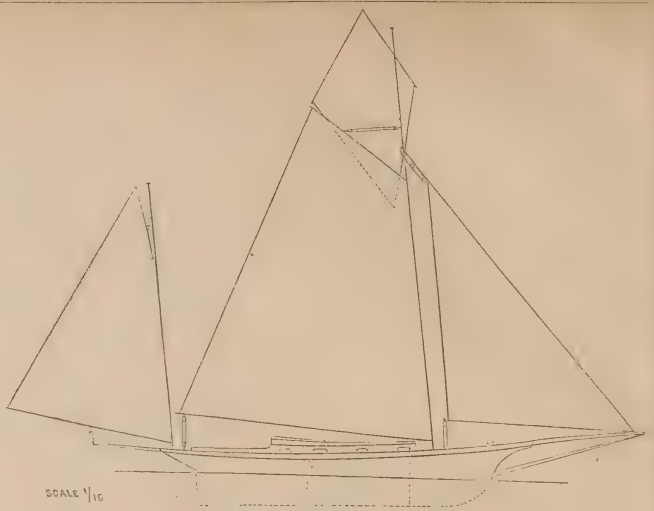
During the past twenty years a great number of the smaller class of cat-boats—or plungers, as we call them—and several sloop yachts, have been brought to this port from New York; but, without a single exception, every one of them had to have her spars and canvas reduced after a trial or two. Others have been built here by those who had their sailing experience elsewhere and ignored the experience of other people, and in all those cases canvas and spars had to be reduced; and even with the sloops built for regular use here, with very small sails compared with those you use, they occasionally have rusty times out in the channel. Of course for smaller-sized yachts schooners are not just the thing on account of the mast in the cabin, the narrow strip of canvas for foresail, and other objections which I will not trespass on your space to detail, but which will be recognized by any one that has used them. We have, therefore, to a certain extent adopted the yawl-rig, the advantages of which I propose to detail, premising that I speak from my own experience in a small yacht which I have handled and taken care of myself ever since I had her built. It may also be premised that we do not by any means pretend to be the originator of the yawl-rig, which has long been known in England and elsewhere, but we have improved upon and Americanized it to a certain extent, so as to render it more practicable and handy. In this shape its success has been such that we now have more yawls than any yacht club in America, and their number is increasing as their merits become known. Of course we have a good many schooners, but the sloops are gradually being turned into yawls. The spring will see but one sloop left in the San Francisco Yacht Club.

The yawl rig simply consists of a mainmast set perhaps a little further forward than it would be in a sloop, and made somewhat lighter. On this is an ordinary mainmast and jib, the main boom, however, only extending aft as far as the after end of the cockpit. Either inside or outside of the cockpit rail is stepped the driver mast, which carries a leg-of-mutton or Bermudian driver. A small spar called the "boomkin" (or "bumpkin," as some style it), rests on the deck and extends outward over the stern, and through a block on its outer end is rove the sheet controlling the driver. The main boom is made of a length sufficient to just clear the driver mast as the boom swings. The jib sheets may lead aft, the main sheet cleat is under the cockpit rail and secured to it, and the driver sheet leads on to a cleat placed at any convenient point by the heel of the driver mast. Thus the sheets controlling all three sails are close by the helmsman's hands, which would not be the case with a schooner. With a flying jib those sheets can lead aft also as mine do. The traveler is on the cockpit rail, and none is needed for the driver.

An English yawl differs but little, if any, from an ordinary cutter as far as her head-sails are concerned. You have described that so fully that it is understood by those who have never handled one. A very small mast is stepped near the taffrail, the whole of the "jigger," or driver, projecting over the stern with a sprit or other peak sail upon it, the shape of the mainsail, of course, being regulated accordingly. This shortens up main boom materially, but they use pretty much the same sized gaff they would with a long main boom. It is a favorite method to change a cutter into a yawl for cruising, by simply changing the mainsail and boom and stepping a driver mast. Then when they are on for racing they change back again, recognizing in this, however, the comfort and convenience of the yawl for cruising purposes.

We, on the other hand, step the mainmast in about the same position as on an ordinary American sloop, or a little forward perhaps, depending, of course, on the build of the hull, position of centreboard, etc. We also carry a single jib, as in an ordinary American sloop, with a long bowsprit to extend the sail well on the foot. Our gaffs are of moderate length in proportion to the boom, and we give our mainsails more hoist than is done on a cutter. The driver-mast is stepped as near the rudder-head as possible, forward or aft of it, but if forward, an elbow on the tiller is necessary. There is no objection to this in the world, mine being made that way. The curve comes under the deck and does not show. The rudder-head is commonly kept below the deck, so as to give the driver-mast the necessary deck support. We have found it to advantage to discard the peak or gaffsail and adopt the Bermudian or leg-of-mutton driver in preference, so as to extend the foot further out and keep the centre of effort

YAWL "ENID," S. F. Y. C.



YAWL "STARTLED FAWN," S. F. Y. C.

as low as possible. The driver is very much larger in proportion than that of the English yawl, and forms a proper balance to the jib. The proportions of these sails require an accuracy of adjustment with relation to each other which makes every difference as to the steering of your boat under the varying spread and position of canvas.

In brief, the English yawl is a modified cutter, and in the same manner the Americanized yawl may be called a modified American sloop.

Now, as to advantages: With jib and driver alone your boat is under command, there being sufficient area of canvas to form working sails. This, of course, is as handy as possible in getting under way or coming to, as will be apparent to every yachtsman, the bulk of canvas being off the boat. As we all very well know, one never reefs until the last moment, and is apt to hold on to it too long on account of the bother. Nobody ever reefs a sloop if he can help it, of course, and the longer the boat the bigger the job. In case we settle away to reef the mainsail in the yawl, we keep right on our course with driver and jib, and all the work on the mainsail is done inboard. Practically, however, we reef very little, for, lowering the mainsail, we can run along easily. In reefing, however, any one will recognize what difference there would be passing an earing inboard or outboard in a lumpy sea and fresh breeze. At no time do we lose control of our vessel, as in laying by under a jib in reefing a sloop. It is very convenient to coax a boat through a squall with driver and jib by flowing the main sheet and getting the bulk of the canvas off her by letting it shake. With a squall abeam, for instance, flow your main sheet, but keep on your course under short sail, the wind passing harmlessly between your masts. If the wind comes too heavily, lower away your mainsail on to the lazy lines and keep on under driver and jib. No need of luffing and waiting for it to pass. Or, if you choose, at any time you can take in your driver alone and sail under mainsail and jib, which would put you in shape like a reefed sloop. Your sails must be properly balanced to enable you to do all this. Your yacht will then work well under any of these circumstances.

The driver acts as a very efficient lever, being so far outboard, and as it is entirely under control, can be used to great advantage in doing short work, as among wharves or vessels. A very slight pull on your driver to windward will swing you wonderfully quick, which will come in very handy in cruising about in a light breeze, or if you happen to get a stern-board on. If you wish to back out of a slip—which it is often convenient for you to do—by bringing your driver square across and throwing your helm over, if you are used to your boat, you can do it in a manner to surprise any lookers-on.

The driver is very handy in other ways as well. If you wish to stop and wait in a moderate breeze without lowering your sails you can come up on your jib and main sheets, haul your driver flat aft and let her sweat. She will then lie head to wind and will pay off enough to let her head sails fill, the driver being so much outboard aft throwing her head up the instant it begins to pay off. At the same time there is not much sail for the wind to take effect on. If alone, you can take your skiff or small boat and go and get a lost hat, boat-hook or an oar, or pick up a duck; you may shoot without thinking of lowering your sails or your boat coming to grief during your temporary absence. If you beat up into a narrow slip or creek and want to turn square in your wake, haul your driver quickly to windward to swing her head and deaden way, flow your mainsheet, check on your jib as soon as she pays, ease off your driver, and your jib will turn her almost in her track before she gathers much way. Remember, I am speaking of a small yacht, 30ft. long, one that a man can handle by himself.

In running in a seaway with wind on quarter or dead aft, you have no long boom to dip in at every roll, and make you think everything is coming out of her, as you sometimes have on a sloop. You can swing out like a schooner if you choose, and need never fear jibing. If your sails come over they will come over in two pieces, your driver (the lighter) first, and then the mainsail, seldom both at once. It is a pleasure to run under mainsail alone before a strong breeze as the sail is in the body of the boat, rendering the steering easy. One not used to the rig will be surprised at the driver, as I am at mine sometimes, though I have used it so long. There the little beggar hangs behind you and out of sight, working like a Trojan and requiring no care. You don't see it unless you look over your shoulder, but it keeps pulling away all the time.

All of our yawls are sharp with the helm. The sails are so evenly balanced and so long on the foot and low down that you don't have a great press of after sail. The bulk of it is in the centre of your boat. You never have to work yourself black and blue over a tiller to keep her off in a fresh breeze. A yawl will steer just as easy with wind on the quarter as abeam, which a sloop will not. You can regulate your helm to a certain extent with your driver sheet, the slightest little alteration affecting the steering. In this way you do not have to carry your rudder broad across your stern in a quartering breeze. The yawl *Sappho*, 40ft. long, recently broke her rudder on a shell bank in the southern part of the bay, and her owner beat her up some 17 miles by carefully tending driver and jib sheets without the use of a rudder. When squaring away for Oakland Creek, however, he lowered his driver and steered with two sweeps.

To sum up, I do not believe that any rig yet devised is ahead of a yawl for small yachts which the owner handles and takes care of himself. One can have a lightly built high cabin as on a sloop without having the greatest bulk of his sail in one piece. You can have your sail divided into three pieces, as on a schooner, without having any mast in your cabin to be in the way or strain it. All three sails can be handled by one man. You can get under way and come to without assistance as I very frequently do. In fine, the rig for handiness cannot be beaten.

A few words may be added as to the history and growth of this rig in San Francisco Bay. Captain Harrison, now Vice-Commodore of the S. F. Y. C., brought one here on a ship's deck from England, in 1849, but was not allowed to use her by the Custom House authorities. He then built one here in 1855 or 1856. Although used as a yacht, she was only a little open boat with an English yawl rig, so her existence has no bearing on the question of Americanized yawls. The next was a 17ft. decked boat called the *Petrel*, built by Will Brooks some ten years ago, and rigged with leg-of-mutton mainsail and driver. The same gentleman afterward built a little cabin yacht 22ft. long, called the *Sweetheart*, and rigged her with two leg-of-mutton sails. She passed from his hands, was re-rigged and re-sparred as a sloop, and finished her days on the bar outside the Golden Gate, drowning her two owners at the time.

After a couple of years absence in the mining region, finding myself without a boat on my return, I started in and had built a little 30ft. yacht. An old sailing chum, Capt. Edwin Moody, who had had a little keel boat yawl rigged in Boston over 30 years ago, advised me to rig my new boat as a yawl. He drew me a spar plan which I adopted, both mainsail and driver being Bermudian. After using her until I found I did not have sail enough with that form of mainsail I put on a gaff. This little boat, the *Enid*, was the first one of the present Americanized yawls, and was built some four years ago. She is 30ft. long, 10ft. beam, 4ft. depth of hold, and 2ft. 10in. draught. She is very full forward, has a long floor, moderate deadrise, full round bridge, an overhanging round stern, and is built with oak frame, keel, etc., planked with Oregon pine; galvanized fastening. The spar plan I send herewith will show size of spars and sails. Her cost out here was an even thousand dollars, ready for use. I carry an English sliding topmast 12ft. long, with club topsail; also a flying jib and jib-topsail, seldom used, however, except in winter-hunting cruises, or when my sailing partner, J. F. Lewis, is aboard, he having a great fondness for light sails. She has a centre-board, of course, as have nearly all our yachts; the bights on the bay shore all being shoaled from the tailings from the hydraulic mines brought down by the rivers. I have no reef points in either mainsail, jib or driver. My mainsail, although in one piece, is virtually composed of two sails. The one next the mast has the cloths running as on a leg-of-mutton sail, a belt rope extending from thwart of gaff to after end of boom. Above this the cloths run as on a gaff sail, parallel to the deck, the whole making a gaff mainsail. To shorten sail I slack up on the peak halliards and haul down on a line at the outer end of the gaff when the upper half comes down and hangs to leeward and leaves a leg-of-mutton sail. I seldom have occasion to use this, however, generally taking in the whole sail when it becomes necessary. My wife and I have been off on a two-weeks' cruise alone up river in this little boat during the summer months, and were once out on her in a heavy southeaster. We never had any trouble at all in getting under way, and whenever I had to be forward my wife would take the helm under instructions, she generally attending to the commissary department only at other times and I looking out for the boat. We go in for genuine Corinthian cruising here; in fact, we all do, every man here sailing his own yacht, some with men, of course, but the smaller craft without. The only yacht in the bay with a sailing master is the recently built $30,000 schooner *Casco*, belonging to Dr. Samuel Merritt, of Oakland—a keel boat 94 feet long.

About a year after my boat was built, Vice-Commodore C. H. Harrison launched a $10,000 yawl rigged centre-board yacht, called it *Frolic*, 49 feet long over all, 16ft. 3in. beam and 5ft. draft. She immediately became the ladies' boat of the fleet, being comfortable, dry and safe. Her owner is an Englishman and could hardly help adhering to certain English principles, among them the short bowsprit, short-footed jib and square-headed driver. He had first a lug driver, which was replaced by a gaff; but most of us think it no more effective now than is a schooner's narrow foresail. To carry out his ideas to make his boat sail as she should, he has had several mainsails. He has finally decided on lengthening his bowsprit and Americanizing his jib, and will probably in time change that driver to the accepted shape. This gentleman has been one of the most staunch advocates of his favorite rig, and has done more than any one else in bringing it forward. The only thing I have against him is that he will persist in calling a driver a jigger, a term which we have discarded for the more euphonious one. He has overcome his prejudices enough to adopt a centre-board, and considers his yawl Americanized; but we will not acknowledge this till he has a Bermudian driver and lengthens that jib.

After this yacht had been built a year, the sloop *Sappho*, owned by C. Chittenden, was re-rigged as a yawl, and her owner would never change back. The *Sappho* is 40 feet long, 15ft. 8in. beam and 3ft. 3in. draft. She followed the *Frolic*'s fashion of gaff driver, but her owner tells me she will have a Bermudian one in the spring. Next Mr. F. A. Hyde re-rigged the little sloop *Raven* as a yawl, leg-of-mutton driver and all. He then bought the sloop *Startled Fawn* and turned her into a yawl after a couple of months use. She is 45ft 6in. over all, 37ft. 6in keel, 14ft. 8in. beam, 3ft. 7in. depth of hold and 4ft draft. She is a very handy, handsome boat, sails better than she did as a sloop, and is of a useful size. I send you a spar plan made by Captain Moody, who also drew those of the *Enid* and *Mist*, formerly the *Raven*, now belonging to the Commodore of the San Francisco Yacht Club. Our Commodore, Vice-Commodore and Secretary are all yawl owners, by the way.

You want to know about speed, of course. My boat is not fast. There is a concession that a yacht owner seldom makes. In the first few races she came in behind her class, so everybody said yawls were a fraud. Consideration was not taken that she was the smallest boat in her class and in the club. I was classed with schooners and sloops. The second year the little schooner *Virgin*, 32 feet long, beat me unmercifully and took the flag of the class. The next year, with my new gaff mainsail, the *Enid* beat the *Virgin* so badly that the latter turned tail before reaching the windward stake boat. The sloop *Ariel* beat me that time. Our course, by the way, is 32 miles measured by line. The *Frolic*, when she tried it, turned out slow. She made no showing at all in her class, her competitors being all sloops, when she should have been in with the schooners. There was too much English about her for speed; but, as she is being gradually changed, she is improving.

Then the *Fawn* comes out a regular Americanized yawl. As a sloop Capt. Hyde confessed the *Frolic* had beaten him, which was laid to the *Fawn*'s being smallest. The first time they met in a race the *Fawn*, in her handsome new yawl rig with Bermudian driver, beat the *Frolic* fair and square without time allowance, although the *Fawn* is 37ft. water-line, while the *Frolic* is 43ft. More than this, in this race the New York sloop *Clara* competed and was beaten by both the yawls *Frolic* and *Fawn*. The latter, which as a sloop had had a trick of laying down and wallowing in a breeze, stood up to her canvas beautifully and went to windward against a 35-mile breeze in first class style, carrying all sail. I was on the judges' steamer when the yachts passed through the North point squalls, and we stopped expecting to pick up the crews of the sloops *Clara* and *Magic*, they were making such heavy weather of it. They were knocked down fifty times, cock-pits full of water and men in them to their waists. The yawls and Bermudian sloops went through this without the slightest trouble.

Since the *Fawn* has beaten her sloop record we hear of no more talk about the yawls "being comfortable but slow." The fastest sloop on the bay—the *Emerald*, a 47ft. boat—is to come out as a yawl in the spring, and the *Ariel*, another sloop, will also be rigged that way. There will then only be one little sloop in the club fleet, so our sloop class for regattas is ended. Four years' experience has converted a good many yachtsmen, among them your correspondent "Podgers," who was at first one of the most persistent opponents of the rig. He writes you that he has had experience in every kind of boat, from skiffs to hundred-tonners, and that sloops are awful and schooners next best to yawls. He bought the *Fawn* before Mr. Hyde owned her and Capt. Moody drew a spar plan of her as a yawl, but he got new sails for her as a sloop. Now, however, he sees the error of his ways and has come out in print as an advocate of yawls. He even owns one himself, and we consider his conversion complete. We yawl men have had a friendly laugh at him, of course.

I hope some gentlemen in your part of the world, who like Corinthian cruising, will try the yawl. It will not cost much to take out the sloop's spars and sails and rig as I have described. If they are not satisfied they can put on their old gear; but I do not think they will ever change back after once trying it fairly. Mind you, I speak of cruising yachts. If

any of your readers are interested in any points which have not occurred to me, if they will write I will endeavor to give them what information I can, derived from our experience. Capt. Edward Moody, a thorough yachtsman, can furnish plans if desired by any one. If their boats are already built, let them give dimensions, style of boat, etc. SAUCELITO.

The yawl has become a fixture in San Francisco, and it is with no little pride in the American Corinthian and in ourselves that we give space to our correspondent "Saucelito" to record this as a fact. We have so strenuously fought for able models and ship-shape rigs that we note the preference among our 'Frisco brethren with profound satisfaction. With their good example before us, we do not think the time very distant when the principles of sound design and hardy rig will so far obtain among the yachtsmen of the East that even the most inveterate champion of the sloop will thank us for our efforts in behalf of his conversion to something better.

YACHTING NEWS.

COLUMBIA YACHT CLUB.—At a meeting of this club, held at the residence of ex-Com. J. S. Baker, New York, March 4, some important features were incorporated with the sailing rules hitherto in vogue. Upon motion of Mr. John Frick, Secretary of the club, the following resolution was adopted: "That the regatta course hereafter be a triangular one; that open boats be allowed one man to every three feet of boat, with the exception of the owner, and one man to every seven feet of cabin boat, with the exception of the owner; that no one but a member of the club be allowed to sail a boat." In accord with this, the new course will be from the club house, foot W. 86th st., to and around a stakeboat off Edgewater, and another off Guttenberg, sail three times over. Monday, June 23, was fixed upon for the annual match. Ladies regatta some time in August, and the Champion pennant match in October. In the ladies' regatta at least one lady must be on board of each entry. The April meeting will be held at the above address, after that at the club house. Prizes for 1878 were distributed to the winners, as previously reported in these columns.

LAUNCH OF THE NORNA.—The finest and largest addition made to the American yacht fleet for some time past, was successfully launched, March 5, from the yard of C. & R. Poillon, Brooklyn. A full description of the schooner appeared in our issue of Oct. 24, 1878, so that it will only be necessary here to refer to the design of the schooner as a whole, in order to forestall the hasty critics who will rush into print, should they see *Norna* heel a little more than others when under sail. In the first place, she has not been laid down as a racing vessel, but as a comfortable cruiser, one which should have ample room below, a flush deck, moderate rig and ease as well as safety in a seaway, combined with reliable weatherly qualities. That the model combines all the elements necessary to attain these ends in a high degree is certain. Both her owner, Mr. Chas. H. Contoit, and her designer, Mr. A. Carey Smith, had their eyes wide open when they struck in her lines, and did not operate in the dark. Her owner is well aware that in order to secure the easy qualities he seeks, he must of necessity sacrifice a certain amount of initial statitical stability, and make up by ballast what he loses in narrow beam and an easy bilge. It is expected that *Norna* will heel slightly more under a breeze than the wide, flat-bottomed, sharp-bilged craft of the wretched *Mohawk* type, and we warn critics against too hasty declamation should the new schooner sail scuppers-to before the rest of the fleet, lest in their very ire they betray their want of knowledge.

If *Norna* will heel more at the outset than the beamy craft, she will not be found wanting in wind and sea; and we look forward to very satisfactory all-round qualities in her performances, and do not believe that her owner will have occasion to regret his choice of an easy sea-going form in preference to the hard bilged spar-breakers and pile-drivers, so much affected by the smooth-water school. The *Norna* has as neat a gang of rigging as one need see, the handiwork of Philip E. Low, whose name is a guarantee of his work among the owners of many a big one. Below, the quarters are very tastily fitted with the saloon amidships on the English plan. The joiner work is rich but not in the least gaudy, and the plumbing, of which there is much more in a big schooner than most would imagine, reflects credit upon Mr. Wm. Bishop, who modestly says that this is not the first craft he has had a hand at. *Norna* was launched with 25 tons of pig stowed, besides the 4 tons of wholesome lead on her keel. She floated exactly at the intended line: pretty good proof that Mr. Smith has got the designing of this class of vessel down pretty fine, and that the care bestowed upon calculating her elements was not in vain. The schooner will now be finished up inside and will make sail for a trial in some five or six weeks.

SEAWANHAKA YACHT CLUB.—The annual fixtures of this club have been settled upon as follows:

May 30 (Decoration Day)—Review of the fleet by the commodore. Starting from Tompkinsville, S. I., at half-past ten A. M., the yachts to pass in review before the flagship, then sail to and anchor off the Beach House, near New Dorp, for refreshments, returning about four P. M.

June 21 (Saturday)—Corinthian race, open to all yachts of recognized clubs; prize $150, to first, second and third class sloops and second class schooners. Prizes also to be given to members of the winning crews.

Two or more yachts to start in each class.

Annual Corinthian Cruise—Yachts will rendezvous at Glen Cove, L. I., July 8, starting next morning for Oyster Bay, and from there, as may be decided upon, to Thimble Islands, New London, Greenport, Stonington, Newport and New Bedford.

Lightship Regatta—Open to all first class sloops of recognized clubs, for Center Cup; value, $700.

Race to take place between the 15th and 20th October, as appointed by the Regatta Committee; course, from Sandy Hook Lightship to Cape May Lightship and return; three yachts to start or no race.

The club has under consideration the erection of a club house on Staten Island.

SOUTHWARK YACHT CLUB.—The annual meeting of the Southwark Yacht Club was held Monday evening, March 3, at their rooms, Philadelphia, when the following gentlemen were elected to serve during the season of 1879: Com., Joseph P. Kennedy, yacht *Spurt*; Vice-Com., Chas. Messick, yacht *Maid*; Rear Com., John Quinn, yacht *F. Lawrence*; Sec'y, Jas. M. Winterbottom; Treas., Isaac Sharp; Measurer, Wm. F. Roach; Steward, Geo. W. Carlley; Trustees—Isaac Sharp, Geo. W. Carlley, R. W. B. Lauer, F. V. B. Maxwell, J. T. Dallas; Regatta Committee—John H. Roach, Chm'n; C. R. Dougherty, Isaac Sharp, Wm. Clymer, R. W. B. Lauer. The meeting was largely attended, and the utmost interest manifested by the members. The club is in splendid condition in every respect, and expect to have over fifty boats in their spring regatta, due notice of which will be given, together with a list of the prizes. C. C.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

J. H. C.—The rifle is not made except in samples. It is not in the market.

HARVARD, Cambridge, Mass.—For trout fishing go down into Tolland County, Conn.

A. B. D.—When your earthen flower pots have been thoroughly soaked they will not leak.

E. H. L., Scranton, Pa.—See our advertising columns for gunsmiths who will choke-bore your gun.

J. H. W.—Can send you fourteen papers on boat and skiff building, or can procure you copy of Neilson's book on boat building on receipt of $1.25.

H. N. D.—For a second-hand boat go to Desmond, 37 Peck Slip, or to Geo. Roahr, foot of 135th st., Harlem. They will put you on the track of one probably.

ARCHER.—Would advise you to read Maurice Thompson's "Witchery of Archery." You can get much information from his article in *Scribner's* for May, 1878.

G. B. S., Poughkeepsie; R., Georgia; and F. W. H.—Will these correspondents, whose queries were answered last week, send their addresses to this office.

F. W. K., Milburn, N. J.—Where can I procure a copy of the last report of the New Jersey Fish Commissioners? Ans. G. A. Anderson, Fish Com., Trenton.

SUBSCRIBER, Stamford, Conn.—You can buy pigeons for trap shooting at Washington Market, this city. They cost fifty cents per pair. Blue rocks to be had there.

W. F. S., Memphis, N. Y.—Where shall I direct to have my pup's name registered, and what is the price? Ans. To John Munson, St. Louis, Mo. We believe there is no charge.

M. E. L., Frederick City.—Will you have the kindness to give me the address of some party of whom I could obtain beagle pups? Ans. Perhaps from W. L. Bradbury, Orange C. H., Va.

D. J. W., Wyoming, Canada.—To whom should I address a letter for information respecting homestead lands in Kansas? Ans. Write to A. M. Sommers, Land Commissioner, Emporia, Kansas.

X. Y. Z., Dauphin, Pa.—Is the salmon fishing reserved in Nova Scotia? Give name of any of the Commissioners of Fisheries there? Ans. Fitz Cochran, Chief Game Commissioner, Halifax, Nova Scotia.

E. K. L.—The cut of the Edgar barbless hook appeared in issue of Dec. 5, 1878. We took great pains to make out an index so that our readers might find such things without writing to us to hunt them up.

KAMP, Lockhaven, Pa.—Where can wild celery seed be purchased, and at what time and where should it be planted? Ans. We cannot give you the required information. Address American *Agriculturist*, New York.

E. G. J., Boston.—Please give me the pedigree of the pointer dog Ned, winner of first prize at the annual dog show in your city in 1869 or '70? Ans. There was no show held in this city until 1877. No dog named Ned won in that year.

C. B. V.—Vanderdecken's "Yacht Sailor" treats of seamanship; Kemp's "Manual," of seamanship and the construction of small yachts; Kemp's "Yacht Designing," of large yachts. Prices, $3.75, $8.50 and $25. Can procure you either.

W. R. L., Rushville, Ill.—I have a pointer pup six months old; it is no larger than one of three. Will not get fat. Do you know of any way to make him grow? He has plenty to eat. Ans. Try a teaspoonful of cod liver oil twice a day.

W. H., Philadelphia.—1. Have had three pasteboard concentrators shot through my gun in mistake. Will the use of concentrators damage a choke-bore gun? 2. What is the best way to wash a breech-loading shotgun? Ans. 1. They should not. 2. Use water.

E. M. E., Hancock, N. Y.—Can you tell me who imports and keeps for sale greenheart and other woods for making fishing rods in New York City? Ans. Address Lumber Dealer, northwest corner of Centre and Walker streets. He sells lancewood in half logs and greenheart in boards.

SUBSCRIBER, Baltimore.—There are Eley numbered wads which have on them the numbers 4, 5 and 6. They are used for convenience as follows: When the shells are loaded with No. 4 shot a No. 4 wad is used, a No. 5 for No. 5 shot, etc. Thus the shooter knows just what his loaded shells contain.

O. C. B.—For construction of centreboard for skiff, see paper sent you. Follow the proportions therein given. Make sail 12ft. on boom, 6ft. 4in. on gaff, 8ft. 6in. on hoist; mast, 2ft. 9in. from bow. Centre of centreboard when down should be perpendicularly under centre of sail. No skag or keel required beyond what you already have.

C. E., New York.—1. Can you tell me of any person I could stop with for a couple of weeks on the south side of Long Island, not far from New York? I want to be on the water so as to collect all kinds of shore birds. 2. Do you consider the sooty tern rare around these parts? Ans. 1. Address Dave Hart, Northport, L. I. 2. Decidedly so.

J. D., Jr., Erie, Pa.—I am in want of a book treating fully on rod making. Want the best work. Can you help me? Ans. No such specific work. Send to Orange Judd & Co., 245 Broadway, New York, for "American Angler's Guide," by Thad Norris, 2 vols., $5; or, buy Hallock's "Sportsman's Gazetteer," 909 pages, price, $3, for sale at this office.

L. O. T., Weybridge, Vt.—1. Can you tell me where I can obtain maps of Lake Megantic and the upper Connecticut region? Also map of Montana and at what price? 2. Do the Winchester Co. make an Express rifle? 3. What will kill the lice on my cocker spaniel pup? Ans. 1. Beers & Co., corner Church and Fulton streets, N. Y. 2. Yes. 3. Sapanule.

ED. H., Baraboo, Wis.—Will you please inform me through your "Answers to Correspondents" the way the split bamboo fishing rods are made? Ans. Several two-column articles describing the manufacture of split bamboo rods have appeared in our columns. The attentive inquirer had better refer to his files. We have no space for description in this column.

J. H. T.—If draft is no consideration, try a keel 4in. deep amidships on your Barnegat sneak boat, rounding off well at both ends. Sail of the standing lug pattern, 5ft. on boom, 3ft. 8in. head, and 4ft. on luff; latter at right angles to foot; mast a little over one-third length of boat from bow; mast, 1½in. at partners; boom, 1⅜in. at centre; gaff, 1⅛in. Taper both ends. Good clothes line for single halliards and sheet.

H. W. K., Prince George Co., Md.—1. Please recommend to me some reliable map of the White Mountains and the northern part of New Hampshire? Also, where could I get the same? 2. The correct number of shot in one ounce of No. 8 shot. 3. What would be the charge for a 14 gauge 7½ lbs. muzzle-loader? Ans. 1. Of J. R. Osgood & Co., Boston. 2. 399 of Tatham's, 375 of Leroy, Edgar & Co. 3. 3 drs. powder, 1 oz. shot.

C. F. N., Brooklyn, L. I.—I have a 12-bore, 30-inch barrel, muzzle-loading shot-gun, which does not shoot as well as it should. The bore along about midway of barrels, is from 1 to 2-100ths of an inch smaller than at muzzle and breech. Please tell me in your "Answers to Correspondents" how to bore it to be most effective for quail, rabbits and such? Ans. It needs reboring. A practical gunsmith will tell you how to rebore it.

ROB, Brookfield, O.—I shipped a dog to a certain State. The express agent told me that the charges would be $10. The dog was shipped C. O. D., less the express charges, $10. When the C. O. D. bill was returned, they charged $18.75. Can I recover the $8.75 that they overcharged? Ans. The extra $8.75 was probably the commission for collecting. Unless your original contract for $10 included the collection fee, you probably cannot recover anything.

S. S., Washington, Ind.—1. How would it do to breed a Gordon setter to a black Irish setter? What color would the pups be? 2. How often per day, and what would be the proper food for a pup three or four months old? 3. Please give treatment for distemper? Ans. 1. Very well, if both were good field dogs. The colors of the puppies would be black and black and tan, with possibly a red one. 2. Three times a day; bread and milk. 3. Distemper appears in so many forms that treatment must be governed by the particular case.

PAUL, West Boylston, Mass.—Why do young puppies from the age of six weeks to four months crave and continually gnaw old mortar or plastering? When I first noticed it I thought it was because they had not bones enough, but after supplying them with bones find they continue on the mortar just the same, at times leaving the bones for the mortar and returning to the bones. Ans. We do not know that as a rule they do. When they do, it is probably caused by either a desire for lime or the presence of worms in the intestines.

A. G. F.—For leeboard for 11ft. canoe, use ½ or ⅝in. hard wood Cut forward edge 18in. long; on bottom, 22in.; after edge, 6in.; and then cut up to upper end of forward edge; round off corners. Hang to side of bot by driving two staples, one over the other, two inches apart, near the upper corner of board. Slip these over suitable iron thole pin, which will keep the board in place. Have staples on opposite side of board also, so that it can be shifted over to pin on other side when you go about. Pins, 5-16in. diameter and 3½in. long. Ship them same as thole pins. Board should hang about under centre of sail, if convenient to reach.

CANADIAN, Bowmanville.—1. A certain authority on shooting (long range) says: "A rifle recoiling without hindrance will throw a bullet higher than if held firmly to the shoulder." We have a theory that a firmly held rifle will throw a shot higher on the target than a loosely held rifle. Which is the correct theory? 2. What is the smallest figure that an archery outfit can be got for, both gentleman's and lady's, and at the same time be articles that dependence can be placed upon? 3. What are the symptoms of a too lightly grooved long-range rifle? Ans. 1. Will have an article on the subject in a few weeks. 2. Send for catalogues of the archery goods' dealers who advertise in our columns. We have already published a good deal about this. In archery the best is the cheapest. 3. "Unaccountables" during the score.

F. L., Flemington, N. J.—I am a watchmaker. Do you know of any good place in Texas for me to start? Could you give any names of persons that live there that I may correspond with? Where can I get, and how much for, the latest small map of Texas? What part of the State do they have trout? Are they small or large ones? Could you give me the name of party "J. G." and address in last week's paper on Texas. He talks as though he would take an interest in a poor man and "thet's me." Ans. 1. We should think any of the thriving German towns west of San Antonio a good field for a watchmaker. 2. You might correspond with S. B. Buckley, State Geologist, Austin. "J. G." has positively forbidden us to give away his name. Colton & Co., William street, N. Y., publish a map of Texas; 50 cents we think is the price. Texas "trout" are bass. There are a few speckled trout in the extreme northwest corner of the "pan-handle."

S. Y. C., New Orleans.—Time allowance should vary for size and length of course. Difference in size implies difference in power, and the larger boat must allow the smaller time, so that they may race upon an equalization of power. The longer the course the greater must the amount of time allowed be, for excess of power over a long distance is a greater advantage in point of time than over a short distance. In practice we only work up to the theoretical demands in a very rough and often unjust way. In place of size, length only is taken by all clubs in the country, excepting the New York and Seawanhaka yacht clubs. This is done simply to obviate the labor involved in calculating actual size, though one or two clubs have attempted to justify length measurement in theory; something that cannot logically be accomplished however. See our back files for articles on this subject. Second, the length of course is often disregarded, and so much per foot allowed without regard to the number of miles sailed. A course may be 15 miles, with a leading wind all around, yet if one or two sides require beating up, the number of miles sailed may be half as large again. It is common to overlook this difference, and to figure upon a fair wind all round, to the manifest injustice of the smaller boat. The objection to mere length measurement is modified to a great extent as long as boats of the same type sail together, such as those of your club. Its unfairness will appear in strong light when sailing a sharpie or a narrow cutter against a sloop. For your purposes, length on water-line, with one-third of any overhang added, will form a fair basis. For estimating distances sailed, add all straight courses; and on those where the wind is dead ahead, allow once and a half the actual distance. If long and short legs can be made, allow less in proportion. The total will give a good approximation to distance sailed. The judges should be criterion as to this. Allow time as below; or, if you are content to follow the custom in northern waters, take direct distance only. This gives general satisfaction, because custom has hardened yachtsmen to the errors committed, also because it is more readily understood and applied. Classification should be adapted to the boats of the club, so as to limit the number of classes, and yet not have boats differing much in size of sail in the same class. The time you allow—3, 4, 5 and 6s. for over 22ft., from 20 to 22ft., 18 to 20ft. and under 18ft.—is only about half as much as generally allowed in the North, and is hardly enough. We send you by mail one of Herreshoff's time tables, which are the best of the kind They are too long to print. You can compare your rules with the table at leisure.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.
[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 13, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

STUBE AND ACKHURST.—We do not suppose that the worthy and well-known gentlemen whose names are here given will recognize themselves as the "Dr. Stutce" and "Mr. Acklinert" whom our paper mentions as having spoken on the subject of migratory quail before the Brooklyn Gun Club a few days ago. Neither do we suppose the friends who have known them for many years will recognize them by those names. Our printer's devil however seems satisfied; and as long as he is suited, he will doubtless maintain that none of us ought to complain. Nevertheless we tender our apology to Dr. Stube and to the veteran naturalist, Mr. John Ackhurst, of 32 Nassau st., Brooklyn, whom we advise that the best thing he can do is to capture that printer's imp and put him in pickle as a specimen.

FOREST AND STREAM TOURNAMENT.—Work began with the most brilliant promise and with the best of feeling on all sides, and the keenest desire to win as well. The score of 478, made by the Zettlers' first team on the first night, has never been equaled, and the New York team made a bold bid with 468 in the possible 500. In the next issue of the FOREST AND STREAM the match will be fully reported in all its details.

The discretion left to the captains to fix the exact terms of carrying out the match was wisely used, and precisely what was done will be shown by the record from the Secretary, published elsewhere.

BACK AGAIN.—That bumble-bee man has come back from the West, and now wants to know if he can find good trout fishing in the Boston "frog pond." Yes, bless his soul! all the bobbing he wants. But he must wait until the 1st of April. Trout and fools are both out of season until that date.

—Fred Beverly's lecture before the Long Island Historical Society on Tuesday night last was very fully attended. Subject: "Life Among the Caribs," illustrated with stereopticon views. Mr. Ober (Fred Beverly) spent two years among the Windward Islands, and the information which he gathered here, and is ready to impart, is of the most novel and interesting character. Natural History Societies can find no greater attraction than such lectures as he can give. By the aid of a stereopticon he can magnify a small bug to the size of an elephant, so that the nearest-sighted persons in the room can see it.

GROUSE FOR NEW ZEALAND.

The United States have already supplied New Zealand with salmon; now we have sent a lot of pinnated grouse. What next?

We are glad to see that the shipment of these birds recently made from Kansas has reached San Francisco in fairly good order, and has been started on its long sea voyage. Mr. Creighton's letter, in another column, sufficiently explains itself. It is to be noted, however, that if the pinnated grouse had already penetrated to California, as some of our correspondents would have us believe, it is strange that a cage full from Kansas should excite so much interest and curiosity as is indicated by the closing paragraph of Mr. Creighton's letter.

FOREST AND STREAM has been instrumental in sending several lots of pinnated grouse to England, including a shipment to the Prince of Wales; but all died sooner or later, we believe. The fate of the New Zealand shipment will be watched with the greatest interest. Unless something be done before long to protect this species, it is not altogether beyond the range of possibilities that we may be obliged in the years to come to send to New Zealand for birds with which to stock our own prairies once more.

THE BERLIN FISHERY EXPOSITION.

THE Deutsche Fischerei Verein has made rapid advance during the few years of its existence and has had a wide influence in promoting the developement of fish culture in Germany.

The exhibition of the Verein in 1873 was very effective in awakening a public interest in fish culture, advancing the science of pisciculture, and securing needed protection for the fishing industries. Since that date, what was then an infant society has increased very largely both in membership and influence and now possesses facilities and resources for conducting an exhibition on a much grander scale. We have already published at length, in our issue of Jan. 23, the prospectus of the International Exposition of Products and Implements of Sea and Fresh Water Fisheries which the Society will hold at Berlin in April, 1880. A glance at this prospectus will show that the proposed exhibition will be on a scale fully commensurate with the importance which this department of commercial industry and political economy is assuming. Provision is made for the display and comparative study of all kinds of fishing methods, tackles and utensils; machinery for working up raw materials; apparatus for pisciculture, including all kinds of appliances and implements for artificial breeding; models of hatching houses, etc.; methods of conveying live fish, eggs, fry, etc. There will also be collections of the fish of every quarter of the globe, of birds, animals and insects which are injurious to fish and fish spawn. Scientific investigations will be made regarding herbaric and aquatic fauna and everything pertaining to this important branch of fish culture. It will thus be seen that if the plan is carried out with the fullness of detail set forth in the circular, the visitor to the Berlin Exposition will have rare facilities for the exhaustive study of every branch of his science. An opportunity will also be afforded to different nations of bringing their fishery products to the attention of the world; and to dwell upon the beneficial results likely to accrue from such a commercial exhibit is to insist upon commonplaces. Whether or not the United States will be suitably represented or not will, of course, depend upon the action of Congress. It is due that that body should give the subject the attention it deserves and a suitable appropriation be made.

Mr. George Shepard Page, No. 10 Warren st., this city, who is a Corresponding Member of the Deutscher Fischerei Verein, has been instructed to act as the medium of the Verein in this country and will give attention to any correspondence which may be addressed to him upon the subject.

AGAIN TO THE FORE.

THOUGH comparatively a new organization, the Seawanhaka Yacht Club has from the very day of its inception pursued a policy at once so sound and liberal that its future has always been bright, and a prosperous carreer assured it. Organized a few years ago by yacht owners whose only aim in the formation of the club was the concentration from all sources of the progressive element of the sport and the foundation of a club in which active sailing and a mastery of naval science and seamanship were the objects primarily to be attained, it followed that the growth of the club in numbers and popular favor made rapid strides, and that it soon took rank in standing and *esprit de corps* with the time-honored association whose records lead back to *anti-bellum* contests on the deep. With its pretty burgee flying at the mast-heads of some sixty sail, and its roll footing up over one hundred and fifty members—most of them on the active list and masters of their vessels, from hawse-hole forward to taffrail aft—no wonder that the yachting public and the outside world have learned to look to them for the lead—for the course to sail the ship of club administration safely to the haven of success. While our Eastern friends may fairly claim the honor of having first introduced Corinthian matches among the small fry, the credit of inaugurating the same system upon a larger scale and carrying it through to the brightest realization of the most sanguine expectations, will ever form a conspicuous leaf in the array of laurel wreaths bestowed by a discriminating public upon the leading spirits of the Seawanhakas. To them we are indebted in no small measure to the present activity and prosperity among the Corinthians of America; to them we owe the most influential steps in favor of the liberalization of our matches and the raising of our regattas from mere family affairs to open races in which the flyers of all clubs are equally welcome at the line. To their energy and generous efforts we must ascribe the steps taken to abrogate oppressive laws and odious regulations, the recognition by the Custom House of yachts of less than twenty tons, the countenance of ocean matches, the dissemination of knowledge relating to the technical phases of the sport, and, last but not least, they have placed themselves squarely upon the record—thanks to the leading members, of whom the club may well be proud—in favor of the inauguration of a measure as prominent for its liberalism as for its praiseworthy unselfishness and its direct bearing upon the formation of a valuable nucleus of technical acquisitions which will bear potentially and healthily upon the development of the American model of the future.

The proposition of the Seawanhaka Yacht Club to enforce upon owners of winning yachts a deposit of their vessel's "lines" with the club is a move which receives our hearty commendation, and one that will add immeasurably to the prominence already taken by this club among its many sister organizations, and a step that will redound to the fame of the prime movers of this innovation. As the leading exponent of the sport in America, and in sympathy with all attempts to lift yachting to the highest standard, the club has our best wishes for the bright future which is certainly in store so long as they follow the course the tact of their leaders has plotted on the chart of the future.

ORNITHOLOGY AND ICHTHYOLOGY.—Dr. Elliott Coues and Prof. G. Brown Goode, both of the Smithsonian Institution, are two of the hardest students and most prolific workers in America. Each is now preparing a mighty and comprehensive Bibliography of his own specialty. We have referred to Dr. Coues' work before, and published a card of his in our issue of Jan. 30, inviting some co-operation on the part of our readers. To-day we print a similar card from Prof. Goode; and as what he says outlines the general plan of both works, those who are interested and wish to assist in either specialty, will be enabled to act intelligently by examining the context. Prof. Goode says in a private letter, from which we quote:

"I propose to call my work an 'Index Bibliography of American Ichthyology.' It will make a book of some 600 or 700 pages 8vo. It will give a full title of every book (in every edition) and every article in periodicals relating to fishes, fisheries and fish culture, together with a short collation of each one which communicates new facts. I have now some 3,000 titles, and expect to run up to about 5,000 or more. The work will also give page references for every description of new species or genera, and references to every published figure or cut of an American fish. It will be arranged in sections. In Section 1 will be given an alphabetical list of authors, with their papers arranged chronologically. In Section 2 the same papers will be arranged by years as in Coues' Bibliography in his 'Birds of the Colorado Valley,' showing the growth of ichthyological knowledge from year to year. Then there will be a systematic catalogue, grouping together the works on descriptive ichthyology, on anatomy, on physiology, on geographical distribution, on the fisheries, on angling, on fish culture, on legislation of the fisheries, on embryology, etc. Finally, will be an index of zoological names, which will refer to every zoological name used for American fishes, and its introduction into literature. I hope to make the book useful to all writers on, and students of, fishes, by enabling them to find at a glance what has been written on any particular topic, or by any one writer. Take for instance your own writings: it will show at once exactly where Mr. Hallock has written of the sea trout, the kyack, the capelin and cod fisheries of Labrador, the fisheries of the Restigouche, legal protection of game fishes, etc.; it will show the page where Cope first described *Thymallus tricolor*. It will give reference to the only published figure of that fish; the one in FOREST AND STREAM."

With this exposition of Prof. Goode's requirements we take much pleasure in appending the circular which he has addressed to our correspondents; and we have no doubt that most of them will readily comply. We presume Mr. Goode proposes to furnish an alphabetical list of the remaining pseudonyms:

UNITED STATES COMMISSION, FISH AND FISHERIES,
SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., March 3, 1879.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Your paper has contained many articles signed only by initials or pseudonyms. It is much to be regretted that so many of your contributor prefer to conceal their names, for recorded facts have little value unless authenticated by some reliable name. Many of these articles are important contributions to knowledge, and I hope that their authors will comply with the request which I am going to make, and thus place their observations upon a permanent footing in geological literature.

Send you a list of the signatures for the first four letters of the alphabet I wish to invite the writers who have used these signatures to send me their real name for use in the Bibliography. A postal card addressed to me at the Smithsonian Institution will be sufficient. I should add that I have included in this list not only the contributors to FOREST AND STREAM, but those to the *Rod and Gun* and the *American Sportsman*. This list will be followed by others, but I shall be very glad to have any writer communicate to me his real name, whether his signature is included in this list or not; and if a list of his articles could also be sent, it would greatly facilitate the work.

G. BROWN GOODE.

A., H. C. A., J. A., Forest Aisle, William Aitch, Al Fresco, Alleghany, Alosa, Amateur, Angler, Amateur Angler, Anglo-American, Apachee, Archer, Asa, Au Sable, B. (several under this), B. Y. B., F. B., B. O. B., G. B., J. H. B., L. W. B., R. F. B., R. S. B., W. N. B., Balsam, Ian Beg., Bellerophon, Bistowy, Boz, B. L. Z. Bub, Bob, Bocepa, Boston, A. Brick, Buck Bass, Black Bass, Buncombe, A. H. Crampton, Crusoe, D., C. U. D., D. L. D., J. E. D., G. D., T. S. D., H. W. De L., Dexter, Dick, Doctor Druid, E., W. C. E., W. W. E., Eric.

GAME PROTECTION.

OPINIONS REGARDING CO-OPERATIVE GAME LAWS.

BOONE, Iowa, March 2, 1879.

MY DEAR MR. HALLOCK:

I want to thank you, personally and heartily, for the table and recommendations on the subject of co-operative game laws in your last issue. I had been engaged last week in writing an article on game preservation for a new edition of a stereotype popular work on this subject of game and the gun that so interests all. Saturday night had come, and I laid down my pen at the heading, "Co-operative Legislation," when this morning's mail brings me your table and suggestions. It falls in, in almost every respect, with my own views, and I am sure that you have the thanks of every thoughtful gunner in the country for the paper, and for the pains it has cost to prepare it. It comes in most opportunely for my own help, which I know you will not grudge me.

One feature of your plan cannot be introduced west of the Mississippi, and that is trapping. Here in Iowa we have just had our contest on that point, and the war has been "to the knife." Oh, sir, if you could see the slaughter of our grouse that I have seen; if you could see the piles of traps high as a story and a half house and thirty feet at the base, stowed away at point after point in a single county, ready for winter use; if you had seen sleigh load after sleigh load of our beautiful birds taken in a single fortnight from a forty-acre field, by men from abroad, for sale abroad; if you had seen 10,000 birds shipped for a single dealer in a single county in a single season; if you had seen the waste and scarcity of grouse for two years after in that region; if you had multiplied this 10,000 by 40, for slaughter and shipment from other points in the State in a single season, you would not wonder that Iowa had risen up, though tardily, on the whole miserable business and enacted that trapping game shall be no more in this State for any purpose, at any season.

It makes one's blood boil, this slaughter without limit in the past; this readiness to slaughter to the last bird on our prairies in sacrifice to the *auri sacra fames*—the accursed thirst for gold. Thanks to the American Express Co. for its late order to its agents forbidding shipments contrary to the laws of a State. We shall now have no more of the gentle, lifeless birds brought into our stations at dusk in flour sacks, barreled up and marked "poultry," and hastened on to the expectant accomplice at Chicago, New York, Boston, sold by the pair or the dozen, but received by the ton!

Do you know what trapping prairie chickens means, friend Hallock? Let me tell you from the very ground! In October our farmers enter their cornfields for husking. They do not feed their horses grain for weeks while in this work, but suffer them to help themselves to the corn as they pass along the rows. Of course, only a part of every ear the horses pluck off is eaten; the rest is scattered on the ground. From this time on the cornfields become the stated resort of the grouse for their morning and evening feed. Up to this time it has been the wheat stubble, and between the two their old skill of foraging on grass seeds, buds and berries is lessened, and they seek these only as variety. When, at last, the snow covers the ground and the cold is at its height, they are literally shut off from all their food, without the resources they had before the time of stubble and of corn. They must eat something; so far it has been corn; it must be corn or nothing now. And now the trapper sees his time and the gold beyond it. Alighted on fence posts, on shrubs or trees, the poor grouse sees a single ear protruding above the snow—on a box, indeed, but corn; and all that is in sight. He flies to the ear; lights on the board by its side; sinks through; the board returns to its place, and the proud but hungry bird is a prisoner. Another comes—he, too, falls through; another and another, till perhaps a half dozen are pent up in the slatted prison. All over the fatal field other traps are set, other groups are imprisoned, and often, in the winter nights and fierce storm—thermometer at 20 deg. below—sleep the sleep of the frozen, the sleep of death! Not for the man's own use; not in thought of friend of the town; not in considerateness of the increase; but for men 1,000 miles away, and to the last bird of the district that will enter the fated pens. The voice of Iowa, of Nebraska, of Minnesota is "Death to the trap and woe to the trapper!" They have left us almost stripped of our chosen birds already, and no compromise will ever be entered into with them. With or without a compromise they would still ply their pitiless trade, in season and out of season, so long as a bird remained. It became with us simply a question of "No trapping or game extermination."

You have most happily adapted your open season to the singularly uniform breeding habits of game in all sections, and to the average of the State laws. BOONE.

NEW YORK, March 8, 1879.

EDITOR FOREST AND STREAM:

I was surprised to find, under proposed amendment of the game laws offered by the N. Y. Association for the Protection of Fish and Game, the alteration of the statute regarding ruffed grouse in N. Y. State; and astonished at the temerity of the learned body, in appointing the 15th of October for the opening of the woodcock season. That the close time pertaining to the latter bird should be extended until the 1st of September is indisputable if we would consider the young ruffed grouse shot unlawfully during August; but to prohibit shooting until the 15th of October displays an egregious ignorance of the habits of *Philohela minor*. By the time the association would kindly allow no cock shooting the main flight has been known to pass in their southern migration the parallel of 41 deg. N. Lat. Admitting that during the average climatic season the principal body of woodcock fly between the 15th and the 25th of the most genial of our autumnal months, are we to be debarred from killing, in connection with our grouse shooting, these fully grown, well developed, magnificently feathered birds—they of the gray foreheads and pink legs—that come straggling in from their unknown moulting retreats even before October.

Again, consider the ridiculousness of extending the grouse season a month later than it now is. Has not the experience of these protectionists—if any they have had in this direction—evinced to them that this grand bird, so strong of wing, so cautious and so frequently successful in avoiding both dog and gun, that he is amply competent of self-protection after Sept. 1st; and that a month later scarcely a flock is to be discovered, as is shown by the solitary nature of this woodland bird which loves its secluded wiles so well.

Laws, however, we must have should we desire shooting at all, or sufficient time allowed us to shoot—laws, that while protecting the young bird dependent upon parental solicitude and time for reproduction, do not prohibit sport to the sportsman, and offer immunity to cockney gunners and market-shooters when the due season arrives for enjoying it; but laws that offer alike protection to the birds as well as birds to the protectors.

In conclusion I would briefly state that the terse, yet exhaustive treatise regarding the amelioration of the present game laws and the reasons thereof, in your admirable journal of 27th of Feb., expresses an epitome of the desideratum most keenly felt; and that it may be so considered and expediently acted upon by those who have the power to arrest the depletion of our game is the heartfelt wish of

FRANK WARWICK.

LAKEVILLE, Ct., March 6, 1879.

EDITOR FOREST AND STREAM:

I want to thank you for your article in issue of Feb. 27, "Co-operative Game Laws." It certainly is a move in the right direction. As our game laws now stand they are practically of very little value in the wilder localities from the greater ease with which they are evaded in such places and the reluctance of the residents to prosecute for violations. A uniform law, it seems to me, would be much more easily enforced, and unless enforced any law is useless. I am satisfied that such a law as you propose would afford much more real protection than the most stringent law does at present, and I for one hope the matter will receive the attention of sportsmen and law makers till we at least have a uniform open season for States in the same latitude. W. H. W.

MORRIS CO., N. J., Feb. 29, 1879.

EDITOR FOREST AND STREAM:

I wish to express my extreme gratification at the interest you are developing in your valuable paper in reference to game protection, and more especially quail protection, and I hope you will "go on with the good work" until the whole sporting fraternity is roused to active measures in this direction. I claim that the true sportsman is not the greatest enemy of the quail, but the nefarious pot-hunter. In the section from which I write all the amateur sportsmen would not, in several years, destroy as many quail as these vampires slaughter in a single season;—these scavengers, who frequently, to my knowledge, leave legitimate occupations to engage in this nefarious business because more lucrative; who hunt not merely twice or thrice in a season, but day after day the season through, pursuing their prey with untiring energy and unerring aim, and who, as your correspondent, "Sentimental Shooter," suggests, "gives 'em both barrels settin',"—these are the birds of prey that are "depleting the country of the choicest game," and the worst feature of it all is that there is apparently no remedy for this despicable business. Legislation evidently cannot prevent it. "Sentimental Shooter" says, Send them the FOREST AND STREAM, and thereby educate them to a higher "sportsmanlike sentiment." To this I would say amen with all my heart. I wish your paper could be put into the hands of every man in the country who handles a gun or follows a dog, for it cannot fail to be a power in elevating the "moral tone of the hunting field." But the difficulty is, these gentry do not read the FOREST AND STREAM, and indeed do not care to, for if they did they would not be guilty of practices so contemptible. INDIGNANT.

MANCHESTER, N. H., March 5, 1879.

MR. EDITOR: We had hard work to get our game laws as good as they are. We wanted to do just what you propose, or nearly so—make all shooting begin the first of September, except upland plover, which leave us about that time. But the pot-hunters, who want to shoot for the Boston market the first of July, fought us hard on woodcock, and told our Solons that they left the north part of the State before September, and bullied, or "bulled," them into believing such a truly "cock-and-bull" story! And so we had to compromise on August. This is all wrong, as they will then shoot ruffed grouse at the same time, if they can do it without being found out; and if Massachusetts and other neighbor States don't go back on us, we may get September fixed for the beginning of all shooting yet, which is as it should be. We altered our trout law to conform with Massachusetts and Maine, but they showed signs of altering theirs the other way. There is not one spring in a dozen where a trout can be caught in New Hampshire before May, though I well remember filling my basket till it "slopped over" the 23d day of April, 1841. I had to hold the last ones in. We allow fishing through September for the anglers in Mutagog and Parmachene, where the trout spawn late. Nobody in the south of the State ever thinks of fishing after the shooting season has begun. We might have said the 21st of September, as they have in Maine, but nobody ever remembers exactly any day of the month, except the first and last, unless they have a note to pay at the bank, and fishermen are not apt to be troubled that way! I like your simple code of game laws hugely, and wish it could be adopted all over the country. I never believed in summer shooting, and think Frank Forester perfectly right in that matter, as, in fact, he was in almost all things relating to sport.

Yours most truly, SAM'L WEBBER.

EXPORTATION OF QUAIL.—Concerning the exportation of quail, the letter to which we have referred is as follows:

SAN FRANCISCO, Jan. 25, 1879.

F. P. BAKER, ESQ.:

Dear Sir—The cage came through all right, and if the top of each compartment had any soft substance on which the birds could have struck their head, I don't think any of them would have died. Three died on the way, of which two birds were brought here.

In Wells, Fargo & Co.'s depot the noise, bustle and disturbance killed three more, and one died after I got them on shipboard on Saturday. Up to a late hour last Tuesday, when the steamer sailed, there were no more deaths; and I adopted every possible precaution to insure their safety.

I paid the butcher to attend them, and gave the captain a bonus to pay him on arrival, if all went well; put gravel and wheat on board, and asked two New Zealand friends of mine returning to the colony to look after their welfare. The only difficulty I foresee will be the heat in passing through the tropics; but this will not last long, and they will have been accustomed to confinement long before that. I think your estimate of saving a dozen is likely to be correct; possibly more will get through. I shall, however, advise you fully of the result.

I also forwarded your letters to the Society in Christ Church, New Zealand, and a copy of the printed directions, which was most considerate on your part.

Should they arrive safely, no miscarriage in the matter of releasing the birds will happen. To guard against accidents I have also arranged for telegraphing to the society as soon as the steamer touches the first New Zealand port.

The arrival of the birds excited a great deal of interest here, and I have been written to from Virginia City on the subject. If I can at any time, or in any way, do you a service, pray command me. You have laid me under lasting obligations in this matter, which I may some day have an opportunity of acknowledging.

ROBERT J. CREIGHTON.

MAINE.—The following is a brief synopsis of the laws passed by the Legislature of Maine, which adjourned on the 5th inst., relative to fish and game: "The use of weirs is limited to one-eighth of the channel of any river. The annual close time of lobsters for canning purposes is fixed from August 1 to April 1, and no lobsters less than 10½ inches shall be sold or exposed for sale from August 1 to April 1, under penalty of $5 for each lobster. Fishing for porgies with steamboats and seines was further restricted by prohibiting such fishing in bays and harbors the entrance to which is two miles wide or less. Plover is omitted from the list of birds protected. The fishery bill of 1878 was amended, changing the close time of land-locked salmon, togue and trout from October 1 to May 1, except in St. Croix River and Kennebec County, where it shall be from September 15 to May 1; for bass and perch, from April 1 to July 1, providing, however, that during February, March and April citizens may take such fish for their own use.

NEW YORK ASSOCIATION.—At a regular meeting of the New York Association for the Protection of Fish and Game, last Monday evening, the committee which had been appointed to draft a new State game law, reported the bill which fixed the opening of the season for grouse, quail, woodcock, snipe, hares, rabbits, squirrels, etc., at Oct. 15. Some discussion developed a great deal of opposition to putting the date so late. The next important point was in regard to having in possession game after the close of the season. The date fixed was the 1st of February, which allows one month to dispose of the stock on hand. Wilson snipe were also added to the list of birds entitled to protection, and a general penalty of $25 for each offence was fixed, instead of a penalty at the end of each section. A number of amendments by a committee appointed to confer with a like committee of the Fish Culturat Association, were adopted, to the effect that no lobster less than ten and a half inches in length, no shad less than one pound, or blue or weak fish less than one-half pound shall be exposed for sale, under the penalty of $25. There was also an amendment intended to protect dealers, who, without intent to evade or defy the law, might innocently receive consignments of fish out of season. The amendment was amended so that dealers so circumstanced will be relieved of the penalty by sending the fish back from whence they came as soon as they are received. Mr. Hallock, who was one of a committee of three appointed in 1875 to prepare a report on the best method of unifying the game laws of all the States, presented the report, which was filed.

IMPORTATION OF MIGRATORY QUAIL.—Parties wishing to import these birds will find full information in the following letter:

BOSTON, March 3, 1879.

EDITOR FOREST AND STREAM:

From letters I have received I judge that my remarks in a previous communication are not fully understood. I write to make them more clear. Mr. Braun, of Messina, Sicily, offers to furnish migratory quail at the following rates, delivered on steamer for New York at Messina:

Not less than two cages of 100 birds each, $20 per cage, U. S. gold.
" " " five " " " " " 19 " " " "
" " " ten " " " " 18 " " "

I am about ordering some birds for my own section, and would be pleased to order at the same time for any others who desire to import. By thus uniting the orders, each one will get the benefit of the discount allowed by Mr. Braun for the whole quantity ordered, whatever that may be, and each one (except myself) will thus avoid the trouble of correspondence and of attending to trans-shipment and custom house entries at New York. As I have this to do in order to get my own birds, it is small additional trouble to do it for others at the same time.

In conclusion, I say that I take no responsibility in this matter, beyond that of promptly forwarding the money and orders received to Mr. Braun, and of attending to the forwarding of the birds to their respective owners upon their arrival in New York. I have no pecuniary interest in the importation, but am simply giving to the public the benefit of such information and facilities as I have for procuring the birds, with the desire that others may unite in sufficient numbers to secure the speedy introduction of the birds into our country in quantities large enough to give the experiment a good chance of success. Mr. Braun will be instructed to mark each cage with the name of its owner. Every man must take his own chance as to the condition in which the birds reach him. The cage that is marked with his name is the one that will be sent to him. Previous shipments have arrived, with the birds healthy and in good order. They appear to make the journey without injury. There is no duty to be paid upon the importation.

HORACE F. TOBEY,
17 Oliver street, Boston.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT
For the Short-Range Championship of 1879

First prize to be ten monogram medals, presented by the FOREST AND STREAM AND ROD AND GUN. Open to teams from any organized rifle club.

Conditions—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams may furnish there own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Ten dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. The match to be governed by the rules of the N. R. A. relating to teams.

In addition to the teams named, the Centennial Team from Arnold & Constable's establishment entered at the eleventh hour, and were given place on Saturday evening:

New York, Feb. 22.—A meeting of Captains of amateur rifle clubs was held at Conlin's Gallery this morning, pursu-

ant to the call of the FOREST AND STREAM Association, to take action on the proposed tournament. The following clubs were represented: Seppenfeldt, Hellwigs, Empire, New York (2 teams), South Brooklyn, Newark, Catholic Institute of Newark, and Zettlers (2 teams). Dr. Dudley, of the Empires, was called to the chair, and F. J. Donaldson, of the N. Y. R. C., acted as secretary. The following teams entered for the tournament: Seppenfeldt, Hellwig, Empire, New York 1st and 2d teams, South Brooklyn, Newark, the Catholic Institute team of Newark and the Zettler's 1st and 2d team. Ten team in all.

The subject of targets was next in order, and, after discussion, it was moved and seconded that a committee of three be appointed to decide upon the number of targets to be used for each competitor, and Messrs. Conlin, Zettler and Hellwig were appointed as such committee. Carried. Moved and seconded that each club select a member, not shooting on the team, to serve as referee during the shooting of their club, and that the referees of the two clubs shooting during one evening select an umpire, not a member of either club, to settle all disputed points of that evening's shoot. Carried. Mr. Banks, of the FOREST AND STREAM, desired to know whether their trophy should be one club badge or made into ten individual badges. Moved and seconded that the offer of ten individual badges for the winning team be accepted. Carried. Moved and seconded that the captains of the teams in their order of merit shall select which prize they shall take after the first prize has been won; but the team winning the first prize shall not have such privilege until all the others have selected theirs. Carried. Moved and seconded that the time limited for entries shall close on Thursday, March 6, and the tournament shall open on Monday, March 10, at eight o'clock P. M. Adopted.

New York, March 6.—An adjourned meeting of the captains of amateur rifle clubs was held at Conlin's gallery this evening. Present, Seppenfelt, Hellwig, Empire, New York, first and second team; South Brooklyn, Newark Amateur, Catholic Institute of Newark and Zettlers' 1st and 2d team.

After reading minutes of the previous meeting, a call for additional entries was made. None appearing, it was moved and seconded that the motion adopted at the previous meeting, closing the entries on Thursday, the 6th inst., be reconsidered. Carried.

Moved and seconded that the limits for entries be closed at 10 o'clock on Saturday evening the 8th of March. Carried.

The committee to whom was referred the subject of targets reported that they had adopted a movable screen to be used behind the target to record the number of shots, and that, in their judgment, one target for each man who shoots would be enough. The report was accepted.

Moved and seconded that the names of members of teams be handed in before 10 o'clock P. M., Saturday, March 8. Carried.

Moved and seconded that the gallery be in possession of the team shooting, the captain of the opposing team and the umpire. Carried.

Moved and seconded that in case of disputes by referees as to the value of a shot made, that the shooting be stopped and a decision rendered by the umpire before continuing. Carried.

The following resolution was offered, and on motion adopted, to wit: "No member of any team will be permitted to rest any part of his body against or upon any support, nor is it allowable to place the stock of the rifle under the coat, vest or suspenders while shooting, and any shot made in that manner will be counted a miss."

It was then moved and seconded that the captains draw for positions or time of shooting. Carried. The drawing resulted as follows:

Monday evening, 1st position, 1st team N. Y. R. C.; Monday evening, 2d position, 1st team Zettlers; Tuesday evening, 1st position, Seppenfelts; Tuesday evening, 2d position, Hellwig; Wednesday evening, 1st position, 2d team N. Y. R. C.; Wednesday evening, 2d position, South Brooklyn; Thursday evening, 1st position, Catholic Institute of Newark; Thursday evening, 2d position, Empire; Friday evening, 1st position, 2d team Zettlers; Friday evening, 2d position, Newark Amateur.

Mr. Conlin informed the meeting that in addition to the ten badges given by the Forest and Stream Association, that the following prizes had been offered, with a prospect of more to follow: Winchester Arms Co., new model rifle; Shoverling, Daly & Co, Ballard; Remington Co., Remington. The Union Metallic Arms Co. are to send a prize, etc., etc., etc.

Moved and seconded, that in case of a tie (in accordance with the N. R. A. rules) that the teams which tie shoot the tie off by teams. Carried.

Moved and seconded that a committee of three be appointed to receive entries and team members' names. Carried.

Messrs. Conlin, Duckworth and Ward were appointed such committee.

The minutes were read and approved, and on motion the meeting adjourned *sine die*. F. J. DONALDSON, Sec.

MASSACHUSETTS—*Boston, Walnut Hill, March 8.*—Winchester rifle match, 200 yards; wind steady and light clear; 38 entries; best scores:

J N Frye	4	4	5	4	5	5	5	4	5	4	3	5	4	5	5—89

BOSTON MAMMOTH RIFLE GALLERY.—The regular monthly prize shoot for March has opened with some very brilliant shooting for the first week. The following is the summary; 150 feet, possible 40:

G Lamb	5 5 4 4 5 5 5 5—38	W H Preston	4 4 5 4 4 4 5 5—35
A L Eames	4 5 4 4 5 5 5 5—37	D F Richardson	5 4 4 4 4 5 5 5—35
D F Small	5 5 4 4 4 5 5 5—37	Everett Clark	4 4 5 4 4 5 4 4—34
W Bradford	4 4 5 5 5 4 5 5—37	H Lowell	4 4 5 4 4 5 4 5—35
G E Everett	5 5 5 4 3 5 4 5—37	W H Harrison	4 5 4 5 5 4 4 4—35
E S Tobey, Jr.	5 5 4 4 3 4 5 5—36	E C Fales	5 4 4 4 4 4 4 5—34
Frank Hollis	3 4 5 5 4 5 4 4—36	K R Tuttle	3 5 5 4 4 5 4 4—34
J J Dunne	4 4 4 4 5 5 5 5—36	G H Bent	5 4 4 4 4 4 5 5—34
E W Archer	4 3 4 4 5 4 5 5—35	E B Arnold	3 5 5 4 4 4 5 5—34
M L Pratt	4 4 5 4 4 5 5 5—35	L C Naisawald	3 4 4 4 4 4 5 5—34

MASSACHUSETTS—*Medford.*—The first of the March series of matches was held at the Bellevue range on the 5th inst., with 43 entries; 200 yards, 7 shots, off-hand, any rifle; the scores stood: First class—H. Withington, 31; H. Davis, 29; C. H. Russell, 29; A. B. Archer, 28; E. W. Archer, 27. Second class—J. Barker, 29; E. P. White, 28; A. T. Howard, 28. Third class—O. T. Perry, 27; S. A. Brown, 26.

SCHUETZENBUND OF CONNECTICUT.—The festival of this organization will take place Monday and Tuesday, the 23d and 24th of June next. Open to all comers. Prize list follows in a few weeks.

—The Franklin Rifle Club, of Hartford, made some good scores on the 1st inst. at the regular monthly shoot. The club medal was won by Rich. Britton with 22 inches, and the best single shots were H. B. Moore and D. S. Wadsworth at 1 inch each, and R. Britton at 1 4-10th inches.

—The shooters of New Britain have been holding a tournament in gallery work, and have shown some good scoring. The marksmen were divided into two classes, and the record shows in seven shots: Professional—Wm. Bowers, 35; H. P. King, 34; O. E. Pillard, 34; Wm. Burritt, 34; E. G. Babcock, 33. Amateur—C. H. Faughnan, 34; C. J. Elam, 34; H. Williams, 33.—The tournament excited a great deal of interest among the riflemen in town, and it has been managed most creditably throughout.

GALLERY PRACTICE.—The Zettler Rifle Club on the 25th ult.—Orcedmoor target reduced to gallery distance; bull's-eye, 1 1-16ths inches; 10 shots per man; possible 50—scored as follows:

M B Enzel	50	J Dutil	45
P Fenning	49	C Jhason	45
M L Riggs	49	F Hunzinger	45
W M Farrow	48	Wm Klein	45
C G Zettler	48	H Fisher	42
D Mill	47	P Regles	42
G A Schurman	46	Capt N D Ward	42
L Beatse	46	C Vollors	41
L Frenbel	45	C Recht	40
D Culhane	45	C Connor	40
B Zettler	45		

BUNDESFEST FINANCES.—Some idea of the magnitude of the Bundesfest, held at Union Hill last June, may be gained from the statistics contained in the Treasurer's report. From these it appears that the receipts from societies belonging to the Bund, gate moneys, target fees and other sources were $26,004.12. The expenses were $25,458.52. A surplus of prizes on hand, with fees which are due, leaves a surplus of $729.63.

GERMAN SOCIETIES.—The German Schuetzenbund have re-elected Captain Brandes again for the sixteenth time. First Lieutenant, Lorenz Hutzelmann; Second Lieutenant, Fred Voglin; Third Lieutenant, Geo. Sattler; Shooting Masters, Aug. Altmann and Otto Labes.

The Williamsburgh Shooting Association have elected the following officers: President, G. Buscher; Vice-President, Wm. Hahn; Secretary, Chas. Falkenmeyer; Treasurer, L. Adetstein; Shooting Masters, Chs. Horney, Chs. Beekman; Finance Committee, A. Nehrbas, J. Steeger.

The officers of the Brooklyn Schuetzen Corps are: Captain, John H. Doscher; First Lieutenant, Geo. Bundelmann; Second Lieutenant, Fred Schmidt; Recording Secretary, Wm. Zang; Financial Secretary, H. Harris; Treasurer, John W. Abrens; Custodian, Fred Otten; Shooting Masters, Hermann Posbergh, Wm. Tomford.

The Syracuse Society have elected B. Haberle, President; John Brellbreck, Vice-President; Jacob Mantel, Treasurer; Fl. Singer, Recording Secretary; Anton V. Altman, Financial and Corresponding Secretary; Carl Werner, Shooting Master.

New Haven, Conn., has elected J. Widmann, President; E. Buxbaum, Vice-President; H. H. Trycdmas, Secretary; J. Koerber, Treasurer; Hagenunger, Shooting Master.

LOUISIANA RIFLE SHOOTING.—The N. O. *Times*, in its issue of March 3, calling attention to the decline of rifle practice at Frogmoor, says:

We are desirous that Frogmoor should be recognized in future as our military base. Let us make soldiers of our people with a view of having no use for them as such. A commonwealth, like an individual, is apt to have less fighting to do to the extent to which it is prepared to do it. A warlike people, always in readiness through the constant exercise of the art of war, is likely to find abundant leisure for the arts of peace. Therefore, the best recipe the South has for perpetual peace is in rifle practice. There is, to be sure, some drawback in the desire which a sense of one's proficiency in any art awakens to display it, and the fear that hence we may fall into habits of aggression, or, in other words, turn out a bully. But such cheap vices in our weak nature a great people should be able to overcome. We fear the zeal which opened the exercises at Frogmoor a few years ago is measurably abated. There should be other centres opened throughout the State and public sentiment awakened anew in favor of a system so admirable both in its military and social aspects; for none of us desire that Louisiana should be behind the foremost in zeal or proficiency.

MICHIGAN—*East Saginaw, March 1.*—At the seventeenth regular weekly practice of the East Saginaw Amateur Rifle Club, the following score was made, 200-yard target reduced, possible 50:

Capt W J Shaw	4	5	4	4	5	5	5	4	5	4—45
C G Yawkey	5	4	4	5	5	4	5	4	4	5—45
R F Corbyn	3	5	4	4	4	5	5	5	4	4—44
H G Hamilton	3	5	4	4	5	5	5	5	4	4—44
F R Osborn	4	4	4	4	4	4	4	4	4	5—40
J H Howry	3	4	3	3	4	4	4	4	4	4—37

In shooting off the tie for the club medal, Shaw made 5 4 5 5 4—23; Yawkey, 5 5 5 5 5—25.

ILLINOIS—*Chicago, March 1.*—The George H. Thomas Post Rifle Club met to-day at the Northwestern rifle range for their regular weekly competition at 200 yards, and made the following score:

J A Freeman	4	4	5	4	5	4	4	4	4	5—43
D B Freeman	4	5	5	4	4	4	4	4	4	4—42
S M Tyrrell	4	4	4	4	4	4	5	4	4	4—41
W H Chenoweth	4	4	4	5	5	4	4	4	4	5—41
L H Drury	5	4	4	4	4	4	4	3	4	4—40
G A Sawyer	4	4	5	4	5	4	3	3	4	4—40

C.

—The Marquis of Lorne, Governor General of Canada, has been chosen Patron of the Dominion Rifle Association, and has given £50 as a prize. The government has appropriated money for the sending of a Canadian team to Wimbledon.

SPRING MEETING AT CREEDMOOR.

The Board of Directors of the N. R. A. have decided upon the conditions of the spring meeting matches and the Prize Committee are now at work upon it to fill out the list of awards. It will be noted that there are several innovations, notably the allowance of any position for military rifles at the mid-ranges. The matches stand:

1. Director's match, 200 yards.
2. 200 yards, all comers, any rifle.
3. Team of four from any club, any rifle, 200 yards.
4. Military team match, five men from any company, troop, or battery, 200 yards off-hand—using rifle of organization prize, a stand of colors, 200 yards.
5. Subscription match, for teams of cavalry, or artillery using carbines, 300 yards.
6. Subscription match—all comers—any military rifle, 200 yards.
7. 300 yards, all comers, any rifle.
8. Team subscription match—four men from any club—any rifle, 300 yards.
9. Subscription—all comers—any rifle, 500 yards.
10. Subscription—all comers, any military rifle—any position, 500 yards.
11. Military teams—four men from any military organization, any military rifle—any position, 500 yards.
12. Subscription—all comers, any rifle—500 yards, off-hand.
13. Team match—600 yards, four men from any club—any rifle, any position.
14. Subscription—all comers—600 yards, any rifle.
15. Subscription, 800, 900 and 1,000 yards—all comers—any position, any military rifle.
16. Leech cup match.
17. Running deer match.

In all matches, unless otherwise provided, seven shots per man at each distance will be fired. In subscription matches the entrance fees will be distributed, thirty per cent. to the association, twenty-five per cent. to first, twenty per cent. to second, fifteen per cent. to third and ten per cent. to fourth man.

EXPRESS BULLET EXPERIMENTS.

EDITOR FOREST AND STREAM:

Referring to the communication of Mr. Rabbeth in No. 25, I would state that I have been using a light hollow bullet in my rifle (a long-range Sharps) since the 10th of August on large game in Montana, and that it has given much satisfaction, both as regards destructiveness and accuracy, up to 200 yards. The experiences with this bullet on game will be given in another communication, and I will merely speak now on the question of accuracy of flight. Contemplating soon after making the experiments on the trajectory of light and hollow bullets in June last, as detailed in one of your August numbers, and contemplating a hunting trip to Montana, I sent to the factory a sketch for a hollow or express ball of the following dimensions, a specimen of which is inclosed, to wit: .44 cal., $\frac{3}{4}$ in. long, with a 3-16 in. hole extending down from the point $\frac{3}{4}$ of the length of the ball, to weigh 270 or 280 grains, patched and alloyed; the ball to have a certain taper. The moulds made as above, and which, by the way, cost twelve dollars, with 5 per cent. of tin, cast a ball of 275 grains patched.

My experience with this projectile on large game, and some practice at the target during the hunting season, with a charge of 96 grains of Curtis and Harvey No. 6, caused a belief that its flight was as true and accurate up to 200 yards as that of the 450 grain ball formerly used on game. Since going into winter quarters the rifle has been fitted with more accurate hunting sights consequent on its flatness of trajectory, and by the use of a 3 ft. loading tube the shell is charged with 105 grains of the same powder, with still enough room for the lubricant. I occasionally amuse myself at target practice, experimenting with different charges and weight of ball, and am now convinced that, with the above charge (105-275), the rifle will do as accurate and uniform shooting up to 200 yards, as with a 450 or 520 grains solid ball; I mean that with the above charge (1 to $2\frac{2}{3}$) it will group its balls, on a favorable day, within an 8-inch circle, and that, forming an opinion on at least 100 shots at target without a short time past, there have been as few "unaccountable" shots as with the heavier balls.

I have not shot ten consecutive shots at 200 yards with the same sight, and, since reading Mr. Rabbeth's article, the weather has been too blustering and stormy for the experiment, there being now two and a half feet of snow on the ground. In looking over the target sheets I find, on one day when seven shots were fired at that distance with the same sight, they are grouped within a 7-inch circle. The accompanying target—the result of three days' previous practice, 30 shots, 21 of which were fired at 200 yards with 275 grains ball—is a fair sample of what the rifle will do at that distance. No. 25 appears to be the only indifferent shot, and it was thought at the time the rifle was not at fault. Making allowance for the different charges of powder (102, 105 and 110 grains) and the different elevations of Vernier sight on each day, this target shows such a grouping of balls as to justify my estimation of the accuracy of the rifle with the light ball. I think equal accuracy could be had with 110 grains powder, but few shots have been tried. Four shots were fired one day at 300 yards range, which were grouped in a space $12\frac{3}{4}$ in. horizontal by 5 in. vertical. Sights used—open silver front sight, vernier peep sight on heel, position lying.

The inference, based on the foregoing facts, is that the principle of the British express rifle can be successfully ap

plied to this class of rifle. This particular rifle is an exceptional one of its class; for, originally, with very shallow grooves, they have become still more shallow by three years' constant use and with more than four thousand discharges ot target and game. This would indicate that a very shallow, multi-grooved rifle will, without doubt, give the necessary twist to a light ball with a proportion of strong powder at ball as high as 1 to 2⅝. I will go further and advance the opinion that the express principle can be successfully applied to all the American breech-loaders that have the shallow multi-grooved system of rifling like the Sharps system, viz.: the Ballard, Maynard and Whitney. I am not familiar with the improved Remington and some others.

If this inference is correct it does not seem to accord with the opinion advanced by the advocates of the British double express, that a peculiar form of rifling is essential for the application of the express principle (heavy charge of powder and light projectile). If shallow grooving is sufficient to give the projectile the necessary twist, why the necessity for the deep grooving and sharp lands of the Henry system, requiring much more trouble to clean and making it necessary to shoot a forced ball, which, *prima facie*, would give more resistance to the projectile than the shallow grooves? This brings up a question raised in a former article, as to how much resistance or retardation may be necessary in the barrel to develop the complete combustion of a large charge of powder. Some of the 450 bore Express rifles burn 150 grains of powder with only a 28-inch barrel. Would a shallow grooved rifle of same length burn that much powder of same quickness? This may be compensated for by increased twist in the shallow grooves. It is claimed that the Henry system fouls less than other systems. My opinion is, that depends as much on the powder as anything else. With American powder, in ten or twelve consecutive shots at 100 yards without wiping, I see no diminution in accuracy in my rifle; with the English powder (the C. & H. No. 6 or No. 8) the result is still more favorable, as that powder is much cleaner. That brings up the subject of powder, and I hope, Mr. Editor, you will help agitate the subject. My experience for several months past (firing away seven pounds in my rifle during that time at target and game) with the Curtis and Harvey No. 6 is more favorable to it compared to a good brand of American powder than Mr. Davison, of the Providence Tool Company, reports. Careful experiments at target at different times shows that 96 grains of the C. & H. (English) powder will throw a 275 grain ball, 200 yards range, more than two feet higher on the target (27½ in. last experiment) than same charge of an FG. powder sent me by the Sharps Company. I have used three or four of the standard FG. brands of American powder, and this brand appears of about the same strength. I think 100 grains of the C. & H. will give as high velocity to the 275 grains ball as 120 or 125 grains of American FG. powder. I was in hopes Mr. Davison's report would have brought out the powder men, and that we could have found out some brand equal in strength to the English powder and proved so by some careful experiments, but have only noticed one feeble reply from a friend of one of the American brands; so I infer theinferiority is admitted. I prefer using American powder if it can be had of the same strength and cleanliness, both on account of its cheapness as from other considerations; but, acting on a contrary opinion, I have for next season's hunting sent for a 12-pound case of the C. & H. No. 6, which will cost me $1.50 or $1.75 per pound delivered here, powder in England costing, as I understand, 68 cents, the balance being principally tariff charges, put on to protect our factories. For some time past the powder factories have been offering prizes to encourage and develop our splendid breech-loaders. Now let the rifle and gun factories return the compliment and offer prizes for the strongest and cleanest powder for hunting purposes. Invite the English factories to the competition, provided they will, in case of success, guarantee to have an agency here and sell their powder at a reasonable rate. It seems to me the desired powder should be manufactured here for 75 cents per pound.

Our slow burning FG. powders are admirably adapted for target shooting, especially for long range, where the gun is cleaned after each discharge and a high trajectory not objectionable, and where the distance is known. For hunting, especially with the rifle, a powder is required that will give the highest velocity with very little resistance in the barrel. Were full confidence established in the safety of the Shultze or Dittmar powder, no other would be used in the rifle west of the Mississippi River. It is just what is needed in the mountains—little noise, little smoke, equal strength with the black powder, no dirt, and consequently no cleaning necessary. I hope those two companies will persevere until the desired article is produced, or at least until full confidence in their safety is established. I hope Mr. Dittmar will experiment with a 275 or 280 grains ball with as much of his powder as can be gotten into the 2⅞ or 2⅝ shell, and let us know the result, both as to accuracy, trajectory and uniformity of shooting.

I think Mr. Rabbeth is in error in regard to the telescoping theory. Though not fully confirmed in reference to the cause of the going to pieces or explosion of the Express bullet, I think it is caused by the flesh and blood of the animal made into a semi-fluid state by the impinging of the ball, and which, acting as if a column of water is forced into the hollow pointed ball, with a pressure commensurate with its high velocity forcing its sides asunder, which scatter out in all directions (there being little or no resistance laterally from the soft flesh) at angles with line of fire, more or less obtuse according to the velocity of projectile, the sides at the point of the ball, being weakest, giving away first. The butt of the ball, after the sides are started, may assist by the telescoping process, but the other is the prime cause. The above process is repeated is a modified form when shot into a snow bank or sawdust, where the semi-fluid theory will still hold good, and where little resistance is made to the forward part of the ball. Shot into timber, which offers solid resistance to point of ball, and where there is no fluid condition to the wood fibre, this expansion does not occur, or at least to any great extent, the timber, of course, by its lateral resistance, assisting in this result. It is a fact well established that a hollow ball, fired into the soft parts, say the intrails, of a deer or other animal, will expand or go to pieces quicker than when put through behind the shoulders or more solid places, and the higher the velocity the quicker and more destructive the explosion. I have frequently observed that, in case of a deer shot in the flank, the ball would expand so suddenly as to tear a hole on entering in its tough hide much larger than the calibre of the ball. Shot through the ribs, the hole made would be no larger than the calibre. I shot at twenty yards distance a mountain lynx, an animal of cat kind, next in size below the mountain lion, and with belly as soft and yielding as that of the domestic cat. The ball, hitting in the flank, expanded so quick as to tear a hold through the skin large enough to take out its entrails, but did not go through, though the distance through him was not over four inches. In these cases, where the explosion was most violent, there was little or no resistance to the point of ball, and consequently it would appear that the telescope theory does not hold good, though it may assist, as also may the compressed air theory. If it were the compressed air theory the ball should go to pieces more violently when shot into solid flesh than when shot into the soft, semi-fluid entrails.

In conclusion, I hope some of the other rifle factories will follow the enterprise of Mr. Davison, of the Providence Tool Co., get up moulds for a light hollow bullet suitable to their guns, and give us the result of their experiments, both as regards accuracy and trajectory. I failed to state at the proper place that the trajectory of the 105-275 grain cartridge, sighted for 200 yards, rises above line of sight at about 90 yards, about 6 inches on an average. P.

Montana, Feb. 8, 1879.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limacolæ* or Shore Birds.

NEW HAMPSHIRE—*Nashua, March*, 6.—Our fox-hunters have had good sport this winter; a dozen brushes attest their skill. Judge Sawyer claims three. Rabbit hunting has helped shorten the long winter and given sport to the boys and work for the dogs. Quail have wintered here, for we have had no heavy snows. Unfortunately we have but few quail to get the benefit of a mild winter. WEBB.

SALISBURY GAME CLUB.—The annual meeting of the Salisbury Game Club, of Lakeville, was held March 4, and the following officers were elected: Pres., W. B. Rudd; Sec'y, W. H. Williams; Treas., W. B. Perry. W. H. W.

NEW YORK—*Good Ground, March* 8.—There are plenty of broad-bills and some geese, but we can't do anything with them till the bay breaks up. We are looking for it to go out soon. WM. N. LANE.

MONROE SPORTSMEN'S CLUB.—The annual meeting of the Monroe Sportsmen's Club, of Rochester, N. Y., was held March 6. The membership is eighty-two, and the report of the treasurer showed an excellent financial condition. The old officers were re-elected: W. J. Babcock, Pres.; J. H. Brown, Vice-Pres.; L. A. Pratt, Sec'y and Treas.

VIRGINIA.—Two curious coon specimens have been recently captured by Virginia hunters. The local papers chronicle that Mr. James Custis, residing about four miles from Onancock, caught a yellow coon, with head resembling a wild cat, and Mr. Smith Martin's dog, near Locustville, caught a red coon in Parramore's woods.

KENTUCKY—*Stanford, March* 1.—The first spring month brings the glad tidings from every direction that the quail are plentiful despite severity of the winter and their wholesale slaughter during the continuance of snow by red foxes, skunks and the no-more-to-be-respected-pot-hunters. Our crop of squirrels appears to have disappeared with the last tide of immigration concerning which so much appeared in the papers. KENTUCKIAN.

TENNESSEE.—*Nashville, March* 5.—Quite a number of snipe are being killed about here just now. Last Saturday I saw several lots for sale on the streets. J. Gilbert told me to-day that he had seen several this morning, and gave it as his opinion—and he is an old hunter about here—that they will be more plentiful than last year. John Branch bagged several woodcock last week. The season for all other game is closed until next September. J. D. H.

IOWA—*Pomeroy, Feb.* 28.—First geese came on the 21st inst., and I secured a fine old fellow on the 22d. He was in fine order and very fat for the time of year. The warm weather now seems to indicate an early spring and an unusually good season. ABE DACOTAH.

WILD PIGEONS—*Willis, Texas, March* 4.—The wild pigeons are in Grayson County, I learn, by the millions. There was an immense flight of them over us one day last week, going Northeast. C. L. J.

STONE'S BIRD TRAP.—For Stone's bird trap, a cut of which appeared in our advertising columns last week, send to A. B. Shipley & Sons, 503 Commerce street, Philadelphia.

A LONG SHOT.—*Leesburg, Va., March* 5.—Young Mr. Thomas Edwards, of this place, killed, March 3, a wild goose from a flock of twenty-two. He was 140 steps from the flock when they rose; his gun, a muzzle-loader, loaded with 13 shot larger than buck shot. The party who went after the geese embalmed the one murdered in their "memories," or thereabouts, with oysters, in deference to Lent. T. W.

That recalls the story of the pious but epicurean friar in Father Prout's Reliques, who tied his ham to a rope, doused it into the water and drew it forth from the sea—for, forsooth, what came out of the sea might be eaten in Lent.

TIN COATED SHOT.—The following is an extract of a letter addressed to the Leroy Shot Company. It answers questions often asked of us:

FRANKLIN, Pa., March 5, 1879.

I distributed your bag of No. 8 tin-coated shot among the members of my club, and at our regular shoot on Saturday last I had a report from a few of those who had used the shot, and in every case the verdict was, "It is just what we want." We all use choke-bore guns, and are perfectly satisfied that it is the only shot used that will not injure the barrels nor foul the gun in any way. HON. JOHN A. WILSON.

GUN PATTERNS—*Brooklyn, N. Y., March* 5.—*Editor Forest and Stream:* In your last issue Mr. E. L. Seeley quotes from your former issue of a gun putting 309 shots in a 30-in. circle, 40 yards, 1¼ oz. No. 8 shot; also of his gun putting 324 shot in the same space and distance, No. 8 shot, 1 oz. Very good patterns; but I will now show you a gun remarkable for pattern and penetration, altered from a muzzle-loader of twenty-six years shooting by myself to that of a breech-loader. This gun, made by Wilmott, of St. Louis, formerly of Boston, at the trial of soft vs. chilled shot at Messrs. Tatham Bros., Long Island, as a muzzle-loader, made in a 30-in. circle, forty yards, No. 7 shot, 3½ drs. Hazard's electric powder, right barrel only 98 pellets, left 114; percentage of penetration through twenty-five sheets of tough brown paper 20 per cent. Seven other guns shot at the same distance and charge, with the exception of powder—in which they all used 4 drs. No. 1 Dupont's powder—patterns varied from 100 pellets up to 240 a 250, breech-loading, choked, etc., the average penetration of the seven guns was about 5 per cent. Since then Messrs. Wm. Read & Sons have altered this No. 10 Wilmott to a breech-loader, producing the most exquisite marksmanship, and one of the handsomest guns. It contains all its hard shooting properties, and targets forty yards distance, No. 8, 1¼ oz. shot (soft), 30-in. circle, right barrel 325, left 309. Very little boring has been done, but that a taper bore. I shot in a match recently, 4 drs. Hazard, 1¼ oz. shot, 25 yards rise, good birds, all killed dead at least fifteen out of twenty; three others falling out of bounds—from five to nine shots fired through them, at least eight shot out of ten went through; Tatham's chilled. So many inquiries have been made through your and other papers, viz.: "Where can I get a muzzle-loader altered to a breech-loader?" This is now answered; but bear in mind the barrels must be first inspected to ascertain if there is metal enough for the work. WM. KING.

POISONING GEESE IN CALIFORNIA.—*Oakland, Cal., Feb.* 11.—*Editor Forest and Stream:* A large part of the cultivated portion of the State of California is overrun with ground squirrels, and the damage they do each year to the grain is immense. The farmers poison both them and the gophers as the easiest way of getting rid of the pests. Men now travel over the State and contract to clear the ranches of squirrels for so much an acre. So effective is the compound they use that they make money and carry out their contract at a price of ten cents per acre. Their success has been so great that the farmers along the foothills and in the vicinity of the great tule islands have adopted the same plans to rid themselves of the wild geese which frequent certain parts of the State during the winter months. The birds come in by millions, and what shooting is done has very little effect on them. They can be seen in flocks covering hundreds of acres on the tule lands bordering the bay shores, and go back in the foothills also for young grain. It occasionally happens that these geese are shot before the poison takes effect, and are taken home and eaten. The result is a poisoned family. Happily no deaths from this cause have occurred, but there have have been several narrow escapes and a number of sick people. People have to be careful about shooting a laggard goose, or one which appears to be wounded. The wild ducks also are sometimes poisoned by eating this poisoned grain strewn about for the geese. I recently had a pair of ducks given me by a friend who had been yachting up the rivers, and I and my whole family were poisoned. I was sick from the effects of the poison for about ten days, although the other members of the family, who had eaten less heartily, recovered in a day or two. The physician who attended us states that he had had five or six cases of the same kind during the winter, and had heard of several others. Such a dangerous custom as this should be stopped by law. The farmers should protect themselves without endangering the lives of others; the idea of poisoning wild game seems outrageous. We understand, however, it has been done in the southern part of California also, where droves of quail are an annoyance, and where there are few hunters to drive them off. Y.

THE DITTMAR POWDER.

The discussion over the merits of the light powder still keeps up, and it is as various as can well be. To-day we give several opinions and reports of experience. The first sportsman says:

Noticing frequent articles in your columns about Dittmar powder, I write you my little experience with it. Last summer I bought two cans (C) of Dittmar, using it in an 8 lb. 12-gauge gun. I used paper shells with one "fibre," and one P. E. wad over powder, just pressing the wads down firmly, not raming hard. I tried it first with 2¾ drs., 1 oz. No. 8 chilled shot. With this charge at 30 yds. it would hardly stick the shot into a soft pine board. I increased powder by ¼ dr. up to 3¾ drs., leaving the weight of shot the same. With the ast charge there was an unpleasant shock—not exactly recoil—possibly imagination—so I settled back on 3½ drs. This for glass balls I found good and liked it. I went out hunting a number of times, using Dittmar, 3½ drs. 1 oz. No. 8 chilled shot, shooting gray and black squirrels from the tree tops on the run, and any way you could find them. I always had to fire the second, and often the third, shot to bring them down, while with 3 drs. Hazard's Electric No. 4, same shot, I could drop them wherever seen the first time. One day I saw at a distance of some 50 yards a red squirrel and made it a sort of test shot. I gave him the Dittmar, when he scampered down and out on another limb, from which the second barrel, loaded with Hazard, dropped him dead. With 3½ drs. of the latter and a scant ounce of buck shot I killed a duck fully 75 yards, and had no trouble in getting "venison for breakfast with the first shot. A friend here tried Dittmar with like result. We met with no accident, but feared to increase the charge, so that in effect it was the same as a very small charge of black powder, excepting it was less trouble to clean our guns.

Canton, N. Y. R.

A friend of the powder reports:

Montreal, March 3, 1879.—*Editor Forest and Stream:* I notice in your paper of the 30th of January last a letter from "Canvas Back" asking if any one had kept shells loaded with Dittmar powder for any length of time and then used them to good advantage. As I have had experience with that powder, I will give your readers the benefit and at the same time answer the question of your correspondent.

When the Dittmar powder was first advertised in your paper I secured two canisters. I had always used Curtis & Harvey's No. 6 powder and tested the Dittmar in competition with it, loading my shells (Eley's brown paper) with different charges from 2½ to 4 drachms of powder and 1 to 1¼ oz. No. 8 shot. The gun was an 8lb. 12-gauge Parker, distance 40 yds. My first series of experiments were not at all satisfactory, the Dittmar giving very poor results both in pattern and penetra-

tion. A few days later I gave the new powder another trial, taking more care in loading the shells, but still could not obtain the results claimed for it by the maker. I found it clean, very little recoil and no smoke to speak of, but it did not seem to have the strength required. I wrote direct to Carl Dittmar about it, telling him about my want of success and asking if he could explain. In his reply he stated that perhaps I did not load my shells properly and sent me directions how to load with it, and also sent me some more of his powder that was a little quicker. This I also tried, loading my shells as directed, and with such success that I have since then used no other make. I will say this, however: that with all the care possible in loading I never have obtained quite the same amount of penetration with the Dittmar as with Curtis & Harvey's, measure for measure; but by using ¼ drachm more of Dittmar I can obtain just as good results without the inconvenience of recoil, and with the greater advantage of having no smoke to interfere with the sighting of my second barrel. It also has the further advantage of not fouling the gun like the black powder. I am very fond of shooting, but cannot get away from business very often, and therefore enjoy the few days when I do go probably more thoroughly than if I could spend all the time I should like to. When preparing for any of my little expeditions (duck shooting principally) I always load and take with me more shells than I use, so that a good many of them remain over from time to time. In October, 1877, I made preparations for a trip to the Sorel Islands, some fifty miles below this city on the St. Lawrence, but was unfortunately prevented from carrying out my intentions. I therefore packed up my loaded shells in a tin box where I keep them, and there they remained until Sept. last. On the 27th of August I received an invitation from my friend, Mr. Whitcher, of Ottawa City, to join him for a week's duck shooting on the 1st of Sept. (opening day), which I accepted, and spent one of the most delightful weeks that it has ever been my good fortune to enjoy. I took with me and used the loaded shells that I had prepared, some of them having been loaded with Dittmar powder for over twelve months. These I used the first two or three days, bringing down some ducks at very long distances, and when I came to use the shells loaded only a few days previously I could not see that there was any difference in the shooting qualities.

My friend W. was so pleased with what he saw of the qualities of the Dittmar powder that he asked me to get him some, and I sent him half a dozen pound canisters. Last month while in Ottawa City I saw Mr. W., and asked him how he was pleased with the Dittmar I sent him. He replied that he had done some very good shooting with it, but that it did not seem to be uniform; some of the charges seeming to have less power than others. I found on inquiry that he had not loaded the shells himself, but had allowed some one else to do it for him, and the party never having seen any of that kind of powder before probably did not load the shells properly. I explained how I loaded with the Dittmar, and think the next time he tries it he will be better satisfied. I had a few days' duck shooting in the early part of November, and was out in some of the most disagreeable kinds of weather, cold, rainy and windy, with sleet and snow, and my shells would sometimes be so damp that I could not force them into my gun; but in the evening on returning to the house would dry them and rub a little grease over the outside and use them next day without finding their efficacy injured in any way. I think the suggestion of your correspondent, "Beggar," relative to rendering paper shells impervious to dampness, is a very good one, and I shall give it a trial this next fall.

WOOD DUCK.

Another Montreal correspondent says:

Having for two years past made many experiments in the use of Dittmar's, Schultz's and black powder, my experience may help some of your numerous readers to form an opinion. Two years ago Mr. Dittmar paid a visit to Montreal and called upon several of our leading sports men to test the merits of his powder. The result of these experiments shortly afterward appeared in the FOREST AND STREAM AND ROD AND GUN. It was our opinion at that time that Dittmar's was not quite as strong powder as Curtis & Harvey's, but it evidently possessed the advantage of being much cleaner, besides producing less smoke and recoil. The penetration was better with black powder, but the pattern favored Dittmar's. Had it been less expensive it would probably have been favorably received. However, some few, myself included, continue to use it to this day. The only fault I can find is that it becomes comparatively worthless if exposed to the air any length of time. If kept in air-tight cans or in made-up cartridges, my experience is that it will do as good service as any black powder. I shall always use it in my first barrel, and I believe I can bag more game than by the use of black powder only. One of your correspondents says: "After using two hundred shells the inside of my barrels was very much spotted." Any gun will become spotted after such use, in spite of the best of care. I use two different guns, both of excellent makers. I have shot each at least five hundred times with Dittmar's powder, and the barrels are as free from spots as can be expected after two years' use.

I fully agree with your editorial that "it has many decided advantages over black powder, but it has not yet superseded black powder," and I will add that it is an invaluable addition.

ROYAL H.

A western New York shooter says:

I have read all the articles on Dittmar powder, and will give you my experience. The first time I saw it used was in Syracuse at the Sportsmen's State Convention by A. H. Bogardus in Weiting Opera House, and I noticed that the sound of the reports varied a great deal, although the same charges were used. Last spring I procured some. My gun weighs 8lbs. 1oz., 10-gauge. I used 3½ drs., but found while I got good pattern I did not get good penetration. Rammed the powder a little harder and got better penetration; and I would like to ask, How can any one get penetration without recoil? Don't it take just so much force to give the 1¼oz. shot the same penetration whether you use Dittmar, black or any other powder? I never have been able to get as good penetration with the Dittmar as with the black; neither have I had so much recoil with the Dittmar as with the black. Perhaps, had the Dittmar been sufficiently rammed, should have got both penetration and recoil. But just here comes the trouble—viz., how much to ram the charge, for my gun is a fine one, and don't care to spoil it or maim myself for life. Up to the time of my using the Dittmar, the boits, etc., were as bright as the day they came from the factory, but after using the Dittmar a few times they all began to look red, resembling rust, and it could not be removed until I took flour of emery and used some time and labor on them. This red appearance, I know, came from using the Dittmar powder, for my gun was not out in the rain, and is taken care of the first thing after the day's sport. I used it all during woodcock shooting, and honesty compels me to say that I never used any powder that was half so pleasant (but a woodcock is not a hard bird to kill, providing one holds the gun straight), for I could always shoot the second barrel, as there was no smoke to bother, and then always had the pleasure of seeing the bird, when hit, turn over and fall to the ground. But when it came to grouse shooting, found that I did not kill my birds cleanly, and had to go back to the black, which, perhaps, would not have been necessary had I known how much of a charge or how hard to ram the charges without hurting my gun. Noticed the same thing in using and seeing it used—viz., that the reports varied a great deal with same charges, and am positive that no one ever took more pains in loading shells, as the directions were followed to the letter.

HAMMERLESS.

PIGEON MATCHES.

NEW YORK—*Syracuse, March* 6.—Match at snow birds:

Mr Brown	1 0 1 1 1 1 1 0 0 1—7	E Lodder	0 1 1 0 1 1 1 0 0 1—6
F Denison	1 1 0 0 1 1 1 0 1 0—6	D Lefever	1 1 1 1 1 1 0 0 0 1—7
H Goetzert	1 0 0 0 1 0 1 1 1—5	C Parker	1 0 1 0 0 1 1 0 1 1—6
Geo Luther	1 1 1 1 1 1 0 1 1 0—8	W Prettie	1 1 0 1 1 1 0 1 1 0—7
T Greenway	0 1 1 1 0 0 1 1 1 0—5		

Brown, Lefever and Prettie divided second.

Match at pigeons:

W Page	1 1 0 0 1—3	Geo Luther	1 0 0 0 1—2
H Goettert	1 0 0 1 1—3	W Prettie	0 1 0 1 1—3

Ties on ten.

Frank Ingalls	1 1 1 1 1—5
Isaac Buell	1 1 1 1 0—4

D. F. S.

FOUNTAIN GUN CLUB.—Seventeen competitors appeared at the monthly shoot of the club at the Brooklyn Driving Park, March 5. The birds were good and the shooting as a whole excellent. Mr. Rowell carried off the medal by killing 9 out of 7; Messrs. W. H. Hunter, M. J. Kearney, J. T. Slane and Lemken each killed 5; J. Bohling, H. Muller, C. Schenhoven, J. White, Carman and Williams killed 4 out of 7; Pohlemus and Fiske killed 3 each; Durfee, Carlin, Sheridan and Cleaver killed 2 each.

PALISADE VS. JERSEY CITY HEIGHTS. The return match between the Palisade and Jersey City Heights gun clubs took place on the grounds of the latter at West End, N. J., on Saturday last, and proved a very close and exciting contest. From the score it will be seen some very excellent shooting was done all round. The match was ten men each club, twenty balls each man, from three Bogardus traps ten yards apart, the particular trap pulled depending upon a die thrown by the puller three yards in rear of shooter, after the shooter had reached the score. The balls were of amber color, very even in weight and thickness; a picked lot by Joe Nichols, a gentlemanly superintendent of the Bohemian Glass Works, 214 Pearl street. The day was fine and the audience large, and of course enthusiastic, the opinion several times expressed on the grounds that there are but a few brace of guns that will exceed the score of the present shoot. Though the Heights' boys won, yet five balls in 400 is not a very large margin to exhilarate over, and they are unanimous in the expression of the fact that they met "adversaries" worthy of their steel" (no pun intended). The following is the score:

Jersey City Heights.

Heritage	1 0 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—16
Leroy	0 1 0 1 1 0 0 1 1 1 1 0 1 1 1 1 0 1 0—14
Burdett	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—21
Zellner	1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1—15
Harrison	1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 1 1—18
Heddon	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
Coles	1 1 1 1 0 1 1 1 1 0 0 1 1 1 1 1 1 1 1—17

Average, 16 2-10.

Judges—Capt. K. C. Johnson, J. O. H. G. C.; G. Graef, P. G. C.

Referee—W. Hoey, Long Branch G. C. JACOBSTAFF.

KENTUCKY—*Stanford, March* 1.—The State match between Tennessee and Kentucky, to be shot this year, is pronounced "a go." Fifteen best from each State will shoot three matches at twenty birds each—ten singles, ten doubles—the first match to be shot at Louisville on May 15, the week preceding spring races. Second match will be at Lexington during the summer, and the final match will be at Nashville during the field trials. Both States have many crack shots, and a lively interest is naturally exhibited by our sportsmen in their successful possibilities. May we all live to enjoy the sport. KENTUCKIAN.

MICHIGAN—*Howell, March* 7.—Regular weekly shoot; glass balls; Card's rotary trap, Bogardus ruler, Paine's balls; weather cold and cloudy, with light breeze; club shoot for a revolver:

Ramsey	1 0 1 1 1 1 1 0 0 1—7	E Fisher	1 1 1 0 1 1 1 1 1 1—9
Jewett	1 1 1 1 1 1 1 1 1 1—10	Mulliken	0 0 1 0 1 0 1 1 1 0—6
Angel	1 0 1 0 1 1 0 0 1 0—5	A Beach	1 0 1 0 1 1 1 1 1 1—8
Rupert	1 1 1 1 0 1 1 1 0—8	Wilhelm	1 0 1 1 1 1 1 1 1 1—9
J Fisher	1 1 1 0 1 1 0 1 1—8		

Match for 100 pounds of chilled shot; H. D. Wilber and R. H. Ramsey against E. F. Mulliken and C. G. Jewett at twenty single rises each, Card's rotary trap, and ten double rises each, from two old pattern Bogardus traps five yards apart, 16 yards rise:

Single rise.

H D Wilber	1 1 0 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1—17
R H Ramsey	1 1 0 1 1 1 1 1 0 1 1 1 1 1 1 1 0 1 0—16—33
Mulliken	1 1 1 1 1 0 1 1 0 1 1 1 1 1 1 1 1 1 1—18
Jewett	0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19—37

Double rise.

Wilber	10 10 10 10 10 10 10 10 11 11—11
Ramsey	10 11 11 11 11 11 11 11 00 10—17—28
Mulliken	10 11 11 11 11 10 11 11 11 11—18
Jewett	11 01 10 11 01 10 11 01 11 11—15—33

Mulliken and Jewett won with a total of 70 to 61. GREGORY.

WISCONSIN—*Baraboo, March* 5.—Score at glass balls; Bogardus trap and rules:

Brewer	0 1 1 1 0 1 1 1 1 1 1 0 1 1 1—12
Kartack	1 1 1 1 0 1 0 0 1 1 1 1 1 1 0—11
Elliott	1 1 1 0 0 1 0 1 0 0 1 1 1 1 1—11
Whitehead	0 1 1 0 1 0 1 1 1 1 1 1 1 1 1—9
Warren	1 0 1 0 0 1 0 0 0 1 1 1 1 1 1—9
Davis	0 1 1 0 1 0 1 0 1 0 ED. H.

OHIO—*Cincinnati, Feb.* 28.—Match at glass balls on Clifton Heights Bogardus traps screened, 18 yards rise; weather very windy and unfavorable for good shooting:

A Henochberg	1 1 1 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1—15
Fey	1 1 1 1 1 1 1 0 0 0 1 1 1 1 1 0 1 0 1—15
J Limberg	1 0 1 1 1 0 1 0 1 0 0 0 0 1 0 0 1—10
E Fey	1 0 0 0 1 0 0 0 1 1 0 0 0 1 1 0 1—8
W Eberly	0 0 0 1 0 1 0 0 0 0 0 0 0 0 0 1 0—4
H Berger	0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0—2

A sweepstake match was won by Limberg. C.
